Government of India Notifications, Appointments, Promotions, &c.

LEGISLATIVE DEPARTMENT.

NOTIFICATIONS.

Simla, the 19th October, 1883.

No. 17.—His Excellency the Viceroy and Governor General has been pleased to accept the resignation by the Hon'ble D. G. Barkley of his office of Additional Member of the Council of the Governor General for the purpose of making Laws and Regulations.

No. 18.—The following Statute is published for general information:—

46 VICT., CHAPTER 6.

An Act to provide, during twelve months, for the Discipline and Regulation of the Army.

[26th April, 1883.]

Whereas the raising or keeping a standing army within the United Kingdom of Great Britain and Ireland in time of peace, unless it be with the consent of Parliament, is against law:

And whereas it is adjudged necessary by Her Majesty and this present Parliament, that a body of forces should be continued for the safety of the United Kingdom and the defence of the possessions of Her Majesty's Crown, and that the whole number of such forces should consist of one hundred and thirty-seven thousand six hundred and thirty-two men, including those to be employed at the depôts in the United Kingdom of Great Britain and Ireland for the training of recruits for service at home and abroad, but exclusive of the numbers actually serving within Her Majesty's Indian possessions:

And whereas it is also judged necessary for the safety of the United Kingdom, and the defence of the possessions of this realm, that a body of Royal Marine forces should be employed in Her Majesty's fleet and naval service, under the direction of the Lord High Admiral of the United Kingdom, or the Commissioners for executing the office of Lord High Admiral aforesaid:

And whereas the said marine forces may frequently be quartered or be on shore, or sent to do duty or be on board transport ships or vessels, merchant ships or vessels, or other ships or vessels, or they may be under other circumstances in which they will not be subject to the laws relating to the Government of Her Majesty's forces by sea:

And whereas no man can be forejudged of life or limb, or subjected in time of peace to any kind of punishment within this realm by martial law, or in any other manner than by the judgment of his peers and according to the known and established laws of this realm; yet nevertheless it being requisite, for the retaining all the before-mentioned forces, and other persons subject to military law, in their duty, that an exact discipline be observed, and that persons belonging to the said forces who mutiny or stir up sedition, or desert Her Majesty's service, or are guilty of

crimes and offences to the prejudice of good order and military discipline, be brought to a more exemplary and speedy punishment than the usual forms of the law will allow :

44 & 45 Vict., c. 58.

And whereas the Army Act, 1881, will expire—

(a) In the United Kingdom, the Channel Islands, and the Isle of Man, on the thirtieth day of April one thousand eight hundred and eighty-three ; and

(b) Elsewhere in Europe, inclusive of Malta, also in the West Indies and America, on the thirty-first day of July one thousand eight hundred and eighty three ; and

(c) Elsewhere, whether within or without Her Majesty's dominions, on the thirty-first day of December one thousand eight hundred and eighty-three :

Be it therefore enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows :

Short title.

1. This Act may be cited as the Army (Annual) Act, 1883.

Army Act (44 & 45 Vict., c. 58) to be in force for specified times.

2. (1) The Army Act, 1881, shall be and remain in force during the periods hereinafter mentioned, and no longer, unless otherwise provided by Parliament ; that is to say,

(a) Within the United Kingdom, the Channel Islands, and the Isle of Man, from the thirtieth day of April one thousand eight hundred and eighty-three to the thirtieth day of April one thousand eight hundred and eighty-four, both inclusive ; and

(b) Elsewhere in Europe, inclusive of Malta, also in the West Indies and America, from the thirty-first day of July one thousand eight hundred and eighty-three to the thirty-first day of July one thousand eight hundred and eight-four, both inclusive ; and

(c) Elsewhere, whether within or without Her Majesty's dominions, from the thirty-first day of December one thousand eight hundred and eighty-three to the thirty-first day of December one thousand eight hundred and eighty-four, both inclusive;

and the day from which the Army Act, 1881, is continued in any place by this Act is in relation to that place referred to in this Act as the commencement of this Act.

44 & 45 Vict., c. 58.

(2) The Army Act, 1881, while in force shall apply to persons subject to military law, whether within or without Her Majesty's dominions.

44 & 45 Vict., c. 58.

(3) A person subject to military law shall not be exempted from the provisions of the Army Act, 1881, by reason only that the number of the forces for the time being in the service of Her Majesty, exclusive of the marine forces, is either greater or less than the number hereinbefore mentioned.

Prices in respect of billeting. 44 & 45 Vict., c. 58.

3. There shall be paid to the keeper of a victualling house for the accommodation provided by him in pursuance of the Army Act, 1881, the prices specified in the schedule to this Act.

Amendments of Army Act, 1881.

Amendment of s. 46 (3) of 44 & 45 Vict., c. 58, as to power of commanding officer.

4. Whereas the words hereinafter mentioned in section forty-six of the Army Act, 1881, are superfluous, inasmuch as the offence therein mentioned is an aggravated offence of drunkenness, and it is expedient to omit the same : Be it therefore enacted as follows :—

In section forty-six of the Army Act, 1881, the words "was guilty of drunkenness after being warned for duty, or unless he" shall be omitted from the third sub-section.

Amendment of s. 80 (4) of 44 & 45 Vict., c. 58, as to attestation paper.

5. Whereas by section eighty of the Army Act, 1881, provision is made with respect to the recording of the answers of a recruit in an attestation paper to the questions put to him, and with respect to the signing and attesting of the attestation paper, and doubts have arisen with respect to the application of the said section to duplicates of such paper if duplicates are required by the regulations of a Secretary of State under Part II of the said Act, and it is expedient to remove such doubts : Be it therefore enacted as follows :—

There shall be added to section eighty of the Army Act, 1881, after the sixth sub-section the following enactment :—

(7.) Where the regulations of a Secretary of State under this part of this Act require duplicate attestation papers to be signed and attested, this section shall apply to both such duplicates, and in the event of any amendment of an attestation paper the amendment shall be made in both of the duplicate attestation papers.

Amendment of s. 94 of 44 & 45 Vict., c. 58, as to justices of the peace for the purpose of enlistment.

6. Whereas by the second sub-section of section ninety-four of the Army Act, 1881, it is enacted that an officer while subject to military law shall not act as a justice of the peace for the purpose of the attestation of soldiers :

And whereas militiamen can be attested before any officer as well as before a justice of the peace, and it is expedient to make provision for the attestation of soldiers before officers : Be it therefore enacted as follows :—

In section ninety-four of the Army Act, 1881, the words "an officer in the United Kingdom or elsewhere, if authorised in that behalf under the regulations of a Secretary of State also," shall be inserted before the words "every person exercising the office of a Magistrate" in the first sub-section; and the second sub-section shall be omitted.

Amendment of s. 145 (2) of 44 & 45 Vict., c. 58, as regards the liability of a soldier to maintain his wife and children.

7. Whereas under section one hundred and forty-five of the Army Act, 1881, it is provided that in the case either (a) of an order or decree made for payment by a soldier either of the cost of the maintenance of his wife or child, or of any bastard

child, or of the cost of any relief given to his wife or child, by way of loan, being sent to a Secretary of State, or (b) of it appearing to the satisfaction of a Secretary of State that a soldier has deserted or left in destitute circumstances, without reasonable cause, his wife or any of his legitimate children under fourteen years of age, the Secretary of State may order a sum therein mentioned to be deducted from the daily pay of such soldier, and to be appropriated in the first case in liquidation of the sum adjudged to be paid by such order or decree, and in the second case towards the maintenance of such wife or children:

And whereas it is expedient to make it obligatory on the Secretary of State to make the order in such cases: Be it therefore enacted as follows:—

In section one hundred and forty-five of the Army Act, 1881, the words "Secretary of State shall order" shall be substituted for the words "Secretary of State may order" in the second sub-section.

Amendment of s 172 of 44 & 45 Vict., c. 58, respecting provisions as to warrants and orders of military authorities.

8. Whereas it is expedient to make further provision respecting the validity of orders of military authorities for the detention in custody of persons subject to military law when on boardship: Be it therefore enacted as follows:—

There shall be added to section one hundred and seventy-two of the Army Act, 1881, after the fourth sub-section the following enactment:—

(5.) Where a military convict, or a military prisoner, or a person who is subject to military law and charged with an offence, is a prisoner in military custody, and for the purpose of conveyance by sea is delivered on board a ship to the person in command of the ship or to any other person on board the ship acting under the authority of the commander, the order of the military authority which authorises the prisoner to be conveyed by sea shall be a sufficient authority to such person, and to the person for the time being in command of the ship, to keep the said prisoner in custody and convey him in accordance with the order, and the prisoner while so kept shall be deemed to be kept in military custody.

Amendment of s. 175 (1) of 44 & 45 Vict., c. 58, as to officers subject to military law.

9. Whereas in section one hundred and seventy-five of the Army Act, 1881, which declares what persons shall be subject to military law as officers, the first sub-section is as follows:—

(1). "Officers of the regular forces on full pay, and if not otherwise subject to military law, officers of the staff of the army, and officers employed on military service under the orders of an officer of the regular forces:"

And whereas, having regard to the terms of the Royal Warrant regulating the pay and promotion of the army, doubts have arisen with respect to the construction of the above enactment, and it is expedient to remove such doubts: Be it therefore enacted as follows:—

In section one hundred and seventy-five of the Army Act, 1881, the words "officers of the regular forces on the active list, within the meaning of any Royal Warrant for regulating the pay and promotion of the regular forces, and officers not on such active list who are employed on military service under the orders of an officer of the regular forces, who is subject to military law" shall be substituted for the first sub-section (above recited).

Amendment of s. 182 of 44 & 45 Vict., c. 58, as to warrant officers.

10. Whereas by section one hundred and eighty-two of the Army Act, 1881, power is given to a court-martial to sentence a warrant officer to be suspended from rank, pay and allowances, or any of them, and injustice may arise if a warrant officer is sentenced to a suspension in any one of such cases, and not in all of them, and it is expedient to prevent the same;

And whereas by the same section power is given to a court-martial to sentence a warrant officer to be transferred to a corps in the same arm or branch of the service, and in the same regimental rank as that in which he served immediately before his transfer to be warrant officer, and such power is unnecessary, as the power to order such transfer is by section eighty-three of the same Act vested in the competent military authority: Be it therefore enacted as follows:—

In section one hundred and eighty-two of the Army Act, 1881, the words "or any of them" shall be omitted after the words "rank and pay and allowances" in the second sub-section.

In section one hundred and eighty-two of the Army Act, 1881, the words "or to be transferred to a corps in the same arm or branch of the service and in the same rank as that in which he served immediately before his transfer to be warrant officer" shall be omitted from the second sub-section.

Printing of amendments.

11. In all copies of the Army Act, 1881, which may be printed after the commencement of this Act the words by this Act directed to be substituted for other words shall be printed therein in lieu of the latter words, and the words directed by this Act to be added shall be added thereto, and the words directed by this Act to be omitted shall be omitted therefrom.

Schedule.

Accommodation to be provided.	Maximum Price.
Lodging and attendance for soldier where hot meal furnished.	Two pence halfpenny per night.
Hot meal as specified in Part I of the second Schedule to the Army Act, 1881.	One shilling and one penny halfpenny each.
Where no hot meal furnished, lodging and attendance, and candles, vinegar, salt, and the use of fire, and the necessary utensils for dressing and eating his meat.	Four pence per day.
Ten pounds of oats, twelve pounds of hay and eight pounds of straw per day for each horse.	One shilling and nine pence per day.
Lodging and attendance for officer	Two shillings per night.

Note.—An officer shall pay for his food.

Section 5.

Insert the following as Note (2) under this Section :—

NOTE (2).—This Section does not apply in the case of appointments made under Section 34 in consequence of the absence of an officer on privilege leave : the allowances authorised in that Section are admissible for the first 30 days of an officer's absence on privilege leave to any officer acting in two or more offices at one time in consequence of the leave. It applies, however, to cases coming under Section 36.

No. 3905.—Privilege leave for one month, beginning on the 18th October 1883, having been granted to Mr. E. Rule, Comptroller of Indian Treasuries, Mr. T. H. Biggs has been appointed to officiate as Comptroller of Indian Treasuries during Mr. Rule's absence. Mr. Biggs received charge of the duties of the said appointment from Mr. Rule after noon on the 5th October 1883.

D. M. BARBOUR,
Secy. to the Govt. of India.

PART IV.

Acts of the Governor General's Council assented to by the Governor General

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[Third publication.]

The following Act of the Governor General of India in Council received the assent of His Excellency the Governor General on the 4th October, 1883, and is hereby promulgated for general information:—

ACT No. XVI OF 1883.

An Act for the protection of Inventions exhibited in the Exhibitions of India.

WHEREAS it is expedient that such protection as is hereinafter mentioned should be afforded to the inventors of new manufactures who are desirous of exhibiting them at Exhibitions to be held in India; It is hereby enacted as follows:—

Short title.

1. *(1)* This Act may be called the Protection of Inventions Act, 1883;

Commencement.

(2) And it shall come into force at once.

Act to be read with Act XV of 1859.

2. It shall be read with, and taken as part of, Act XV of 1859 (*for granting exclusive privileges to inventors*).

Inventions exhibited when to be deemed new though publicly used or made publicly known.

3. If, within six months from the time of the opening of an Exhibition, a person, being the inventor and exhibitor of any manufacture exhibited at that Exhibition, petitions the Governor General in Council, under Act XV of 1859, for leave to file a specification of his invention, the circumstance that the invention has at any time after the opening of the Exhibition been publicly used or made publicly known shall not prevent the invention being deemed to have been at the time of presenting the petition a new invention for the purposes of the said Act.

Meaning of term "Exhibition."

4. In this Act, "Exhibition" means the International Exhibition to be held in the years one thousand eight hundred and eighty-three and one thousand eight hundred and eighty-four at Calcutta, and any Exhibition to be held in India which the Governor General in Council may, on the application of any persons desirous of holding the Exhibition, by notification in the *Gazette of India*, declare to be, in the judgment of the Governor General in Council, calculated to promote Indian art or industry, and to prove beneficial to the mercantile, agricultural or industrial classes of Her Majesty's subjects in India.

D. FITZPATRICK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[Third publication.]

The following Act of the Governor General of India in Council received the assent of His Excellency the Governor General on the 4th October, 1883, and is hereby promulgated for general information:—

ACT No. XVII OF 1883.

An Act to amend the Native Passenger Ships Act, 1876.

WHEREAS it is expedient to amend the Native Passenger Ships Act, 1876, with a view to provide for the better regulation of the passenger-traffic between British India and ports in the Red Sea; It is hereby enacted as follows:—

VIII of 1876.

Short title.

1. *(1)* This Act may be called the Native Passenger Ships Act, 1883; and

Commencement.

(2) It shall come into force on such day as the Governor General in Council directs by notification in the *Gazette of India.*

VIII of 1876.

Addition to section 11 of the Native Passenger Ships Act, 1876.

2. After clause (*e*) of section eleven of the Native Passenger Ships Act, 1876, the following clause shall be added:—

"(*ee*) in the case of any ship sailing to any port in the Red Sea, that she is propelled principally by steam, and, if she is carrying more than one hundred passengers being Natives of Asia or Africa, that she has on board a medical officer licensed in accordance with rules made under this Act."

Substitution of new section for section 26 of same Act.

3. For section twenty-six of the same Act the following section shall be substituted:—

Bond where ship clears for port in Red Sea.

"26. In the case of every ship sailing from any port in British India to any port in the Red Sea, the officer whose duty it is to grant a port clearance for any such ship shall not grant the clearance unless and until the owner, agent or master of the ship and two sureties resident in British India have executed in favour of the Secretary of State for India in Council a joint and several bond, for the sum of Rs. 5,000, conditioned—

"(*a*) that the ship shall touch at Aden on the outward voyage and there obtain a clean bill of health, and shall do the same on the homeward voyage if the ship continues to carry more than sixty passengers; and

"(*b*) that the master and medical officer (if any) of the ship shall comply with on the outward voyage, and also on the homeward voyage if the ship continues to carry more than sixty passengers, the provisions of this Act and of such rules relating to ships sailing between ports in British India and ports in the Red Sea as the Governor General in Council may, from time to time, make under section forty-six."

Amendment of section 27 of same Act.

4. In section twenty-seven of the same Act, for the word "thirty" the word "sixty" shall be substituted.

Addition to section 28 of same Act.

5. To section twenty-eight of the same Act the following words shall be added:—"and the authority empowered to grant the same may refuse to grant a bill of health in the case of any ship on board of which the requirements of the rules made under section forty-six are not complied with."

Addition of new sections after section 28 of same Act.

6. After section twenty-eight of the same Act the following sections shall be added:—

Certain ships to carry medical officer.

"28A. Every ship sailing from or to any port in British India to or from any port in the Red Sea and carrying more than one hundred passengers being Natives of Asia or Africa shall have on board a medical officer licensed in accordance with rules made under this Act.

Certain ships to be propelled by steam.

"28B. Every ship sailing from or to any port in British India to or from any port in the Red Sea shall be propelled principally by steam.

Power for Local Government to direct medical inspection of passengers.

"28C. *(1)* The Local Government may, from time to time, direct that no passenger shall be received on board any ship or any ship of a specified class sailing from any port in British India to any port in

the Red Sea unless and until he has been inspected, at such time and place as the Local Government may fix in this behalf, by a medical officer to be appointed by the Local Government in this behalf.

"(2) If, in the opinion of the officer making an inspection under this section, a passenger is suffering from any dangerously infectious or contagious disease, the passenger shall not be permitted to embark."

Addition of new sections after section 38 of same Act.

7. After section thirty-eight of the same Act the following sections shall be added:—

Penalty on master or medical officer of certain ships disobeying rules.

"38A. If the master of any such ship as is referred to in section twenty-seven, or any medical officer in charge of any such ship, wilfully breaks, or omits or neglects to obey, any rule with regard to those ships made under section forty-six, he shall be punished with fine which may extend to five hundred rupees, or with imprisonment for a term which may extend to three months, or with both.

Penalty on master of certain ships sailing without medical officer.

"38B. If any ship sailing from or to any port in British India to or from any port in the Red Sea and carrying more than one hundred passengers has not on board a medical officer as required by section 28A, the master of the ship shall be punished with fine which may extend to five hundred rupees, or with imprisonment for a term which may extend to three months, or with both.

Penalty on owner and master of certain ships not propelled by steam.

"38C. If any ship sailing from or to any port in British India to or from any port in the Red Sea is not principally propelled by steam, the owner and master shall each be punished with fine which may extend to five hundred rupees, or with imprisonment which may extend to three months, or with both.

Penalty on master receiving passenger in contravention of section 28C.

"38D. If the master of any ship, while a direction under section 28C is in force, knowingly receives on board his ship any person in contravention of that section or of the direction, he shall be punished with imprisonment which may extend to three months, or with fine which may extend to five hundred rupees for each person so received, or with both."

Additions to section 46 of same Act.

8. After clause (b) of section forty-six of the same Act the following clause shall be added:—

"(bb) the licensing and appointment of medical officers in cases where they are required, under this Act, to be carried;"

and after clause (e) of the same section the following clauses shall be added:—

"(ee) the functions of the master, medical officer (if any) and other officers of the ship during the voyage;

"(eee) the access of intermediate or between decks passengers to the upper deck."

New section added to same Act.

9. To the same Act the following section shall be added, namely:—

Power to exempt ship from provisions of Act.

"50. The Local Government may, from time to time, with the previous sanction of the Governor General in Council, for any special reason and subject to such conditions as it thinks fit, exempt any ship or class of ships from any provision of this Act."

D. FITZPATRICK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[Second publication.]

The following Act of the Governor General of India in Council received the assent of His Excellency the Governor General on the 11th October, 1883, and is hereby promulgated for general information :—

ACT No. XVIII OF 1883.

An Act to amend the Cattle-trespass Act, 1871.

WHEREAS it is expedient to amend the Cattle-trespass Act, 1871; It is hereby enacted as follows :— I of 1871.

Power for Local Government to transfer functions of District Magistrate or Local Government to local authority and direct that surplus receipts be credited to local fund.

1. The Local Government may, from time to time, by order notified in the local official Gazette—

(a) transfer to any local authority, within any part of the territories under its administration in which the Cattle-trespass Act, 1871, is in operation, all or any of the functions of the Local Government or the Magistrate of the district under that Act, within the local area subject to the jurisdiction of the local authority ; or I of 1871.

(b) direct that the whole or any part of the surplus accruing in any district under section eighteen of that Act shall be placed to the credit of such local fund or funds as may be formed for any local area or local areas comprised in that district;

and may, from time to time, in like manner, cancel any order made under this section.

Definitions.

2. In this Act—

"local authority" means any body of persons for the time being invested by law with the control and administration of any matters within a specified local area; and

"local fund" means any fund under the control or management of a local authority.

D. FITZPATRICK,
Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[Second publication.]

The following Act of the Governor General of India in Council received the assent of His Excellency the Governor General on the 12th October, 1883, and is hereby promulgated for general information:—

ACT No. XIX OF 1883.

An Act to consolidate and amend the law relating to loans of money by the Government for agricultural improvements.

WHEREAS it is expedient to consolidate and amend the law relating to loans of money by the Government for agricultural improvements; It is hereby enacted as follows:—

Short title.

1. *(1)* This Act may be called the Land Improvement Loans Act, 1883.

Local extent. Commencement.

(2) It extends to the whole of British India, but shall not come into force in any part of British India until such date as the Local Government, with the previous sanction of the Governor General in Council, may, by notification in the local official Gazette, appoint in this behalf.

XXVI of 1871.

Acts XXVI of 1871 and XXI of 1876 repealed.

2. *(1)* The Land Improvement Act, 1871, and Act XXI of 1876 *(an Act to amend the Land Improvement Act, 1871,)* shall, except as regards the recovery of advances made before this Act comes into force and costs incurred by the Government in respect of such advances, be repealed.

(2) When in any Act, Regulation or notification, passed or issued before this Act comes into force, reference is made to either of those Acts, the reference shall, so far as may be practicable, be read as applying to this Act or the corresponding part of this Act.

"Collector" defined.

3. In this Act, "Collector" means the Collector of land-revenue of a district, or the Deputy Commissioner, or any officer empowered by the Local Government by name or by virtue of his office to discharge the functions of a Collector under this Act.

Purposes for which loans may be granted under this Act.

4. *(1)* Subject to such rules as may be made under section ten, loans may be granted under this Act, by such officer as may, from time to time, be empowered in this behalf by the Local Government, for the purpose of making any improvement, to any person having a right to make that improvement, or, with the consent of that person, to any other person.

(2) "Improvement" means any work which adds to the letting value of land, and includes the following, namely:—

(a) the construction of wells, tanks and other works for the storage, supply or distribution of water for the purposes of agriculture, or for the use of man and cattle employed in agriculture;

(b) the preparation of land for irrigation;

(c) the drainage, reclamation from rivers or other waters, or protection from floods or from erosion or other damage by water, of land used for agricultural purposes or waste-land which is culturable;

(d) the reclamation, clearance, enclosure or permanent improvement of land for agricultural purposes;

(e) the renewal or reconstruction of any of the foregoing works, or alterations therein or additions thereto, and

(f) such other works as the Local Government, with the previous sanction of the Governor General in Council, may, from time to time, by notification in the local official Gazette, declare to be improvements for the purposes of this Act.

Mode of dealing with applications for loans.

5. *(1)* When an application for a loan is made under this Act, the officer to whom the application is made may, if it is, in his opinion, expedient that public notice be given of the application, publish a notice, in such manner as the Local Government may, from time to time, direct, calling upon all persons objecting to the loan to appear before him at a time and place fixed therein and submit their objections.

(2) The officer shall consider every objection submitted under sub-section *(1)*, and make an order in writing either admitting or overruling it:

Provided that, when the question raised by an objection is, in the opinion of the officer, one of such a nature that it cannot be satisfactorily decided except by a Civil Court, he shall postpone his proceedings on the application until the question has been so decided.

Period for repayment of loans.

6. *(1)* Every loan granted under this Act shall be made repayable by instalments (in the form of an annuity or otherwise) within such period from the date of the actual advance of the loan, or, when the loan is advanced in instalments, from the

date of the actual advance of the last instalment, as may, from time to time, be fixed by the rules made under this Act.

(2) The period fixed as aforesaid shall not ordinarily exceed thirty-five years.

(3) The Local Government and Governor General in Council, in making and sanctioning the rules fixing the period, shall, in considering whether the period should extend to thirty-five years or whether it should extend beyond thirty-five years, have regard to the durability of the work for the purpose of which the loan is granted, and to the expediency of the cost of the work being paid by the generation of persons who will immediately benefit by the work.

Recovery of loans.

7. *(1)* Subject to such rules as may be made under section ten, all loans granted under this Act, all interest (if any) chargeable thereon, and costs (if any) incurred in making the same, shall, when they become due, be recoverable by the Collector in all or any of the following modes, namely:—

(*a*) from the borrower—as if they were arrears of land-revenue due by him;

(*b*) from his surety (if any)—as if they were arrears of land-revenue due by him;

(*c*) out of the land for the benefit of which the loan has been granted—as if they were arrears of land-revenue due in respect of that land;

(*d*) out of the property comprised in the collateral security (if any)—according to the procedure for the realization of land-revenue by the sale of immoveable property other than the land on which that revenue is due:

Provided that no proceeding in respect of any land under clause (*c*) shall affect any interest in that land which existed before the date of the order granting the loan, other than the interest of the borrower, and of mortgagees of, or persons having charges on, that interest, and, where the loan is granted under section four with the consent of another person, the interest of that person, and of mortgagees of, or persons having charges on, that interest.

(2) When any sum due on account of any such loan, interest or costs is paid to the Collector by a surety or an owner of property comprised in any collateral security, or is recovered under sub-section *(1)* by the Collector from a surety or out of any such property, the Collector shall, on the application of the surety or the owner of that property (as the case may be), recover that sum on his behalf from the borrower, or out of the land for the benefit of which the loan has been granted, in manner provided by sub-section *(1)*.

(3) It shall be in the discretion of a Collector acting under this section to determine the order in which he will resort to the various modes of recovery permitted by it.

Order granting loan conclusive on certain points.

8. A written order under the hand of an officer empowered to make loans under this Act granting a loan to, or with the consent of, a person mentioned therein, for the purpose of carrying out a work described therein, for the benefit of land specified therein, shall, for the purposes of this Act, be conclusive evidence—

(*a*) that the work described is an improvement within the meaning of this Act;

(*b*) that the person mentioned had at the date of the order a right to make such an improvement; and

(*c*) that the improvement is one benefiting the land specified.

Liability of joint borrowers as among themselves.

9. When a loan is made under this Act to the members of a village-community or to any other persons on such terms that all of them are jointly and severally bound to the Government for the payment of the whole amount payable in respect thereof, and a statement showing the portion of that amount which as among themselves each is bound to contribute is entered upon the order granting the loan and is signed by each of them and by the officer making the order, that statement shall be conclusive evidence of the portion of that amount which as among themselves each of those persons is bound to contribute.

Power to make rules.

10. The Local Government, with the previous sanction of the Governor General in Council, may, from time to time, by notification in the local official Gazette, make rules consistent with this Act to provide for the following matters, namely:—

(*a*) the manner of making applications for loans;

(*b*) the officers by whom loans may be granted;

(*c*) the manner of conducting inquiries relative to applications for loans, and the powers to be exercised by officers conducting those inquiries;

(*d*) the nature of the security to be taken for the due application and repayment of the money, the rate of interest at which, and the conditions under which, loans may be granted, and the manner and time of granting loans;

(*e*) the inspection of works for which loans have been granted;

(*f*) the instalments by which, and the mode in which, loans, the interest to be charged on them and the costs incurred in the making thereof, shall be paid;

(*g*) the manner of keeping and auditing the accounts of the expenditure of loans and of the payments made in respect of the same; and

(*h*) all other matters pertaining to the working of the Act.

Exemption of improvements from assessment to land-revenue.

11. When land is improved with the aid of a loan granted under this Act, the increase in value derived from the improvement shall not be taken into account in revising the assessment of land-revenue on the land:

Provided as follows:—

(1) Where the improvement consists of the reclamation of waste-land, or of the irrigation of land assessed at unirrigated rates, the increase may be so taken into account after the expiration of such period as may be fixed by rules to be framed

by the Local Government with the approval of the Governor General in Council.

(2) Nothing in this section shall entitle any person to call in question any assessment of land-revenue otherwise than as it might have been called in question if this Act had not been passed.

III of 1877.

Act III of 1877 amended.

12. (1) In the Indian Registration Act, 1877, section 17, clause (l), for the word "certificates" the words "orders granting loans" shall be substituted.

(2) In the same Act, section 58, for the words "a certificate" the words "an order" shall be substituted.

(3) In the same Act, section 89, first clause,—

(a) for the words "a certificate" the words "a loan," and

(b) for the words "such certificate" the words "his order,"

shall be substituted.

D. FITZPATRICK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[First publication.]

The following Act of the Governor General of India in Council received the assent of His Excellency the Governor General on the 12th October, 1883, and is hereby promulgated for general information:—

ACT No. XX OF 1883.

THE PANJÁB DISTRICT BOARDS ACT, 1883.

CONTENTS.

CHAPTER I.

PRELIMINARY.

CHAPTER II.

OF THE LOCAL RATE ON LAND.

CHAPTER III.

OF DISTRICT AND LOCAL BOARDS.

An act to make better provision for Local Self-government in the Districts of the Panjáb.

WHEREAS it is expedient to amend the law in force in the territories administered by the Lieutenant-Governor of the Panjáb for the levy and expenditure of rates on land; and

Whereas it is also expedient to provide for the constitution of district boards and local boards in those territories, and to define and regulate the powers to be exercised by those boards;

It is hereby enacted as follows:—

CHAPTER I.

PRELIMINARY.

Short title.

1. *(1)* This Act may be called the Panjáb District Boards Act, 1883.

Extent.

(2) It shall extend only to the territories for the time being administered by the Lieutenant-Governor of the Panjáb; and

Commencement.

(3) It shall come into force in each district on such date as the Local Government, by notification, directs.

Repeal of Act V of 1878.

2. From the date on which this Act comes into force in any district, the Panjáb Local Rates Act, 1878, shall be repealed throughout that district. But all rates imposed, sums credited to the Local Government, and notifications published under that Act, shall, so far as may be, be deemed to have been respectively imposed, credited and published under this Act.

Definitions.

3. In this Act, unless there is something repugnant in the subject or context,—

(1) "Land" means land assessed to the land-revenue, and includes land whereof the land-revenue has been wholly, or in part, released, compounded for, redeemed or assigned.

(2) "Land-revenue" includes trini or grazing-dues levied for grazing on Government lands under section 48 of the Panjáb Laws Act, 1872.

(3) "Landholder" means any person responsible for the payment of the land-revenue, if any, assessed on land. It also includes the proprietor of land the land-revenue of which has been wholly, or in part, released, compounded for, redeemed or assigned.

(4) "Annual value" means—

(a) double the land-revenue for the time being assessed on any land, whether the assessment is leviable or not; or

(b) where the land-revenue has been permanently assessed, or has been wholly or in part compounded for or redeemed, double the amount which, but for such permanent assessment, composition or redemption, would have been leviable; or

(c) where no land-revenue has been assessed, double the amount which would have been assessed if the average village-rate had been applied:

Provided that, in any tract in which, under the settlement for the time being in force, the improvement of the land due to canal irrigation has been excluded from account in assessing the land-revenue, and a rate has been imposed in respect of such improvement, that rate shall be added to the land-revenue for the purpose of computing the annual value.

(5) "Financial year" means the year commencing on the first day of April.

(6) "Prescribed day" means such day as the Local Government may, from time to time, prescribe.

(7) "Notification" means a notification published in the official Gazette.

Panjáb District Boards Act, 1883.

(Chapter III.—Of District and Local Boards—Sections 4-11.)

(8) "Notified" means notified in the official Gazette.

(9) "Deputy Commissioner" means the Deputy Commissioner of a district, and includes any officer specially appointed by the Local Government to perform the functions of a Deputy Commissioner under this Act.

Powers exercisable from time to time.

4. All powers conferred by this Act may be exercised from time to time as occasion requires.

CHAPTER II.

OF THE LOCAL RATE ON LAND.

The local rate.

5. *(1)* All land shall be subject to the payment of a rate, to be called the local rate, not exceeding one anna for every rupee of its annual value.

(2) The proportion which the local rate shall bear to the annual value of land shall, except as provided in sub-section (3), be fixed for each district by the Local Government by notification.

(3) The Local Government may, by notification, delegate to the district board, subject to such restrictions or conditions as it thinks fit, its powers under sub-section (2), and may, by notification, cancel or vary any such notification.

Road, school and post cesses to merge in the rate.

6. From such date as may be notified in respect of each district by the Local Government, all authorized rates and cesses for the maintenance of roads, schools and the district-post shall merge in and become part of the local rate, and no rate or cess other than the local rate shall be thereafter leviable for those purposes.

Liability for local rate.

7. The landholder shall be liable for the local rate subject to the following provisoes, namely :—

(1) where the landholder pays the land-revenue in kind to any assignee of revenue or any village-headman, the assignee of revenue or village-headman shall be liable for the payment of the local rate instead of the landholder, and no demand shall be made by any such assignee or village-headman on the landholder in respect of the payment of the rate ; and

(2) where the Government has, under any lease current at the time when this Act comes into force, paid the local rate on trini, it shall continue to pay the rate during the currency of the lease.

Power to recover a share of the rate from occupancy-tenant.

8. When a local rate is payable by a landholder in respect of lands held by a tenant with a right of occupancy holding at a favourable rent, the landholder may realize from the tenant a share of the rate, bearing the same proportion to the whole rate as the excess of the annual value over the rent paid by the tenant bears to half the annual value.

Appropriation of proceeds of local rate.

9. Four-fifths of the net proceeds of the local rate levied in each district, after deducting the expenses of collection, shall, except as provided in section 68, be allotted to the district board established for that district under this Act.

The remaining one-fifth shall be carried to the credit of the Local Government, and may—

(a) be allotted by that Government to any district board established under this Act ; or

(b) be applied by that Government to provide in the territories to which this Act extends, or any part thereof, for any of the matters on which district boards may expend the funds at their disposal under this Act :

Provided that the Local Government may direct that the whole or any portion of the net proceeds of the local rate levied within the limits of any municipality or military cantonment, after deducting the expenses of collection, shall be carried to the credit of the municipal fund, or made available for the purpose of public improvement in the cantonment or for carrying out therein any rules made under section 25 of the Cantonments Act, 1880, as the case may be. III of 1880.

CHAPTER III.

OF DISTRICT AND LOCAL BOARDS.

A.—Constitution of District and Local Boards.

Establishment of district and local boards.

10. *(1)* The Local Government shall, by notification, establish a district board for each district.

(2) The Local Government may, by notification, establish a local board or local boards within the limits of any district, and may cancel or vary any such notification.

(3) A district board shall have authority throughout the district for which it is established, and a local board shall have authority throughout such portion of the district in which it is established, as the Local Government may, by notification, direct :

Provided that a board shall not have authority over any portion of a district which is for the time being included in a military cantonment or a municipality.

Number and appointment or election of members.

11. *(1)* A district board or local board shall consist of such number of members, not less than six, as the Local Government may fix in this behalf.

(2) The members may be appointed by the Local Government either by name or by official designation, or may be elected in accordance with rules made by the Local Government under this Act, or some may be appointed and some elected, as the Local Government directs :

Provided that—

(a) when the Local Government has directed that all or any proportion of the members shall be elected, it shall not thereafter direct that they shall be appointed, unless a majority of the electors declare that they so desire, or the Governor General in Council, for some reason affecting the public interests, sanctions the direction ;

(b) except with the approval of the Governor General in Council, or unless salaried officers of the Government are elected, not less than two-thirds of the members of every board shall be persons other than salaried officers of the Government ; and

(c) not less than one-half of the members of the board shall be landholders in the district.

Panjáb District Boards Act, 1883.
(Chapter III.—Of District and Local Boards—Sections 12-20.)

(3) When, under a direction issued under sub-section (2), any places on a board are required to be filled by election, and a sufficient number of members is not elected, the Local Government may fill those places by appointment.

Term of office of members.

12. (1) A member of a district board or local board, when appointed by virtue of an office, shall, unless and until the Local Government otherwise directs, continue to be a member of the board while he continues to hold that office.

(2) The term of office of all other elected and appointed members respectively of a district board or local board shall be fixed by the Local Government by rules made under this Act, and may be so fixed as to provide for the retirement of members by rotation, but shall not exceed three years.

(3) An outgoing member shall, if otherwise qualified, be again eligible for election or appointment.

Resignation of members.

13. A member of a local board or of a district board may resign by notifying in writing his intention to do so to the Local Government; and, on the acceptance by the Local Government of such resignation, the member shall be deemed to have vacated his office.

Powers of the Local Government as to removal of members.

14. The Local Government may remove any member of a district board or local board—

(a) if he refuses to act, or becomes incapable of acting, or is declared insolvent, or is convicted of any such offence, or subjected by a Criminal Court to any such order, as implies, in the opinion of the Local Government, a defect of character which unfits him to be a member;

(b) if he has been declared by notification to be disqualified for employment in the public service;

(c) if he, being a member of a local board, without an excuse sufficient in the opinion of the Local Government, neglects for more than three consecutive months to be present at the meetings of that board, or, being a member of the district board, without such sufficient excuse, neglects for more than six consecutive months to be present at the meetings of that board;

(d) if his continuance in office is, in the opinion of the Local Government, dangerous to the public peace or order; or,

(e) when he is a salaried officer of the Government, if his continuance in office is, in the opinion of the Local Government, unnecessary or undesirable.

Filling of casual vacancies.

15. (1) When the place of an elected member of a local board or district board becomes vacant by the resignation or removal of the member or by his death, a new member shall be chosen in accordance with the rules made by the Local Government under this Act to fill the place:

Provided that the Local Government may direct in any such case that the vacancy shall be left unfilled.

(2) When the place of a member of a local board or district board appointed by name becomes vacant as aforesaid, the Local Government may, if it thinks fit, appoint a new member to fill the place.

(3) A person chosen or appointed under this section to fill a casual vacancy shall hold office until the person whose place he fills would regularly have gone out of office, and shall then go out of office, but shall be again eligible for election or appointment.

Incorporation of district boards.

16. Every district board shall be a body corporate by the name of the district board of its district, and shall have perpetual succession and a common seal, with power to acquire and hold property, both moveable and immoveable, and, subject to any rules made by the Local Government under this Act, to transfer any such property held by it, and to contract and do all other things necessary for the purposes of its constitution, and may sue and be sued in its corporate name.

Time for district and local boards coming into existence.

17. The several district boards and local boards constituted under this Act shall come into existence at such time as the Local Government may, by notification, fix in this behalf.

Chairman.

18. (1) A member of every district board or local board shall be elected or appointed to be chairman of the board, and shall hold office for such term, not exceeding three years, as the Local Government may, by a rule made under this Act, fix.

(2) The Local Government shall determine, as regards each board or as regards any class of boards, whether the chairman shall be a person appointed by virtue of his office or by name or be elected.

Vice-chairman.

19. (1) A district board or local board may elect one of its members to be vice-chairman.

(2) A vice-chairman so elected shall hold office for such term as the board may, by rule, fix.

B.—Duties of District and Local Boards.

Duties of district board.

20. (1) The following matters shall, subject to such exceptions and conditions as the Local Government may make and impose, be under the control and administration of each district board within the area subject to its authority:—

(a) the management of all property vested in the district board;

(b) the construction, repair and maintenance of public roads and other means of communication;

(c) the establishment, management, maintenance and visiting of public hospitals, dispensaries, saráis and schools, and the construction and repair of all buildings connected with these institutions;

(d) the training of teachers and the establishment of scholarships;

(e) the supply, storage and preservation from pollution of water for drinking, cooking and bathing purposes; and

(f) the planting and preservation of trees.

Panjab District Boards Act, 1883.
(Chapter III.—Of District and Local Boards—Sections 21-26.)

(2) The Local Government may direct that any of the following matters shall, subject to such exceptions and conditions as it may make and impose, be under the control and administration of a district board within the area subject to its authority:—

(g) the management of any property vested in Her Majesty;

(h) the establishment, maintenance, visiting and management of markets, rest-houses, encamping-grounds and other public institutions, and the construction and repair of all buildings connected with these institutions;

(i) the construction and repair of embankments, and the supply, storage and control of water for agricultural purposes;

(j) the preservation and reclamation of soil, and the drainage and reclamation of swamps;

(k) the construction, repair and maintenance of famine preventive works, and the establishment and maintenance of such relief-works, relief-houses and other measures in time of famine or scarcity as may be entrusted to the charge of the board by the Local Government;

(l) the registration of births, marriages and deaths;

(m) fairs and agricultural shows and industrial exhibitions;

(n) the establishment and management of pounds, including, where the Cattle-trespass Act, 1871, is in force, such functions of the Local Government and the Magistrate of the district under that Act as may be transferred to the board by the Local Government;

I of 1871.

(o) the management of such public ferries as may be entrusted to the charge of the board under section 7 A of the Northern India Ferries Act, 1878, as amended by this Act;

XVII of 1878.

(p) any other local works or measures likely to promote the health, comfort, convenience and interests of the public or the agricultural or industrial prosperity of the country; and

(q) any other matters which the Local Government may declare to be fit and proper matters to be taken under the control and administration of the board.

(3) The Local Government may cancel or modify any direction given by it under sub-section (2).

(4) A district board shall, so far as the funds at its disposal permit, make due provision for all matters placed under its control or administration by or under this section.

Duties of local board.

21. (1) The Local Government, or, subject to the control of the Local Government, a district board, may direct that, within the area subject to the authority of a local board, any matter placed under the control and administration of the district board by or under section 20 shall be transferred to the control and administration of the local board.

(2) A local board, as the agent of, and subject to the control of, the district board, shall, so far as the funds at its disposal permit, make due provision for all matters transferred to its control and administration under sub-section (1).

(3) It shall be the duty of the district board to enforce the responsibility imposed on a local board by sub-section (2).

Limits on expenditure of local board.

22. Except as otherwise provided by this Act, a local board shall not incur expenses or undertake liabilities to any amount exceeding the limit imposed by the district board of its district.

Power for district board to provide for performance of duty in default of local board.

23. (1) If a local board makes default in the performance of any duty imposed on it by or under this Act, the district board may, by order in writing, fix a period for the performance of the duty.

(2) If the duty is not performed within that period, the district board may appoint some person to perform it, and may provide for the expenses of, and incidental to, its performance out of the funds appropriated to or for the purposes of the local board.

C.—Joint Committees.

Joint committees.

24. A district board may concur with any other district board, or with any municipal committee or with any cantonment authority, or with more than one such board, committee or authority, in appointing, out of their respective bodies, a joint committee for any purpose in which they are jointly interested, and for delegating to any such joint committee any power which might be exercised by either or any of the boards, committees or authorities concerned, and in framing or modifying regulations as to the proceedings of any such joint committee, and as to the conduct of correspondence relating to the purpose for which the joint committee is appointed.

D.—Conduct of Business.

Record and publication of proceedings.

25. (1) Minutes of the proceedings at each meeting of a district or local board shall be drawn up and recorded in a book to be kept for the purpose, and shall be signed by the chairman of the meeting or of the next ensuing meeting, and shall be published in such manner as the Local Government may, from time to time, direct, and shall, at all reasonable times and without charge, be open to the inspection of any inhabitant of the district who pays any rate or tax under this Act.

(2) A copy of every resolution passed by a local board at a meeting shall, within three days from the date of the meeting, be forwarded to the district board and to the Deputy Commissioner.

(3) A copy of every resolution passed by a district board at a meeting shall, within three days from the date of the meeting, be forwarded to the Deputy Commissioner.

Power to make rules as to business and affairs.

26. Every district board, and every local board with the sanction of the district board, may make rules as to—

(a) the time and place of its meetings and the manner in which notice of meetings shall be given;

(b) the conduct of proceedings at meetings and the adjournment of meetings;

(c) the custody of the common seal and the purposes for which it shall be used;

Panjáb District Boards Act, 1883.

(Chapter III.—Of District and Local Boards—Sections 27-32.)

(d) the division of duties amongst its members;

(e) the powers to be exercised by sub-committees or members to whom particular duties have been assigned;

(f) the persons by whom receipts shall be granted for money received under this Act;

(g) the duties, appointment, leave, suspension and removal of the officers and servants of the board;

(h) the term for which the vice-chairman shall hold office, and

(i) other similar matters:

Provided that every rule made under this section must be consistent with this Act and with any rules made by the Local Government under this Act, and shall be published in such manner as the Local Government may direct.

E.—Officers and Servants.

Employment of officers and servants.

27. *(1)* Subject to the provisions of this Act and to any rules which may be made under this Act in this behalf, every district board may employ and pay such officers and servants as may be necessary and proper for the efficient execution of its duties and of the duties of the local boards acting under it:

Provided that if, at any time, in the opinion of the Deputy Commissioner,—

(a) the number of persons employed by a board under this section, or the remuneration assigned by the board to those persons, or to any of them, is excessive, or

(b) any such person is unfit for his employment,

the board shall, on the requirement of the Deputy Commissioner, reduce the number, or remuneration, of those persons, or, as the case may be, dismiss the unfit person.

(2) The board may appeal against any requirement under this section to the Commissioner of the division, whose decision shall be final.

Pensions of Government officials serving boards.

28. In the case of a Government official, a district board may—

(1) if his services are wholly lent to it, contribute to his pension or gratuity and leave-allowances in accordance with the rules of the Government Civil Pension and Leave Codes for the time being in force; and

(2) if he devotes only a part of his time to the performance of duties in behalf of the board, contribute to his pension or gratuity and leave-allowances in such proportion as may be determined by the Government.

Pensions of servants of boards.

29. In the case of an officer or servant, not being a Government official referred to in section 28, a district board may—

(1) grant him leave-allowances and, if he is employed under the district committee when this Act comes into force and not entitled to pension, or if his monthly pay is less than ten rupees, a gratuity; and

(2) if empowered in this behalf by the Local Government—

(a) subscribe in his behalf for pension or gratuity and leave-allowances under the rules of the Government Civil Pension and Leave Codes for the time being in force; or

(b) purchase for him from the Government or otherwise an annuity on his retirement:

Provided that no pension, gratuity, leave-allowance or annuity shall exceed the sum to which, under the Government Civil Pension and Leave Codes for the time being in force, the servant would be entitled if the service had been service under the Government.

F.—Taxation and Finance.

Powers of taxation conferred on district boards.

30. Subject to any general rules or special orders which the Governor General in Council may make in this behalf, a district board may impose, in manner prescribed by section 31, such taxes as may be approved by the Local Government:

Provided that no such tax shall be imposed in respect of any property subject to the local rate.

Procedure in imposing taxes.

31. *(1)* A district board may resolve, at a meeting, convened and constituted in such manner as the Local Government may prescribe, to propose the imposition of any tax under section 30.

(2) When a resolution has been passed under sub-section *(1)*, the board shall publish a notice defining the class of persons or description of property proposed to be taxed, the amount or rate of the tax to be imposed and the system of assessment to be adopted.

(3) Any person likely to be directly affected by the proposed tax, and objecting to the same, may, within thirty days from the publication of the notice, send his objection in writing to the board; and the board shall, at a meeting convened and constituted as aforesaid, take his objection into consideration.

(4) If no objection is sent within the said period of thirty days, or if the objections received, having been considered as aforesaid, are deemed insufficient, the board may submit its proposals to the Local Government, with the objections (if any) which have been sent in and with its decision thereon.

(5) The Local Government, on receiving proposals under sub-section *(1)*, may sanction the same, or refuse to sanction them, or return them to the board for further consideration.

(6) When the proposals of a district board in respect of a tax have been sanctioned by the Local Government, the board may, at a meeting convened and constituted as aforesaid, direct the imposition of the tax in accordance with those proposals:

Provided that, in giving such direction, the board shall fix a date not less than one month from the date of the meeting on which the tax shall come into force.

(7) Every direction under sub-section *(6)* shall be notified, and the notification shall be conclusive evidence that the tax has been imposed in accordance with law.

Reduction and abolition of tax.

32. The Local Government may, by notification, and the district board may, with the sanction of the Local Government, by a resolution passed at a meeting

Panjáb District Boards Act, 1883.
(Chapter III.—Of District and Local Boards—Sections 33-39.)

convened and constituted as the Local Government may prescribe, abolish or reduce any tax imposed under sections 30 and 31.

Levy of fees.

33. With the previous sanction of the Local Government, or of such officer as the Local Government may authorize in this behalf, a district board or local board may fix and levy school-fees and fees for the use of, or benefits derived from, any of the works specified in section 20, clauses (c), (e), (h), (i) and (j), and fees at fairs, agricultural shows and industrial exhibitions held under its authority.

Additional funds to be provided by the Government.

34. When the control and administration of any matter is by or under this Act transferred to a district board, and at the time of the transfer the cost of that control and administration is defrayed from provincial revenue, the Local Government shall, from time to time, allot to the district board such funds, or place at the disposal of the board such sources of income, as may, in the opinion of the Local Government and of the board, be sufficient for maintaining the control and administration of the said matter in the state of efficiency existing at the date of transfer.

District fund.

35. There shall be formed for each district a fund, to be called the district fund, and there shall be placed to the credit thereof—

(a) the balance (if any) of the allotments made for the district under section 7 of the Panjáb Local Rates Act, 1878, and of the road and school cesses, which may be available for expenditure in the district on the day on which the district board comes into existence;

V of 1878.

(b) all proceeds of rates allotted to the district board under section 9;

(c) the proceeds of all taxes imposed in the district under sections 30 and 31;

(d) the amount of all fees levied by the district board or by local boards in the district under section 33;

(e) all funds allotted to the district board and the income arising from all sources of income placed at its disposal under section 34;

(f) all rents and profits accruing from property vested in the district board or managed by the district board or a local board in the district;

(g) all sums contributed to the fund by Government or by any committee, board or private person;

(h) all sums received by the district board or by a local board in the district in the discharge of functions exercised by it under this Act; and

(i) the proceeds of all sources of income which the Local Government may order to be placed at the disposal of the district board:

Provided that the Local Government may revoke any order made under clause (i).

Vesting, custody and investment of district fund.

36. (1) The district fund shall be vested in the district board, and the balance standing at the credit of the fund shall be kept in the Government treasury or sub-treasury or in the bank in which the Government treasury business has been made over, unless the Local Government in any cases otherwise permits.

(2) Subject to such rules as the Governor General in Council may make in this behalf, the district board may, with the previous sanction of the Local Government, invest any portion of the district fund in securities of the Government of India or such other securities as the Governor General in Council may approve in this behalf, and vary such investments for others of the same nature, or dispose of them. The income resulting from the securities, and the proceeds of the sale of the same, shall be credited to the district fund.

Application of district fund.

37. (1) The district fund shall be charged with the payment of the expenses of the district-post, the payment of the expenses of pauper lunatics sent to public asylums from the area under the authority of the district board, the expenses incurred in auditing the accounts of the district boards and local boards, and such portion of the cost of the Provincial Departments for education, sanitation, vaccination, medical relief and public works as may be held by the Local Government to be equitably debitable to the district board in return for services rendered to the board by those Departments.

(2) Subject to the charges specified in sub-section (1), and to such rules as the Local Government may make with respect to the priority to be given to the several duties of the board or otherwise, the district fund shall be applicable to the payment, in whole or in part, of the charges and expenses incidental to the matters specified in sections 20, 27, 28 and 29, and to the provision of grants-in-aid to educational and medical institutions, within the area subject to the authority of the district board, and, with the sanction of the Commissioner, outside that area when such application of the fund is for the benefit of the inhabitants of that area.

Works or undertakings benefiting several districts.

38. In the case of works or undertakings which benefit more districts than one, when the district boards cannot agree, the Commissioner or Commissioners of the division or divisions, or, when the districts are in different divisions and the Commissioners cannot agree, the Local Government, may determine what proportion of the expenses of the work or undertaking shall be borne by each of the district funds of the districts benefited thereby; and such proportion shall be payable out of the several district funds accordingly.

Annual estimates of income and expenditure of district boards.

39. (1) Every district board shall appoint a finance committee consisting of not less than three of its members.

(2) Every district board shall, on or before a prescribed day in each year, hold a meeting at which the finance committee shall submit to the board an estimate of the income and expenditure of the board for the next financial year, in such form as the Local Government may, by a rule made under this Act, prescribe.

(3) The board shall consider the estimate, and may provisionally approve of it with or without modification.

(4) The board shall, on or before a prescribed day, cause copies of the estimate, as provisionally

Panjáb District Boards Act, 1883.

(Chapter III.—Of District and Local Boards—Sections 40-45.)

approved by it, to be sent to the Deputy Commissioner.

(5) The Deputy Commissioner shall, on or before a prescribed day, signify in writing to the board his approval or disapproval of the estimate. When he disapproves of the estimate, he shall state the nature of his objection. The board shall then consider the matter, and either modify the estimate, so as to remove the objection, or refer it through the Deputy Commissioner to the Commissioner of the division. If the Commissioner concurs in the objection, he shall make such modification in the estimate as may, in his judgment, be necessary to remove the objection in whole or in part. If he does not concur in the objection, he shall pass the estimate, and his order shall be final and binding on the board.

(6) When the Deputy Commissioner has signified his approval of an estimate, or the board has modified an estimate so as to remove the Deputy Commissioner's objections, or when the Commissioner has passed orders as provided in sub-section (5), no expenditure which is not provided for in the estimate as approved or modified shall be incurred during the year to which the estimate relates without the previous sanction of the Deputy Commissioner.

(7) When the Deputy Commissioner is a member of the district board, the Commissioner and the Local Government shall take the place of the Deputy Commissioner and the Commissioner respectively for the purposes of this section.

Accounts of district boards.

40. Accounts of the receipts and expenditure of every district board shall be made up periodically to such days and in such form as the Local Government prescribes, and shall be examined and audited as soon as may be after they are so made up by such persons as the Local Government appoints in this behalf.

Estimates and accounts of local boards.

41. (1) Every local board shall submit annually to the district board of its district, on or before such date as the district board may appoint in this behalf, a statement of the requirements, and an estimate of the probable expenditure, of the local board for the coming financial year, and shall submit, as often as the district board may require, accounts of its receipts and expenditure.

(2) The district board shall signify in writing to the local board its approval or disapproval of an estimate submitted under this section, and powers similar to those conferred on the Deputy Commissioner and Commissioner by section 39, clauses (5) and (6), shall be exercised, in regard to the estimate, by the district board and the Deputy Commissioner, or (when the Deputy Commissioner is a member of the district board) the Commissioner, respectively:

Provided that, during the currency of any financial year, the Deputy Commissioner may sanction transfers of provision within the estimate finally approved, when inconvenience or undue delay would be caused by a previous reference to the district board.

(3) The district board shall make arrangements, subject to the approval of the Deputy Commissioner, for the examination and audit of accounts submitted to it under this section, and may arrange for the publication of such accounts.

Inspection of estimates and accounts.

42. Every district board shall cause a copy of every annual estimate provisionally or finally approved under section 39, and of every account made up under section 40, to be kept at its office; and any person paying rates or taxes under this Act may, at all reasonable times, inspect any such estimate or account without payment of any fee.

Publication of abstract of accounts.

43. A statement of the accounts of a district board for each financial year, showing the income of the district fund under each head of receipt, the charges for establishment, the works undertaken, the sums expended on each work, and the balance, if any, of the fund remaining unspent at the end of the year, shall be prepared by the board in such form as the Local Government prescribes; and an abstract of the same shall be published in the English and Vernacular official Gazettes, or in such other manner as the Local Government may direct.

G.—Control.

Control of Commissioner and Deputy Commissioner over boards and joint committees.

44. (1) The Commissioner of the division, or the Deputy Commissioner of the district when he is not a member of the district board, may—

(a) enter on and inspect, or cause to be entered on and inspected, any immoveable property within the limits of the division or district respectively occupied by any local board, district board or joint committee, or any work in progress within those limits under the direction of any such board or committee;

(b) by order in writing call for and inspect any document in the possession or under the control of any such board or committee having authority within those limits;

(c) by order in writing require any such board or committee to furnish such statements, accounts, reports and copies of documents relating to the proceedings or duties of the board or committee, as he may think fit to call for; and

(d) record in writing, for the consideration of any such board or committee, any observations he may think proper in regard to the proceedings or duties of the board or committee.

(2) If any difference of opinion arises between officers exercising the powers conferred by sub-section (1), it shall be referred—

(a) if it arises between two or more Deputy Commissioners in the same division, to the Commissioner; and

(b) if it arises between two or more Deputy Commissioners in different divisions or between two or more Commissioners, to the Local Government;

and the decision thereon of the Commissioner or of the Local Government, as the case may be, shall be final.

Power to suspend action.

45. The Commissioner of the division or the Deputy Commissioner of the district may, by order in writing, suspend, within the division or district respectively, the execution of any resolution or order of a district board or local board or joint committee, or prohibit the

Panjáb District Boards Act, 1883.
(Chapter III.—Of District and Local Boards—Sections 46-54.)

doing of any act within the said limits which is about to be done, or is being done, in pursuance of or under cover of this Act, if, in his opinion, the resolution, order or act is in excess of the powers conferred by law, or the execution of the resolution or order, or the doing of the act, is likely to lead to a breach of the peace, or to cause injury or annoyance to the public or to any class or body of persons.

Extraordinary powers of Deputy Commissioner in case of emergency.

46. (*1*) In cases of emergency, the Deputy Commissioner may provide for the execution of any work, or the doing of any act, which a district board or local board is empowered to execute or do, and the immediate execution or doing of which is, in his opinion, necessary for the service or safety of the public, and may direct that the expense of executing the work or of doing the act shall be forthwith paid by the district board.

(*2*) If the expense is not so paid, the Deputy Commissioner may make an order directing the person having the custody of the balance of the district fund to pay the expense, or so much thereof as is, from time to time, possible, from that balance in priority to all other charges against the same.

Power to provide for performance of duties in case of default of board.

47. (*1*) When the Commissioner, after due enquiry, is satisfied that a district board has made default in performing any duty imposed upon it by or under this Act, he may, by an order in writing, fix a period for the performance of that duty, and, if it is not performed within the period so fixed, he may appoint some person to perform it, and may direct that the expense of performing it shall be paid, within such time as he may fix, by the board to that person.

(*2*) If the expense is not so paid, the Commissioner may make an order directing the person having the custody of the balance of the district fund to pay the expense, or so much thereof as is, from time to time, possible, from that balance in priority to all other charges against the same.

Power to invest other officers with power of control.

48. When the control and administration of any public work is by or under this Act transferred to a district board, and at the time of the transfer the cost of that control and administration is defrayed from provincial revenue, the Local Government may invest any officer with respect to that work with the powers of a Commissioner under section 44 or section 47, or with the powers of a Deputy Commissioner under section 46.

Report of action under preceding sections.

49. When the Commissioner makes any order under section 45 or section 47, he shall forthwith forward to the Local Government, and when the Deputy Commissioner makes any order under section 45 or section 46, or an officer empowered under section 48 makes any order under section 46 or section 47, he shall forthwith forward to the Commissioner, for submission to the Local Government, a copy of the order, with a statement of the reasons for making it, and with such explanation, if any, as the board or committee concerned may wish to offer. The Local Government may thereupon confirm, modify or rescind the order.

Powers of Local Government and its officers over boards.

50. (*1*) It shall be the duty of the Local Government and of all Commissioners and Deputy Commissioners acting under its orders to require that the proceedings of district boards and local boards shall be in conformity with law and with the rules in force thereunder.

(*2*) The Local Government may exercise all powers necessary for the purpose of sub-section (1), and may, amongst other things, by order in writing, annul any proceeding which it considers not to be in conformity with law and with the said rules.

(*3*) The Commissioner of the division and the Deputy Commissioner of the district may, within their jurisdiction, for the same purpose, exercise such powers as may be conferred upon them by rules made in this behalf by the Local Government.

Power of Local Government to supersede in case of incompetency, persistent default or abuse of powers.

51. If a district board or local board is not competent to perform, or persistently makes default in the performance of, the duties imposed on it by or under this or any other Act, or exceeds or abuses its powers, the Local Government may, with the previous approval of the Governor General in Council, by notification, in which the reasons for so doing shall be stated, declare the board to be superseded:

Provided that, in case of public emergency, the notification may be issued without the previous approval of the Governor General in Council, but shall be immediately reported to the Governor General in Council and shall be subject to his orders.

Consequences of supersession.

52. When a district board or local board is superseded under section 51, the following consequences shall ensue:—

(*a*) All members of the board shall from the date of the notification vacate their offices as such members:

(*b*) All powers and duties of the board may, until the board is re-constituted, be exercised and performed by such person as the Local Government appoints in that behalf:

(*c*) Where a district board is superseded, all property vested in it shall, until it is re-constituted, vest in Her Majesty.

Constitution of new board, and transfer of functions of superseded local boards.

53. (*1*) When a district board is superseded, the Local Government shall, as soon as in its judgment conveniently may be, constitute another district board in its place.

(*2*) When a local board is superseded, the Local Government may either constitute another local board in its place, or transfer its functions to the district board or, by a notification under section 10, to any other local board.

Disputes.

54. (*1*) If any dispute, for the decision of which this Act does not otherwise provide, arises between two or more boards constituted under this Act, or between a municipal committee or cantonment authority and any such board, the matter shall be referred—

(*a*) to the Deputy Commissioner if the local authorities concerned are in the same district;

Panjáb District Boards Act, 1883.
(Chapter III.—Of District and Local Boards—Sections 55-59.)

(*b*) to the Commissioner or Commissioners of the division or divisions if the local authorities concerned are in different districts; and

(*c*) to the Local Government if the local authorities concerned are in different divisions and the Commissioners of those divisions cannot agree.

(*2*) The decision of the authority to which any dispute is referred under this section shall be final

(*3*) If, in the case mentioned in clause (*a*), the Deputy Commissioner is a member of one of the boards or committees concerned, his functions under this section shall be discharged by the Commissioner.

(*4*) "Local authority" in this section means a district board, local board, municipal committee or cantonment authority.

Power of the Governor General in Council and the Local Government to make rules.

55. So far as may be consistent with the provisions of this Act—

(1) the Governor General in Council may—

(*a*) make general rules or special orders for the regulation of taxation under section 30; and

(*b*) make rules regulating the powers of district boards to make, vary and dispose of investments;

(2) the Local Government may, for any district or local board, or any class of such boards, make rules for—

(*c*) dividing boards into classes, and fixing the powers of boards of each class;

(*d*) determining the mode and time of appointment or election of members of boards, the term of office, allowances (if any), and the qualifications and disqualifications of such members, and the qualifications and disqualifications of voters, and generally for regulating all elections under this Act;

(*e*) regulating the powers of boards to transfer property;

(*f*) regulating the powers of boards to contract and do other things necessary for the purposes of their constitution and the mode of executing contracts;

(*g*) determining the intermediate offices, if any, through which correspondence between boards or members of boards and the Local Government or its officers shall pass;

(*h*) determining the language in which business shall be transacted;

(*i*) the employment, payment, suspension and removal of officers and servants under section 27;

(*j*) the apportionment of the district fund between the general purposes of the district and the purposes of particular parts of the district;

(*k*) the application of district funds;

(*l*) the form of estimates of income and expenditure under section 39,

(*m*) the form of accounts and the manner of periodical audit under section 40;

(*n*) the publication of abstracts of accounts under section 43;

(*o*) the preparation of plans and estimates for works which are to be partly or wholly constructed at the expense of boards, and as to the authority by which, and the conditions subject to which, such plans and estimates may be sanctioned;

(*p*) the powers of supervision to be exercised by Commissioners and Deputy Commissioners under section 50;

(*q*) the conduct of proceedings of boards, including the fixing of a quorum, the appointment or election of a chairman, and the term of office of a chairman and vice-chairman;

(*r*) the appointment and payment of auditors of the accounts of boards; and

(*s*) the guidance of district boards when suits or other proceedings are intended to be or have been instituted by or against them in Civil Courts; and

(*t*) generally determining the relations between district boards and local boards, and guiding boards and Government officers in all matters connected with the carrying out of the provisions of this Act.

All such rules and alterations of rules shall be notified, and no rules or alteration of rules under clause (2) (*d*) shall come into operation until three months after they have been notified.

H.—Regulations.

Power to make regulations.

56. (*1*) Every district board or local board empowered in this behalf by the Local Government may make regulations for carrying out all or any of the purposes of this Act.

(*2*) A regulation made under this section shall not have effect until it has been confirmed by the Local Government and published in such manner and for such time as the Local Government may direct.

Penalty for infringement of regulations.

57. (*1*) In making any regulation under section 56, a board may direct that a breach of the same shall be punished with fine which may extend to fifty rupees, and, in the case of a continuing breach, with a further fine which may extend to five rupees for every day during which the breach is continued after he has been convicted of such breach.

(*2*) In default of payment of any fine imposed under this section, the defaulter shall be liable to simple imprisonment for a term which may extend to eight days.

Prosecutions.

58. (*1*) Prosecutions under this Act for breach of regulations may be instituted by any board, or by any person authorized by the board in this behalf.

(*2*) A Judge or Magistrate shall not be deemed to be within the meaning of section 555 of the Code of Criminal Procedure a party to, or personally interested in, any case under this section merely because he is a member of the board. X of 1882.

I.—Supplemental and Exceptional Provisions.

Liability of members of boards.

59. Every person shall be liable for the loss, waste or misapplication of any money or other property belonging to the district board, if such loss, waste, or misapplication is a

Panjáb District Boards' Act, 1883.

(Chapter III.—Of District and Local Boards—Sections 60-69.)

direct consequence of his neglect or misconduct while a member of a local board or of the district board, and a suit for compensation for the same may be instituted against him in such Court as the Local Government directs, by the district board with the sanction of the Commissioner, or by the Secretary of State for India in Council.

Procedure for making rules and regulations.

60. (*1*) The Local Government, before making any rules under section 55 or section 67, and a district or local board, before making any regulations under section 56, shall publish, in such manner as the Local Government may deem sufficient for giving information to persons interested, a draft of the proposed rules or regulations, together with a notice specifying a date on or after which the draft will be taken into consideration; and shall, before making the rules or regulations, receive and consider any objection or suggestion which may be made by any person with respect to the draft before the date so specified.

(*2*) Every such rule or regulation shall be published in the official Gazette in English and in such other language as the Local Government directs, and such publication shall be conclusive evidence that the rule or regulation has been made as required by this section.

Acquisition of land.

61. Where any land is required for the purposes of this Act, the Local Government may, at the request of a district board, proceed to acquire it under the provisions of the Land Acquisition Act, 1870; and, on the payment by the board of the compensation awarded under that Act, and of the charges incurred by the Government in connection with the proceedings, the land shall vest in the board.

X of 1870.

Penalty on member, officer or servant being interested in contracts made with a board or joint committee.

62. (*1*) If any member, officer or servant of a district or local board or joint committee appointed under this Act is, otherwise than with the permission in writing of the Commissioner, directly or indirectly interested in any contract made with that board or joint committee, he shall be deemed to have committed an offence under the Indian Penal Code, section 168.

XLV of 1860.

(*2*) A person shall not, by reason of being a shareholder in, or a member of, any incorporated or registered company, be held to be interested in any contract entered into between the company and a board or committee; but he shall not take part in any proceedings of the board or committee relating to any such contract.

Saving for Act XI of 1879.

63. Nothing in this Act shall affect the Local Authorities Loans Act, 1879.

XI of 1879.

General powers of Local Government and Commissioners.

64. In all matters connected with this Act, the Local Government shall have and exercise over Commissioners and Deputy Commissioners, and Commissioners shall have and exercise over Deputy Commissioners, the same authority and control as they respectively have and exercise over them in the general and revenue administration.

Contracts of local committees.

65. Every contract entered into, whether in its own name or in the name of the Government, by the committee appointed in a district under section 11 of the Panjáb Local Rates Act, 1878, may be enforced by and against the district board constituted for that district under this Act, in like manner as it might have been by and against the committee if this Act had not been passed.

V of 1878.

Government officers serving under committees to continue under board.

66. A Government officer employed under the committee appointed in a district as aforesaid at the time when a district board comes into existence for the district under section 17 of this Act shall be deemed to be similarly employed by the board, and shall not be dismissed from that employment without the sanction of the Local Government.

Power of Local Government to except local area from operation of Act.

67. (*1*) If the circumstances of any district or part of a district are, in the opinion of the Local Government, such that all or any of the provisions of this chapter are unsuited thereto, the Local Government may, by notification in the official Gazette, except the district or part from the operation of those provisions; and thereupon those provisions shall not apply to the excepted district or part until again applied thereto by a like notification.

(*2*) While any notification under this section is in force, the Local Government may make rules to provide for any matter dealt with by the provisions to which the notification applies.

Committee to be constituted for district wholly excepted from Act.

68. When a district is excepted, under section 67, from all the provisions of this chapter, a committee shall, except where the Local Government for special reasons otherwise directs, be constituted for the control and administration in that district of the matters mentioned in section 20, or of such of them as the Local Government may, from time to time, specify; and the Local Government shall, from time to time, determine the manner in which the members of the committee shall be appointed and removed, define the functions and authority of the committee, and place at its disposal, subject to such control as the Local Government thinks fit,—

(*a*) the balance standing at the credit of the district fund at the time when the district is excepted or, as the case may be, the balance of the allotments made for the district under section 7 of the Panjáb Local Rates Act, 1878, and of the road and school cesses, which may be available for expenditure in the district at that time;

V of 1878.

(*b*) all proceeds of rates which but for the district being excepted would be allotted to the district board under section 9 of this Act; and

(*c*) such other sources of income mentioned in section 35 of this Act as the Local Government thinks fit:

Provided that not less than one-half of the members of the committee shall be persons who own landed property or reside or carry on trade or business in the district and are not servants of the Government.

Power to direct that Act XX of 1856 shall cease to be in force.

69. (*1*) When any local area in which Act XX of 1856 (*an Act to make better provision for the appointment and maintenance of Police Chaukidárs in Cities, Towns, Stations,*

Panjáb District Boards Act, 1883.
(Chapter V.—Amendment of the Northern India Ferries Act, 1878—Sections 70-79.)

Suburbs and Bázárs in the Presidency of Fort William in Bengal) is in force is included in any local area over which a district board established under this Act has authority, the Local Government may, by notification, direct that that Act shall cease to be in force in the local area so included, and that every pancháyat constituted under that Act for that local area shall cease to exist.

(*2*) When a direction is issued under this section in respect of any local area in which the said Act XX of 1856 is in force, the amount, if any, then available under section 36 of that Act for purposes of improvement in that local area shall be expended therein by the Deputy Commissioner for such purposes.

CHAPTER IV.

SUPPLEMENTAL PROVISIONS AS TO TAXATION.

Recovery of rates.

70. All rates and taxes imposed under this Act, and all arrears of such rates and taxes, may be recovered as if they were arrears of land-revenue.

Local rate or tax how to be assessed and collected.

71. (*1*) The Local Government may, by notification, determine the persons by whom the local rate or any tax imposed under this Act shall be assessed and collected, and make rules for the assessment and collection of the rate or tax, and direct in what manner persons employed in the assessment or collection shall be remunerated.

(*2*) The provisions of section 60 shall apply to all rules made under this section.

Appeals.

72. (*1*) In matters connected with the assessment and collection of any rate or tax leviable under this Act, an appeal shall lie from the order of any person authorized under this Act to make assessments or collections to such person as the Local Government appoints:

Provided that the appeal shall be presented within 30 days from the date of the order.

(*2*) The order passed on an appeal under this section shall be final.

Instalments of rates and taxes.

73. (*1*) The Local Government may, by notification, prescribe by what instalments and at what times any rate or tax leviable under this Act shall be payable:

Provided that every instalment of the local rate leviable under section 5 shall be payable with an instalment of the land-revenue.

(*2*) In any local area subject to the authority of a district board the Local Government may, by notification, delegate to the board, subject to such conditions as it thinks fit, its powers under this section.

Power of Local Government to exempt from taxation.

74. The Local Government may, by notification, remit or reduce any rate or tax imposed under this Act, or exempt any person or class of persons, or any description of property, wholly or in any part from liability to any such rate or tax, and cancel any such remission, reduction or exemption.

Power to direct measurements.

75. When measurements are necessary for the assessment of the local rate or of any tax imposed under this Act, the Local Government may, by notification, direct such measurements to be made.

Suits relating to rates and taxes under this Act cognizable by Courts having cognizance of suits for rent.

76. Suits for the recovery from co-sharers, tenants or others of any sum on account of any rate or tax imposed under this Act, and suits on account of illegal exaction of any such rate or tax, or for settlement of accounts connected therewith, shall, unless the Local Government otherwise directs, be cognizable by the Courts which for the time being have cognizance of suits for rent due on land.

Confirmation and recovery of existing rates.

77. All rates for the maintenance of roads, schools or the district-post, for the payment of which provision has been made in any settlement-record previous to the passing of this Act, or which have been habitually levied by Government, shall be deemed to have been and to be legally imposed, and to have been and to be legally recoverable as if they were arrears of land-revenue payable directly to Government and due on the land in respect of which they are payable.

CHAPTER V.

AMENDMENT OF THE NORTHERN INDIA FERRIES ACT, 1878.

Amendment of the Northern India Ferries Act.

78. After section 7 of the Northern India Ferries Act, 1878, the following shall be inserted, namely:— XVII of 1878.

Management of ferries may be vested in committees and boards.

"7A. The Local Government may direct that any public ferry, wholly or partly within the area subject to the authority of a district board or local board in any district in the territories under the administration of the Lieutenant-Governor of the Panjáb, shall be managed by that board, and may further direct that all or any part of the proceeds from such ferry be paid into the district fund; and thereupon such ferry shall be managed, and such proceeds or part thereof shall be paid, accordingly."

Further amendment.

79. In section 6 of the same Act, after the words "section seven," and in section 17 of the same Act, after the words "section seven" where they first occur, the following shall be inserted, namely:—"and section 7A."

D. FITZPATRICK,
Secretary to the Government of India.

PART V.

Bills introduced into the Council of the Governor General for making Laws and Regulations, or published under Rule 22.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[Third publication.]

The following Bill was introduced into the Council of the Governor General of India for the purpose of making Laws and Regulations on the 4th October, 1883, and was referred to a Select Committee:—

No. 21 of 1883.

A Bill to amend the Legal Practitioners Act, 1879, and the Indian Stamp Act, 1879.

WHEREAS it is expedient to amend the Legal Practitioners Act, 1879, in manner in this Act appearing; (XVIII of 1879.)

And whereas it is also expedient to amend the Indian Stamp Act, 1879, in so far as it relates to the duty chargeable on the enrolment of legal practitioners; (I of 1879.)

It is hereby enacted as follows:—

Short title. 1. (*1*) This Act may be called the Legal Practitioners Act, 1883; and

Commencement. (*2*) It shall come into force at once.

Amendment of section 4 of Act XVIII of 1879. 2. In section 4 of the Legal Practitioners Act, 1879, for the words "as an advocate on the roll of the Chief Court of the Panjáb" the words "under section 41 of this Act" shall be substituted. (XVIII of 1879.)

Addition of a proviso to section 13 of same Act. 3. To section 13 of the same Act the following proviso shall be added:—

"Provided that in any case in which the party on whose behalf any such pleader as aforesaid is retained is—

(*a*) a pardánashín woman, or

(*b*) unable for any sufficient cause to instruct the pleader in person,

the High Court shall not suspend or dismiss the pleader because he has taken instructions from a relative of the party deputed by him or her to instruct the pleader."

New section substituted for section 41 of same Act. 4. For section 41 of the same Act the following section shall be substituted, namely:—

"41. (*1*) A High Court not established by Royal Charter may, from time to time, with the previous sanction of the Local Government, make rules as to the qualifications and admission of proper persons to be advocates of the Court, and, subject to such rules, may enrol such and so many advocates as it thinks fit. (Power for certain High Courts to enrol advocates.)

(*2*) Every advocate so enrolled shall be entitled to appear for the suitors of the Court and to plead or to act, or to plead and act, for those suitors, according as the Court may by its rules determine, and subject to those rules.

"(*3*) The High Court may dismiss any advocate so enrolled or suspend him from practice:

"(*4*) Provided that an advocate shall not be dismissed or suspended under this section unless he has been allowed an opportunity of defending himself before the High Court which enrolled him, and, except in the case of the Chief Court of the Panjáb, unless the order of the High Court dismissing or suspending him has been confirmed by the Local Government."

New section added to same Act. 5. To the same Act the following section shall be added, namely:—

"42. Act I of 1846 (*for amending the law regarding the appointment and remuneration of pleaders in the Courts of the East India Company*) and Act XX of 1853 (*to amend the law relating to pleaders in the Courts of the East India Company*) are repealed." (Repeal of Acts I of 1846 and XX of 1853.)

Amendment of Schedules I & II of Act I of 1879. (Duty on enrolment of advocates.) 6. In Article 27 of Schedule I of the Indian Stamp Act, 1879, the words "in exercise of powers conferred on such Court by letters patent," and in clause (*a*) of Article 11 of Schedule II of the same Act, the words "established by Royal Charter" are repealed. (I of 1879.)

STATEMENT OF OBJECTS AND REASONS.

THE object of this Bill is to amend the Legal Practitioners Act, 1879, in certain respects in which experience has shown that the existing law is defective.

2. Section 13 of the Legal Practitioners Act, 1879, contains a provision that the High Court may suspend or dismiss any pleader who takes instructions in any case except from the party on whose behalf he is retained, or from a private servant of such party, or from some person who is the recognized agent of such party within the meaning of the Code of Civil Procedure. It has been brought to the notice of the Government that the practical operation of this provision is in certain cases attended with inconvenience to litigants and pleaders. In litigation in which pardánashín women are concerned, instructions must often, as a matter of necessity, be given through their near relatives. Again, there are cases in which male litigants, who have not the means of employing private servants, are unable from various causes, such as physical incapacity or old age, to instruct their pleaders in person. In such cases it seems right to allow the relatives of the litigants to instruct pleaders on their behalf. Section 3 of the Bill accordingly adds a proviso to section 13 of the Act enabling pleaders to take instructions from a relative of the party deputed by him or her to instruct the pleader when the party is a pardánashín woman or unable for any sufficient cause to instruct the pleader in person.

3. Under the Legal Practitioners Act, 1879, an advocate not ordinarily practising in his own province must, if he wishes to practise in such a province as the Central Provinces, for example, where the Judicial Commissioner has at present no power of enrolling advocates, first enrol himself as a pleader. As this state of the law is felt by certain persons to be a grievance, a new section has been added to the Act, empowering all High Courts not established by Royal Charter to enrol advocates as the Chief Court of the Panjáb is at present empowered to enrol them. As the power of suspension or removal would, except in the case of the Panjáb Chief Court, be vested in a single officer if it were conferred absolutely on the High Court, it has been thought well to make every order by any High Court, other than the Panjáb Chief Court, suspending or removing an advocate subject to confirmation by the Local Government.

4. The new section 42, which section 5 of the Bill adds to the Act, provides for the repeal of Acts I of 1846 and XX of 1853 in all places to which that section may be extended. The Madras High Court has noticed that these Acts have not as yet been expressly repealed in that Presidency, though a great portion of the Legal Practitioners Act, 1879, has been brought into operation there. These Acts are, it is believed, already repealed in all the provinces to which the Legal Practitioners Act, 1879, extends *proprio vigore;* but it is possible that they may be still unrepealed in some of the other provinces to which that Act has either already been or may hereafter be extended under the power conferred by its first section. The new section 42, taken with the first section of the Legal Practitioners Act, will enable the Local Government of any such province to repeal these Acts if still in force in it.

5. Lastly, section 6 of the Bill amends article 27 of schedule I and article 11 of schedule II of the Indian Stamp Act, 1879, by omitting the words which confine their operation to advocates of the chartered High Courts. As section 41 of the Legal Practitioners Act, 1879, empowers the Chief Court of the Panjáb to enrol advocates, and as the Bill will confer similar powers on the other non-chartered High Courts, the words in question are, as represented by the North-Western Provinces High Court, out of place, so far as advocates are concerned, and should therefore be omitted.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[Second publication.]

The following Bill was introduced into the Council of the Governor General of India for the purpose of making Laws and Regulations on the 10th October, 1883, and was referred to a Select Committee :—

No. 22 OF 1883.

A Bill to amend the Indian Ports Act, 1875.

WHEREAS it is expedient to amend section 47 of the Indian Ports Act, 1875, so as to provide that the pensions or gratuities (if any) of persons employed in any port under that Act shall be charged to the Port Fund account of the port; It is hereby enacted as follows :—

XII of 1875.

Amendment of section 47 of the Indian Ports Act, 1875.

1. In the fourth paragraph of section 47 of the said Act, for the words "All expenses, including the pay and allowances of all persons upon the establishment of the port" the words "All expenses, including the pay, allowances, pensions and gratuities (if any) of all persons employed in the port" shall be substituted.

STATEMENT OF OBJECTS AND REASONS.

IT has recently been ruled by the Government of India in the Finance Department that service in establishments paid from port funds managed by the Government is qualifying service for pension, provided that the port fund pays for such service. It has now been brought to notice by the Government of Bombay that section 47 of the Indian Ports Act, 1875, which regulates the accounts of port-dues, does not authorize provision for pensioning employés either by investment of part of the port funds, or by the purchase of pensions from Government, or otherwise. As it seems to the Government that, when it administers a port fund, it should have the power of ordering the payment of pensions out of that fund, the present Bill, which modifies section 47 of the Indian Ports Act so as to give the Government the desired powers, has been prepared.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[Second publication.]

The following Bill was introduced into the Council of the Governor General of India for the purpose of making Laws and Regulations on the 10th October, 1883 :—

No. 23 OF 1883.

A Bill to give effect to certain unregistered instruments of partition relating to immoveable property in the Madras Presidency, and to remove doubts as to the titles conferred thereby.

WHEREAS it is expedient to give effect to certain unregistered instruments of partition relating to immoveable property in the Madras Presidency, and to remove doubts as to the titles conferred thereby; It is hereby enacted as follows :—

Certain unregistered instruments of partition to have same force and effect as registered instruments.

1. Notwithstanding anything contained in any Act to the contrary, instruments of partition relating to immoveable property in the Madras Presidency, which have been executed before the passing of this Act and have not been registered, shall have the same force and effect as if they had been registered under the law in force at the time when they were executed :

Provided that this Act shall not—

(a) apply to any unregistered instrument of partition which has been superseded by an instrument of partition duly registered, or

(b) affect the title of a transferee in good faith of property, whether he has or has not had notice of an unregistered instrument of partition relating to that property, or

(c) affect any right established by a final decree of a Court of competent jurisdiction.

Compensation to person deprived of right owing to transfer under section 1, clause (b).

2. When any person to whom any right has accrued on the partition or any person claiming under that person has by any such transfer as is mentioned in section one, clause (b), been deprived of any right created by the partition, he shall be entitled to recover compensation in damages from any sharer who has joined in the transfer or, if the sharer is dead, from the assets, if any, in the hands of the heirs of the sharer :

Provided that suit be brought within three years after the date on which this Act comes into force or within three years from the date of the transfer, if the transfer is made after this Act come into force.

STATEMENT OF OBJECTS AND REASONS.

SECTION 17 of the Registration Act, XX of 1866, relates to instruments of which the registration is compulsory, and section 18 to instruments of which the registration is optional.

2. Clause (7) of the latter section includes "Instruments of Partition" among other instruments. The High Court at Madras, shortly after the passing of the Act, recorded an extra-judicial opinion that partition-deeds relating to immoveable property were governed by section 18 of the Act, and that their registration was therefore optional. This opinion was promulgated and acted upon.

3. The Act of 1866 was repealed by the Registration Act, VIII of 1871, which, however, reproduced clause (7), section 18 of the former Act; but the Act of 1871 was in turn repealed by the Registration Act, III of 1877. Section 18 of this Act revised the list of documents the registration of which was optional, and partition-deeds have been omitted from the list.

4. The Madras High Court now says that, of late, grave doubts have been entertained as to the correctness of the opinion recorded by it in the matter of the registration of partition-deeds referred to above, and recommends that, in view of the serious consequences to persons who may have acted on the opinion of the Court, and of the dissensions which may be excited in families by the disturbance of such arrangements, resort should be had to legislation to quiet titles. The High Court further suggests that such legislation should take the form of the present Bill. Under these circumstances, the Government of India deems it the most fitting course to accept the proposals of the High Court without modification, and accordingly the present Bill has been prepared.

C. P. ILBERT.

D. FITZPATRICK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 16th OCTOBER 1883.

GENERAL REMARKS.—Rain continues to fall generally in the Madras Presidency and Mysore, and the condition of the unirrigated crops has much improved. Excessive rain has slightly injured the crops in the Nasik and Ahmednagar districts in the Bombay Presidency; but more rain is wanted for rice in some of the southern districts. The river maintains a low level in Sind where the weather is unusually warm. There has been no rain in Guzerat, but, excepting rice which has failed in parts, the crops there continue to do well. Heavy rain has caused slight damage to the *kharif* in Hyderabad, but the crops there and in the Berars are generally good. There has been little rain in Central India and Rajputana, but the weather is seasonable and prospects fair.

In Burma and Assam the rainfall has been general and favourable, and the rice crop promises well. In Bengal the fall continues light and partial, and, except in the north and east, the later rice crops on high lands have suffered considerably from the break, which is now beginning to affect the crops on the low lands as well. Rain is also needed in parts of the Central Provinces for rice, but prospects are generally favourable. Clear weather has prevailed during the week over the North-Western Provinces and Oudh and Punjab, where rain is much wanted for *rabi* sowings.

Harvesting of *kharif* crops continues in Southern India, and has been nearly completed in the Northern Provinces. *Rabi* operations are also in general progress, except in Bengal, the North-Western Provinces and Oudh, and the Punjab, where they are delayed for want of rain.

Prices are rising in Bengal, fluctuating in the Punjab, and generally stationary elsewhere.

The public health continues fair.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Oct. 17th)		
Bellary ...	2·01 (average of five stations).	Standing crops wet, generally good. Dry crops need much more rain. Harvest gingelly in parts, yield below average.
Kurnool ...	2·09 (average of nine stations).	Standing crops fair, but damaged a little by excessive rain. Harvest *cholum*, *sajja*, and indigo, yield half to three-fourths. Cattle-disease in five taluks.
Ganjam ...	1·10 (average of nine stations).	Standing crops generally thriving. One death from cholera at Berhampore.
Kistna ...	·94 (average of eight stations).	Standing crops generally good. *Cholum* in two taluks suffering from grub. *Cumboo* harvested, yield below half. Small-pox, guinea-worm, and cattle-disease in parts.
Chingleput (Madras) ...	1·20 (average of eleven stations).	Standing crops reviving in three taluks, elsewhere good. Harvest *kar*, paddy, &c., yield one-fourth. Small-pox and cattle-disease slight in parts.
Coimbatore ..	3·11 (average of sixteen stations).	Standing crops benefited by recent rain. Harvest paddy and dry crops in parts, yield average. Cholera in Karur, 17 deaths. Fever slight in two taluks.
Tanjore ...	1·65 (average of twelve stations).	Standing crops generally good. Harvest paddy, *cholum*, *ragi*, *cumboo*, and *varagu*, yield below average. Eight deaths from cholera.
Madura ...	1·84 (average of eight stations).	Standing crops fair. Harvest paddy in parts, yield average. Cholera slight in parts of Dindigul taluk.
Malabar ...	2·67 (average of thirteen stations).	Harvesting first crop nearly over. Second crop cultivation progressing in all taluks. Small-pox in nine taluks; fever and cattle-disease slight in parts.
Travancore ...	3·568	Harvesting over. Cultivation progressing. Fever prevails. *General Remarks.*—General prospects good.
Bombay—(Oct. 17th)		
Kurrachee ...	No rain	Weather sultry. River at Kotri on 15th 7 feet 7 inches against 9 feet 11 inches on same date last year. Fever in 10 talukas, cattle-disease in two talukas. Rats doing some damage in Mirpur Botoro and Shahbandar talukas. Harvesting commenced in places. Wheat, red rice, and *bajri* in Kurrachee 26, 28 and 34, in Kotri 32 and 32, in Tatta 24, 30 and 36, and in Mirpur Botoro 22, 28 and 32 lbs. per rupee, respectively.
Hyderabad ...	......	*Kharif* harvesting continues. *Rabi* operation in progress. River has fallen 1 foot 4 inches since last week and was 2 feet 4 inches lower on 15th instant than on some date last year. Weather unusually hot night and day. Fever in seven, small-pox in three, and cattle-disease in four talukas. Wheat 25, *bajri* 40, *juari* 50, red rice 26, and white rice 22 lbs. per rupee.
Ahmedabad ...	......	Reaping of *bajri* and *juari* progressing, other crops healthy. Fever in some talukas. *Bajri* 28½ and wheat 25 lbs. per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Baroda ...	No rain	Slight cholera in Naosari, Gandevi, and Songad mahals; small-pox in Pisnagar. Cattle-disease in Harif mahal of Kadi division. Rice crop almost failed in Kadi division. Harvesting of *bajri* commenced in some places. Prices—*bajri* 28 and rice 23 lbs. per rupee.
Surat ...	No rain	Cutting of rice, *nagli*, and grass commenced; other crops healthy. Cattle-disease in Olphad. Cholera in Chikhli 6 cases, 4 deaths, in Bulsar 14 cases, 7 deaths, and in Pardi 65 cases, 16 deaths. Destruction of locusts in Bulsar, Walad and Pardi carried on vigorously. *Juari* 42 and *nagli* 43 lbs. per rupee.
Nasik ...	Rain continues with breaks.	Cotton, *bajri*, *urd*, and *mung* have suffered from heavy rain. Locusts doing damage in places. Cholera in Kalwan taluka, 12 attacks, 7 deaths. Cattle-disease in Niphad taluka. *Bajri* 31, wheat 28, and rice 22 lbs. per rupee.
Colaba (Bombay) ...	Slight rain on 11th; total of week ·24.	Total rainfall to date 80·12, being 10·40 above average. Abnormal temparature 0° to 2° warm. Vapour in air excessive, except on 14th when it was defective. Abnormal wind easterly. Thunder and lightning daily, except on 13th.
Poona ...	Rain throughout the district.	*Bajri* 41 and *juari* 50 lbs. per rupee, in Poona *bajri* 34 and *juari* 43.
Ahmednagar ...	Rain maximum at Nevasa 3·0 and minimum at Rahuri, ·08.	Damage caused to the *kharif* crop by excessive and incessant fall of rain is estimated to be on an average about 4 annas; *kharif* crop is being harvested in Parner, Kopergaon, Sangamner, and Akola talukas. Sowing of *rabi* is in progress throughout the district. Cattle-disease prevails to a slight extent in Kopergaon. Cholera 29 attacks, 16 deaths. *Bajri*—maximum 57 lbs. in Jamkhed, minimum 39 in Sangamner. *Juari*—maximum 72 in Shrigonda and minimum 51 in Akola.
Sholapur ...	·52	Total rainfall 37·24. *Kharif* in good condition, *bajri* being reaped in places. Cholera case 1 fatal *Juari* 65 and *bajri* 52 lbs. per rupee.
Dharwar ...	Rain at all stations except Mugud and Nargund; maximum being at Gadag 3·58 and minimum at Dharwar ·22; Karajgi, 3·50; Ranibennur, 3·0; Hubli, Navalgund, and Mundargi nearly 2·0; elsewhere less than 1·0.	Crops reviving, but heavy rain required for rice. Cotton sowing almost finished and wheat, gram, and other *rabi* crops being sown. Slight ague in Dharwar and Hangal, and cattle-disease in three talukas. Prices stationary.
Kanara ...	Karwar, 1·85; Kumpta, 5·23; Sirsi, 1·06; Hallial, 1·32.	Total rainfall 138·40. Small-pox continues in Hanawar and Sidapur. Rice harvest continues on coast. Pepper growing. Common rice in Karwar 12½ seers and in district average 15 seers per rupee.
Rajkot ...	·34	Total rainfall 27·97. General health feverish. Weather very hot and muggy. *Bajri* 29 and *juari* 35 lbs. per rupee.
		General Remarks.—River still falling in Sind. Crops generally good, but slightly damaged by excessive rain in Nasik and Ahmednagar, and by locusts in Tanna, Colaba, and Satara. *Kharif* harvest and *rabi* sowing in progress in most districts. More rain wanted in parts of Dharwar, Kaladgi, and Belgaum. Cholera, fever, and cattle-disease continue in several places.
Bengal—(Oct. 17th)		
Chittagong ...	3·16	Weather rather seasonable. Prospects favourable. Rain has done good to standing crops. Prices steady. Cattle-disease ceased.
Dacca ...	1·70	*Ashini* paddy being harvested; cutting of jute nearly completed; *amun* blossoming. Prospects good.
24-Pergunnahs (Calcutta)	·71	Early crops nearly all harvested. Prospects of rice crop in low lands still favourable. A heavy downpour of rain required. Prices stationary. Health of people generally good.
Moorshedabad ...	·22	Weather hot and sultry, with cool mornings. Paddy is fast drying up from want of rain.
Rajshahye ...	1·41; very slight local showers.	A large part of *amun* crop lost. Public health fair.
Burdwan ...	·74; Cutwa, ·05; Culna, ·53.	Rainfall insufficient. Prospects bad. Health fair; a few cases of cholera reported.
Rungpore ...	*Nil*	Weather hot. Prospects of crops fair, but rain much wanted. Fever prevalent.
Bhagalpur .	*Nil*	Prospects not favourable; rice on high lands has suffered much, on low lands it has also sufferred. Price of rice has risen. No moisture for *rabi* sowings.
Purneah ...	*Nil*	Prospects of rice on high lands damaged by want of rain, rest fair. Rain wanted for *rabi* ploughing. Common rice 18 seers per rupee with rising tendency. Fever prevails.
Patna ...	*Nil*	Paddy much suffering for want of rain. Reaping of *bhadoi*-crops well nigh completed; sugarcane and cotton promising still. Cholera still reported from Behar sub-division.
Durbhunga ...	*Nil*	Weather very hot. Prospects are alarming; for want of rain crops must suffer seriously. Prices rising.
Hazaribagh ...	*Nil*	Weather warm and seasonable. Crops already suffered a great deal for want of rain. Outturn will be poor this year. Prices of food-grains rising gradually. Public health good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Cuttack ...	·41	Early rice being reaped; late rice doing well, but wants more rain. Price of rice has risen slightly. Public health good. Scattered cases of cholera in and around the town of Kendrapara.
		General Remarks.—There has been slight rain in some parts of Bengal Proper and Orissa during the week; it has been of no appreciable benefit to the rice crop which has begun to suffer even in the low lands; in the high lands the crop is said to have already suffered a great deal in several places. Prospects, however, are good in some parts of Northern and Eastern Bengal, where there has been sufficient rainfall. *Rabi* sowings also are being everywhere delayed for want of moisture in the soil in several districts. Prices show a marked tendency to rise owing to the unfavourable prospects of the rice crop. General health of the province is pretty fair, though fever is prevalent in some districts.
N. W. Provinces and Oudh—		
Benares (Oct. 16th)	No rain	Both *rabi* and *kharif* crops will suffer. Rain is urgently wanted for *rabi* sowings. Fever continues. Prices rising slightly.
Allahabad („ 17th)	......	Weather light and fine; nights getting cooler. Rain much required for *rabi* sowings and for the *juari* and late rice. Health good. Prices mostly unchanged.
Gorakhpur („ 14th)	No rain	*Rabi* sowings in progress. Cholera decreasing. Prices steady.
Jhansi („ 15th)	No rain	The *rabi* crops will suffer from want of rain and in some places the *kharif*, *e.g.*, those on *rakar* soil in parganas Jhansi and Moth. Water in tanks and most wells deficient. Prices pretty steady. Health of people good. Little or no cattle-disease.
Agra („ 16th)	No rain	*Kharif* crops continue to dry up; *bajri* being cut. Fever in three parganas. Prices almost stationary.
Bareilly („ „)	......	Rain wanted. Rice has suffered. Health good. Prices stationary. Barley has fallen.
Meerut („ „)	No rain	Ploughing for *rabi* progressing; gram and peas being sown. Health good. Prices steady.
Kumaun („ „)	......	Weather fair. *Kharif* crops all cut; ploughing for *rabi* has commenced. General health good. Cattle-disease continues. Prices slightly fallen.
Lucknow („ „)	No rain	Weather clear. Gram, wheat, peas, &c., are being sown. Rain wanted very much for the *bewat* crops. Condition of people and cattle good. Markets well supplied. Prices steady.
Partabgarh („ „)	No rain	*Mothi*, *jarhan*, *bajri*, and *juari* have suffered from the drought. Gram and peas being sown. General health good. Prices rising.
Sitapur („ „)	......	Gram, peas, and wheat sowing progressing. Prices fluctuating, but with downward tendency.
Fyzabad („ „)	No rain	*Kharif* crops nearly cut; sowing of wheat and peas commenced. Public health good.
Rae Bareli („ 15th)	No rain	Wind westerly. *Juari*, *moth*, and *urd* begun to suffer for want of rain; *dhan* being irrigated. General health good. Supplies abundant. Prices steady.
Cawnpore („ 16th)	......	Cloudless weather. Harvesting of *kharif* crops in progress and preparation for *rabi* sowings. *Juari* on high land is suffering from drought. Fever and cholera abating. Cattle-disease reported last week continues. Slight fall in prices.
Farukhabad („ „)	......	Weather clear and seasonable. Fever on the decrease, otherwise health good. Crops fairly promising, but owing to scanty dew and want of later rains, lighter and dry soils will not yield as well as was expected.
		General Remarks.—The *kharif* harvest is progressing or finished; some loss has been caused by want of rain, but the outturn generally is not complained of. Rain is much wanted for the rabi sowings; none has fallen during the week. Fever and cholera are abating. The public health is good, and the markets are well supplied.
Punjab—(Oct. 17th)		
Delhi ...	......	Health good. Rain wanted. Prices falling.
Hissar ...	......	Health good. Rain much wanted, especially in Rohtak district. Prices stationary.
Umballa ...	......	Health good. *Kharif* harvest nearly completed. Yield expected to be below average. Rain much wanted for *rabi* sowings. Prices stationary.
Jullundur ...	......	Health good. *Rabi* sowings commenced. Rain wanted. Prices falling.
Amritsar ...	.....	Health and condition of crops good. Rain wanted. Prices rising slightly.
Sialkot ..	......	Health and harvest prospects good. Prices stationary.
Ferozepore ...	......	Health and harvest prospects good. Prices rising slightly.
Lahore ..	......	Health good. Prospects much improved. Prices steady.
Rawal Pindi ...	Slight rain	Seasonal fever in Rawal Pindi and Attock tahsils, otherwise health good. *Kharif* prospects average. Prices falling slightly.
Mooltan ...	......	Health good. *Kharif* being harvested. Prices fluctuating.
Dera Ismail Khan ...	......	Health good. *Rabi* ploughings in progress. Prices rising.
Peshawar ...	......	Rain wanted for *rabi* sowings. Slight fever prevalent. Prices falling.
		General Remarks.—The health and harvest prospects of the province are generally good, though rain is much wanted in some districts.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Central Provinces—(Oct. 17th)		
Nagpur ...	......	Weather cloudy. *Rabi* sowings progressing. Health good. Prices steady.
Jubbulpore ...	·75	Weather cloudy at times. Crops in fair condition; rice on sandy soil suffering from want of moisture; cotton promising; *rabi* sowings commenced. Wheat 22 and rice 14 seers per rupee. Health good.
Saugor (Oct. 16th)	......	Weather occasionally cloudy. Cotton and other crops favourable; *rabi* sowings progressing. Health good. Prices stationary.
Seoni ...	·03	Weather cloudy and warm. *Rabi* sowings progressing. Fever prevalent. Prices slightly fallen.
Hoshangabad ...	......	Weather hot. *Kharif* crops good; *rabi* sowings commenced. Health good. Wheat 15 and rice 10 seers per rupee.
Khandwa ...	·04	Weather clear. Twelve deaths from cholera. Prices steady.
Raipur ...	·75	More rain wanted for both *rabi* and *kharif; mung*, linseed, and castor being sown. Cholera decreasing. Prices steady.
Sambalpur (Oct. 13th)	......	Weather favourable with indications of rain which is necessary for the late rice crops. Health good. Common rice 34 seers per rupee.
		General Remarks.—Prospects continue favourable. Sowings of linseed and gram in progress.
British Burma—(Oct. 13th)		
Akyab ...	3·07	Total rainfall 179·57. One death from cholera in Rathandoung otherwise public health good. 74 deaths of cattle in two townships, elsewhere health of cattle good. General appearance of crops good. Season favourable.
Rangoon ...	1·03	Total rainfall 76·36. One death from small-pox, otherwise public health good. Price of paddy Rs. 79 to 105 per 100 baskets.
Bassein ...	2·72	Total rainfall 86·43. Public health good. 24 deaths of cattle. Condition of crops satisfactory except in Thaboung, Kyoukpyaw, and Southern townships, where water has been too high, and paddy is partially spoilt. Price of paddy Rs. 90 to 100 per 100 baskets.
Amherst (Moulmein) ...	0·78	Total rainfall 164·05 Public health and health of cattle good. Crops reported healthy. In Moulmein town public health and health of cattle good. Crops healthy.
Toungoo ...	1·50	Total rainfall 77·44. Public health good. Price of paddy Rs. 65 per 100 baskets.
Kyoukphyoo ...	1·99	Total rainfall 156·08. Public health and health of cattle good. No alteration in prices of paddy.
Sandoway ...	3·6	Total rainfall 206·49. One death from cholera in Northern township, 9 in Letwetshe, 3 in Letweanouk, 2 in Dadiling circle, Central township. Crops continue healthy.
Hanthawaddy ...	......	Public health and health of cattle good. Ploughing progressing in Hlaing township; ploughing completed in Hmawbitwante and Tamanaing townships. Wages of ploughing labour 60 baskets of paddy per man in Hlaing township. Price of paddy from Rs. 90 to 100 per 100 baskets.
Pegu (Oct. 6th)	2·40	Total rainfall 117·01. Public health good. Slight cattle-disease in Zainganaing and Kadoubaw circles, otherwise health of cattle good. Crops promising in Syriam sub-division and better than last year. Price of paddy Rs. 80 to 95 per 100 baskets.
Do. („ 13th)	1·82	Total rainfall 118·83. Public health and health of cattle good. Crops promising. Prices of paddy unchanged.
Tharrawaddy ...	......	No report received.
Prome ...	4·38	Total rainfall 45·62. Public health good. A few cases of cattle-disease still reported from Padoung township, but the number of deaths is small. Ploughing and planting progressing. Crops in good condition.
Thonegwa ...	2·43	Total rainfall 82·64. Public health and health of cattle good. Re-planting still going on in Shweeoung township. About 1,000 acres in Zandoon township damaged by floods, but replanting continues. The third and last rise of the river has commenced, not so high as last rise as yet. Slight damage to crops by insects in Wakamah circle, Dedayi township. Agricultural prospects in other townships good. Price of paddy Rs. 80 to 100 per 100 baskets.
Henzada ...	9·76	Total rainfall 80·28. One death from small-pox in Henzada township, otherwise public health good. Health of cattle good. General appearance of crops good.
Thayetmyo ...	9·52	Total rainfall 39·76. Public health good. Crops promising. Price of paddy Rs. 100 per 100 baskets.
Shwaygyin ...	3·59	Total rainfall 137·24. Four deaths from small-pox in Yelacoond, otherwise public health good. Ten deaths of cattle in Kyaukhmaw circle. Crops slightly damaged by floods in Kawkameh circle, otherwise progressing favourably.
Tavoy ...	4·93	Total rainfall 190·36. Public health and health of cattle good. Prospects of crops good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
British Burma—*contd.*		
Mergui (Oct. 6th)	7·80	Total rainfall 156·80. Public health good. Cattle and crops healthy. 34,700 acres ploughed and sown. Prices of paddy Rs. 90 per 100 baskets. *General Remarks.*—Public health good, except in Akyab. Mortality among cattle appears to be decidedly on the decrease. Rainfall up to date all over the province is considerably less than last year, but agricultural prospects reported on favourably. Area under cultivation in some districts reported larger than last year, and crops said to be in good condition. The heavy rainfall for the week in Thayetmyo has partially revived the crop, and given promise of a better harvest than was anticipated before. Prices of paddy continues steady with an upward tendency owing to a rise in the home market.
Assam—(Oct. 17th)		
Gauhati ...	0·2	Weather seasonable. Mornings slightly foggy. Nights cool. Public health fair. Land being ploughed for mustard. *Sali* paddy coming up well. Prospects good.
Sylhet ...	2·13	State and prospects of crops good. Public health also good.
Cachar ...	3·48	Weather warm. Reaping of *aus* crops nearly finished. Prospect of *sali* crops good. Ploughing for winter crops commenced. Common rice 17¾ seers per rupee. Public health good.
Dibrugarh ...	2·16	Weather rainy. Prospects of crops good. Public health good.
Mysore and Coorg—(Oct. 17th)		
Bangalore ...	7·01	Crops in good condition. Prospects favourable.
Mysore ...	6·28	Weather favourable. Crops in good condition.
Mercara ...	4·57	Heavy showers daily. Coffee berries well matured. Cardamoms are being picked. *Ragi* crop in East Coorg being harvested. *General Remarks.*—Rain has fallen throughout the province. Crops considerably improved. Prospects favourable. Health good. Prices satisfactory. Bangalore—rice 10½, *ragi* 31, and horse gram 29 seers per rupee. In the province average—rice 16, *ragi* and horse gram 28 seers per rupee.
Berar & Hyderabad—(Oct. 17th)		
Amraoti ...	·37	Crops in good condition. *Rabi* sowings commenced. Wheat 16 and *juari* 26 seers per rupee.
Akola ...	·52	Crops in good condition. Preparations for *rabi* sowings progressing.
Hyderabad ...	0·7	Total from 1st January 28·95. Standing crops prospering except in one taluka where excessive rain has slightly damaged some of the *kharif* crops. Cholera still prevails in a mitigated form. Prices—wheat 15¾, coarse rice 11, white *juari* 23; yellow *juari* 27¾, and *tur* 23¼ seers per current sicca rupee.
Central India States—(Oct. 17th)		
Indore ...	·20	Evenings and mornings are cooler and the cold weather is setting in, though clouds occasionally collect. Health good. Prices slightly falling. Agricultural prospects good at present.
Morar (Gwalior) ...	*Nil*	Health and prospects good.
Sutna ...	......	Weather clear and hot. Rain required for *rabi* sowings. Health good.
Rutlam ...	......	No report received.
Neemuch ...	1·34	Weather seasonable. Health and prospects good.
Goona ...	*Nil*	Health and prospects good.
Bhopal ...	......	No report received.
Agar ...	*Nil*	Agricultural prospects satisfactory. Health good.
Sehore ...	*Nil*	Weather clear. Prospects and public health good.
Nowgong ...	*Nil*	Rain wanted for *rabi* sowing. *Kharif* prospects fair. Public health good. Prices steady.
Manpur (Bhopawar) ...	3·40	Prospects good.
Rajputana—		
Abu (Oct. 17th)	No rain	Weather rather cloudy, cool, and seasonable.
Sirohi (" 14th)	No rain	Condition of tanks and wells good. Health and crop prospects good. Weather fine and warm.
Marwar (" 12th)	Rain reported from districts though not general.	Eight months' water in Jodhpore city. Tanks and wells are filling up. Health good. Crop prospects good. Weather cloudy and close. Prices stationary.
Meywar (" 13th)	......	Tanks and wells full. Health a little fair. Crop prospects good. Weather favourable for sowing spring crops.
Harowti (" ")	Shahpura, ·09; elsewhere *nil.*	Weather clear. Health good. Prices steady. Crop prospects generally favourable.
Jhallawar (" 12th)	Thunder and showers	Health and prospects good.
Ajmere (" 16th)	No rain	Prospects fair. Health good.
Jeypore (" 16th)	Slight rain	Weather seasonable. *Kharif* harvesting commenced. Outturn below average. *Rabi* sowing in progress. Prices steady. Health fair.
Bhurtpore ...	......	No report received.
Ulwur (Oct. 16th)	No rain	Prices rising, *bajri* 20, *juari* 23, and gram 23 lbs. per rupee. Health good. Fever reported in three tahsils.

Extract from the Proceedings of the Government of India, Revenue and Agricultural Department (Meteorology),—under date Simla, 19th October 1883.

READ the following :—

Memorandum of the Chief Weather Characteristics in the month of September 1883 in India,—dated 6th October 1883.

IT was noticed in the last monthly report that, towards the close of the month of August, an important change in the weather took place; that the drought which had prevailed over North-Western and Central India for about a month had come to end; damp rainy weather had set in over the North-Western Provinces, Central Provinces, and Bombay; and, quite at the close of the month, had reached the extreme north of the Punjab. This weather lasted far into September, the rainfall in the Punjab, Rajputana, and the Central Provinces being so copious as to raise the total fall of the month considerably above the normal average; and, in a measure, to compensate for the previous deficiency. These conditions did not, however, last beyond the middle of the month; the weather then cleared up; the rains ceased, and the sky became almost clear of cloud.

In Western India, after the constant rain which prevailed so generally at the beginning of the month, the weather showed a decided tendency to clear up; but, about the 22nd, a small cyclonic depression appeared between Bombay and Sholapur, and the month ended, as it began, with daily and rather heavy rain. In Bengal, Assam, and Burma the weather was such as is usual in September, but in the south of the Peninsula it was finer than the average and the rainfall deficient.

In the Punjab there were only ten wet days (September 1—10), but the amount of rain which then fell was so large as to exceed by 3¼ inches the normal average fall of the whole month. The pressure was below the average from the 1st to the 15th, and above it from the latter date till the close of the month; and the humidity varied in the opposite direction, the excess at some stations at the beginning of the month being as much as 40 per cent. of saturation. The usual rise of temperature followed partially on the cessation of the rains; Peshawar, at the close of the period, showing a mean temperature, exceeding the average by 3°; but Sialkot, Lahore, and Delhi, on the other hand, were between 2° and 3° below it.

In the North-Western Provinces the period during which rain fell was longer, lasting from the 1st to the 18th, but the amounts were not so large, and the total at the close of the month was 1½ inches deficient. Pressure and humidity varied in the same manner as in the Punjab, and the temperature variations were similar. Towards the close of the period the mean daily temperature at several stations considerably exceeded the average of the whole month; the excess from the 19th to the 30th being 3·2° at Bareilly, 4·2° at Agra, and 3·8° at Jhansi.

Assam had 25 wet days, and the month's rainfall was 2½ inches more than the average. The date at which the pressure rose above the average was later in this than in the preceding provinces, not occurring until the 20th.

In Bengal, 26 of the 30 days were wet, but the total fall was 3½ inches below the normal amount. The temperature variations were slight and unimportant.

The Central Provinces, Central India, and Berar had 24 wet days; the rainfall on some occasions being heavy, so that, at the close of the month, the total was 5 inches in excess of the average. The weather was, on the whole, rather cool; a mean deficiency of between 1° and 2° of temperature being reported generally, and 3° at Khandwa.

Over the greater part of Rajputana the rainfall ceased on the 14th, but previously to that date rain had fallen on every day, and at Mount Abu the fall continued until the close of the month. Here also the temperature was below the average, the deficiency at Ajmere being 3°.

In Sind and Gujarat rain fell daily until the 6th; it then ceased for a week; but from the 13th onward occasional showers occurred at intervals. The total number of rainy days was 11, and the fall was about the average.

In Bombay there were 25 wet days. Rain fell daily during the first fortnight; it then almost entirely ceased, while the humidity of the atmosphere fell considerably below the average; but about the 23rd the air became much damper; rain recommenced and fell on each day till the end of the month. The total amount was 1 inch above the average, while the temperature was between 1° and 4° below it.

In the south and west of the Peninsula and in Ceylon the month's rainfall was deficient; in the latter region there were only 7, and in the former 15 wet days.

On the Coromandel Coast there were only 10 wet days; the rainfall was 3 inches less than the average, and the temperature was high almost throughout.

Burma had, as usual, the greatest number of wet days, *viz.*, 28 out of 30, and the total rainfall only varied by an insignificant amount from the average. Both temperature and humidity were deficient.

In those provinces where the rains have apparently ceased, the change occurred—

In the Punjab on the 10th.
" Rajputana on the 14th.
" North-Western Provinces on the 18th.
" Central Provinces on the 25th.

Since the beginning of the season, the rainfall has been in excess at about 33, and deficient at about 59, of the reporting stations; so that, on the whole, it has been decidedly below the average.

W. L. DALLAS,

Assistant Meteorological Reporter to the Government of India.

ORDER.—Ordered, that the Memorandum be inserted in the Supplement to the *Gazette of India.*

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House, Simla, on Wednesday, the 10th October, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Honour the Lieutenant-Governor of the Panjáb, K.C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Sir A. Colvin, K.C.M.G.
The Hon'ble W. W. Hunter, LL.D., C.I.E.
The Hon'ble J. W. Quinton.
The Hon'ble D. G. Barkley.

CATTLE-TRESPASS ACT, 1871, AMENDMENT BILL.

The Hon'ble MR. ILBERT moved that the Report of the Select Committee on the Bill to amend the Cattle-trespass Act, 1871, be taken into consideration. He said:—

"The object of this Bill is to enable Local Governments to transfer to local boards and similar authorities certain functions, such as the management of pounds and the like, which under the existing law have to be performed either by the District Magistrate or the Local Government; and also to hand over to local funds under the management of those authorities certain sources of income which are derived from the surplus proceeds of the sale of impounded cattle, and which, under the present Act, have to be applied under the orders of the Local Government to the construction of roads and bridges and other works of public utility. The Select Committee to which the Bill was referred have made the measure somewhat more elastic by omitting the reference to the specific sections of the Cattle-trespass Act, and thus empowering Local Governments to transfer to local bodies any such functions as might, in the opinion of the Local Government, be appropriately discharged by those local bodies, and also to hand over, not necessarily the whole, but either the whole or any part, of the sources of income to which I have referred. The Bill in this form is in accordance with the provisions to the same effect introduced into the various local self-government measures already passed, or in course of being passed, by this Council, and will remove certain technical difficulties which stand in the way of the Governments of Madras, Bombay and Bengal giving effect to their proposals for the extension of local self-government by means of legislation of their own. These are the only alterations which have been made."

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill as amended be passed.

The Motion was put and agreed to.

LAND IMPROVEMENT LOANS BILL.

The Hon'ble MR. QUINTON moved that the Report of the Select Committee on the Bill to consolidate and amend the law relating to loans of money for agricultural improvements be taken into consideration. He said :—

"MY Lord, it will be in the recollection of the Council that this Bill was introduced in October last by my friend Mr. Charles Crosthwaite, and that on that occasion, and at a subsequent meeting of the Council when the Bill was referred to a Select Committee, observations were made by the mover, by the Hon'ble Major Baring and by the Hon'ble Sir Steuart Bayley on the subject of agricultural banks, which attracted much attention and excited much public interest. The intention then was to legislate in this Bill for the promotion of the application, not merely of State loans, but also of private capital to the improvement of land; but, on closer enquiry, the latter was found to be a question of so wide a nature, and of such great importance, and to be attended with so many difficulties of detail, as to demand for its introduction a separate measure, instead of being brought in, as it were by a side wind, in a Bill of which it was not the main object.

"My hon'ble friends of the Executive Council who may speak after me will, no doubt, explain that the subject of agricultural banks has not been laid aside, and that it has been omitted from the present Bill solely on account of its importance and magnitude.

"This measure is accordingly one of a simpler character than that originally introduced, and is meant merely to consolidate and amend the law relating to loans of money *by the Government* for agricultural improvements.

"The necessity for amending the present law, which is contained in Acts XXVI of 1871 and XXI of 1876, was forcibly pointed out by the Famine Commission. As a protection against famine, no measures can be more effective than successful undertakings to improve permanently the productive powers of the soil; and, among such undertakings, the construction of wells, tanks and other works for the storage, supply and distribution of water has in all ages in India been regarded with approbation, and fitfully prosecuted, alike by the people and their rulers. The artificial lakes of Bundelkhund and Central India, the large tanks found all over the Madras Presidency, the inundation-canals of the Western Panjáb and the Madras Delta, are monuments of the anxiety of the Government of the day to counteract the disastrous effects of the failure of the periodical rainfall on which Indian agriculture is so dependent; and the Ganges, the Eastern and Western Jumna, and the Orissa canals, the anicuts and distribution-channels of the Godavari and Kistna, and on the Bombay side Lake Tifa and the Ekrakh and Ashti tanks testify that the British Government has not lagged behind its predecessors in efforts to protect its subjects from the ravages of famine. But the field is too vast to be completely covered by the direct exertions of any Government, however powerful, and it has always been the policy of the Government of India to encourage the people themselves to execute smaller protective works by giving them advances for that purpose from the public treasury.

"To give legal effect to this policy, which had previously been carried out on the authority of the Executive Government, was the object of the enactments to which I have just referred; but unfortunately their provisions, when put in practice, were found to be either defective on the one hand, or too stringent on the other, and they failed consequently to realise the intentions of their framers. The Famine Commission enumerated several obstacles to their successful operation, the reports received from Local Governments and their officers on this Bill allude to others, and contain many valuable suggestions, and a committee of experienced Revenue officials considered the whole subject in Calcutta last cold weather, and reported on it to the Revenue and Agricultural Department of the Government of India. The information derived from these different sources has been carefully weighed and sifted by the Select Committee; and I shall now proceed to state briefly to the Council the alterations we pro-

pose in the existing law, and some of the reasons which have induced us to adopt them.

"Before doing so I may premise that the Select Committee were unable to accept a recommendation of the North-Western Provinces Board of Revenue to amalgamate with the present Bill the Northern India Taḳḳávi Act. That Act gives power to the Local Government to make advances to the owners and occupiers of arable land for the relief of distress, for the purchase of seed or cattle and other like purposes. Its object is quite distinct from that of the present Bill. It is intended to secure Government from loss in making advances for the relief of temporary distress, whereas the Bill now before us is meant to promote the lasting improvement of the productive powers of the soil. The Northern India Taḳḳávi Act requires for its application in each case but little preliminary enquiry, and the loans made under it are petty and are generally recovered within the year; whereas in any system of loans for land-improvement the enquiries must of necessity be more tedious, the sums advanced will, as a rule, be of far larger amount, and the time fixed for their repayment will be far longer. It would thus be difficult, if not impossible, to frame a single enactment which would admit of both objects, namely, the improvement of the land and the relief of temporary distress, by loans from Government, being carried out to the fullest extent.

"The Northern India Taḳḳávi Act has been brought into operation with conspicuous success in parts of the North-Western Provinces and Oudh. By means of it, the vigorous and intelligent exertions of my friends Messrs. M. Conaghey and La Touche have effected the reclamation of extensive tracts of land rendered barren by kans grass in the Banda district; and in the Rae Bareli district in 1880, my friends Messrs. Arthur Harrington and Bennett, by making liberal advances for the construction of temporary wells and the purchase of plough-cattle and seed, were able to save thousands of cultivators from penury, if not from famine.

"We considered it altogether inexpedient to endanger the successful working of an Act under which such benificent results have been attained by amalgamating it with one intended to effect a different object, and we declined to seek for legislative symmetry at the risk of practical failure.

"I now turn to the provisions of the Bill.

"By section 4 we authorise Government to advance money for the purpose of making improvements on land to any person having a right to make those improvements, or, with the consent of that person, to any other person; but we do not attempt to define what persons have the right to make the improvements. We empower no person, who has not the right already, to injure another by making an improvement which might alter the extent of their respective interests in the holdings. It has been objected that we enable tenants to make improvements without the consent of their landlords, but this is exactly what we carefully avoid doing. Whether a tenant can make an improvement with or without his landlord's consent is a question to be settled by the law of landlord and tenant in different provinces. In the Central Provinces, the respective rights of the two parties on this subject have been explicitly laid down in the Act recently passed here; in the Bengal Tenancy Bill, now pending before Council, the same point is provided for; and in the North-Western Provinces I believe I am correct in saying that custom recognises the right of certain classes of tenants to make such improvements. In no province is the law in force on the point, whatever it may be, in any wise altered by the Bill.

"In section 4 we also define what we mean by improvements. The list is substantially identical with that contained in the present law; but, in order to provide for works which might be called for by the circumstances of one province and not of another, we enable Local Governments, with the sanction of the Governor General in Council, to bring under the category any other works of a like nature. Vats for agricultural purposes, farm-buildings, planting topes, channels, preservation of the soil on ridges and slopes, and in the villages

of hilly tracts, and the prevention of landslips and of the formation of ravines and torrents have all been suggested from different quarters as fit objects for which loans might be advanced.

"By making subject to the sanction of the Governor General in Council the exercise of the power conferred upon Local Governments, we endeavour to guard against hasty action likely to affect private rights.

"One main reason given for the reluctance of agriculturists to avail themselves of the provisions of the present law is the delay in obtaining the loan caused by the elaborate enquiries prescribed by the Act on receipt of the application. By section 5 we leave it optional with the officer to whom the application is made to issue a notice calling for objections. In provinces where a record-of-rights is carefully maintained, and where the rights of the applicants to make improvements are clearly laid down by law, it will rarely be necessary to issue the notice, and much delay in granting the loan will thereby be avoided; but where these favourable conditions do not exist, a slower procedure is inevitable, and notice will issue as a matter of course.

"When questions of title or the like are raised which the officer feels that he cannot satisfactorily dispose of, the parties will be referred for a settlement of their disputes to the Courts of law; and, until such settlement be made, no loan will be granted.

"As explained in the Statement of Objects and Reasons, section 6 prescribes with some detail, following the model of the English Acts on similar subjects, the mode and the period in which the loans shall be repaid. They must be repaid by instalments, in the form of annuity or otherwise, within a period not to exceed 35 years, unless the Local Government and Governor General in Council, having regard to the durability of the work for the purpose of which the loan is granted, and to the expediency of the cost of the work being paid by the generation of persons who will immediately benefit by it, think proper to extend it beyond that term. The existing law laid down no period for the repayment of these loans. The practice was to require repayment within a certain number of years, fixed with reference not to the durability of the work but to the amount of the sum borrowed. The result was that small men who had taken loans were compelled to repay principal and interest before they had realized the full benefit of the works for which the loans had been granted, as the amount of the annual instalments was generally out of all proportion to the extent of the annual profits derived from the improvement. It seemed to us, therefore, that the law should clearly indicate the policy to be universally adopted, and show that the object aimed at by the Government of India is not the speedy realization of the loans, but the promotion of improvements on the land.

"I believe I am warranted in saying that the Government of India has no wish to make money out of these transactions, and that, so long as the interests of the general tax-payers are guarded by adequate security for the payment of instalments sufficient to cover risk of loss, the period fixed for the liquidation of the debt may be a long one.

"We were unable to adopt a suggestion, emanating from high Revenue-authorities, that repayment of the principal lent should never be required but that the loan should be commuted into a permanent addition to the land-revenue equivalent to the interest on the sum advanced. This plan, specious though it seems, we found to be open to the fatal objection of mixing up inextricably the affairs of the State in its capacity of capitalist with its business as a landholder, and we believed it impossible to devise a plan which would reconcile borrowers to paying an annuity for ever on account of an improvement the duration of which is necessarily temporary.

"Section 7 is an expansion of the corresponding section of the present law, empowering Government to recover, with interest (which by some unaccountable oversight was omitted from Act XXVI of 1871) and costs,

advances made under this Act from the borrower or his surety, or from the land improved or hypothecated, as if it were an arrear of land-revenue; and we have added a proviso protecting interests in the land which existed before the date of the loan.

"We have further authorised the Collector, on the application of a surety from whom any arrears due by the principal debtor on account of a loan, interest or costs have been realized, to recover in a similar way such sums from the borrower or from the land. This provision is intended to induce persons to come forward readily as sureties.

"In section 8 we have to some extent adopted a suggestion of the Government of Bengal, and provided that the order of an officer granting a loan should be conclusive evidence that the work for which the loan was granted is an improvement, that the person mentioned in the order had, at the date on which the order was made, a right to make the improvement, and that the improvement is one benefiting the land specified. These are points which, so far as Government is concerned, it is not desirable or expedient to have called in question in Courts of law; but we have guarded against injury to private rights by restricting the operation of the provisions to the purposes of this Act only. No one will be able to contest the right of Government to recover a loan taken for an improvement under this Act on the grounds that the work was not an improvement, or that it did not benefit the land, or that the person who made it had no right to do so when once an order has been recorded on these points by the proper officers but as amongst private persons, such disputes may be fought out in the Courts of law notwithstanding the existence of such order.

"Section 9 was framed to meet a wish of the Panjáb Government, with the object of inducing village-communities or joint proprietors to take loans for improvements, such as tanks or embankments, in which they were jointly interested, by enabling them to define conclusively at the time of taking the loan the amounts for which, as among themselves, each should be held liable, without impairing the joint and several liability of the entire body for the debt to Government.

"As explained by Mr. Crosthwaite in the original Statement of Objects and Reasons, everything for which it is not absolutely essential to provide in the body of the Act is left to rules to be framed by the Local Governments with the previous sanction of the Government of India. In an Act of this nature, intended to apply to all India, it is impossible to lay down rules on points such as are enumerated in section 10, which will be equally suitable for every province; and, as the only interests likely to be affected are those of Government, the ordinary objections to giving such extensive powers to Local Governments have no weight. Local Governments have the strongest motives to promote the successful working of the Act, and may safely be left to guard their own interests.

"Section 11 contains a very important innovation on the existing law. It declares generally that the increase in value derived from an improvement made with the aid of a loan granted under this Act shall not be taken into account in revising the land-revenue assessment of the land benefited.

"On this subject the Famine Commissioners wrote :—

"'In addition to the difficulties mentioned as arising out of the working of the rules made under the Act (XXVI of 1871), another reason has been prominently alleged for the disinclination of landholders to spend money, whether their own or borrowed, on the improvement of the land, and that is their doubt whether, at the expiration of the term of settlement, they will be allowed to enjoy the whole profits of such an improvement, or whether it will form the occasion for an enhancement of their assessment. In the Panjáb, it is a rule of the revenue-system that the constructors of new wells should be protected for 20 years from enhancement on account of the irrigation thus provided, and that repairers of old wells and diggers of watercourses should be similarly protected for 10 years. In the North-Western Provinces, Oudh and the Central Provinces, no definite rule appears to have been laid down. In Birár and Madras, rules have been issued providing that the assessment on lands on which wells or other improvements have been constructed by the owners or occupants at their own cost shall not be enhanced at a future settlement except on the ground of a general revision of the district rates. But these rules

have not the force of law, and in the Bombay Presidency alone has this understanding been embodied in an Act. We think it important that *a precise and permanent understanding should be come to on the subject* and *ratified by law*. The landholder should be guaranteed against any enhancement of his assessment for such a period as shall secure to him such a reasonable return on his investment as will encourage the prosecution of improvements.'

"As regards the allusion to the North-Western Provinces, I would observe in passing that a rule of the nature indicated has been executively prescribed, but it is indefinite in its terms, and there is reason to believe that it has not been generally or uniformly acted on.

"The section as it left the hands of the Select Committee proposed to go even beyond the recommendation of the Famine Commission, and to exempt from increase of assessment profits arising from improvement effected by the aid of loans taken under this Act, not merely for such periods as would secure to the maker a reasonable return on his investment, but for all time. In those temporarily-settled provinces where cultivation has almost reached its natural limits, this principle might, perhaps, be applied with advantage; but in others where extensive areas are still awaiting reclamation, which can practically yield no return and pay no revenue until irrigated, the enactment of such a hard-and-fast rule would result only in a useless sacrifice of the prospective financial resources of the State. I therefore propose to move the amendment, immediately after the Motion now before us has been disposed of, of which notice has been given, with the view of empowering the Local Governments, with the sanction of the Governor General in Council, to fix, by rule, periods after the expiration of which increase of value arising from the reclamation of waste land, or from the irrigation of land previously assessed at unirrigated rates, may be taken into account in assessing the land-revenue. To all other improvements under the Act, the general principle prescribed will apply. No enhancement of land-revenue will ever be claimed by Government on account of them.

"If the amendment be accepted, the section will then, in the words of the Famine Commission, embody a precise and permanent understanding on the subject, and give to such understanding that legal ratification which is essential to its successful operation.

"This Bill being intended to regulate only transactions to which Government is a party, no place can properly be found in it for a provision corresponding to section 11, as to improvements effected by tenants. Tenants, as well as landlords, have an equitable right to enjoy the fruits of their labour and expenditure, but the legal provisions for securing this object must be sought for in the law of landlord and tenant. In enactments already passed, or now pending before this Council, they have not been overlooked, and the subject has lately engaged the attention of the legislature in England as well as in India.

"Such, my Lord, are the main provisions of the Bill. We have endeavoured to amend the present law by simplifying the procedure on applications, and to give to it greater elasticity by conferring on the Local Governments extended powers of making rules for matters of detail. We have indicated with no uncertain sound the wish of the Government of India that repayment of advances should be made as easy as possible to the borrower consistently with the interests of the general tax-payer, and we have announced in unmistakable terms that Government will not hasten to appropriate, in the shape of enhanced land-revenue, profits arising from improvements effected under this Act. I cannot assure the Council that the passing of the measure will inaugurate a new era of improvements, or give an irresistible impetus to the building of wells. The Indian agriculturist is not a man of enterprise, and inert habits, the growth of centuries, are not altered in a day; but if, under the present Act, with all its imperfections, over a lákh and a half of rupees were expended in the Panjáb within three years, if within the same period the expenditure in the North-Western Provinces and Oudh reached nearly 3¼ lákhs, the bulk of this being due to the influence with their

people possessed and exercised by the same district officers to whose successful working of the Northern India Takkávi Act I have already alluded, and if the Opium Department was able to induce its cultivators to take in advances for wells since 1879 no less than Rs. 1,22,600, we may reasonably anticipate that the removal of obstacles which have hampered the operation of Act XXVI of 1871 will not be unfruitful, and that it will be followed by a steady, if not rapid, increase in the number of new works constructed year by year to protect the people from famine by improving the productive powers of the soil throughout the empire."

The Hon'ble SIR STEUART BAYLEY said:—"There are several points connected with this Bill which, from the point of view of the Revenue and Agricultural Department, are of considerable importance, and, though they have been mostly dwelt upon by my hon'ble friend Mr. Quinton, still there are two or three of them on which I would ask the permission of the Council, to offer some additional remarks. The first of these points relates to the question of loans by private persons or agricultural banks. The reason which led to the introduction in the original Bill of the provision regarding loans for agricultural purposes, made by private persons duly authorised by the Collectors, to be recovered by revenue-process was explained in the three last paragraphs of the Statement of Objects and Reasons, and it was further dwelt upon in my hon'ble friend Mr. Crosthwaite's opening speech and amplified again by myself. Those reasons, briefly put, were, first, the natural dislike of cultivator-borrowers to come to the Government and get their loans exclusively from them. It was explained that where a man has two competitors both offering to lend him money, one of whom can only lend him money for one purpose, and the other for all purposes; where in the one case the procedure was exceedingly complicated, and in the other money was readily available, it is perfectly clear that under such circumstances the borrower will go to the Native money-lender and not to the Government. Another reason was that Government officers are, from the very nature of their duties and from the circumstances under which they carry on those duties, incapable of sufficiently acquainting themselves with the circumstances of the borrower. These two facts seemed to indicate as a natural conclusion that Government, if possible, should let the business be done by private persons, and that, in consideration of private persons or banks taking up this business, and carrying it out on conditions, to be approved by the Government, that Government should give them special facilities for recovering their debts. These were the circumstances which led to the sections being originally introduced into the Bill. The sections were purely skeleton sections, and, as was observed at the time, could lead to nothing without very careful consideration of the details and being thoroughly thrashed out in committee. When the question came to be considered, it was found that it bristled with difficulties of all kinds. There was, first, the difficulty of distinguishing between loans given for one purpose and loans given for other purposes; for obviously, although Government might undertake to recover loans lent for special purposes under special conditions, it was not at all so clear that they might undertake to recover loans given for ordinary transactions. Then objection was taken to giving preference to one kind of loan and one class of creditors over other kinds of loans and other classes of creditors, and considerable doubts were expressed by experienced officers as to the expediency of allowing Revenue-officers to collect those private debts. There was also great difficulty in arranging for the clearing up of prior incumbrances before banks could be induced to advance money on risky business on what the Government considered moderate rates of interest. Still further complication was likely to arise out of the simultaneous or concurrent jurisdiction in regard to identical transactions between the Revenue and Civil Courts. The consideration of all these difficulties led to the general conclusion that it was better not to include legislation for this purpose in the present Bill, but to take the subject up separately and consider it with all its difficulties on its own basis. My hon'ble friend Mr. Quinton has observed that the matter is not done with. As a matter of fact, since Sir Evelyn Baring made his speech in this room about a year ago, the special experiment to which he therein referred in regard to some particular talúqa in

the Dekkhan has been the subject of considerable correspondence with the Bombay Government, and, through that Government in communication with Sir William Wedderburn, committees of capitalists have been induced to consider the experiment. The subject has now been thrashed out; most of the details of it are about to be submitted to the Secretary of State, and, until he has expressed his opinion upon it, no further action will be taken. That is how the case at present stands, and I may mention that the conclusion come to by the Select Committee to not legislate for this particular point had already commended itself to the Secretary of State.

"The next point upon which I have to ask the attention of the Council is that of the repayment of loans under section 6 of the Bill. My hon'ble friend Mr. Quinton has observed that the section in its present shape is very much amplified from what it stood in the original Bill, and has explained what the object in amplifying it was. Nothing is more noticeable in the correspondence of the Local Governments on the subject than the frequent complaints made that one great obstacle to working the present system is the very short period over which the repayment of loans extended. It is generally from five to ten years, and it varies, not with regard to the nature of the improvement, but with regard to the amount of money spent upon it. The point is one which recommended itself strongly to my hon'ble friend Sir Evelyn Baring, and it was at his request principally that the section is drawn as it is in the Bill and the special reference made to it in the Statement of Objects and Reasons. He wanted it to be understood that the Government have no objection to extending to 30 or 35 years the repayment of loans where necessary; and also, in special cases, in permanent and costly improvements, that it would be a matter for the consideration of the Local Government whether they should not extend the period of repayment beyond the generation that actually borrowed the money and throw some of the burden upon the succeeding generation.

"In connection with this question of the repayment of loans, one important and difficult proposal has been made, and it is one which has the support of some experienced Revenue-officers, among whom I may mention the Secretary to the Government of India in the Revenue and Agricultural Department. That proposal is that the loan should be commuted into a perpetual charge on the land instead of being repaid within a certain term of years, and that it should form a perpetual addition to the rent or revenue, but for present purposes only to the revenue. The proposal has in it certain obvious advantages. I myself think that it would be exceedingly popular, and that it would induce a rapid acceptance of these loans for improvements.

"It would be popular for this reason—that the interest is fixed below that at which a man could borrow from a Native capitalist: he has also the immense advantage and satisfaction that he has never got to repay the loan, and that the burden of it will be thrown upon future generations. There is also another great advantage connected with it, and that is that, the security being land, and not personal, not only can Government afford to lend the money at a lower interest, but also you do away with the necessity for collateral security, which is a very serious obstacle to the working of the present system. You only require collateral security where the borrower has not got a transferable interest in his land, but that unfortunately is the case with the great majority of the cultivators in Northern India. There is consequently a good deal to be said for the proposal, and at one time I was rather inclined to support it; but other considerations prevailed, and I found that the objections to it were very serious. It is obviously inapplicable to the permanently-settled districts, to tracts where there is much sub-infeudation, and to tracts where the assessment is made with joint proprietary-bodies, village brotherhoods for instance. There is a further objection to it, that it would necessarily lead in the future to great inequality of assessment; for instance, where two men made similar improvements with the same amount of money, the one has repaid his loan and the other has had his loan commuted into a permanent addition to his revenue. In course of time the man who has repaid his loan is assessed, and his assessment will be much

below that of the man whose interest on his loan is added to the revenue. That may be kept in view for a short time, but the inevitable tendency of it would be in the course of time to bring the assessment of the man who has repaid his loan up to the same level as that of the man who is still paying the burden of his interest as an addition to his assessment. But, besides these objections, it was considered by the best authorities that it was economically wrong in principle for Government to mix up this loan business with its reversionary interest in the produce of the soil. The loans should be lent as anybody else would lend money, and all that Government wants to recover is the interest on its own money and sufficient to cover risks and the cost of collection. It was felt that such a proposal as making a permanent addition to the revenue for improvements was scarcely consistent with the particular principle in section 11, which desires to exempt all improvements hereafter from future assessment. There would further be a risk of serious complication in the case of an exhausted improvement. The man who has had his revenue permanently increased in connection with it will very naturally call for a remission, and it would be exceedingly difficult for Government not to grant that remission; in other words, he will borrow money for his failure too cheaply and at the expense of his neighbours. For all these reasons it was determined in Committee that this proposal should not be embodied in the law, and I have quite come to the conclusion that the Committee's decision was correct; I only notice the matter here to show that it has not lightly been cast aside but fully considered.

"Still connected with this question of interest, my hon'ble friend Sir Evelyn Baring had intended to make a few remarks, and as he was not to be here when the Bill was to be considered in Council, he sent me a short note telling me what he intended to say. It was merely to point out that, under the present law, the rate of interest is fixed by rules made by Local Governments with the previous sanction of the Government of India, and that in our new Bill we do not attempt to alter the procedure in any way; that the present rate is a uniform rate of 6¼ per cent. which was fixed by the Government in 1877, the Government desiring it to be understood that they did not wish to make any profit by these loans; that the object in fixing the rate of interest was to fix it at such a point as would not only suffice to cover their own interest, but also the cost of collection and secure them from loss; and when that was done that was all they wanted; but if any Local Government thought that these objects could be secured at a lower rate of interest their representations would be considered. That is what Sir Evelyn Baring had to say upon that subject.

"I now come to a still more important question—that of improvements under section 11. My hon'ble friend Mr. Quinton has already given the history of the section and of the proposed amendment which he would make. I may say for myself that I am very pleased to see this amendment; for without it I should have had some difficulty in accepting the section as it stands. Mr. Quinton has already quoted what the Famine Commission have said upon the subject; and there is one other extract I may read to you in conjunction with his remarks. They wrote:—

"'In addition to the difficulties mentioned in paragraph 2 of this section as arising out of the working of the rules made under the Act, another reason has been prominently alleged for the disinclination of landowners to spend money, whether their own or borrowed on the improvement of the land, and that is their doubt whether at the expiration of a term of settlement they will be allowed to enjoy the whole profits of such an improvement, or whether it will form the occasion for an enhancement of their assessment. In the Panjáb it is a rule of the revenue system that contractors of new wells should be protected for 20 years from enhancement on account of the irrigation thus provided, and that repairers of old wells and diggers of watercourses, should be similarly protected for 10 years. In the North-Western Provinces, Oudh, and the Central Provinces, no definite rule appears to have been laid down. In Birár and Madras rules have been issued providing that the assessment on lands on which wells or other improvements have been constructed by the owners or occupants at their own cost shall not be enhanced at a future settlement, except on the ground of a general revision of the district rates. But these rules have not the force of law, and in the Bombay Presidency alone has this understanding been embodied in an Act. We think it important that a precise and permanent understanding should be come to on the subject and ratified by law. The landowner should be guaranteed against any enhancement of his

assessment for such a period as shall secure to him such a reasonable return on his investment as will encourage the prosecution of improvements. It appears to be quite possible to draw up a set of rules defining what the period should be for any locality or any class of cases, so that it may be clearly known, without fear of mistake or danger of retractation and change of view, by every landowner or tenant who executes a permanent improvement on the land, whether he is entitled to the entire profits arising from it, or to a part for ever or for a term of years. We have made a further reference to this subject in the section which treats of wells.

"'The question of how far the State could properly intervene directly in the construction of wells in the case of the landlords declining to take advances, or not assenting to the charge for the construction being placed on the land, is not one easily answered. But, notwithstanding the arguments that have been adduced by some experienced officers in the opposite sense, we are not able to satisfy ourselves either that the Government could safely or equitably insist upon the construction of a well on any land at the cost or risk of the owner of that land or its occupier for the time being, or that it would be practicable for the Government under any system which provided for the first construction of wells at its cost, also to undertake their maintenance for all time. Assistance might properly be given by the loan of dredging tools, or of boring tools in countries where rock is likely to be met with; it might also take the form of loans of money, or both loans and supervision. Provision might also be made for meeting all difficulties dependant on complications of tenure or differences of opinion among interested parties, the law being so amended as to provide that where co-proprietors whose land will be benefitted by the construction of a well cannot agree, the wish of the majority should override the dissent of the minority. It might also be possible to stimulate well-construction by extending the practice of Bombay and Madras to Upper India so far as to rule that the assessment of land irrigated from a permanent well should not be liable to enhancement on account of the well at any revision of the settlement, provided that the well is kept in efficient repair. But whatever plan be adopted to facilitate well-construction, we can hardly doubt that in some way the landholder must discharge the cost of first construction, with interest thereon in a term of years and thereafter become the sole owner of the well, and be placed in respect to it in exactly the same position as that which he would have occupied if he had made the well himself.'

"The Revenue Department last year in taking up the recommendations of the Famine Commission piece by piece had to consider the whole question. They called upon each Local Government for a statement as to how the law and rules stood in each province. The answers came and the Bombay Government have legislated for it and Madras has provided for it, in its Revenue rules. The Bombay law stands thus. Section 106 of the Bombay Revenue Code is as follows:—

"'It shall be lawful for the Governor in Council to direct at any time a fresh revenue-survey or any operation subsidiary thereto, but no enhancement of assessment shall take effect till the expiration of the period previously fixed under the provisions of section 102.

"'A revised assessment shall be fixed not with reference to improvements made from private capital and resources during the currency of any settlement made under this Act or under Bombay Act I of 1865, but with reference to general considerations of the value of land, whether as to soil or situation, prices of produce or facilities of communication.'

"Then a subsequent section (107) provides:—

"'Nothing in the last preceding section shall be held to prevent a revised assessment being fixed—

"'(a) with reference to any improvement effected at the cost of Government, or

"'(b) with reference to the value of any natural advantage when the improvement effected from private capital and resources consists only in having created the means of utilizing such advantage, or

"'(c) with reference to any improvement which is the result only of the ordinary operation of husbandry.'

"The Madras rules are found in the Standing Orders of the Board, I, paragraph 5—

"'Collectors of districts in which settlement by the Settlement Department has been completed or is in progress will notify in their Gazettes that the rates will be liable to revision after thirty years' duration. It is to be explained however to the raiyats that if the general rates of a district are altered, the demand will be regulated with reference to the intrinsic quality and position of the land as compared with other land of similar natural soil and situation, and not with reference to any improvement which may have been effected by the raiyats at their own cost.'

"And again in paragraph 8—

"'The raiyats should receive the most distinct assurance, that the tax on lands cultivated by means of wells henceforth to be reconstructed by them at their own cost, will never be enhanced, unless on a general revision of the district rates; and that in such revision any modification in the assessment of lands so improved will be irrespective of the increased value conferred upon them by their holders.'

"I need not go into to the rule for the other provinces. With the exception of the Panjáb the rules are somewhat indefinite, and I cannot say that they have been very carefully acted upon in all the settlements made hitherto. With these facts before us the question of how the Famine Commissioner's recommendations were to be carried out came to be considered, and a proposal was made to legislate upon the subject. Mr. Crosthwaite was consulted, and he drew out a rough sketch of the lines on which in his opinion legislation ought to be conducted. I will briefly mention those lines because they contained some suggestions of importance. He proposed that improvements made during the currency of existing settlements should be registered. That is a very valuable suggestion. The value of the improvements was to be settled by a committee of arbitrators and registered, together with the improvement and the area covered by it. Then he divided his improvements into two classes, one of which might be specified as quasipermanent improvements and costly; the other more temporary and less costly improvements and partaking of the nature of reclamation. The first class Mr. Crosthwaite proposed to exempt from assessment altogether; the second class he proposed to exempt absolutely for five years, and thereafter to let him recoup his interest, by deducting 6¼ per cent. on cost of improvement from the full assessment of the land. These were the lines upon which Mr. Crosthwaite thought that it would be possible to legislate. When the question came up to be discussed, we found that difficulties cropped up at every turn. The first main difficulty was perhaps one of theory; it was in fact to reconcile two conflicting theories—what I may call the English theory and the Indian theory. The English theory has regard to the relation between lessor and lessee, and from this point of view the English theory naturally urges that any increase in the letting value of the land caused by the lessee should be his and benefit him, and that he should get this benefit in the shape either of an increased length of lease on the old terms, or compensation for the unexhausted portion of his improvements. The Indian theory, if I may say so, disregards altogether the relation between lessor and lessee and looks upon Government as a joint proprietor with the landholder, and that Government, as joint proprietor, is by the ancient law and custom of India entitled to a share in the produce of every bígah of land. The logical deduction from the English point of view would be that the landholder should have, as a permanency, the full benefit of any increased value caused by his improvement. Even here I think myself that the fact of the landholder in India having a permanent right of occupancy in his land really divides off his position in a very marked way from that of the leaseholder in England whose position is a temporary one. The natural outcome of the Indian point of view is that when the Government as the sleeping shareholder in the land has provided that the improver should receive full interest for his money spent on improvement, and that he has been recouped for his original outlay, thereafter the Government should retain its right to a share in the improved produce of the soil. These two theories no doubt are antagonistic, but I think that it would have been possible to have come to a reasonable compromise upon them. As a matter of fact you will see that Mr. Crosthwaite based his proposals on the Indian theory, but he went far outside that Indian theory when he proposed that permanent improvements of a valuable kind should be exempted for ever. His object in so doing was that he considered that public policy required that we should do all in our power to encourage improvements of this kind rather than look to future increase of revenue. And in this view, as a matter of expediency, I most fully concur. I think that it would have been very possible to arrange the two conflicting theories upon somewhat such terms as these if we had gone on and proceeded to legislate. But there was another difficulty and that was

the difficulty of distinguishing between the two classes of improvements which Mr. Crosthwaite desired to distinguish. It was almost impossible to draw any line or to find any logical terms to cover the distinction which he desired; permanent and temporary would not do, nor perfect and imperfect; and after considering the matter again I have come to the conclusion that our mistake was in looking at the nature of the improvement instead of trying to find the distinction in the condition of the country to be improved. I think that if we had looked rather to the question of complete or incomplete cultivation, by a sparse or full population, we might probably have more easily found the means of logically distinguishing between the two classes than in looking to the nature of the improvement to be effected. However the idea of special legislation upon this point was abandoned, and it was abandoned because it was inextricably mixed up with the very much larger question with regard to the whole principle of re-settlement in Northern India which was at that time under reference to the Secretary of State. In referring that question to the Secretary of State, the Government of India expressed in very general and broad terms its desire that improvements effected by landholders should hereafter be exempted from assessment, and in reply the Secretary of State, in equally general and broad terms, expressed his thorough approval of the principle. The general question, including the special point of assessing improvements, is now under the consideration of the Local Governments. When, therefore, section 11 was introduced in Select Committee I had very great doubts as to whether it ought to be accepted; not because I doubted the principle of it, I quite accepted and most strongly endorse the principle that as a matter of policy we ought as a rule to secure to the improver the full value of his improvement;—but for the reason that the general question was then under the consideration of the Local Governments, and it appeared to me that modifications might have to be made by each Local Government. It was also perfectly obvious that we could not deal with improvements made under this Act with the money borrowed from Government in a different way from improvements made out of private capital, and that whatever we did in the one case would bind us in the other; and it seemed to me that it would be better if we were first to get the Local Governments' opinions and that the matter should be legislated for in regard to improvements as a whole, and not in regard to improvements only on money borrowed from the Government. However my views did not command the assent of the majority and I gave in on that point, but shortly after that, as my hon'ble friend Mr. Quinton has explained, it became obvious that some modification in the broad and general rule we have adopted should be made; and it became specially obvious in regard to the Panjáb. In the Panjáb, in the south-western districts, the condition of things is that there is a very large amount of waste land unoccupied, and a very sparse population; the land in its unirrigated state is of very little value, and in Montgomery for instance, such land is assessed at somewhere about one anna an acre; but as soon as water is brought to it, it can be assessed at 14 annas or one rupee an acre; and it seems monstrously unjust to the general tax-payers of India that the Government of India should give up all further claim to the increased produce of land assessed at one anna an acre when by a very small expenditure that land becomes assessable at one rupee. That would be the effect of section 11 as it stands, and consequently I think that the amendment which my hon'ble friend Mr. Quinton proposes to introduce to that section is a great improvement. The point has a further indirect bearing on the Government revenue for it is not merely in the present that you lose, but, as has been already pointed out, there is this to be considered—when you come to revise your settlement hereafter, the question of improvements made before the passing of this Act must come up. People who have been assessed for improvements made on unirrigated land before the Act was passed would complain that others have not been similarly assessed on improvements made since the Act was passed and the result would be a general levelling down of assessments, and consequence loss of revenue to Government. That would be the effect if it were not for this modification which it is now proposed to put in the Bill. The present practice of the Panjáb Government as has been stated by the Famine Commissioners is to give an exemption of 20 years and this

apparently carries out the principle which I have explained that the improver should get back the cost of his improvement and a fair amount of interest. I find it stated that the average cost of sinking a well may be put down at Rs. 300 and the average assessment from which it is exempted is put down at Rs. 18, and twenty times 18 is 360; and so he is enabled fully to recoup his expenditure with at least a portion of interest on it. Obviously to my mind this principle if accurately worked out, is far fairer as regards such lands than would be the broad exemption for ever of all improvements from assessment. I quite admit—in fact I most fully concur—in what Mr. Quinton observed as to districts where the land is fully cultivated and where there is a very small margin of waste and a very full population—where, in other words, it is far more important to improve existing cultivation than to bring additional land under the plough—that there section 11 in its broad application may well stand, and the Government should say 'improve your lands by all means, we shall never take anything for it.' But where the position is reversed, where there is much waste land, where improvement is scarcely so much improvement as reclamation, there I think that the Government ought to return in its hands some security, and safeguard its right to share in the future produce of the land. As I have said the proviso which my hon'ble friend Mr. Quinton proposes to introduce as an amendment quite meets my views in regard to this particular Bill and I shall very gladly support it; but it may well be that Local Governments in dealing with the matter in regard to their own provinces, not with reference only to improvements made with Government money but to improvements generally, will see the necessity of adapting the modification in the proviso to the local circumstances of each particular province and they may have to modify the form if not the principle of the proviso."

His Excellency THE PRESIDENT said :—"I do not wish to detain the Council at any length, but I should like to make one or two observations before this motion is submitted to the Council. The object of the Bill has been very clearly stated by my hon'ble friend, Mr. Quinton. It has been found in practice that the provisions of the Acts upon the subject of loans from Government for land improvement, have not been made use of so largely as was desirable, and have, in certain respects, tended to discourage recourse on the part of landholders and cultivators of the soil to the Government for assistance of this description. My hon'ble friends, Mr. Quinton and Sir Steuart Bayley, have quoted extracts from the report of the Famine Commission, which show how much importance they attached to loans of this sort, and there can be no doubt I think that there are few objects of greater public interest than the encouragement by every possible means of the improvement of land devoted to agricultural purposes.

"The amendments in the existing law proposed in this Bill have all been made with the object of rendering recourse to loans from the Government for land improvement more easy; and removing some, at all events, of the proved obstacles which exist under the present law to the use of such loans.

"I no more than my hon'ble friend, Mr. Quinton, can venture to say whether this Bill, when it becomes law, will lead to a great extension of applications for Government loans. When this measure was first introduced it was I think my hon'ble friend Sir Evelyn Baring—whose loss to this Council every Member, I am confident, deeply regrets—who said that he was not very sanguine as to the practical results that might follow from this measure. Be that as it may, I hope that the greater facilities which this Bill will afford for obtaining these loans will, at all events, tend to encourage applications for them, and to induce the cultivators of the soil to make greater use of the capital of the Government for the improvement of their land.

"I might content myself with these few remarks and put the question at once, but there are one or two points which have been alluded to by previous speakers upon which I should like to say a few words.

"With respect to Agricultural Banks I desire only to say that I hope no one will suppose that by the omission from this Bill of the clauses touching upon

that subject, which were included in the original Bill, the Government imply any intention of abandoning the object which they then had in view. My hon'ble friend Sir Steuart Bayley has stated that that important object is still under the consideration of the Government, and that it is shortly their intention to address the Secretary of State in respect to it. No measure of this kind could be undertaken without the sanction of the Home Government, and I hope that the public will clearly understand that the withdrawal from this Bill of those clauses, imperfect in their nature as they were, does not in the least degree mean that the Government have lost their interest in the question or given up the solution of it as hopeless.

"I now come to the point touched on at some length by Sir Steuart Bayley, namely, that dealt with in the eleventh section of the Bill as it now stands to which Mr. Quinton is about to move an amendment when the present discussion is disposed of. Sir Steuart Bayley has said that he at one time was of opinion that it would have been better to have omitted section 11 altogether from this Bill, and not to have dealt in this measure with this particular subject. I quite admit that section 11 relates only to a portion—in fact only to a small portion—of a much larger question, and that the principles which that section lays down are principles which must have, and ought to have, a much wider application than that which can be given to them under the present Bill. But at the same time I think that the Select Committee acted wisely in not striking out section 11 from this Bill; because I cannot but think that when that section had once been introduced and the Bill published with it, its entire removal would have led to serious misapprehension as to the intentions of Government with regard to the assessment on land improved by the owner or occupier and increased in value by such improvement. I therefore think that it was wise, having once put in the section, to leave it in the Bill, amending it so as to make clear the views of the Government upon the matter with which it deals. With regard to the question of principle I will not detain the Council long, because it is a much larger question than that raised in this particular measure, and it is one on which the Government will have hereafter to express their opinion much more fully: but at the same time, after what has fallen from my hon'ble friend Sir Steuart Bayley, I should like to say a few words as regards my own opinion on this subject, Sir Steuart Bayley has said that there are two theories on this question—the English theory and the Indian theory—and he defined the English theory to be that a tenant who made improvements in the land which he occupied, ought if he were removed from his farm, to receive compensation based upon the addition which his improvement had made to the letting value of the land, I very much wish that I could say that that is the recognised English theory upon this question. It is my own theory unquestionably, and it is a theory which has been partially, and in the end I fear imperfectly, adopted by Parliament at home; but it is a theory only held by a certain number of persons, and there is a wholly antagonistic theory very prevalent among other persons in England, namely, that the tenant should only receive on quitting his holding repayment of the actual outlay he may have made on his improvements.

"For myself as I have said, I entirely hold, in respect to ordinary cultivated land, to the theory which Sir Steuart Bayley, has described as the English theory.

"I think that if a tenant, by his own exertion, and the expenditure of his own capital, adds to the letting value of my land, I ought if he leaves his farm to compensate him for the additional letting value of the land of which I am about to take possession. I think that is a perfectly sound and just principle with respect to land under full cultivation because although it is I know said that there are two factors in the results of all improvement, namely, the expenditure of the tenant's capital and labour, and the inherent qualities of the soil, in the case of cultivated land, this second factor should not, as it seems to me, be regarded as constituting an appreciable element in the calculation of the value of a tenant's improvements. For the right to enjoy the results of the inherent qualities

of the soil is already covered by the payment of his ordinary rent, and the addition to the letting value of his land arising from his improvements may therefore be treated as resulting only from his expenditure of capital and labour and may fairly be taken as the measure of the compensation which should be given to him in respect of such improvements, when he quits the land.

"Therefore, it appears to me that the principle laid down in section 11 as it stood is a right principle in regard to what I may describe as fully cultivated land, but I admit that the case of what may be broadly called reclamation differs very materially from that of the improvement of land already under full cultivation. In the case of the reclamation of land by a very small expenditure of capital and labour, a very great result may often in a few years be produced. The inherent qualities of the land are the principal factor; the outlay of the occupier is a much more limited factor, and the true mode of dealing with cases of that kind seems to me to be the adoption of what is called in England an improvement lease. The land should be let at a low rent or should be assessed to revenue at a low rate for a certain number of years so that the cultivator may recoup himself for the operations which he carries on in order to bring the waste land under cultivation.

"He should have ample time to fairly repay himself for that expenditure, and the rent or revenue, at first very low, should be gradually increased, until at length when the land has been brought into a state of cultivation, it becomes reasonable that the Government or the landowner should step in once for all and place upon the land the full ordinary rates of rent or revenue of similarly cultivated land in the neighbourhood.

"After that has once been done, then any other improvements that the occupier of land may subsequently make ought to fall under the principle laid down in the first portion of section 11, and the person making the improvement should be entitled to reap the full and entire benefit of any addition that he may make to the letting value of the land. That appears to me to be a fair mode of dealing with the question of the reclamation of land, and from the information which I have received, I believe that the case of unirrigated land, especially in the Panjáb, and probably also in other parts of India, which is let at unirrigated rates, falls very much into the same category as that of unreclaimed land, because by a very small expenditure of money or labour on the part of the occupier of the soil a very large additional value may be given to the land. Consequently I am quite prepared to admit, as proposed by the amendment of Mr. Quinton, that 'where the improvement consists of the reclamation of waste land, or of the irrigation of land assessed at unirrigated rates, the increase may be so taken into account after the expiration of such period as may be fixed by rules to be framed by the Local Government with the approval of the Governor General in Council.' My hon'ble friend, Sir Steuart Bayley, alluded to the difficulty which had been felt in drawing any such distinction as Mr. Crosthwaite originally proposed to draw between different descriptions of improvement. I admit the force of that remark as applied to the particular proposal made by Mr. Crosthwaite, but it appears to me that between improvements on land under full cultivation, and improvements made for the purpose of reclamation of waste land, or for the irrigation of land at present unirrigated, a line may be distinctly drawn which is, in itself, in this country and elsewhere, quite defensible upon grounds of principle. No line of this kind that you can draw can be absolutely satisfactory; there must always be border cases difficult to deal with; but it seems to me that such a line as I have described is easy and simple and rests upon clear and intelligible grounds.

"Under these circumstances I readily agree to the adoption of the amendment which my hon'ble friend, Mr. Quinton, is about to move, and with that alteration it appears to me that section 11 will lay down an important and valuable principle which I hope to see in course of time much more widely adopted.

"I have no more to say at the present moment on this subject. I have every hope that the Bill will make an important improvement in the exist-

ing law, and it will afford me great satisfaction if it should be largely made use of by those for whose benefit it is intended."

The Motion was put and agreed to.

The Hon'ble MR. QUINTON also moved that, for the proviso to section 11, the following be substituted, namely:—

"Provided as follows:—

"(1) Where the improvement consists of the reclamation of waste-land, or of the irrigation of land assessed at unirrigated rates, the increase may be so taken into account after the expiration of such period as may be fixed by rules to be framed by the Local Government with the approval of the Governor General in Council.

"(2) Nothing in this section shall entitle any person to call in question any assessment of land-revenue otherwise than as it might have been called in question if this Act had not been passed."

He said that the observations which had fallen from His Excellency the President and from Sir Steuart Bayley on the subject of the amendment relieved him from the necessity of detaining the Council by urging anything in addition to what he had already said in his remarks on the previous motion and was glad that it had obtained such powerful support.

His Honour THE LIEUTENANT-GOVERNOR said that he had intended to offer a few remarks in support of the proposed amendment, but much of what he had to say had been anticipated by His Excellency the President and Sir Steuart Bayley. He fully agreed that the principle embodied in section 11 of the Bill as it left the hands of the Select Committee was applicable to districts which were fully developed, in which the margin of waste-land was small, and where the share in the assets of the land had come up to a fair level. But that was not the case in the Panjáb. In that province there were vast tracts of land which could be brought under cultivation at very small expense, and any proposal to relieve them from the higher assessment for all time would be a wanton sacrifice of the resources of the State. The whole of our revenue-system in the Panjáb had been built up upon the system of what His Excellency the President had described as improvement-leases. Wells, when sunk, were exempted for a period of longer or shorter duration from assessment. After the expiry of 20 years an assessment was taken, and it would never do now to exempt in future all new wells from the higher assessments, because that would at once raise a great diversity of interest between persons who had in years past embarked their capital in the improvement of land and those who were to do so after the passing of this Act. The result would be that the past assessments, which were higher than those imposed on land improved under this Act, would have to be forced down to the level of assessments on unirrigated land. The consequence of that would be a loss probably of one-third of our assessment. HIS HONOUR could not therefore have supported clause 11 of the Bill as it stood, but the proposed amendment removed the objections which he entertained to it; it met the case of the Panjáb; it would enable the Panjáb to carry on its system as it had hitherto done; and for that reason he was quite prepared to give it his cordial support. But he wished at the same time to point out that, by adopting this provision in the present Bill, the Government was practically pledged in the future not only for improvements executed by loans taken from agricultural banks, but for improvements executed by loans taken from private individuals, and in the expectation that Government would in the future accord equal protection to improvements of both kinds he was prepared to support the present proposals.

The Hon'ble MR. HOPE said that he wished to express his satisfaction that his hon'ble colleague Mr. Quinton had come forward and moved the amendment which stood in his name, because it appeared to him that that amendment embodied a principle of a most important character, which was indeed to be drawn from the words in which his hon'ble colleague had couched his first clause, but which appeared to him (MR. HOPE) to be even more clearly and satisfactorily stated in a portion of the extracts from the Bombay Land-revenue Code which his hon'ble colleague Sir Steuart Bayley had read out to the Council. The particular portion he referred to was that in which, after providing that no

assessment should be levied with respect to any improvements made during the currency of a settlement, permission is given to take such improvements into consideration on its revision :—

"With reference to the value of any natural advantage, when the improvement effected from private capital and resources consists only of having created the means of utilising such advantage."

Of course, under the Bombay system, the extent to which a revision should be carried, and the amount of assessment which ought to be imposed, under such circumstances was a question of fact, which would have to be determined in the several individual cases which arose. In some of the more fully cultivated districts, where population was dense and the assessment already heavy, it might even happen that, as the Hon'ble Mr. Quinton had suggested, it might even be judged not worth while to make any increase in the assessment at all, but the right to make such increase must nevertheless be stated in clear and definite terms in the law.

This principle of the assessability of improvements in view of the rights of the landowner was in accordance with the practice which existed throughout the whole of India under the old Native rulers. All civil officers who had had much to do with revenue-assessments were acquainted with hundreds, perhaps thousands, of cases in which they had found wells to have come under assessment, after they had been held, for a certain term of years, exempt from assessment under sanads and other orders by Native Governments—Governments who, he might say, were remarkably shrewd, and whose views in those matters were strikingly in accordance with modern principles of political economy. But this principle was not only in accordance with old custom in India. It was also sound in itself and in accordance with well-recognised principles of political economy. The case was not one of policy, but of mutual rights. If it was reasonable that the occupier of land, whoever he might be, should get a full and fair return for any capital which he might invest in improvements, it was equally reasonable to secure to the owner his rights for any natural advantages which his property might possess, and which had not already been discounted by the rent imposed upon the occupier. There were of course some cases in which the occupier could turn the land, or its mineral resources to other than ordinary uses contemplated in fixing his rent, as where dry crop land was converted by a well into irrigated; but such cases were exceptional, and when they occurred it was just as reasonable, as he had already remarked, that the one party should be protected as the other. It would be as unreasonable to contend that Government was under such circumstances precluded from raising the assessment at a revision, or that a private person was precluded from securing by the provisions of his lease the full advantage to which the mineral or other properties of his land entitled him, as it would be to contend that if a man possessed a building site upon which he did not choose to build a house, or a coal mine which he was unable or disinclined to work, he must therefore allow the free use of that land, or present the working of that coal mine to some one else, without charging ground rent in the one case or royalty in the other.

He had one more remark to make. It would appear that some persons were under an apprehension that a restriction or reservation of right such as that contemplated would act very materially in preventing people from investing their capital in improvements. All that he could say was that no such result had been found to follow from the principle, which was in force throughout the Bombay Presidency. That principle, although it had only lately been embodied in the Bombay Revenue Code, had been recognised in orders there throughout the whole of his period of thirty years' service in India, and he might very easily have come to the Council to-day armed with statistics to show the enormous increase of wells and other improvements of a like nature, involving immense expenditure of money, which the tenants in Bombay under the thirty years' revenue settlements had effected notwithstanding. For his own part he did not feel the slightest apprehension that, if the proposed amendment were adopted

by the Council, it would have any prejudicial effect upon the object of improving the land and attracting capital to it, which we all so greatly desired.

The Motion was put and agreed to.

The Hon'ble MR. QUINTON also moved that the Bill as amended be passed.

The Motion was put and agreed to.

PANJÁB DISTRICT BOARDS BILL.

The Hon'ble MR. BARKLEY moved that the Report of the Select Committee on the Bill to make better provision for Local Self-government in the Panjáb be taken into consideration. He said:—

"My Lord, when I moved for leave to introduce this Bill, I explained that it had been framed to give effect to the proposals of the Local Government for the further extension of local self-government in the Panjáb, but that it did not apply to municipalities; and that, as it had been decided in correspondence between the Panjáb Government and the Government of India that it was desirable to consolidate the local cesses levied on land in each district with the local rate imposed under Act V of 1878, and to amend that Act in other respects, it was proposed to repeal that Act and to re-enact its provisions with the necessary amendments.

"The members of the Select Committee, to which the Bill was referred, have considered the Bill, with the suggestions for its improvement made by the Local Government, and by the various officers and local authorities who were consulted by that Government and they have been able to accept a considerable number of those suggestions. The Local Government has been communicated with in regard to all changes of any importance proposed to be made in the Bill as introduced, and, as the measure is one relating to local administration, great weight has always been given to its views in determining whether proposed alterations should be adopted or not. As the changes, other than amendments in matters of minor detail, which have been made are fully set forth in the report of the Select Committee, which briefly explains the reasons for each, I propose to confine my remarks to those which are of most importance.

"Taking, first, the provisions relating to taxation, the powers of imposing taxes other than the local rate conferred by section 30 are given, subject to the provisions of that and the following section, to all district boards, instead of to those only which are empowered to determine the incidence of the local rate, as these powers may sometimes be found useful in cases in which the Local Government may not wish to delegate the power of determining the incidence of the local rate to the district board. The proceeds of taxes so imposed will be credited in full to the district fund of the district, as the Local Government does not think it necessary to retain the provision, contained in the Bill as introduced, that the same proportion of these taxes as of the local rate should be carried to its own credit. In any case in which it may be found necessary to impose new taxes, the district in which they are levied will thus get the full benefit of them.

"Power has also been given to the Local Government to direct that any portion of the net proceeds of the local rate which may be levied within the limits of a municipality or military cantonment should be made available for the purposes of the municipality or cantonment. Under the law hitherto in force, the proceeds of the local rate and cesses on land levied within municipal or cantonment limits were applicable to the purposes of the district as a whole, and were expended under the orders of the district committee. There are only a few cases in which the local rate or cesses are levied in military cantonments; but in some districts a considerable portion of the local rate is paid for lands within municipal limits. As the financial position of particular districts and municipalities must be considered in determining whether any change should be made in the existing appropriation of the local rate paid for lands in such localities, it was found impossible to lay down any general rule on

the subject in the Bill, and the Local Government is therefore empowered to decide the question in each case.

"In other respects there is no material change in the part of the Bill which relates to taxation.

"Next, as regards the constitution of district and local boards the district boards to be established under the Act will take the place of the committees appointed under the Local Rates Acts previously in force. Unlike those committees, they will in all cases be corporations, with power to acquire and hold property, to contract, and to sue and be sued; but as in some districts it may not be at present possible to establish boards of this character, the Local Government is empowered by section 67 to except these from the provisions of this part of the Act, and section 68 provides for the constitution in these districts of a committee similar to those which now exist, unless where the Local Government for special reasons otherwise direct. This exception has been added to provide for cases like that of the Simla district, the most important part of which is comprised within the Simla municipality and the several hill cantonments, the remainder consisting only of the two small detached parganas of Kotgarh and Kotkhai, distant fifty miles or more from Simla. It has not been found convenient hitherto to maintain a district committee to control the expenditure of the insignificant local income of these two parganas.

"The district board will ordinarily have authority throughout the district for which it is established, with the exception only of the area of municipalities and military cantonments; but the Local Government may except portions of districts from this part of the Act. This power is required for hill tracts like portions of the Kangra and Hazara districts, and may also be required for parts of some of the Trans-Indus districts, whenever district boards are established in those districts.

"Some change has been made in the Bill with respect to the relation of the local boards which may be formed within districts to the district board. As there is no present intention to declare any such boards independent of the district board, the provisions originally contained in the Bill for the case of local boards declared independent of the district board have been dropped, and it is now provided that all local boards shall act as the agents of, and be under the control of, the district board. The Local Government, however, may direct particular matters to be placed under the management of the local board, and may also make rules as to the apportionment of the district fund between the general purposes of the district and the purposes of particular parts of the district, and for determining the relations between district boards and local boards. Sections 21 to 23 and 41 of the Bill also contemplate the appropriation of specific funds to the purposes of the local boards, and the nature of the control which may be exercised by district boards is regulated by sections 22, 23 and 41. It will not, therefore, be possible for the district board, if it were so disposed, to reduce the local boards subordinate to it to mere nonentities; and it will probably be found most convenient ordinarily to leave the administration of many matters in the hands of the local boards, which will be able to meet more frequently than the district board.

"Chairmen of district and local boards, whether elected or appointed by the Local Government, will be chosen from among the members of the board, and will hold office for such term, not exceeding three years, as the Local Government may fix. It has all along been intended that only members of boards should be eligible for election or appointment as chairmen, though this was not distinctly stated in the Bill as introduced.

"It has not been thought necessary to empower local boards to appoint joint committees in concurrence with other local boards or authorities, as the district board will discharge the functions of a joint committee for the local boards within the district, and can appoint a joint committee in concurrence with other local bodies when this is desirable. But cantonment authorities

have been added to the other local authorities who may concur in appointing joint committees, as this may sometimes be found useful in regard to matters in which district boards and residents in cantonments are jointly interested.

"As the district board is the corporate body, it has been empowered to employ such servants as are necessary for the purposes of the local boards subordinate to it, as well as such as are necessary for its own purposes. This will enable it to authorize a local board as its agent to employ necessary servants. The power given by the Bill as introduced to Deputy Commissioners to control appointments made by second class boards has been extended to all boards as recommended by the Local Government. As I mentioned on a recent occasion, the Delhi Municipal Committee, when consulted on the original draft of the Municipal Bill, thought it desirable that the Deputy Commissioner should have this power; and if it is exercised in such a way as to give dissatisfaction to the board, it will have an appeal to the Commissioner of the division.

"As respects finance, the effect of the provisions of sections 35 and 36, forming a district fund, and vesting that fund in the district board, and of the repeal of Act V of 1878 in districts in which the present measure is brought into force, will be to put an end to the power, which that Act gave to the Local Government, to withdraw from any district unexpended balances of the allotment made to it from the proceeds of the local rate. The district boards will, therefore, occupy a much more secure financial position than the committees whose place they will take. They have also been empowered to invest their funds in approved securities, subject to such rules as may be made by the Governor General in Council in that behalf, and to the previous sanction of the Local Government. This condition will be a check upon money being hoarded when it might be spent with more advantage in meeting the immediate requirements of the district.

"Additional powers to make rules have been given to the Local Government for the purpose of regulating the language of the boards, the channel through which correspondence should pass, and the preparation and sanction of plans and estimates for works, and for the guidance of district boards in conducting litigation.

"With reference to the last point, as district committees were not hitherto empowered to sue nor liable to be sued, all suits relating to matters under their control having to be brought by or against Government, it is probable that district boards will require some instructions as to the course to be adopted when suits are brought against them, or when they have occasion to institute suits; and it may be desirable that such cases should ordinarily be reported to the Local Government, in order that it may be in a position to give the boards any assistance or advice which may be required.

"The Bill originally contained a section, similar to that which is to be found in most Municipal Acts, requiring persons proposing to sue a district board, or any of its members or officers, for compensation for any wrongful act done or purporting to be done under the Act, to give written notice at least a month before instituting the suit. It will be remembered that, on the occasion of the passing of the North-Western Provinces and Oudh Municipalities Act, I doubted the expediency of omitting the provision of this nature which was contained in the Act previously in force, and that my hon'ble friend Mr. Ilbert explained why it had not been considered necessary to retain it, and expressed an opinion that, if such a provision is really required, it ought to be embodied in a general Act, granting the necessary protection to all persons acting under statutory or other similar authority. I understood him to think that the protection was not more likely to be wanted in India than in England, where it had been found possible to dispense with it, and the prospect of its being given by a general Act therefore seemed to me to be somewhat faint; but, from what afterwards passed in committee on the present Bill, I gathered that, if Local Governments showed cause for considering that local authorities required such protection as would be afforded by notice of suits, there would be

no objection to providing it. On this understanding I agreed to the omission of the section in question from the Bill; and I had the less difficulty in doing so, because it could not be said in this case, as in that of a Municipal Bill, that by the omission we were depriving the boards of a protection which their predecessors had enjoyed under the law hitherto in force. District boards are perhaps less likely to be frequently engaged in litigation than municipal committees; but if suits for compensation for alleged wrongs are brought against them, and it is found that inconvenience is caused by the want of sufficient notice before such suits are brought, steps will no doubt be taken to make this known to the Government of India, in order that the necessary legislation may be taken in hand.

"As the Bill does not now make the district boards a continuation of the committees previously in existence with larger powers than before, it has become necessary to make provision for their liability to discharge obligations incurred by those committees. We have therefore adopted the provisions of the Act recently passed for the North-Western Provinces and Oudh, saving contracts made on behalf of district committees, and providing for the continued employment of Government officers serving under them.

"Comparatively little use has been made in the Panjáb of the provisions of Act XX of 1856, for the appointment and maintenance of police-chaukídárs in towns, and most places in which it was in force, other than military cantonments, have been constituted into municipalities and now raise the necessary taxation by other methods. In any towns which have not become municipalities, a tax can be imposed for the purpose of paying for watchmen under the provisions of the Panjáb Laws Act, as amended in 1878 and 1881. The Local Government, under these circumstances, did not consider it necessary that Act XX of 1856 should continue to apply to such towns; and, as that Act contains no provision for withdrawing it from operation in any place to which it has been extended, we have provided in section 69 that, when a district board is established having authority in any place to which Act XX of 1856 applies, the Local Government may direct that that Act shall cease to be in force.

"The changes which have been made in the Bill have not altered what I pointed out in moving for leave to introduce it as one of its most marked features, namely, the extent to which it leaves details to be regulated by rules to be made by the Local Government. It was then explained that this was rendered necessary by the varying circumstances of different parts of the province, with regard to which the rules must be framed if much progress is to be effected.

"But wherever the provisions now to be found in the third chapter of the Bill can be made applicable, the district boards will enjoy a much greater measure of independence than the committees which have hitherto performed similar functions, and they will have a much more complete control over the administration of their funds. They will in most instances be relieved by local boards of such duties as can most suitably be discharged by smaller bodies, with local knowledge and with a real interest in local business; but these boards will be subordinate to the district board, and it will continue to manage all matters affecting the interests of the district as a whole. The constitution of these smaller bodies is a new step in the direction of local self-government, and it may fairly be hoped that the interest which has hitherto been taken by members of district committees in the departments of administration entrusted to them will be still more largely manifested by the members of the local boards now to be constituted, who will be thoroughly acquainted with the wants and interests of the smaller areas over which their authority will extend, and who will be put to less inconvenience in attending meetings than the members of a committee assembled from all parts of the district to meet at its head-quarters. The powers reserved to district officers by the Bill will enable them to give these boards the guidance, counsel and assistance which they must often require, and which could neither be so frequently nor so usefully supplied by the district board; and the relations which at present as a rule exist between the rural population and the district officer afford some guarantee that both dis-

trict and local boards will be ready to be guided by his advice, and that he will take a hearty interest in training them to make the best use of their powers, and in the success of their administration."

The Motion was put and agreed to.

The Hon'ble MR. BARKLEY said that he had now to ask His Excellency the President for leave to move two amendments of which he had not given notice. The amendments, he explained, were not of an important character.

His Excellency THE PRESIDENT said that he had been made acquainted with the nature of the two amendments which Mr. Barkley wished to propose, and the necessity for moving them now had arisen in consequence of thel ateness at which the Report of the Select Commitee was brought to the notice of the Lieutenant-Governor and himself. Under those circumstances, and as they did not involve any important points, he would give leave that the amendments be made.

The Hon'ble MR. BARKLEY said that the first amendment was as follows :—

That the proviso to the second sub-section of section 20 be omitted.

The matter which that amendment was intended to cover was already provided for by section 34 of the Bill, which required the Local Government, when services, the cost of which was hitherto borne by Government, were undertaken by a district board under section 20, to provide it with adequate funds for their maintenance in the same state of efficiency as before. That being so, it did not appear necessary to retain that proviso to section 20.

The Hon'ble MR. ILBERT remarked that the proviso was inserted for the purpose of making clear the mutual relations of section 20 and section 34 of the Bill; but as he understood that its retention in its present form might possibly lead to administrative difficulties and as the meaning of the Bill appeared to be reasonably clear without it, he would not offer any objection to its omission.

The amendment was put and agreed to.

The Hon'ble MR. BARKLEY also moved that to section 51 the following be added, namely :—

"but shall be immediately reported to the Governor General in Council and shall be subject to his orders."

He said that this course would no doubt always be adopted, but that it was better to provide for it in the Bill.

The Motion was put and agreed to.

The Hon'ble MR. BARKLEY moved that the Bill as amended be passed.

His Honour THE LIEUTENANT-GOVERNOR said :—" This Bill is a younger son in a tolerably large family, and, as is the fate of younger sons in thrifty households, it has been made to wear the clothes of its elder brothers. The fit is, no doubt, in some respects excellent. But I am not sure that the child would not have run about more freely and grown more robust in the loose homespun in which it was first clothed by its nurse than in the elaborate and tight-fitting garments in which it now appears. Although the Bill has been greatly altered in its transit through Committee, I desire to express my thanks to the Council for the great consideration that has been given to the representations which I have on several occasions found it my duty to make in respect to the various changes from time to time proposed, and for the concessions that have been made to me. Above all, I am grateful that the distinctive features of the Bill have not been interfered with. As described in the Panjáb Government letter of 24th April last, and by my hon'ble colleague Mr. Barkley, in his speech when introducing the Bill, this is an enabling rather than an enacting Bill. No doubt, this peculiarity of form makes large drafts upon the confidence of the Government of India, the legislature and the public. But in no other way can local self-government, in

my judgment, be successfully developed in the Panjáb. When municipal government was first attempted in this Province, almost everything was done by executive arrangement without any law at all. When the necessity for some law came to be felt, a mere skeleton Act was passed. It enacted little, but permitted much. A few years later the law was revised and somewhat elaborated, but still left elastic. Now, after twenty years' experience, it is found practicable to reduce to positive enactment not only the leading principles but many of the details of municipal government, and a Bill for the purpose is now before this Council.

"I should wish to proceed in a somewhat similar way in introducing local self-government in the districts—that is to say, progressively, but tentatively and cautiously. This is the explanation of the peculiar feature of the Bill. It is only in myth and fable that Athene springs at once full armed from the brain of Zeus. In nature and the work-a-day world, things proceed more slowly—first the blade, then the ear, then the full corn in the ear. The necessity for cautious advance and for diversity of arrangements to meet the varying requirements of different parts of the country has, notwithstanding all we have heard to the contrary, been from the first recognised and insisted upon both by the Supreme and Local Governments. In the Government of India resolution of 18th May, 1882, it was said that the Governor General in Council is quite aware of the absurdity of attempting to lay down any hard-and-fast rules which shall be of universal application in a country so vast, and in its local circumstances so varied, as British India. And in the Local Government resolution of 7th September, 1882, diversity of arrangement was strongly insisted on as presumptive proof that the varying requirements of localities have not been disregarded. The policy of Government is to be found less in the Bill than in the published resolutions. The Bill, and the rules of general or local application to be found under it and to be modified from time to time as circumstances require, are the steps by which effect is gradually to be given to that policy in its integrity. Uniformity is impossible, and an Act rigid in its provisions and applicable to the whole province is altogether out of the question at the present stage. In no other way than by leaving large discretion to the Local Government to vary its arrangements when necessary district by district, and from time to time, can local self-government be successfully attempted in this Province. In no other way can we avoid, in this country of deep-rooted prejudices and hoary traditions, the evils that inevitably result from laws too far in advance of the social condition of the people.

"The policy of local self-government has often been assailed on the ground that we ought not to legislate in advance of social opinion. That is a proposition to which I for one cannot agree. In the countries of Europe and America it may be true: society there has inherent elements of progress, and, as Sir Henry Maine has forcibly remarked in his Ancient Law, page 24, social necessities and social opinion are in progressive societies always more or less in advance of law. Here in India the case is reversed. Society is inherently unprogressive. It is firmly rivetted to ancient custom and inveterate prejudice. The only true progress it has made for centuries has been forced upon it from without. Had our legislature waited upon Indian opinion; the fires of the suttee would not yet have been extinct; the Ganges would still have claimed her woman victims; crimes would still have been defined and punishments awarded with reference to the caste and rank of the offender; property would still have been forfeited for religious opinion; we should have had no free Press, no railways, no telegraphs, no post-offices, no municipal government; and the country would be a century behind its present state of development.

"There is no more plausible fallacy than the proposition that in India legislation ought not to be in advance of the social state of the people. From the nature of the case it must always be in advance. The real question is one of degree. Legislation that is too progressive may be a greater calamity to a people than legislation that lags behind the popular demand. But it is our duty, in the position in which we are placed, so to adjust both our legislative and our administrative measures as to create a higher and a better social

opinion, and to give to the people gradually and progressively, as they are able to receive it, an increasing share in the benefits flowing from political principles which England has secured for herself by centuries of struggle and at the cost of much of her best and noblest blood. Thus only, in my humble opinion, can we be faithful to our trust in India and true to the great traditions we have inherited.

"As regards particular sections of the Bill, I need say very little. The Bill differs from the Central Provinces Act, the North-Western Provinces Act, and all other Bills that I have seen, in requiring the Local Government, when transferring to district boards any works or services paid for from provincial revenues, to provide the boards with sufficient funds for the maintenance of those works and services. This is in accordance with the principles laid down by the Government of India. But the Panjáb Bill is the only one that contains such a provision or affords such a security to the district boards.

"The Bill is also singular in its provisions regarding taxation. The scope and object of the taxation-sections were explained by Mr. Barkley when the Bill was introduced. But it will perhaps not be considered out of place if I advert to the subject again. I cannot make it plainer than by quoting the following passage from a note on the Bill which was forwarded to the Government of India with the Panjáb letter of 24th April last:—

'No system of local self-government will be complete which does not aim at the ultimate inclusion of all classes of the community within its scope. It has been matter of regret to Sir Charles Aitchison, in working out the scheme of local self-government, that a large section of the community will, for the present at all events, have no interest in the funds to be administered by rural boards, and will therefore be disqualified from representation at their sittings. The want which will be thus experienced will be partially met by a fuller development of the policy described in paragraph 21 of the Government of India Resolution of 18th May, 1882. Should it hereafter be possible to make over the administration of the license-tax to the local boards, the object will, in a large measure, be attained. But, apart from this possibility, the Lieutenant-Governor is very desirous of providing the machinery for interesting all classes of the people residing in the rural districts in the great work of self-administration; and it is necessary that all should bear their burden of taxation, if they are to have a substantial interest in the proceedings of the boards. Moreover, it is an admitted defect in our systems of taxation that they usually fail to reach the classes who benefit most by British rule. The Lieutenant-Governor thinks that the local knowledge of Native communities should be brought practically to bear upon the solution of this problem. There are places where the local rates under the present Act may be heavier than is required by local circumstances; there are unquestionably other parts of the Province where no permissible amount of local taxation upon the classes now subject to it can really meet local needs, whilst, in the same localities, some other classes, benefited by local fund expenditure, altogether escape local burdens. The people themselves should come forward to redress these inequalities which with the advance of progress will be felt more and more. Section 18 (now section 30) will enable the people to do this, if they should so desire. Its operation, taken with that of section 12 (now section 5), will by no means of necessity involve any increase of taxation. On the contrary, the total amount of local taxation in any given local area might be lowered; whilst at the same time the section might be used to redistribute the pressure of local imposts, to lessen the weight of taxation upon the labouring or cultivating classes who live by agriculture, and justly to lay an adequate amount of it upon the mercantile classes, who reap, with others, no small share of the benefits derived from local works and communications.'

"While therefore ample funds will be provided by the Provincial Government for all works and services paid from provincial finances which may be transferred to the control of district boards, taxation may be had recourse to either as a substitute for part of the local rate, so as thereby to reduce the taxation on the land or to provide additional funds wherewith to undertake new works and services or to extend and improve those already under their control. For such purposes provincial funds cannot be allotted to district boards. The boards must find their own funds either by husbanding their resources or by fresh taxation. The power of taxation, however, is sufficiently guarded by the provision of sections 30 to 32 of the Bill, and still more by the fact that all proposals for additional taxation must emanate from the boards themselves and not from the Government.

"In conclusion, I must once more express my cordial concurrence in the general policy to which this Bill is intended to give effect in the Panjáb. The

policy itself is not new; it is rather an advance on lines laid down long ago. But it is a development of an old policy conceived in a spirit of generous sympathy with the people, and wise anticipation of their wants and legitimate aspirations. It has my most hearty support, and no effort will be wanting on my part to make it successful in the province which it is my privilege and my pride to govern."

His Excellency THE PRESIDENT said:—" I cannot let this Bill pass without expressing the great satisfaction which I feel that a measure intended to enable my hon'ble friend opposite, the Lieutenant-Governor of the Panjáb, fully and completely to carry out his Resolution of the 7th September 1882, should at last have been brought to completion, and should be about to become law. This measure has been so framed as to give the fullest possible effect to the Resolution to which I have just alluded, and that Resolution was drawn up in complete accordance with the views of the Government of India as laid down in their Resolution of the 18th May 1882. The Lieutenant-Governor has, from the commencement, formed the most just estimate of the views and intentions of the Government of India as set forth in that Resolution, and under this Bill he will be enabled, according to his judgment of the requirements of the various localities under his Government, to give to the principles which that Resolution embodied such development as he thinks most suitable to the circumstances of each locality.

"It has been said in criticism of this Bill that it is, as my hon'ble friend has just explained, an enabling, rather than an enacting, measure. No doubt that is the case, but it was essential that that should be the character of legislation upon this subject, if one of the most fundamental principles of the Resolution of the 18th May was to be carried out, the principle, namely, that the system sketched out in that Resolution was to be applied in different degrees to the different provinces of India and to the different districts of each province.

"One of the points most clearly explained in that Resolution was the very obvious one that in a country so diversified as India it was essentially necessary to vary the arrangements for Local self-government according to the varying condition, not of each province, but almost of each district in each province; variety was contemplated by that Resolution, and I myself have always regarded it as an essential feature of the proposal of the Government. I have therefore been rather surprised that other Local Governments have not, as that of my hon'ble friend has done, reserved to themselves more complete powers of varying the modes of applying the system of local self-government, and that they have rather tied themselves down to a cut and dry system to be applied generally throughout the districts under their Government. It is however quite true that if there be any province which more than another requires the adoption of different arrangements in different districts, that province is the Panjáb. In the Panjáb we have every variety of social circumstances; every variety of development; great differences of race and of creed, from old settled districts like that of Delhi, to the border districts on the Afghan frontier, and to hill tracts, like those in which we are living at the present moment. It was, therefore, extremely natural that the Lieutenant-Governor should feel it necessary to take large powers in order to enable him to give adequate elasticity to the schemes to be adopted in different parts of the province under his rule. Undoubtedly a measure of this kind makes a large demand upon public confidence; and it will depend very largely upon my hon'ble friend to what extent he carries out the principles of local self-government in the Panjáb. The Bill enables him to apply the principles sketched out in the Resolution of the 18th May to the fullest extent, but it will not compel him to do so. He has given to the public in his Resolution of the 7th September 1882 the fullest assurance as to the mode in which he intends to exercise the powers conferred upon him, and I have the most complete and entire confidence that, when this Bill becomes law, he will, without delay, apply the principles laid down for his guidance by the Government of India in such degree, in such manner, and to such extent, as he may feel to be most suitable to the various parts of the territory under his administration.

"When the boards to be established under this Bill have once been set up, the measure contains all due provision that they shall not be arbitrarily or rashly abolished; that, once established, they shall not be overthrown except in rare cases in which adequate reasons may exist for the change; and I hold, therefore, that the public may regard with complete satisfaction the passing of this Bill as assuring to the Panjáb a wide development of the system of local self-government.

"As Sir Charles Aitchison has said, that system is not a new one; the Government of India of the present day lay no claim to having in this matter struck out a novel policy; all that they have done is that they have endeavoured to make a large step in the direction of extending and developing the work which their predecessors commenced; and I am quite sure that that extension and development will nowhere be more thoroughly and fully carried into effect than in the Panjáb under the rule of my hon'ble friend.

"Sir Charles Aitchison has said something upon the taxing clauses in this Bill, and upon that subject I have one observation to make. The principle which the Government of India desire to see applied in respect to the matter of taxation is this: when any service is handed over to the new boards which are about to be established, there should be given to them at the same time an ample amount of funds out of existing taxation to enable them to maintain that service in its present state of efficiency. I should be exceedingly sorry if there should be any mistake on this subject, or if it should be supposed that the present extension of local self-government had been devised for the purpose of forcing additional taxation upon the people. That is not our intention; whatever duties the boards are required to undertake they will have funds given to them for the purpose of enabling them to discharge those duties upon the existing scale; if in future years they should desire to do more, of course they will provide for that at their own will under the taxing clauses of the Bill, but in regard to any services now provided for out of general or provincial funds which may be handed over to them means will be given to them at the same time for fulfilling those services without any increase of the total existing taxation.

"I have thought it desirable to make this point quite clear, because there has perhaps been some misapprehension upon it, and because the principle which I have just laid down is one to which the Government of India and the Secretary of State attach great importance.

"I have only in conclusion to congratulate my hon'ble friend the Lieutenant-Governor upon the passing of this Bill, and to express my entire confidence that he will work it in complete accordance with the spirit of his Resolution of the 7th September 1882."

The Motion was put and agreed to.

INDIAN PORTS ACT, 1875, AMENDMENT BILL.

The Hon'ble Mr. Ilbert introduced the Bill to amend the Indian Ports Act, 1875, and moved that it be referred to a Select Committee consisting of the Hon'ble Sir A. Colvin, the Hon'ble Mr. Reynolds and the Mover.

The Motion was put and agreed to.

The Hon'ble Mr. Ilbert also moved that the Bill and Statement of Objects and Reasons be published in the *Fort St. George Gazette*, the *Bombay Government Gazette*, the *Calcutta Gazette* and the *British Burma Gazette* in English and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

MADRAS PARTITIONS DEEDS REGISTRATION BILL.

The Hon'ble Mr. Ilbert also moved for leave to introduce a Bill to give effect to certain unregistered instruments of partition relating to immoveable

property in the Madras Presidency, and to remove doubts as to the titles conferred thereby. He said :—

"This is a Bill which has been prepared in pursuance of the request of the Madras High Court, who apprehend that an extra-judicial opinion expressed by the Court a good many years ago on one of the former Registration Acts, may cause some difficulties in connection with the titles to land in that Presidency.

"The subject is a highly technical one, and, in order to explain it, I shall be compelled to refer very shortly to some of the provisions of these Acts.

"This is how the case stands.

"Section 17 of the Registration Act XX of 1866 relates to instruments of which the registration is compulsory, and section 18 to instruments of which the registration is optional.

"Clause (7) of the latter section includes 'Instruments of Partition' among other instruments. The High Court at Madras, shortly after the passing of the Act, recorded an extra-judicial opinion that partition-deeds relating to immoveable property were governed by section 18 of the Act, and that their registration was therefore optional. This opinion was promulgated and acted upon.

"The Act of 1866 was repealed by the Registration Act VIII of 1871, which, however, reproduced clause (7), section 18 of the former Act; but the Act of 1871 was in turn repealed by the Registration Act III of 1877. Section 18 of this Act revised the list of documents the registration of which was optional, and partition-deeds have been omitted from the list.

"The Madras High Court now say that, of late, grave doubts have been entertained as to the correctness of the opinion to which I have referred, and recommend that, in view of the serious consequences to persons who may have acted on the opinion of the Court, and of the dissensions which may be excited in families by the disturbance of such arrangements, resort should be had to legislation to quiet titles. They have sent up the draft of a Bill which will in their opinion effect the objects which they desire, and the Bill which I am now asking leave to introduce is framed in accordance with that draft."

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also introduced the Bill.

The Hon'ble MR. ILBERT also moved that the Bill and Statement of Objects and Reasons be published in the *Gazette of India*, and in the *Fort St. George Gazette* in English and in such other languages as the Local Government might think fit.

The Motion was put and agreed to.

SUNDRY BILLS.

The Hon'ble MR. ILBERT also moved that the Hon'ble Sir A. Colvin be added to the Select Committees on the following Bills :—

To amend the law relating to Court-fees.

To amend the law relating to certificates granted under Act XXVII of 1860 (*an Act for facilitating the collection of debts on successions, and for the security of parties paying debts to the representatives of deceased persons*).

The Motion was put and agreed to.

The Council adjourned *sine die*.

D. FITZPATRICK,

Secretary to the Government of India,

Legislative Department.

SIMLA;

trict and local boards will be ready to be guided by his advice, and that he will take a hearty interest in training them to make the best use of their powers, and in the success of their administration."

The Motion was put and agreed to.

The Hon'ble MR. BARKLEY said that he had now to ask His Excellency the President for leave to move two amendments of which he had not given notice. The amendments, he explained, were not of an important character.

His Excellency THE PRESIDENT said that he had been made acquainted with the nature of the two amendments which Mr. Barkley wished to propose, and the necessity for moving them now had arisen in consequence of the lateness at which the Report of the Select Committee was brought to the notice of the Lieutenant-Governor and himself. Under those circumstances, and as they did not involve any important points, he would give leave that the amendments be made.

The Hon'ble MR. BARKLEY said that the first amendment was as follows:—

That the proviso to the second sub-section of section 20 be omitted.

The matter which that amendment was intended to cover was already provided for by section 34 of the Bill, which required the Local Government, when services, the cost of which was hitherto borne by Government, were undertaken by a district board under section 20, to provide it with adequate funds for their maintenance in the same state of efficiency as before. That being so, it did not appear necessary to retain that proviso to section 20.

The Hon'ble MR. ILBERT remarked that the proviso was inserted for the purpose of making clear the mutual relations of section 20 and section 34 of the Bill; but as he understood that its retention in its present form might possibly lead to administrative difficulties and as the meaning of the Bill appeared to be reasonably clear without it, he would not offer any objection to its omission.

The amendment was put and agreed to.

The Hon'ble MR. BARKLEY also moved that to section 51 the following be added, namely:—

"but shall be immediately reported to the Governor General in Council and shall be subject to his orders."

He said that this course would no doubt always be adopted, but that it was better to provide for it in the Bill.

The Motion was put and agreed to.

The Hon'ble MR. BARKLEY moved that the Bill as amended be passed.

His Honour THE LIEUTENANT-GOVERNOR said:—"This Bill is a younger son in a tolerably large family, and, as is the fate of younger sons in thrifty households, it has been made to wear the clothes of its elder brothers. The fit is, no doubt, in some respects excellent. But I am not sure that the child would not have run about more freely and grown more robust in the loose homespun in which it was first clothed by its nurse than in the elaborate and tight-fitting garments in which it now appears. Although the Bill has been greatly altered in its transit through Committee, I desire to express my thanks to the Council for the great consideration that has been given to the representations which I have on several occasions found it my duty to make in respect to the various changes from time to time proposed, and for the concessions that have been made to me. Above all, I am grateful that the distinctive features of the Bill have not been interfered with. As described in the Panjáb Government letter of 24th April last, and by my hon'ble colleague Mr. Barkley in his speech when introducing the Bill, this is an enabling rather than an enacting Bill. No doubt, this peculiarity of form makes large drafts upon the confidence of the Government of India, the legislature and the public. But in

no other way can local self-government, in my judgment, be successfully developed in the Panjáb. When municipal government was first attempted in this Province, almost everything was done by executive arrangement without any law at all. When the necessity for some law came to be felt, a mere skeleton Act was passed. It enacted little, but permitted much. A few years later the law was revised and somewhat elaborated, but still left elastic. Now, after twenty years' experience, it is found practicable to reduce to positive enactment not only the leading principles but many of the details of municipal government, and a Bill for the purpose is now before this Council.

"I should wish to proceed in a somewhat similar way in introducing local self-government in the district—that is to say, progressively, but tentatively and cautiously. This is the explanation of the peculiar feature of the Bill. It is only in myth and fable that Athene springs at once full armed from the brain of Zeus. In nature and the work-a-day world, things proceed more slowly—first the blade, then the ear, then the full corn in the ear. The necessity for cautious advance and for diversity of arrangements to meet the varying requirements of different parts of the country has, notwithstanding all we have heard to the contrary, been from the first recognised and insisted upon both by the Supreme and Local Governments. In the Government of India resolution of 18th May, 1882, it was said that the Governor General in Council is quite aware of the absurdity of attempting to lay down any hard-and-fast rules which shall be of universal application in a country so vast, and in its local circumstances so varied, as British India. And in the Local Government resolution of 7th September, 1882, diversity of arrangement was strongly insisted on as presumptive proof that the varying requirements of localities have not been disregarded. The policy of Government is to be found less in the Bill than in the published resolutions. The Bill, and the rules of general or local application to be framed under it and to be modified from time to time as circumstances require, are the steps by which effect is gradually to be given to that policy in its integrity. Uniformity is impossible, and an Act rigid in its provisions and applicable to the whole province is altogether out of the question at the present stage. In no other way than by leaving large discretion to the Local Government to vary its arrangements when necessary district by district, and from time to time, can local self-government be successfully attempted in this Province. In no other way can we avoid, in this country of deep-rooted prejudices and hoary traditions, the evils that inevitably result from laws too far in advance of the social condition of the people.

"The policy of local self-government has often been assailed on the ground that we ought not to legislate in advance of social opinion. That is a proposition to which I for one cannot agree. In the countries of Europe and America it may be true: society there has inherent elements of progress, and, as Sir Henry Maine has forcibly remarked in his Ancient Law, page 24, social necessities and social opinion are in progressive societies always more or less in advance of law. Here in India the case is reversed. Society is inherently unprogressive. It is firmly rivetted to ancient custom and inveterate prejudice. The only true progress it has made for centuries has been forced upon it from without. Had our legislature waited upon Indian opinion, the fires of the suttee would not yet have been extinct; the Ganges would still have claimed her human victims; crimes would still have been defined and punishments awarded with reference to the caste and rank of the offender; property would still have been forfeited for religious opinion; we should have had no free Press, no railways, no telegraphs, no post-offices, no municipal government; and the country would be a century behind its present state of development.

"There is no more plausible fallacy than the proposition that in India legislation ought not to be in advance of the social state of the people. From the nature of the case it must always be in advance. The real question is one of degree. Legislation that is too progressive may be a greater calamity to a people than legislation that lags behind the popular demand. But it is our duty, in the position in which we are placed, so to adjust both our legislative and our administrative measures as to create a higher and a better social

HOME DEPARTMENT.

NOTIFICATIONS.—EXAMINATIONS.

Simla, the 23rd October 1883.

No. 80.—The services of Lieutenant-Colonel A. C. Toker, Bengal Staff Corps, are replaced at the disposal of the Military Department, with effect from the forenoon of the 13th instant.

The 24th October 1883.

No. 84.—The following Regulations respecting the Examination of Candidates for the Civil Service of India, to be held in June 1884, are published for general information :—

EXAMINATIONS FOR THE CIVIL SERVICE OF INDIA.

Regulations for the Open Competition of June 1884.

N.B.—The Regulations are liable to be altered in future years.

1. On the 3rd June, 1884, and following days, an Examination, open to all qualified persons, will be held in London (*a*). Not fewer than persons will be selected, if so many shall be found duly qualified; viz., for the Lower Provinces of Bengal (including Assam); for the Upper Provinces of Bengal (including the Punjab and Oudh); for Burma; for Madras; and for Bombay (*b*).

2. No person will be deemed qualified who shall not satisfy the Civil Service Commissioners—

(i) That he is a natural-born subject of Her Majesty.

(*a*) An order for admission to the Examination will be sent to each Candidate on the 20th of May.
(*b*) The numbers will be announced hereafter.

(ii) That his age will be above seventeen years and under nineteen years on the 1st January, 1884. [*N.B.—In the case of Natives of India this must be certified by the Government of India, or of the Presidency or Province in which the Candidate may have resided.*]

(iii) That he has no disease, constitutional affection, or bodily infirmity unfitting him, or likely to unfit him, for the Civil Service of India.

(iv) That he is of good moral character.

3. Should the evidence upon the above points be *primâ facie* satisfactory to the Civil Service Commissioners, the Candidate, on payment of the prescribed fee (*c*), will be admitted to the Examination. The Commissioners may however, in their discretion, at any time prior to the grant of the Certificate of Qualification hereinafter referred to, institute such further inquiries as they may deem necessary; and if the result of such inquiries, in the case of any Candidate, should be unsatisfactory to them in any of the above respects, he will be ineligible for admission to the Civil Service of India; and if already selected will be removed from the position of a Probationer.

4. The Examination will take place only in the following branches of knowledge:—

		Marks.
	English Composition	300
(*d*)	History of England—including a period selected by the Candidate ...	300
(*d*)	English Literature—including books selected by the Candidate ...	300
	Greek	600
	Latin	800
	French	500
	German	500
	Italian	400
(*e*)	Mathematics (pure and mixed)	1,000
	Natural Science: that is, the Elements of any two of the following Sciences, *viz.*:— Chemistry, 500; Electricity and Magnetism, 300; Experimental Laws of Heat and Light, 300; Mechanical Philosophy, with outlines of Astronomy, 300.	
	Logic	300
	Elements of Political Economy	300
(*f*)	Sanskrit	500
(*f*)	Arabic	500

Candidates are at liberty to name any or all of these branches of knowledge. No subjects are obligatory.

5. The merit of the persons examined will be estimated by marks; and the number set opposite to each branch in the preceding regulation denotes the greatest number of marks that can be obtained in respect of it.

6. The marks assigned to Candidates in each branch will be subject to such deduction as the Civil Service Commissioners may deem necessary (*g*), in order to secure that "a Candidate be allowed no credit at all for taking up a subject in which he is a mere smatterer."

7. The Examination will be conducted on paper and *vivâ voce*, as may be deemed necessary.

8. The marks obtained by each Candidate, in respect of each of the subjects in which he shall have been examined, will be added up, and the names of the several Candidates who shall have obtained, after the deduction above mentioned, a greater aggregate number of marks than any of the remaining Candidates, will be set forth in order of merit, and such Candidates shall be deemed to be Selected Candidates for the Civil Service of India, provided they appear to be in other respects duly qualified. Should any of the Selected Candidates become disqualified, the Secretary of State for India will determine whether the vacancy thus created shall be filled up or not. In

(*c*) The fee (£5) will be payable by means of a special stamp according to instructions which will be communicated to Candidates.

(*d*) A considerable portion of the marks for English History and Literature will be allotted to the work selected by the Candidate. (See notice on p. 4.) In awarding marks for this, regard will be had partly to the extent and importance of the periods or books selected, but chiefly to the thoroughness with which they have been studied.

(*e*) The examination will range from Arithmetic, Algebra, and Elementary Geometry up to the elements of the differential and integral calculus, including the lower portions of applied Mathematics.

(*f*) The standard of marking in Sanskrit and Arabic will be determined with reference to a high degree of proficiency, such as may be expected to be reached by a Native of good education.

(*g*) Marks assigned in English Composition and Mathematics will be subject to no deduction.

the former case, the Candidate next in order of merit, and in other respects duly qualified, shall be deemed to be a Selected Candidate. A Selected Candidate declining to accept the appointment which may be offered to him will be disqualified for any subsequent competition.

9. Selected Candidates, before proceeding to India, will be on probation for two years, during which time they will be examined periodically, with a view of testing their progress in the following subjects:—(h)

	Marks.
1. Law	1,250
2. Classical Languages of India—	
Sanskrit	500
Arabic	400
Persian	400
3. Vernacular Languages of India (each)	400
4. The History and Geography of India	350
5. Political Economy	350

In these Examinations, as in the Open Competition, the merit of the Candidates examined will be estimated by marks, and the number set opposite to each subject denotes the greatest number of marks that can be obtained in respect of it at any one Examination. The Examination will be conducted on paper and *vivâ voce,* as may be deemed necessary. The last of these Examinations will be held at the close of the second year of probation, and will be called the "Final Examination," at which it will be decided whether a Selected Candidate is qualified for the Civil Service of India. At this Examination Candidates will be permitted to take up any one of the following branches of Natural Science, *viz.,*—Botany, Geology, or Zoology, for which 350 marks will be allowed.

10. Candidates will be tested during their probation as to their ability to perform journeys on horseback; and no Candidate will be deemed qualified for the Civil Service of India who fails to satisfy the Civil Service Commissioners of his competence in this respect.

11. Any Candidate who, at any of the periodical Examinations, shall appear to have wilfully neglected his studies, or to be physically incapacitated for pursuing the prescribed course of training, will be liable to have his name removed from the list of Selected Candidates.

12. The Selected Candidates who, at the Final Examination, shall be found to have a competent knowledge of the Subjects specified in Regulation 9, and who shall have satisfied the Civil Service Commissioners of their eligibility in respect of nationality, age, health, character, and ability to ride, shall be certified by the said Commissioners to be entitled to be appointed to the Civil Service of India, provided they shall comply with the regulations in force, at the time, for that Service.

13. Persons desirous to be admitted as Candidates must apply on forms, which may be obtained from "The Secretary, Civil Service Commission, London, S. W." at any time after the 1st December, 1883. The forms must be returned so as to be received at the office of the Civil Service Commissioners on or before 31st March, 1884 (i).

The Civil Service Commissioners are authorized by the Secretary of State for India in Council to make the following announcements:—

(1) *Selected Candidates will be permitted to choose, according to the order in which they stand in the list resulting from the Open Competition, so long as a choice remains, the Presidency (and in Bengal the Division of the Presidency) to which they shall be appointed; but this choice will be subject to a different arrangement, should the Secretary of State, or the Government of India, deem it necessary* (k).

(2) *The Probationers, having passed the necessary Examinations, will be required to report their arrival in India within such period after the grant of their Certificate of Qualification as the Secretary of State may in each case direct.*

(3) *The seniority in the Civil Service of India of the Selected Candidates shall be determined according to the order in which they stand on the list resulting from the Final Examination.*

(h) Full instructions as to the course of study to be pursued will be issued to the successful Candidates as soon as possible after the result of the Open Competition is declared.

(i) These forms should be accompanied by evidence on the points mentioned in Regulation 2, and by a list of the subjects in which the Candidate desires to be examined. Evidence of health and character must bear date not earlier than 1st March, 1884. Applications for leave to alter or add to the list of Subjects named will not be entertained unless received on or before the 5th of May.

(k) This choice must be exercised immediately after the result of the Open Competition is announced, on such day as may be fixed by the Civil Service Commissioners.

(4) *An allowance amounting to £300 will be given to all candidates who pass their probation at one of the Universities or Colleges which have been approved by the Secretary of State, viz., the Universities of Oxford, Cambridge, Glasgow, Edinburgh, St. Andrew's, and Aberdeen; Trinity College, Dublin; University College, London; and King's College, London; provided such Candidates shall have passed the required Examinations to the satisfaction of the Civil Service Commissioners, and shall have complied with such rules as may be laid down for the guidance of Selected Candidates.*

(5) *All Selected Candidates will be required, after having passed the first periodical Examination, and before receiving the first instalment of their allowance, to attend at the India Office for the purpose of entering into an agreement binding themselves, amongst other things, to refund in certain cases the amount of their allowance in the event of their failing to proceed to India. A surety will be required.*

(6) *After passing the Final Examination, each Candidate will be required to attend again at the India Office, with the view of entering into covenants, by which, amongst other things, they will bind themselves to agree to such Regulations for the provision of pensions for their families as may be approved by the Secretary of State for India in Council. The stamps payable on these covenants amount to £1.*

(7) *Candidates rejected at the Final Examination of 1886 will in no case be allowed to present themselves for re-examination.*

Notice respecting the Examination in the History of England, and English Literature.

History of England.

For the guidance of Candidates who may have a difficulty in making their selections for special study under this head, the following list is given as indicating the character and amount of reading that would be regarded as satisfactory.

Any one of the following periods, to be studied generally in "Bright's History," and particularly in portions, selected by the Candidate, of the Text books named:—

1. **Henry II. to Edward III., A.D. 1154-1377.**—Stubbs' Select Charters; Stubbs' Constitutional History of England.

2. **The Tudors, A. D. 1485-1603.**—Hallam's Constitutional History of England; Froude's History of England.

3. **The Stuarts, A.D. 1603-1714.**—Hallam's Constitutional History of England; Macaulay's History of England.

4. **A.D. 1714-1805.**—Lord Stanhope's History; Sir T. E. May's Constitutional History; *either* Massey's Reign of George III. *or* Lord Stanhope's Life of Pitt.

English Literature.

Under this head there will be (besides the general paper) a special paper on the following books:—

1. **Spenser.**—Faery Queen, Books I. and II.
2. **Shakespeare.**—King John, As You Like It.
3. **Bacon.**—Essays, I. to XXX. inclusive.
4. **Goldsmith.**—Poems.
5. **Macaulay.**—Biography of Goldsmith. Essays on Clive and on Boswell's Johnson.

The oral examination in English Literature will have reference chiefly to such works, *not included in the foregoing list*, as the Candidate may offer for the purpose.

EVIDENCE OF AGE TO BE REQUIRED FROM CANDIDATES FOR THE CIVIL SERVICE OF INDIA.

I.—Every candidate born in England or Wales should produce a certificate from the Registrar-General of Births, Marriages, and Deaths, or from one of his provincial Officers. This certificate may be obtained at Somerset House, or from the Superintendent Registrar of the District in which the birth took place.

II.—A candidate who is a native of India must have his age certified by the Government of India, or of the presidency or province in which he may have resided.

PART IV.

Acts of the Governor General's Council assented to by the Governor General.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[Third publication.]

The following Act of the Governor General of India in Council received the assent of His Excellency the Governor General on the 11th October, 1883, and is hereby promulgated for general information :—

ACT No. XVIII OF 1883.

An Act to amend the Cattle-trespass Act, 1871.

WHEREAS it is expedient to amend the Cattle-trespass Act, 1871; It is hereby enacted as follows :— (I of 1871.)

Power for Local Government to transfer functions of District Magistrate or Local Government to local authority and direct that surplus receipts be credited to local fund.

1. The Local Government may, from time to time, by order notified in the local official Gazette—

(*a*) transfer to any local authority, within any part of the territories under its administration in which the Cattle-trespass Act, 1871, (I of 1871.) is in operation, all or any of the functions of the Local Government or the Magistrate of the district under that Act, within the local area subject to the jurisdiction of the local authority ; or

(*b*) direct that the whole or any part of the surplus accruing in any district under section eighteen of that Act shall be placed to the credit of such local fund or funds as may be formed for any local area or local areas comprised in that district;

and may, from time to time, in like manner, cancel any order made under this section.

Definitions.

2. In this Act—

"local authority" means any body of persons for the time being invested by law with the control and administration of any matters within a specified local area; and

"local fund" means any fund under the control or management of a local authority.

D. FITZPATRICK,
Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[Third publication.]

The following Act of the Governor General of India in Council received the assent of His Excellency the Governor General on the 12th October, 1883, and is hereby promulgated for general information:—

ACT NO. XIX OF 1883.

An Act to consolidate and amend the law relating to loans of money by the Government for agricultural improvements.

WHEREAS it is expedient to consolidate and amend the law relating to loans of money by the Government for agricultural improvements; It is hereby enacted as follows:—

Short title.

1. *(1)* This Act may be called the Land Improvement Loans Act, 1883.

Local extent. Commencement.

(2) It extends to the whole of British India, but shall not come into force in any part of British India until such date as the Local Government, with the previous sanction of the Governor General in Council, may, by notification in the local official Gazette, appoint in this behalf.

Acts XXVI of 1871 and XXI of 1876 repealed.

XXVI of 1871.

2. *(1)* The Land Improvement Act, 1871, and Act XXI of 1876 *(an Act to amend the Land Improvement Act, 1871,)* shall, except as regards the recovery of advances made before this Act comes into force and costs incurred by the Government in respect of such advances, be repealed.

(2) When in any Act, Regulation or notification, passed or issued before this Act comes into force, reference is made to either of those Acts, the reference shall, so far as may be practicable, be read as applying to this Act or the corresponding part of this Act.

"Collector" defined.

3. In this Act, "Collector" means the Collector of land-revenue of a district, or the Deputy Commissioner, or any officer empowered by the Local Government by name or by virtue of his office to discharge the functions of a Collector under this Act.

Purposes for which loans may be granted under this Act.

4. *(1)* Subject to such rules as may be made under section ten, loans may be granted under this Act, by such officer as may, from time to time, be empowered in this behalf by the Local Government, for the purpose of making any improvement, to any person having a right to make that improvement, or, with the consent of that person, to any other person.

(2) "Improvement" means any work which adds to the letting value of land, and includes the following, namely:—

(a) the construction of wells, tanks and other works for the storage, supply or distribution of water for the purposes of agriculture, or for the use of men and cattle employed in agriculture;

(b) the preparation of land for irrigation;

(c) the drainage, reclamation from rivers or other waters, or protection from floods or from erosion or other damage by water, of land used for agricultural purposes or waste-land which is culturable;

(d) the reclamation, clearance, enclosure or permanent improvement of land for agricultural purposes;

(e) the renewal or reconstruction of any of the foregoing works, or alterations therein or additions thereto, and

(f) such other works as the Local Government, with the previous sanction of the Governor General in Council, may, from time to time, by notification in the local official Gazette, declare to be improvements for the purposes of this Act.

Mode of dealing with applications for loans.

5. *(1)* When an application for a loan is made under this Act, the officer to whom the application is made may, if it is, in his opinion, expedient that public notice be given of the application, publish a notice, in such manner as the Local Government may, from time to time, direct, calling upon all persons objecting to the loan to appear before him at a time and place fixed therein and submit their objections.

(2) The officer shall consider every objection submitted under sub-section *(1)*, and make an order in writing either admitting or overruling it:

Provided that, when the question raised by an objection is, in the opinion of the officer, one of such a nature that it cannot be satisfactorily decided except by a Civil Court, he shall postpone his proceedings on the application until the question has been so decided.

Period for repayment of loans.

6. *(1)* Every loan granted under this Act shall be made repayable by instalments (in the form of an annuity or otherwise), within such period from the date of the actual advance of the loan, or, when the loan is advanced in instalments, from the

date of the actual advance of the last instalment, as may, from time to time, be fixed by the rules made under this Act.

(2) The period fixed as aforesaid shall not ordinarily exceed thirty-five years.

(3) The Local Government and Governor General in Council, in making and sanctioning the rules fixing the period, shall, in considering whether the period should extend to thirty-five years or whether it should extend beyond thirty-five years, have regard to the durability of the work for the purpose of which the loan is granted, and to the expediency of the cost of the work being paid by the generation of persons who will immediately benefit by the work.

Recovery of loans.

7. (1) Subject to such rules as may be made under section ten, all loans granted under this Act, all interest (if any) chargeable thereon, and costs (if any) incurred in making the same, shall, when they become due, be recoverable by the Collector in all or any of the following modes, namely:—

(a) from the borrower—as if they were arrears of land-revenue due by him;

(b) from his surety (if any)—as if they were arrears of land-revenue due by him;

(c) out of the land for the benefit of which the loan has been granted—as if they were arrears of land-revenue due in respect of that land;

(d) out of the property comprised in the collateral security (if any)—according to the procedure for the realization of land-revenue by the sale of immoveable property other than the land on which that revenue is due:

Provided that no proceeding in respect of any land under clause (c) shall affect any interest in that land which existed before the date of the order granting the loan, other than the interest of the borrower, and of mortgagees of, or persons having charges on, that interest, and, where the loan is granted under section four with the consent of another person, the interest of that person, and of mortgagees of, or persons having charges on, that interest.

(2) When any sum due on account of any such loan, interest or costs is paid to the Collector by a surety or an owner of property comprised in any collateral security, or is recovered under sub-section (1) by the Collector from a surety or out of any such property, the Collector shall, on the application of the surety or the owner of that property (as the case may be), recover that sum on his behalf from the borrower, or out of the land for the benefit of which the loan has been granted, in manner provided by sub-section (1).

(3) It shall be in the discretion of a Collector acting under this section to determine the order in which he will resort to the various modes of recovery permitted by it.

Order granting loan conclusive on certain points.

8. A written order under the hand of an officer empowered to make loans under this Act granting a loan to, or with the consent of, a person mentioned therein, for the purpose of carrying out a work described therein, for the benefit of land specified therein, shall, for the purposes of this Act, be conclusive evidence—

(a) that the work described is an improvement within the meaning of this Act;

(b) that the person mentioned had at the date of the order a right to make such an improvement; and

(c) that the improvement is one benefiting the land specified.

Liability of joint borrowers as among themselves.

9. When a loan is made under this Act to the members of a village-community or to any other persons on such terms that all of them are jointly and severally bound to the Government for the payment of the whole amount payable in respect thereof, and a statement showing the portion of that amount which as among themselves each is bound to contribute is entered upon the order granting the loan and is signed by each of them and by the officer making the order, that statement shall be conclusive evidence of the portion of that amount which as among themselves each of those persons is bound to contribute.

Power to make rules.

10. The Local Government, with the previous sanction of the Governor General in Council, may, from time to time, by notification in the local official Gazette, make rules consistent with this Act to provide for the following matters, namely:—

(a) the manner of making applications for loans;

(b) the officers by whom loans may be granted;

(c) the manner of conducting inquiries relative to applications for loans, and the powers to be exercised by officers conducting those inquiries;

(d) the nature of the security to be taken for the due application and repayment of the money, the rate of interest at which, and the conditions under which, loans may be granted, and the manner and time of granting loans;

(e) the inspection of works for which loans have been granted;

(f) the instalments by which, and the mode in which, loans, the interest to be charged on them and the costs incurred in the making thereof, shall be paid;

(g) the manner of keeping and auditing the accounts of the expenditure of loans and of the payments made in respect of the same; and

(h) all other matters pertaining to the working of the Act.

Exemption of improvements from assessment to land-revenue.

11. When land is improved with the aid of a loan granted under this Act, the increase in value derived from the improvement shall not be taken into account in revising the assessment of land-revenue on the land:

Provided as follows:—

(1) Where the improvement consists of the reclamation of waste-land, or of the irrigation of land assessed at unirrigated rates, the increase may be so taken into account after the expiration of such period as may be fixed by rules to be framed

by the Local Government with the approval of the Governor General in Council.

(2) Nothing in this section shall entitle any person to call in question any assessment of land-revenue otherwise than as it might have been called in question if this Act had not been passed.

III of 1877. Act III of 1877 amended.

12. (1) In the Indian Registration Act, 1877, section 17, clause (l), for the word "certificates" the words "orders granting loans" shall be substituted.

(2) In the same Act, section 58, for the words "a certificate" the words "an order" shall be substituted.

(3) In the same Act, section 89, first clause,—

(a) for the words "a certificate" the words "a loan," and

(b) for the words "such certificate" the words "his order,"

shall be substituted.

D. FITZPATRICK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[Second publication.]

The following Act of the Governor General of India in Council received the assent of His Excellency the Governor General on the 12th October, 1883, and is hereby promulgated for general information :—

ACT No. XX OF 1883.

THE PANJÁB DISTRICT BOARDS ACT, 1883.

CONTENTS.

CHAPTER I.

PRELIMINARY.

An act to make better provision for Local Self-government in the Districts of the Panjáb.

WHEREAS it is expedient to amend the law in force in the territories administered by the Lieutenant-Governor of the Panjáb for the levy and expenditure of rates on land; and

Whereas it is also expedient to provide for the constitution of district boards and local boards in those territories, and to define and regulate the powers to be exercised by those boards;

It is hereby enacted as follows:—

CHAPTER I.

PRELIMINARY.

Short title.

1. *(1)* This Act may be called the Panjáb District Boards Act, 1883.

Extent.

(2) It shall extend only to the territories for the time being administered by the Lieutenant-Governor of the Panjáb; and

Commencement.

(3) It shall come into force in each district on such date as the Local Government, by notification, directs.

Repeal of Act V of 1878.

2. From the date on which this Act comes into force in any district, the Panjáb Local Rates Act, 1878, shall be repealed throughout that district. But all rates imposed, sums credited to the Local Government, and notifications published under that Act, shall, so far as may be, be deemed to have been respectively imposed, credited and published under this Act.

V of 1878

Definitions.

3. In this Act, unless there is something repugnant in the subject or context,—

(1) "Land" means land assessed to the land-revenue, and includes land whereof the land-revenue has been wholly, or in part, released, compounded for, redeemed or assigned.

(2) "Land-revenue" includes trini or grazing-dues levied for grazing on Government lands under section 48 of the Panjáb Laws Act, 1872.

IV of 1

(3) "Landholder" means any person responsible for the payment of the land-revenue, if any, assessed on land. It also includes the proprietor of land the land-revenue of which has been wholly, or in part, released, compounded for, redeemed or assigned.

(4) "Annual value" means—

(*a*) double the land-revenue for the time being assessed on any land, whether the assessment is leviable or not; or

(*b*) where the land-revenue has been permanently assessed, or has been wholly or in part compounded for or redeemed, double the amount which, but for such permanent assessment, composition or redemption, would have been leviable; or

(*c*) where no land-revenue has been assessed, double the amount which would have been assessed if the average village-rate had been applied:

Provided that, in any tract in which, under the settlement for the time being in force, the improvement of the land due to canal irrigation has been excluded from account in assessing the land-revenue, and a rate has been imposed in respect of such improvement, that rate shall be added to the land-revenue for the purpose of computing the annual value.

(5) "Financial year" means the year commencing on the first day of April.

(6) "Prescribed day" means such day as the Local Government may, from time to time, prescribe.

(7) "Notification" means a notification published in the official Gazette.

Punjab District Boards Act, 1883.

(Chapter III.—Of District and Local Boards—Sections 4-11.)

(8) "Notified" means notified in the official Gazette.

(9) "Deputy Commissioner" means the Deputy Commissioner of a district, and includes any officer specially appointed by the Local Government to perform the functions of a Deputy Commissioner under this Act.

Powers exercisable from time to time.

4. All powers conferred by this Act may be exercised from time to time as occasion requires.

CHAPTER II.

OF THE LOCAL RATE ON LAND.

The local rate.

5. *(1)* All land shall be subject to the payment of a rate, to be called the local rate, not exceeding one anna for every rupee of its annual value.

(2) The proportion which the local rate shall bear to the annual value of land shall, except as provided in sub-section (3), be fixed for each district by the Local Government by notification.

(3) The Local Government may, by notification, delegate to the district board, subject to such restrictions or conditions as it thinks fit, its powers under sub-section (2), and may, by notification, cancel or vary any such notification.

Road, school and post cesses to merge in the rate.

6. From such date as may be notified in respect of each district by the Local Government, all authorized rates and cesses for the maintenance of roads, schools and the district-post shall merge in and become part of the local rate, and no rate or cess other than the local rate shall be thereafter leviable for those purposes.

Liability for local rate.

7. The landholder shall be liable for the local rate subject to the following provisoes, namely:—

(1) where the landholder pays the land-revenue in kind to any assignee of revenue or any village-headman, the assignee of revenue or village-headman shall be liable for the payment of the local rate instead of the landholder, and no demand shall be made by any such assignee or village-headman on the landholder in respect of the payment of the rate; and

(2) where the Government has, under any lease current at the time when this Act comes into force, paid the local rate on trini, it shall continue to pay the rate during the currency of the lease.

Power to recover a share of the rate from occupancy-tenant.

8. When a local rate is payable by a landholder in respect of lands held by a tenant with a right of occupancy holding at a favourable rent, the landholder may realize from the tenant a share of the rate, bearing the same proportion to the whole rate as the excess of the annual value over the rent paid by the tenant bears to half the annual value.

Appropriation of proceeds of local rate.

9. Four-fifths of the net proceeds of the local rate levied in each district, after deducting the expenses of collection, shall, except as provided in section 68, be allotted to the district board established for that district under this Act.

The remaining one fifth shall be carried to the credit of the Local Government, and may—

(*a*) be allotted by that Government to any district board established under this Act; or

(*b*) be applied by that Government to provide in the territories to which this Act extends, or any part thereof, for any of the matters on which district boards may expend the funds at their disposal under this Act:

Provided that the Local Government may direct that the whole or any portion of the net proceeds of the local rate levied within the limits of any municipality or military cantonment, after deducting the expenses of collection, shall be carried to the credit of the municipal fund, or made available for the purpose of public improvement in the cantonment or for carrying out therein any rules made under section 25 of the Cantonments Act, 1880, as the case may be.

III of 1880.

CHAPTER III.

OF DISTRICT AND LOCAL BOARDS.

A.—Constitution of District and Local Boards.

Establishment of district and local boards.

10. *(1)* The Local Government shall, by notification, establish a district board for each district.

(2) The Local Government may, by notification, establish a local board or local boards within the limits of any district, and may cancel or vary any such notification.

(3) A district board shall have authority throughout the district for which it is established, and a local board shall have authority throughout such portion of the district in which it is established, as the Local Government may, by notification, direct:

Provided that a board shall not have authority over any portion of a district which is for the time being included in a military cantonment or a municipality.

Number and appointment or election of members.

11. (*1*) A district board or local board shall consist of such number of members, not less than six, as the Local Government may fix in this behalf.

(2) The members may be appointed by the Local Government either by name or by official designation, or may be elected in accordance with rules made by the Local Government under this Act, or some may be appointed and some elected, as the Local Government directs:

Provided that—

(*a*) when the Local Government has directed that all or any proportion of the members shall be elected, it shall not thereafter direct that they shall be appointed, unless a majority of the electors declare that they so desire, or the Governor General in Council, for some reason affecting the public interests, sanctions the direction;

(*b*) except with the approval of the Governor General in Council, or unless salaried officers of the Government are elected, not less than two-thirds of the members of every board shall be persons other than salaried officers of the Government; and

(*c*) not less than one-half of the members of the board shall be landholders in the district.

Panjáb District Boards Act, 1883.
(Chapter III.—Of District and Local Boards—Sections 12-20.)

(3) When, under a direction issued under sub-section (2), any places on a board are required to be filled by election, and a sufficient number of members is not elected, the Local Government may fill those places by appointment.

Term of office of members.

12. *(1)* A member of a district board or local board, when appointed by virtue of an office, shall, unless and until the Local Government otherwise directs, continue to be a member of the board while he continues to hold that office.

(2) The term of office of all other elected and appointed members respectively of a district board or local board shall be fixed by the Local Government by rules made under this Act, and may be so fixed as to provide for the retirement of members by rotation, but shall not exceed three years.

(3) An outgoing member shall, if otherwise qualified, be again eligible for election or appointment.

Resignation of members.

13. A member of a local board or of a district board may resign by notifying in writing his intention to do so to the Local Government; and, on the acceptance by the Local Government of such resignation, the member shall be deemed to have vacated his office.

Powers of the Local Government as to removal of members.

14. The Local Government may remove any member of a district board or local board—

(a) if he refuses to act, or becomes incapable of acting, or is declared insolvent, or is convicted of any such offence, or subjected by a Criminal Court to any such order, as implies, in the opinion of the Local Government, a defect of character which unfits him to be a member;

(*b*) if he has been declared by notification to be disqualified for employment in the public service;

(*c*) if he, being a member of a local board, without an excuse sufficient in the opinion of the Local Government, neglects for more than three consecutive months to be present at the meetings of that board, or, being a member of the district board, without such sufficient excuse, neglects for more than six consecutive months to be present at the meetings of that board;

(*d*) if his continuance in office is, in the opinion of the Local Government, dangerous to the public peace or order; or,

(*e*) when he is a salaried officer of the Government, if his continuance in office is, in the opinion of the Local Government, unnecessary or undesirable.

Filling of casual vacancies

15. *(1)* When the place of an elected member of a local board or district board becomes vacant by the resignation or removal of the member or by his death, a new member shall be chosen in accordance with the rules made by the Local Government under this Act to fill the place:

Provided that the Local Government may direct in any such case that the vacancy shall be left unfilled.

(2) When the place of a member of a local board or district board appointed by name becomes vacant as aforesaid, the Local Government may, if it thinks fit, appoint a new member to fill the place.

(3) A person chosen or appointed under this section to fill a casual vacancy shall hold office until the person whose place he fills would regularly have gone out of office, and shall then go out of office, but shall be again eligible for election or appointment.

Incorporation of district boards.

16. Every district board shall be a body corporate by the name of the district board of its district, and shall have perpetual succession and a common seal, with power to acquire and hold property, both moveable and immoveable, and, subject to any rules made by the Local Government under this Act, to transfer any such property held by it, and to contract and do all other things necessary for the purposes of its constitution, and may sue and be sued in its corporate name.

Time for district and local boards coming into existence.

17. The several district boards and local boards constituted under this Act shall come into existence at such time as the Local Government may, by notification, fix in this behalf.

Chairman.

18. (*1*) A member of every district board or local board shall be elected or appointed to be chairman of the board, and shall hold office for such term, not exceeding three years, as the Local Government may, by a rule made under this Act, fix.

(2) The Local Government shall determine, as regards each board or as regards any class of boards, whether the chairman shall be a person appointed by virtue of his office or by name or be elected.

Vice-chairman.

19. (*1*) A district board or local board may elect one of its members to be vice-chairman.

(2) A vice-chairman so elected shall hold office for such term as the board may, by rule, fix.

B.—Duties of District and Local Boards.

Duties of district board.

20. (*1*) The following matters shall, subject to such exceptions and conditions as the Local Government may make and impose, be under the control and administration of each district board within the area subject to its authority:—

(*a*) the management of all property vested in the district board;

(*b*) the construction, repair and maintenance of public roads and other means of communication;

(*c*) the establishment, management, maintenance and visiting of public hospitals, dispensaries, saráis and schools, and the construction and repair of all buildings connected with these institutions;

(*d*) the training of teachers and the establishment of scholarships;

(*e*) the supply, storage and preservation from pollution of water for drinking, cooking and bathing purposes; and

(*f*) the planting and preservation of trees.

Panjáb District Boards Act, 1883.

(Chapter III.—Of District and Local Boards—Sections 21-26.)

(2) The Local Government may direct that any of the following matters shall, subject to such exceptions and conditions as it may make and impose, be under the control and administration of a district board within the area subject to its authority:—

(g) the management of any property vested in Her Majesty;

(h) the establishment, maintenance, visiting and management of markets, rest-houses, encamping-grounds and other public institutions, and the construction and repair of all buildings connected with these institutions;

(i) the construction and repair of embankments, and the supply, storage and control of water for agricultural purposes;

(j) the preservation and reclamation of soil, and the drainage and reclamation of swamps;

(k) the construction, repair and maintenance of famine preventive works, and the establishment and maintenance of such relief-works, relief-houses and other measures in time of famine or scarcity as may be entrusted to the charge of the board by the Local Government;

(l) the registration of births, marriages and deaths;

(m) fairs and agricultural shows and industrial exhibitions;

(n) the establishment and management of pounds, including, where the Cattle-trespass Act, 1871, is in force, such functions of the Local Government and the Magistrate of the district under that Act as may be transferred to the board by the Local Government;

of 1871.

(o) the management of such public ferries as may be entrusted to the charge of the board under section 7 A of the Northern India Ferries Act, 1878, as amended by this Act;

XVII of 1878.

(p) any other local works or measures likely to promote the health, comfort, convenience and interests of the public or the agricultural or industrial prosperity of the country; and

(q) any other matters which the Local Government may declare to be fit and proper matters to be taken under the control and administration of the board.

(3) The Local Government may cancel or modify any direction given by it under sub-section (2).

(4) A district board shall, so far as the funds at its disposal permit, make due provision for all matters placed under its control or administration by or under this section.

Duties of local board.

21. *(1)* The Local Government, or, subject to the control of the Local Government, a district board, may direct that, within the area subject to the authority of a local board, any matter placed under the control and administration of the district board by or under section 20 shall be transferred to the control and administration of the local board.

(2) A local board, as the agent of, and subject to the control of, the district board, shall, so far as the funds at its disposal permit, make due provision for all matters transferred to its control and administration under sub-section (1).

(3) It shall be the duty of the district board to enforce the responsibility imposed on a local board by sub-section (2).

Limits on expenditure of local board.

22. Except as otherwise provided by this Act, a local board shall not incur expenses or undertake liabilities to any amount exceeding the limit imposed by the district board of its district.

Power for district board to provide for performance of duty in default of local board.

23. *(1)* If a local board makes default in the performance of any duty imposed on it by or under this Act, the district board may, by order in writing, fix a period for the performance of the duty.

(2) If the duty is not performed within that period, the district board may appoint some person to perform it, and may provide for the expenses of, and incidental to, its performance out of the funds appropriated to or for the purposes of the local board.

C.—Joint Committees.

Joint committees.

24. A district board may concur with any other district board, or with any municipal committee or with any cantonment authority, or with more than one such board, committee or authority, in appointing, out of their respective bodies, a joint committee for any purpose in which they are jointly interested, and for delegating to any such joint committee any power which might be exercised by either or any of the boards, committees or authorities concerned, and in framing or modifying regulations as to the proceedings of any such joint committee, and as to the conduct of correspondence relating to the purpose for which the joint committee is appointed.

D.—Conduct of Business.

Record and publication of proceedings.

25. *(1)* Minutes of the proceedings at each meeting of a district or local board shall be drawn up and recorded in a book to be kept for the purpose, and shall be signed by the chairman of the meeting or of the next ensuing meeting, and shall be published in such manner as the Local Government may, from time to time, direct, and shall, at all reasonable times and without charge, be open to the inspection of any inhabitant of the district who pays any rate or tax under this Act.

(2) A copy of every resolution passed by a local board at a meeting shall, within three days from the date of the meeting, be forwarded to the district board and to the Deputy Commissioner.

(3) A copy of every resolution passed by a district board at a meeting shall, within three days from the date of the meeting, be forwarded to the Deputy Commissioner.

Power to make rules as to business and affairs.

26. Every district board, and every local board with the sanction of the district board, may make rules as to—

(a) the time and place of its meetings and the manner in which notice of meetings shall be given;

(b) the conduct of proceedings at meetings and the adjournment of meetings;

(c) the custody of the common seal and the purposes for which it shall be used;

Panjab District Boards Act, 1883.
(Chapter III.—Of District and Local Boards—Sections 27-32.)

(*d*) the division of duties amongst its members;

(*e*) the powers to be exercised by sub-committees or members to whom particular duties have been assigned;

(*f*) the persons by whom receipts shall be granted for money received under this Act;

(*g*) the duties, appointment, leave, suspension and removal of the officers and servants of the board;

(*h*) the term for which the vice-chairman shall hold office, and

(*i*) other similar matters:

Provided that every rule made under this section must be consistent with this Act and with any rules made by the Local Government under this Act, and shall be published in such manner as the Local Government may direct.

E.—Officers and Servants.

27. *(1)* Subject to the provisions of this Act and to any rules which may be made under this Act in this behalf, every district board may employ and pay such officers and servants as may be necessary and proper for the efficient execution of its duties and of the duties of the local boards acting under it:

Employment of officers and servants.

Provided that if, at any time, in the opinion of the Deputy Commissioner,—

(*a*) the number of persons employed by a board under this section, or the remuneration assigned by the board to those persons, or to any of them, is excessive, or

(*b*) any such person is unfit for his employment,

the board shall, on the requirement of the Deputy Commissioner, reduce the number, or remuneration, of those persons, or, as the case may be, dismiss the unfit person.

(2) The board may appeal against any requirement under this section to the Commissioner of the division, whose decision shall be final.

28. In the case of a Government official, a district board may—

Pensions of Government officials serving boards.

(1) if his services are wholly lent to it, contribute to his pension or gratuity and leave-allowances in accordance with the rules of the Government Civil Pension and Leave Codes for the time being in force; and

(2) if he devotes only a part of his time to the performance of duties in behalf of the board, contribute to his pension or gratuity and leave-allowances in such proportion as may be determined by the Government.

29. In the case of an officer or servant, not being a Government official referred to in section 28, a district board may—

Pensions of servants of boards.

(1) grant him leave-allowances and, if he is employed under the district committee when this Act comes into force and not entitled to pension, or if his monthly pay is less than ten rupees, a gratuity; and

(2) if empowered in this behalf by the Local Government—

(*a*) subscribe in his behalf for pension or gratuity and leave-allowances under the rules of the Government Civil Pension and Leave Codes for the time being in force; or

(*b*) purchase for him from the Government or otherwise an annuity on his retirement:

Provided that no pension, gratuity, leave-allowance or annuity shall exceed the sum to which, under the Government Civil Pension and Leave Codes for the time being in force, the servant would be entitled if the service had been service under the Government.

F.—Taxation and Finance.

30. Subject to any general rules or special orders which the Governor General in Council may make in this behalf, a district board may impose, in manner prescribed by section 31, such taxes as may be approved by the Local Government:

Powers of taxation conferred on district boards.

Provided that no such tax shall be imposed in respect of any property subject to the local rate.

31. (*1*) A district board may resolve, at a meeting, convened and constituted in such manner as the Local Government may prescribe, to propose the imposition of any tax under section 30.

Procedure in imposing taxes.

(*2*) When a resolution has been passed under sub-section (*1*), the board shall publish a notice defining the class of persons or description of property proposed to be taxed, the amount or rate of the tax to be imposed and the system of assessment to be adopted.

(*3*) Any person likely to be directly affected by the proposed tax, and objecting to the same, may, within thirty days from the publication of the notice, send his objection in writing to the board; and the board shall, at a meeting convened and constituted as aforesaid, take his objection into consideration.

(*4*) If no objection is sent within the said period of thirty days, or if the objections received, having been considered as aforesaid, are deemed insufficient, the board may submit its proposals to the Local Government, with the objections (if any) which have been sent in and with its decision thereon.

(*5*) The Local Government, on receiving proposals under sub-section (*4*), may sanction the same, or refuse to sanction them, or return them to the board for further consideration.

(*6*) When the proposals of a district board in respect of a tax have been sanctioned by the Local Government, the board may, at a meeting convened and constituted as aforesaid, direct the imposition of the tax in accordance with those proposals:

Provided that, in giving such direction, the board shall fix a date not less than one month from the date of the meeting on which the tax shall come into force.

(*7*) Every direction under sub-section (*6*) shall be notified, and the notification shall be conclusive evidence that the tax has been imposed in accordance with law.

32. The Local Government may, by notification, and the district board may, with the sanction of the Local Government, by a resolution passed at a meeting

Reduction and abolition of tax.

Panjáb District Boards Act, 1883.
(Chapter III.—Of District and Local Boards—Sections 33-39.)

convened and constituted as the Local Government may prescribe, abolish or reduce any tax imposed under sections 30 and 31.

Levy of fees.

33. With the previous sanction of the Local Government, or of such officer as the Local Government may authorize in this behalf, a district board or local board may fix and levy school-fees and fees for the use of, or benefits derived from, any of the works specified in section 20, clauses (c), (e), (h), (i) and (j), and fees at fairs, agricultural shows and industrial exhibitions held under its authority.

Additional funds to be provided by the Government.

34. When the control and administration of any matter is by or under this Act transferred to a district board, and at the time of the transfer the cost of that control and administration is defrayed from provincial revenue, the Local Government shall, from time to time, allot to the district board such funds, or place at the disposal of the board such sources of income, as may, in the opinion of the Local Government and of the board, be sufficient for maintaining the control and administration of the said matter in the state of efficiency existing at the date of transfer.

District fund.

35. There shall be formed for each district a fund, to be called the district fund, and there shall be placed to the credit thereof—

(a) the balance (if any) of the allotments made for the district under section 7 of the Panjáb Local Rates Act, 1878, and of the road and school cesses, which may be available for expenditure in the district on the day on which the district board comes into existence;

(b) all proceeds of rates allotted to the district board under section 9;

(c) the proceeds of all taxes imposed in the district under sections 30 and 31;

(d) the amount of all fees levied by the district board or by local boards in the district under section 33;

(e) all funds allotted to the district board and the income arising from all sources of income placed at its disposal under section 34;

(f) all rents and profits accruing from property vested in the district board or managed by the district board or a local board in the district;

(g) all sums contributed to the fund by Government or by any committee, board or private person;

(h) all sums received by the district board or by a local board in the district in the discharge of functions exercised by it under this Act; and

(i) the proceeds of all sources of income which the Local Government may order to be placed at the disposal of the district board:

Provided that the Local Government may revoke any order made under clause (i).

Vesting, custody and investment of district fund.

36. (1) The district fund shall be vested in the district board, and the balance standing at the credit of the fund shall be kept in the Government treasury or sub-treasury or in the bank to which the Government treasury business has been made over, unless the Local Government in any cases otherwise permits.

(2) Subject to such rules as the Governor General in Council may make in this behalf, the district board may, with the previous sanction of the Local Government, invest any portion of the district fund in securities of the Government of India or such other securities as the Governor General in Council may approve in this behalf, and vary such investments for others of the same nature, or dispose of them. The income resulting from the securities, and the proceeds of the sale of the same, shall be credited to the district fund.

Application of district fund.

37. (1) The district fund shall be charged with the payment of the expenses of the district-post, the payment of the expenses of pauper lunatics sent to public asylums from the area under the authority of the district board, the expenses incurred in auditing the accounts of the district boards and local boards, and such portion of the cost of the Provincial Departments for education, sanitation, vaccination, medical relief and public works as may be held by the Local Government to be equitably debitable to the district board in return for services rendered to the board by those Departments.

(2) Subject to the charges specified in sub-section (1), and to such rules as the Local Government may make with respect to the priority to be given to the several duties of the board or otherwise, the district fund shall be applicable to the payment, in whole or in part, of the charges and expenses incidental to the matters specified in sections 20, 27, 28 and 29, and to the provision of grants-in-aid to educational and medical institutions, within the area subject to the authority of the district board, and, with the sanction of the Commissioner, outside that area when such application of the fund is for the benefit of the inhabitants of that area.

Works or undertakings benefiting several districts.

38. In the case of works or undertakings which benefit more districts than one, when the district boards cannot agree, the Commissioner or Commissioners of the division or divisions, or, when the districts are in different divisions and the Commissioners cannot agree, the Local Government, may determine what proportion of the expenses of the work or undertaking shall be borne by each of the district funds of the districts benefited thereby; and such proportion shall be payable out of the several district funds accordingly.

Annual estimates of income and expenditure of district boards.

39. (1) Every district board shall appoint a finance committee consisting of not less than three of its members.

(2) Every district board shall, on or before a prescribed day in each year, hold a meeting at which the finance committee shall submit to the board an estimate of the income and expenditure of the board for the next financial year, in such form as the Local Government may, by a rule made under this Act, prescribe.

(3) The board shall consider the estimate, and may provisionally approve of it with or without modification.

(4) The board shall, on or before a prescribed day, cause copies of the estimate, as provisionally

Panjáb District Boards Act, 1883.

(Chapter III.—Of District and Local Boards—Sections 40-45.)

approved by it, to be sent to the Deputy Commissioner.

(5) The Deputy Commissioner shall, on or before a prescribed day, signify in writing to the board his approval or disapproval of the estimate. When he disapproves of the estimate, he shall state the nature of his objection. The board shall then consider the matter, and either modify the estimate, so as to remove the objection, or refer it through the Deputy Commissioner to the Commissioner of the division. If the Commissioner concurs in the objection, he shall make such modification in the estimate as may, in his judgment, be necessary to remove the objection in whole or in part. If he does not concur in the objection, he shall pass the estimate, and his order shall be final and binding on the board.

(6) When the Deputy Commissioner has signified his approval of an estimate, or the board has modified an estimate so as to remove the Deputy Commissioner's objections, or when the Commissioner has passed orders as provided in sub-section (5), no expenditure which is not provided for in the estimate as approved or modified shall be incurred during the year to which the estimate relates without the previous sanction of the Deputy Commissioner.

(7) When the Deputy Commissioner is a member of the district board, the Commissioner and the Local Government shall take the place of the Deputy Commissioner and the Commissioner respectively for the purposes of this section.

Accounts of district boards.

40. Accounts of the receipts and expenditure of every district board shall be made up periodically to such days and in such form as the Local Government prescribes, and shall be examined and audited as soon as may be after they are so made up by such persons as the Local Government appoints in this behalf.

Estimates and accounts of local boards.

41. *(1)* Every local board shall submit annually to the district board of its district, on or before such date as the district board may appoint in this behalf, a statement of the requirements, and an estimate of the probable expenditure, of the local board for the coming financial year, and shall submit, as often as the district board may require, accounts of its receipts and expenditure.

(2) The district board shall signify in writing to the local board its approval or disapproval of an estimate submitted under this section, and powers similar to those conferred on the Deputy Commissioner and Commissioner by section 39, clauses (5) and (6), shall be exercised, in regard to the estimate, by the district board and the Deputy Commissioner, or (when the Deputy Commissioner is a member of the district board) the Commissioner, respectively:

Provided that, during the currency of any financial year, the Deputy Commissioner may sanction transfers of provision within the estimate finally approved, when inconvenience or undue delay would be caused by a previous reference to the district board.

(3) The district board shall make arrangements, subject to the approval of the Deputy Commissioner, for the examination and audit of accounts submitted to it under this section, and may arrange for the publication of such accounts.

Inspection of estimates and accounts.

42. Every district board shall cause a copy of every annual estimate provisionally or finally approved under section 39, and of every account made up under section 40, to be kept at its office; and any person paying rates or taxes under this Act may, at all reasonable times, inspect any such estimate or account without payment of any fee.

Publication of abstract of accounts.

43. A statement of the accounts of a district board for each financial year, showing the income of the district fund under each head of receipt, the charges for establishment, the works undertaken, the sums expended on each work, and the balance, if any, of the fund remaining unspent at the end of the year, shall be prepared by the board in such form as the Local Government prescribes; and an abstract of the same shall be published in the English and Vernacular official Gazettes, or in such other manner as the Local Government may direct.

G.—Control.

Control of Commissioner and Deputy Commissioner over boards and joint committees.

44. *(1)* The Commissioner of the division, or the Deputy Commissioner of the district when he is not a member of the district board, may—

(*a*) enter on and inspect, or cause to be entered on and inspected, any immoveable property within the limits of the division or district respectively occupied by any local board, district board or joint committee, or any work in progress within those limits under the direction of any such board or committee;

(*b*) by order in writing call for and inspect any document in the possession or under the control of any such board or committee having authority within those limits;

(*c*) by order in writing require any such board or committee to furnish such statements, accounts, reports and copies of documents relating to the proceedings or duties of the board or committee, as he may think fit to call for; and

(*d*) record in writing, for the consideration of any such board or committee, any observations he may think proper in regard to the proceedings or duties of the board or committee.

(2) If any difference of opinion arises between officers exercising the powers conferred by sub-section (1), it shall be referred—

(*a*) if it arises between two or more Deputy Commissioners in the same division, to the Commissioner; and

(*b*) if it arises between two or more Deputy Commissioners in different divisions or between two or more Commissioners, to the Local Government;

and the decision thereon of the Commissioner or of the Local Government, as the case may be, shall be final.

Power to suspend action.

45. The Commissioner of the division or the Deputy Commissioner of the district may, by order in writing, suspend, within the division or district respectively, the execution of any resolution or order of a district board or local board or joint committee, or prohibit the

Panjáb District Boards Act, 1883.

(Chapter III.—Of District and Local Boards—Sections 46-54.)

doing of any act within the said limits which is about to be done, or is being done, in pursuance of or under cover of this Act, if, in his opinion, the resolution, order or act is in excess of the powers conferred by law, or the execution of the resolution or order, or the doing of the act, is likely to lead to a breach of the peace, or to cause injury or annoyance to the public or to any class or body of persons.

Extraordinary powers of Deputy Commissioner in case of emergency.

46. (*1*) In cases of emergency, the Deputy Commissioner may provide for the execution of any work, or the doing of any act, which a district board or local board is empowered to execute or do, and the immediate execution or doing of which is, in his opinion, necessary for the service or safety of the public, and may direct that the expense of executing the work or of doing the act shall be forthwith paid by the district board.

(*2*) If the expense is not so paid, the Deputy Commissioner may make an order directing the person having the custody of the balance of the district fund to pay the expense, or so much thereof as is, from time to time, possible, from that balance in priority to all other charges against the same.

Power to provide for performance of duties in case of default of board.

47. (*1*) When the Commissioner, after due enquiry, is satisfied that a district board has made default in performing any duty imposed upon it by or under this Act, he may, by an order in writing, fix a period for the performance of that duty, and, if it is not performed within the period so fixed, he may appoint some person to perform it, and may direct that the expense of performing it shall be paid, within such time as he may fix, by the board to that person.

(*2*) If the expense is not so paid, the Commissioner may make an order directing the person having the custody of the balance of the district fund to pay the expense, or so much thereof as is, from time to time, possible, from that balance in priority to all other charges against the same.

Power to invest other officers with power of control.

48. When the control and administration of any public work is by or under this Act transferred to a district board, and at the time of the transfer the cost of that control and administration is defrayed from provincial revenue, the Local Government may invest any officer with respect to that work with the powers of a Commissioner under section 14 or section 17, or with the powers of a Deputy Commissioner under section 46.

Report of action under preceding sections.

49. When the Commissioner makes any order under section 15 or section 47, he shall forthwith forward to the Local Government, and when the Deputy Commissioner makes any order under section 45 or section 46, or an officer empowered under section 48 makes any order under section 46 or section 47, he shall forthwith forward to the Commissioner, for submission to the Local Government, a copy of the order, with a statement of the reasons for making it, and with such explanation, if any, as the board or committee concerned may wish to offer. The Local Government may thereupon confirm, modify or rescind the order.

Powers of Local Government and its officers over boards.

50. (*1*) It shall be the duty of the Local Government and of all Commissioners and Deputy Commissioners acting under its orders to require that the proceedings of district boards and local boards shall be in conformity with law and with the rules in force thereunder.

(*2*) The Local Government may exercise all powers necessary for the purpose of sub-section (1), and may, amongst other things, by order in writing, annul any proceeding which it considers not to be in conformity with law and with the said rules.

(*3*) The Commissioner of the division and the Deputy Commissioner of the district may, within their jurisdiction, for the same purpose, exercise such powers as may be conferred upon them by rules made in this behalf by the Local Government.

Power of Local Government to supersede in case of incompetency, persistent default or abuse of powers.

51. If a district board or local board is not competent to perform, or persistently makes default in the performance of, the duties imposed on it by or under this or any other Act, or exceeds or abuses its powers, the Local Government may, with the previous approval of the Governor General in Council, by notification, in which the reasons for so doing shall be stated, declare the board to be superseded:

Provided that, in case of public emergency, the notification may be issued without the previous approval of the Governor General in Council, but shall be immediately reported to the Governor General in Council and shall be subject to his orders.

Consequences of supersession.

52. When a district board or local board is superseded under section 51, the following consequences shall ensue:—

(*a*) All members of the board shall from the date of the notification vacate their offices as such members:

(*b*) All powers and duties of the board may, until the board is re-constituted, be exercised and performed by such person as the Local Government appoints in that behalf:

(*c*) Where a district board is superseded, all property vested in it shall, until it is re-constituted, vest in Her Majesty.

Constitution of new board, and transfer of functions of superseded local boards.

53. (*1*) When a district board is superseded, the Local Government shall, as soon as in its judgment conveniently may be, constitute another district board in its place.

(*2*) When a local board is superseded, the Local Government may either constitute another local board in its place, or transfer its functions to the district board or, by a notification under section 10, to any other local board.

Disputes.

54. (*1*) If any dispute, for the decision of which this Act does not otherwise provide, arises between two or more boards constituted under this Act, or between a municipal committee or cantonment authority and any such board, the matter shall be referred—

(*a*) to the Deputy Commissioner if the local authorities concerned are in the same district;

Panjáb District Boards Act, 1883.

(Chapter III.—Of District and Local Boards—Sections 55-59.)

(*b*) to the Commissioner or Commissioners of the division or divisions if the local authorities concerned are in different districts; and

(*c*) to the Local Government if the local authorities concerned are in different divisions and the Commissioners of those divisions cannot agree.

(*2*) The decision of the authority to which any dispute is referred under this section shall be final.

(*3*) If, in the case mentioned in clause (*a*), the Deputy Commissioner is a member of one of the boards or committees concerned, his functions under this section shall be discharged by the Commissioner.

(*4*) "Local authority" in this section means a district board, local board, municipal committee or cantonment authority.

Power of the Governor General in Council and the Local Government to make rules.

55. So far as may be consistent with the provisions of this Act—

(1) the Governor General in Council may—

(*a*) make general rules or special orders for the regulation of taxation under section 30; and

(*b*) make rules regulating the powers of district boards to make, vary and dispose of investments;

(2) the Local Government may, for any district or local board, or any class of such boards, make rules for—

(*c*) dividing boards into classes, and fixing the powers of boards of each class;

(*d*) determining the mode and time of appointment or election of members of boards, the term of office, allowances (if any), and the qualifications and disqualifications of such members, and the qualifications and disqualifications of voters, and generally for regulating all elections under this Act;

(*e*) regulating the powers of boards to transfer property;

(*f*) regulating the powers of boards to contract and do other things necessary for the purposes of their constitution and the mode of executing contracts;

(*g*) determining the intermediate offices, if any, through which correspondence between boards or members of boards and the Local Government or its officers shall pass;

(*h*) determining the language in which business shall be transacted;

(*i*) the employment, payment, suspension and removal of officers and servants under section 27;

(*j*) the apportionment of the district fund between the general purposes of the district and the purposes of particular parts of the district;

(*k*) the application of district funds;

(*l*) the form of estimates of income and expenditure under section 39;

(*m*) the form of accounts and the manner of periodical audit under section 40;

(*n*) the publication of abstracts of accounts under section 43;

(*o*) the preparation of plans and estimates for works which are to be partly or wholly constructed at the expense of boards, and as to the authority by which, and the conditions subject to which, such plans and estimates may be sanctioned;

(*p*) the powers of supervision to be exercised by Commissioners and Deputy Commissioners under section 50;

(*q*) the conduct of proceedings of boards, including the fixing of a quorum, the appointment or election of a chairman, and the term of office of a chairman and vice-chairman;

(*r*) the appointment and payment of auditors of the accounts of boards; and

(*s*) the guidance of district boards when suits or other proceedings are intended to be or have been instituted by or against them in Civil Courts; and

(*t*) generally determining the relations between district boards and local boards, and guiding boards and Government officers in all matters connected with the carrying out of the provisions of this Act.

All such rules and alterations of rules shall be notified, and no rules or alteration of rules under clause (2) (*d*) shall come into operation until three months after they have been notified.

H.—Regulations.

Power to make regulations.

56. (*1*) Every district board or local board empowered in this behalf by the Local Government may make regulations for carrying out all or any of the purposes of this Act.

(*2*) A regulation made under this section shall not have effect until it has been confirmed by the Local Government and published in such manner and for such time as the Local Government may direct.

Penalty for infringement of regulations.

57. (*1*) In making any regulation under section 56, a board may direct that a breach of the same shall be punished with fine which may extend to fifty rupees, and, in the case of a continuing breach, with a further fine which may extend to five rupees for every day during which the breach is continued after he has been convicted of such breach.

(*2*) In default of payment of any fine imposed under this section, the defaulter shall be liable to simple imprisonment for a term which may extend to eight days.

Prosecutions.

58. (*1*) Prosecutions under this Act for breach of regulations may be instituted by any board, or by any person authorized by the board in this behalf.

(*2*) A Judge or Magistrate shall not be deemed to be within the meaning of section 555 of the Code of Criminal Procedure a party to, or personally interested in, any case under this section merely because he is a member of the board. X of 1882.

I.—Supplemental and Exceptional Provisions.

Liability of members of boards.

59. Every person shall be liable for the loss, waste or misapplication of any money or other property belonging to the district board, if such loss, waste or misapplication is a

Panjáb District Boards Act, 1883.

(Chapter III.—Of District and Local Boards—Sections 60-69.)

direct consequence of his neglect or misconduct while a member of a local board or of the district board, and a suit for compensation for the same may be instituted against him in such Court as the Local Government directs, by the district board with the sanction of the Commissioner, or by the Secretary of State for India in Council.

Procedure for making rules and regulations.

60. (*1*) The Local Government, before making any rules under section 55 or section 67, and a district or local board, before making any regulations under section 56, shall publish, in such manner as the Local Government may deem sufficient for giving information to persons interested, a draft of the proposed rules or regulations, together with a notice specifying a date on or after which the draft will be taken into consideration; and shall, before making the rules or regulations, receive and consider any objection or suggestion which may be made by any person with respect to the draft before the date so specified.

(*2*) Every such rule or regulation shall be published in the official Gazette in English and in such other language as the Local Government directs, and such publication shall be conclusive evidence that the rule or regulation has been made as required by this section.

Acquisition of land.

61. Where any land is required for the purposes of this Act, the Local Government may, at the request of a district board, proceed to acquire it under the provisions of the Land Acquisition Act, 1870; and, on the payment by the board of the compensation awarded under that Act, and of the charges incurred by the Government in connection with the proceedings, the land shall vest in the board.

X of 1870.

Penalty on member, officer or servant being interested in contracts made with a board or joint committee.

62. (*1*) If any member, officer or servant of a district or local board or joint committee appointed under this Act is, otherwise than with the permission in writing of the Commissioner, directly or indirectly interested in any contract made with that board or joint committee, he shall be deemed to have committed an offence under the Indian Penal Code, section 168.

XLV of 1860.

(*2*) A person shall not, by reason of being a shareholder in, or a member of, any incorporated or registered company, be held to be interested in any contract entered into between the company and a board or committee; but he shall not take part in any proceedings of the board or committee relating to any such contract.

Saving for Act XI of 1879.

63. Nothing in this Act shall affect the Local Authorities Loans Act, 1879.

XI of 1879.

General powers of Local Government and Commissioners.

64. In all matters connected with this Act, the Local Government shall have and exercise over Commissioners and Deputy Commissioners, and Commissioners shall have and exercise over Deputy Commissioners, the same authority and control as they respectively have and exercise over them in the general and revenue administration.

Contracts of local committees.

65. Every contract entered into, whether in its own name or in the name of the Government, by the committee appointed in a district under section 11 of the Panjáb Local Rates Act, 1878, may be enforced by and against the district board constituted for that district under this Act, in like manner as it might have been by and against the committee if this Act had not been passed.

V of 1878.

Government officers serving under committees to continue under board.

66. A Government officer employed under the committee appointed in a district as aforesaid at the time when a district board comes into existence for the district under section 17 of this Act shall be deemed to be similarly employed by the board, and shall not be dismissed from that employment without the sanction of the Local Government.

Power of Local Government to except local area from operation of Act.

67. (*1*) If the circumstances of any district or part of a district are, in the opinion of the Local Government, such that all or any of the provisions of this chapter are unsuited thereto, the Local Government may, by notification in the official Gazette, except the district or part from the operation of those provisions; and thereupon those provisions shall not apply to the excepted district or part until again applied thereto by a like notification.

(*2*) While any notification under this section is in force, the Local Government may make rules to provide for any matter dealt with by the provisions to which the notification applies.

Committee to be constituted for district wholly excepted from Act.

68. When a district is excepted, under section 67, from all the provisions of this chapter, a committee shall, except where the Local Government for special reasons otherwise directs, be constituted for the control and administration in that district of the matters mentioned in section 20, or of such of them as the Local Government may, from time to time, specify; and the Local Government shall, from time to time, determine the manner in which the members of the committee shall be appointed and removed, define the functions and authority of the committee, and place at its disposal, subject to such control as the Local Government thinks fit,—

(*a*) the balance standing at the credit of the district fund at the time when the district is excepted or, as the case may be, the balance of the allotments made for the district under section 7 of the Panjáb Local Rates Act, 1878, and of the road and school cesses, which may be available for expenditure in the district at that time;

V of 1878.

(*b*) all proceeds of rates which but for the district being excepted would be allotted to the district board under section 9 of this Act; and

(*c*) such other sources of income mentioned in section 35 of this Act as the Local Government thinks fit:

Provided that not less than one-half of the members of the committee shall be persons who own landed property or reside or carry on trade or business in the district and are not servants of the Government.

Power to direct that Act XX of 1856 shall cease to be in force.

69. (*1*) When any local area in which Act XX of 1856 (*an Act to make better provision for the appointment and maintenance of Police Chaukídárs in Cities, Towns, Stations,*

Panjáb District Boards Act, 1883.
(Chapter V.—Amendment of the Northern India Ferries Act, 1878—Sections 70-79.)

Suburbs and Bázárs in the Presidency of Fort William in Bengal) is in force is included in any local area over which a district board established under this Act has authority, the Local Government may, by notification, direct that that Act shall cease to be in force in the local area so included, and that every panchâyat constituted under that Act for that local area shall cease to exist.

(2) When a direction is issued under this section in respect of any local area in which the said Act XX of 1856 is in force, the amount, if any, then available under section 36 of that Act for purposes of improvement in that local area shall be expended therein by the Deputy Commissioner for such purposes.

CHAPTER IV.

SUPPLEMENTAL PROVISIONS AS TO TAXATION.

Recovery of rates.

70. All rates and taxes imposed under this Act, and all arrears of such rates and taxes, may be recovered as if they were arrears of land-revenue.

Local rate or tax how to be assessed and collected.

71. (*1*) The Local Government may, by notification, determine the persons by whom the local rate or any tax imposed under this Act shall be assessed and collected, and make rules for the assessment and collection of the rate or tax, and direct in what manner persons employed in the assessment or collection shall be remunerated.

(*2*) The provisions of section 60 shall apply to all rules made under this section.

Appeals.

72. (*1*) In matters connected with the assessment and collection of any rate or tax leviable under this Act, an appeal shall lie from the order of any person authorized under this Act to make assessments or collections to such person as the Local Government appoints:

Provided that the appeal shall be presented within 30 days from the date of the order.

(*2*) The order passed on an appeal under this section shall be final.

Instalments of rates and taxes.

73. (*1*) The Local Government may, by notification, prescribe by what instalments and at what times any rate or tax leviable under this Act shall be payable:

Provided that every instalment of the local rate leviable under section 5 shall be payable with an instalment of the land-revenue.

(*2*) In any local area subject to the authority of a district board the Local Government may, by notification, delegate to the board, subject to such conditions as it thinks fit, its powers under this section.

Power of Local Government to exempt from taxation.

74. The Local Government may, by notification, remit or reduce any rate or tax imposed under this Act, or exempt any person or class of persons, or any description of property, wholly or in any part from liability to any such rate or tax, and cancel any such remission, reduction or exemption.

Power to direct measurements.

75. When measurements are necessary for the assessment of the local rate or of any tax imposed under this Act, the Local Government may, by notification, direct such measurements to be made.

Suits relating to rates and taxes under this Act cognizable by Courts having cognizance of suits for rent.

76. Suits for the recovery from co-sharers, tenants or others of any sum on account of any rate or tax imposed under this Act, and suits on account of illegal exaction of any such rate or tax, or for settlement of accounts connected therewith, shall, unless the Local Government otherwise directs, be cognizable by the Courts which for the time being have cognizance of suits for rent due on land.

Confirmation and recovery of existing rates.

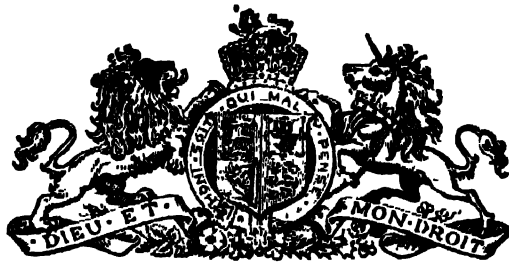
77. All rates or the maintenance of roads, schools or the district-post, for the payment of which provision has been made in any settlement-record previous to the passing of this Act, or which have been habitually levied by Government, shall be deemed to have been and to be legally imposed, and to have been and to be legally recoverable as if they were arrears of land-revenue payable directly to Government and due on the land in respect of which they are payable.

CHAPTER V.

AMENDMENT OF THE NORTHERN INDIA FERRIES ACT, 1878.

Amendment of the Northern India Ferries Act.

78. After section 7 of the Northern India Ferries Act, 1878, the following shall be inserted, namely:— XVII of 1878.



Management of ferries may be vested in committees and boards.

"7A. The Local Government may direct that any public ferry, wholly or partly within the area subject to the authority of a district board or local board in any district in the territories under the administration of the Lieutenant-Governor of the Panjáb, shall be managed by that board, and may further direct that all or any part of the proceeds from such ferry be paid into the district fund; and thereupon such ferry shall be managed, and such proceeds or part thereof shall be paid, accordingly."

Further amendment.

79. In section 6 of the same Act, after the words "section seven," and in section 17 of the same Act, after the words "section seven" where they first occur, the following shall be inserted, namely:—"and section 7A."

PART V.

Bills introduced into the Council of the Governor General for making Laws and Regulations, or published under Rule 22.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[Third publication.]

The following Bill was introduced into the Council of the Governor General of India for the purpose of making Laws and Regulations on the 10th October, 1883, and was referred to a Select Committee:—

No. 22 OF 1883.

A Bill to amend the Indian Ports Act, 1875.

WHEREAS it is expedient to amend section 47 of the Indian Ports Act, 1875, so as to provide that the pensions or gratuities (if any) of persons employed in any port under that Act shall be charged to the Port Fund account of the port; It is hereby enacted as follows:—

XII of 1875.

Amendment of section 47 of the Indian Ports Act, 1875.

1. In the fourth paragraph of section 47 of the said Act, for the words "All expenses, including the pay and allowances of all persons upon the establishment of the port" the words "All expenses, including the pay, allowances, pensions and gratuities (if any) of all persons employed in the port" shall be substituted.

STATEMENT OF OBJECTS AND REASONS.

IT has recently been ruled by the Government of India in the Finance Department that service in establishments paid from port funds managed by the Government is qualifying service for pension, provided that the port fund pays for such service. It has now been brought to notice by the Government of Bombay that section 47 of the Indian Ports Act, 1875, which regulates the accounts of port-dues, does not authorize provision for pensioning employés either by investment of part of the port funds, or by the purchase of pensions from Government, or otherwise. As it seems to the Government that, when it administers a port fund, it should have the power of ordering the payment of pensions out of that fund, the present Bill, which modifies section 47 of the Indian Ports Act so as to give the Government the desired powers, has been prepared.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[Third publication.]

The following Bill was introduced into the Council of the Governor General of India for the purpose of making Laws and Regulations on the 10th October, 1883 :—

No. 23 OF 1883.

A Bill to give effect to certain unregistered instruments of partition relating to immoveable property in the Madras Presidency, and to remove doubts as to the titles conferred thereby.

WHEREAS it is expedient to give effect to certain unregistered instruments of partition relating to immoveable property in the Madras Presidency, and to remove doubts as to the titles conferred thereby; It is hereby enacted as follows :—

Certain unregistered instruments of partition to have same force and effect as registered instruments.

1. Notwithstanding anything contained in any Act to the contrary, instruments of partition relating to immoveable property in the Madras Presidency, which have been executed before the passing of this Act and have not been registered, shall have the same force and effect as if they had been registered under the law in force at the time when they were executed :

Provided that this Act shall not—

(*a*) apply to any unregistered instrument of partition which has been superseded by an instrument of partition duly registered, or

(*b*) affect the title of a transferee in good faith of property, whether he has or has not had notice of an unregistered instrument of partition relating to that property, or

(*c*) affect any right established by a final decree of a Court of competent jurisdiction.

Compensation to person deprived of right owing to transfer under section 1, clause (*b*).

2. When any person to whom any right has accrued on the partition or any person claiming under that person has by any such transfer as is mentioned in section one, clause (*b*), been deprived of any right created by the partition, he shall be entitled to recover compensation in damages from any sharer who has joined in the transfer or, if the sharer is dead, from the assets, if any, in the hands of the heirs of the sharer :

Provided that suit be brought within three years after the date on which this Act comes into force or within three years from the date of the transfer, if the transfer is made after this Act come into force.

STATEMENT OF OBJECTS AND REASONS.

SECTION 17 of the Registration Act, XX of 1866, relates to instruments of which the registration is compulsory, and section 18 to instruments of which the registration is optional.

2. Clause (7) of the latter section includes "Instruments of Partition" among other instruments. The High Court at Madras, shortly after the passing of the Act, recorded an extra-judicial opinion that partition-deeds relating to immoveable property were governed by section 18 of the Act, and that their registration was therefore optional. This opinion was promulgated and acted upon.

3. The Act of 1866 was repealed by the Registration Act, VIII of 1871, which, however, reproduced clause (7), section 18 of the former Act; but the Act of 1871 was in turn repealed by the Registration Act, III of 1877. Section 18 of this Act revised the list of documents the registration of which was optional, and partition-deeds have been omitted from the list.

4. The Madras High Court now says that, of late, grave doubts have been entertained as to the correctness of the opinion recorded by it in the matter of the registration of partition-deeds referred to above, and recommends that, in view of the serious consequences to persons who may have acted on the opinion of the Court, and of the dissensions which may be excited in families by the disturbance of such arrangements, resort should be had to legislation to quiet titles. The High Court further suggests that such legislation should take the form of the present Bill. Under these circumstances, the Government of India deems it the most fitting course to accept the proposals of the High Court without modification, and accordingly the present Bill has been prepared.

The 11th October, 1883.

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 23rd OCTOBER 1883.

GENERAL REMARKS.—Unusually heavy rain has fallen throughout the greater part of the Madras Presidency, in Mysore, and in the southern districts of Bombay. Some damage has been done by excessive rain in parts of Madras and in the Deccan, and *rabi* sowings have been retarded, but standing crops have on the whole been much benefited and promise well. Damage from excessive rain and interruption of *rabi* sowings are also reported from Hyderabad and the Berars. In Sind there has been no rain, and water for *rabi* irrigation is scarce owing to the low level of the river. Slight showers, favourable to *rabi* sowings, have fallen over the greater part of Central India, except Gwalior where rain is needed. No rain fell in Rajputana, and it is much needed in Ulwar; elsewhere prospects are good.

Except in Mergui, scarcely any rain has fallen in Burma during the week, and rice on highlands has suffered in parts of three districts. In Assam the weather is seasonable, and crops are doing well. Rain still holds off in Bengal, and much injury has been done by the long break to the rice crop, the prospects of which are very unfavourable in all, save the eastern districts. In the Central Provinces there has been general and in parts heavy rain which has delayed agricultural operations, but prospects continue good. Moderate rain has fallen in a few districts of the North-Western Provinces and Oudh, and in two districts of the Punjab, but more is needed in both provinces for the *rabi*.

The *kharif* is being harvested, and winter sowings are in progress in most provinces, where they are not retarded by drought or by excessive rain.

The public health is generally fair.

Prices are still rising in Bengal, and are generally steady elsewhere.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Oct. 24th)		
Bellary ...	2·29 (average of eight stations).	Standing crops generally good. Harvest gingelly, yield below average.
Kurnool ...	3·29 (average of nine stations).	Standing crops generally damaged by excessive rain. Harvest *sajja*, *korra*, and indigo, yield half to three-fourths.
Ganjam ...	1·42 (average of fifteen stations).	Standing crops generally thriving.
Kistna ...	4·04 (average of eleven stations).	Standing crops good. Harvest *maize*, *cholum*, and *korra*, yield below half. Fever, guinea-worm, small-pox, and cattle-disease in parts. Cholera in two villages, 2 deaths.
Chingleput (Madras) ...	8·09 (average of eleven stations).	Standing crops generally good. Harvest *kar*, paddy, &c., yield half. Small-pox slight in all, but one taluk; 5 deaths from cholera in one village. Cattle-disease slight in two taluks.
Coimbatore ...	3·09 (average of sixteen stations).	Standing crops suffer from excessive rain in parts of three taluks, elsewhere good. Harvest paddy, *cholum*, *ragi*, and *cumboo*, yield average. Ten deaths from cholera in two taluks; fever and small-pox in parts.
Tanjore ...	5·93 (average of twelve stations).	Standing crops good. Harvest paddy, *cholum*, *ragi*, *cumboo*, and gingelly, yield below average.
Madura ...	3·69 (average of eight stations).	Standing crops fair. Harvest paddy, yield average.
Malabar ...	4·09 (average of fourteen stations).	Harvesting first crop nearly over, second crop cultivation progressing. Small-pox slight in nine taluks; fever slight in three taluks.
Travancore ...	·983	Sowings nearly over. Yield of last crop in Quilon division below average. Fever prevails.
		General Remarks.—General prospects good.
Bombay—(Oct. 24th)		
Kurrachee ...	No rain	River at Kotri on 22nd 6 feet 10 inches, against 9 feet on same date last year. *Rabi* crops require water. *Kharif* crops being harvested. Fever in eleven talukas. Cattle-disease in three talukas. Wheat, red rice, and *bajri* in Kurrachee 24, 28 and 36, in Dadu 32 and 50, in Sakro 15, 28 and 42, and in Jati 10, 32 and 40 lbs. per rupee, respectively.
Hyderabad ...	Badin, ·25	*Kharif* harvesting continues. *Rabi* operations in progress. Fever in seven; small-pox in two, and cattle-disease in four talukas. Wheat 25, *bajri* 38, *juari* 40, red rice 26, and white rice 22 lbs. per rupee.
Ahmedabad ...	......	*Kharif* harvest continues. Standing crops healthy. Fever in some talukas. *Bajri* 28¾ and wheat 25¼ lbs. per rupee.
Baroda ...	......	Cholera continues in Naosari mahal. Crops in good condition. Locusts greatly diminished in Naosari division. *Bajri* 29 and rice 23 lbs. per rupee.
Surat ...	·22	Total rainfall 55·99. Cutting operations continue. Damage by rain more or less to *juari*, rice, and grass in some talukas. Cattle-disease in Olphad. Fever in Olphad and Pardi. Cholera in Surat, 10 deaths, in Pardi, 33 cases, 15 deaths. Locusts nearly destroyed. *Juari* 38 and *nagli* 43 lbs. per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Nasik ...	......	Heavy rain damaged *bajri* and cotton crops, and retarded preparation of land for *rabi*. Locusts doing damage to crops in places. Cholera in Kalwan taluka, 22 attacks, 13 deaths. *Bajri* 31, wheat 28, and rice 22 lbs. per rupee.
Colaba (Bombay) ...	Heavy rain from 18th to 21st, total of week 9·20.	Total rainfall to date 89·32, being 19·22 above average. Abnormal temperature 0° to 6° cool. Vapour in air excessive. Abnormal wind southerly, and strong on 19th and 20th. Frequent thunder and lightning.
Poona ...	......	Break in weather since yesterday. Standing crops injured in places by excessive rain. *Bajri* 43 and *juari* 53 in Poona; *bajri* 34 and *juari* 43 lbs. per rupee.
Ahmednagar ...	Rain in all talukas—maximum at Sangamner, 1·20; minimum at Shrigonda, ·59.	Total rainfall in the district up to date 35·49. *Kharif* crops where standing, have been injured by the excessive fall of rain and where reaped, in getting rotten by the damp. Harvesting of *kharif* is in progress in Parner, Jamkhed, Kopargaon, Sangamner, and Akola, except in Shrigonda. Sowing of *rabi* is impeded, and it is too late in the season to undertake the work hereafter. Cholera 8 attacks, 4 deaths. Cattle-disease to a slight extent in Kopargaon. *Bajri*—maximum 54 lbs. in Jamkhed, minimum 40 in Kopargaon; *juari*—maximum 78 lbs. in Shrigonda, minimum 48 in Sangamner.
Sholapur ...	1·14	Total rainfall 38·38. *Kharif* in good condition; *bajri* being reaped. *Rabi* sowing retarded in a few places owing to excessive rain. *Bajri* 52 and *juari* 64 lbs. per rupee.
Dharwar ...	Good rain throughout the district; maximum being at Kod, 4·43; Hangal, 2·97; Ron, 1·86; Mugad, 1·75; Bankapur, 1·37; Kalajgi, 1·11; Gadag, 1·07; Dharwar, 1·0; elsewhere less than 1·0.	Standing crops much benefited by rain, but more is required for rice. Sowings of wheat, gram, and other late crops in progress. Ague in two stations and cattle-disease in four.
Kanara ...	Karwar 5·09; Kumpta, 8·91; Sirsi, 5·13, Haliyal, 1·43.	Total rainfall 143·49. Small-pox, 5 cases in Siddapur. Weather fair. Common rice in Karwar 12½, in district average 15 seers per rupee.
Rajkot ...	....	General health feverish. Mornings fresh. Wind north-east. *Bajri* 29 lbs. and *juari* 31 lbs. per rupee.
		General Remarks. River continues to fall in Sind. Some damage caused to crops, and *rabi* sowings retarded by heavy rain in several districts, but parts of Dharwar, Kaladgi, and Belgaum much benefited by it. Locusts still prevalent in parts of the Central and Southern divisions. Fever, cholera, and cattle-disease prevalent in many places.
Bengal—(Oct. 24th)		
Chittagong ...	*Nil*	Weather fair. Prospects of crops good. Prices somewhat low. General health favourable. Cattle-disease has again appeared.
Dacca ...	*Nil*	*Ashu* paddy being harvested; *aman* thriving. Mustard and pulses being sown. Prospects good.
24-Pergunnahs (Calcutta)	·06	Harvesting of early paddy almost over, yield estimated at a full average crop. Late rice on high lands has suffered much from drought, that on low lands also requires rain. Lands being prepared for winter crops. Common rice selling at from 14 to 21 seers per rupee. Public health generally good. Cases of cholera reported from Baraset sub-division.
Moorshedabad ...	*Nil*	Sultry days with cold dewy nights. *Aman* rice continues to deteriorate. In the absence of rain efforts are being made to induce recourse to irrigation which it is hoped will save a portion of this important crop. The drought is also seriously impeding the cold weather sowings. Cholera reported from Khargram, otherwise public health good.
Rajshahye ...	*Nil*	Clouds about. Crops on high ground drying fast. *Rabi* sowings being delayed for want of rain. Price of rice has risen.
Burdwan ...	*Nil*; Culna, ·88; Cutwa, ·12; Raneegunge, ·02.	Cold weather apparently set in. Prospects of *aman* crop very unfavourable, *aus* crop has been fair. Health generally tolerable. Some cases of cholera reported.
Rungpore ...	*Nil*	Weather dry and occasionally cloudy. Rain wanted for winter paddy. Prices of food-grains have risen. Fever prevalent.
Bhagalpur ..	·28	Prospects of crops not favourable.
Purneah ...	·09	Prospects of crops not favourable. Rain wanted for *rabi* ploughing. Fever raging.
Patna ...	·40	Paddy suffering much for want of rain. Cholera and fever still reported from the interior
Durbhunga ...	*Nil*	No likelihood of any more rain. Crops must be deficient in consequence. In some places they are almost entirely destroyed, but generally an eight anna rice crop is expected to be reaped throughout the district. Prices steadily rising.
Hazaribagh ...	·05	Weather bright and seasonable. Rice crops considerably injured by existing drought. *Rabi* sowings still going on. Public health good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Cuttack ...	·04	Weather hot and dry. Low land rice doing well; high land rice suffering from drought. Price of rice rising. Public health generally good. A few cases of cholera reported from the interior. *General Remarks.*—Very slight rainfall has been reported from some districts during the week. It is said to be of no appreciable benefit to the crops. Want of rain is most seriously felt, and the prospects are very unfavourable, except in Julpaigoorie and Cooch Behar and in almost all districts of Eastern Bengal. The rice crop in the high lands has already been considerably damaged, on the low lands it still holds out, but will be a short crop. The drought is also seriously impeding the cultivation of the cold weather crops. In many districts the prices of rice show a marked tendency to rise, owing to the apparent early cessation of the rains. General health of the province is pretty fair, though fever is reported to be prevalent in some districts.
N. W. Provinces and Oudh—		
Benares (Oct. 23rd)	Benares, 1·2; Chandousi, 1·2; Gangapur, 1·3.	The uncut *kharif* crops will benefit by this rain, and *rabi* sowings have commenced with more favourable prospects. Fever decreasing. Slight rise in prices of food-grains.
Allahabad („ 24th)	Rain in seven out of nine tahsils average ·9.	Rain most beneficial both for *rabi* sowings and for late *kharif*. Most rain south of Jumna where most needed. Health good. Prices falling.
Gorakhpur („ 21st)	No rain	Cloudy weather for the last two days. Rain wanted for the *rabi* sowings and rice. Cholera disappearing. Prices steady.
Jhansi („ 22nd)	·3 in pargana Jhansi on the 19th instant.	*Kharif* crops have dried up in parts of parganas Jhansi and Mau, particularly in the former. Sowings of *rabi* going on. Prices slightly fluctuating. Health of people and cattle good. Grazing scarce.
Agra („ 23rd)	No rain	*Kharif* crops continue to suffer from drought. *Rabi* ploughings and sowings in progress, but rain needed. Slight fever in two parganas. General health good. Prices steady.
Bareilly („ „)	No rain	*Kharif* harvesting pretty general. Health good. Prices stationary and inclined to fall.
Meerut („ „)	No rain	*Kharif* harvest commenced. *Maize* cut. *Rabi* ploughings and sowings in full progress. Gram already germinated. Barley being sown. Health good. Labour plentiful. Supplies sufficient. Prices easier.
Kumaun („ „)	......	Sky somewhat cloudy. Ploughing for *rabi* is being done. Health good. Cattle-disease continues. Prices unchanged.
Lucknow („ „)	No rain	A little cool at night. Prospects good. A slight fall of rain will be most welcome for the *kharif* crops. Wheat and other *rabi* crops are being sown. Condition of people and cattle good. Markets well supplied. Prices stationary as usual.
Partabgarh („ „)	Slight rain at Sadr on 19th.	*Bajri* being cut. *Rabi* sowings have commenced in Partabgarh and Kunda tahsils, and in a few places gram and barley have germinated. The crops in Patti are suffering from drought. Prices stationary. General health good.
Sitapur („ „)	No rain	Heavy clouds. *Rabi* prospects rather gloomy. *Mash* and *bajri* injured. Prices steady.
Fyzabad („ „)	No rain	Gram, peas, wheat, &c., are being sown. Markets well supplied. Prices steady. Public health good. Condition of cattle fair.
Rae Bareli („ 22nd)	Slight rain on the 19th	Cloudy weather during two days of the week. *Juari*, late rice, *mothi*, and *urd* suffering from want of rain. *Rabi* sowings commenced. Markets well supplied. General health good. Prices almost steady.
Cawnpore („ 23rd)	No rain	Occasional clouds. *Rabi* sowings commenced, but some unirrigated lands left fallow. Cholera and fever still lingering, otherwise health of the people is good. Cattle-disease almost disappeared. Prices unchanged.
Farukhabad („ „)	......	Weather seasonable. Fever decreasing. Crops fair. *Rabi* sowings in progress. *General Remarks.*—No rain has fallen in the northern districts, but there has been a beneficial fall in Benares and Allahabad, and a slighter one in Jhansi, Rae Bareli, and Partabgarh. Some loss is being caused by want of rain, especially in Aligarh and Agra. The markets are well supplied and prices steady.
Punjab—(Oct. 24th)		
Delhi ...	......	Health good. Prices of *juari* and *bajri* have risen. Prices of other food-grains are falling.
Hissár ..	·20	Rain urgently needed in the Rohtak district. Health good. Prices stationary.
Umballa ...	......	No report received.
Jullundur ...	......	Health good. *Rabi* sowings in progress. Prices steady.
Amritsar ...	......	Health good. *Kharif* being harvested. Prices steady.
Sialkot ...	......	Health and crop prospects good. Prices stationary.
Ferozepore ...	......	Health and crop prospects good. Slight rise in prices of gram and *juari*.
Lahore ...	......	Health and crop prospects good. Prices steady.
Rawalpindi ...	·20	Seasonal fever in three tahsils. Health elsewhere good. Crop prospects average. Prices falling.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—*contd.*		
Mooltan ...	......	Health good. *Kharif* harvesting in progress. Prices stationary.
Dera Ismail Khan ...	......	Health good. *Rabi* sowings commenced. Prices steady.
Peshawar ...	......	Slight fever still prevalent. Prices falling.
		General Remarks.—There has been slight rain in the Hissar and Rawalpindi districts, but more is required for the *rabi* sowings throughout the province. Health and *kharif* prospects are generally good.
Central Provinces.—(Oct. 24th)		
Nagpur ...	5·50	Weather fine and clear. Cotton and *juari* somewhat injured by late rains. Wheat sowings delayed. Health good. Prices steady.
Jubbulpore ...	·68	Weather cloudy at times. Prospects favourable. Outturn of rice, *kodo*, and *kutki* small in places. Cotton good. *Rabi* sowings continue. Wheat 24 and rice 16 seers per rupee. Health good.
Saugor ..	·39	Weather cloudy. *Kharif* crops thriving. *Rabi* sowings delayed by late rain. Health fair. Prices steady.
Seoni ...	2·44	Heavy rain on 20th and 21st. Weather clear and cool since. *Kharif* reaping and *rabi* sowings retarded by rain. Fever prevalent. Prices inclined to fall.
Hoshangabad ...	2·52	Weather seasonable. Prospects good. *Rabi* sowings continue. Fever prevalent. Wheat 15 and rice 10 seers per rupee.
Khandwa ...	1·96	Weather clear. *Kharif* prospects good. *Rabi* sowings commenced. Prices falling.
Raipur ...	1·70	Rain favourable. Sowings in progress. Health good, Prices steady.
Sambalpur ...	·03	Weather close and cloudy. More rain wanted for late rice and pulses. Health good. Common rice 35 seers per rupee.
		General Remarks.—Prospects continue favourable. Sowings in general progress. Health good.
British Burma—(Oct. 20th)		
Akyab ...	*Nil*	Total rainfall 179·57. Public health good. 82 deaths of cattle in two townships, otherwise health of cattle good. Slight damage to crops from insects in Koladan township. Crop prospects favourable.
Rangoon ...	·03	Total rainfall 76·39. Five deaths from small-pox, otherwise public health good. Prices of paddy from Rs. 97 to 103 per 100 baskets.
Bassein ...	·05	Total rainfall 86·48. Public health good. Nine deaths of cattle in Bassein township, 15 in Thaboung, 7 in Thegwin, and 6 in Kyoupyaw. Heat excessive. Rain wanted in southern parts of district. Paddy in places with little water beginning to suffer. Price of paddy from Rs. 90 to 100 per 100 baskets.
Amherst (Moulmein) ..	*Nil*	Total rainfall 164·65. Public health and health of cattle good. Crops healthy. Rain wanted for high-lying land and late sowings. In Moulmein town public health and health of cattle good. Crops healthy. Injury to crops from drought is apprehended in elevated lands. No damage from floods or insects.
Toungoo ...	*Nil*	Total rainfall 77·44. Public health and health of cattle good. Price of paddy Rs. 70 per 100 baskets. General appearance of crops fair.
Kyoukphyoo ...	*Nil*	Total rainfall 156·08. Public health and health of cattle good. Price of paddy stationary.
Sandoway ...	*Nil*	Total rainfall 206·49. One death from cholera in Letweashe circle, otherwise public health believed to be good. Crops continue healthy.
Hanthawaddy ...	......	Public health good. Slight cattle-disease in Hlaing township. Ploughing completed. Wages of ploughing labour 60 baskets of paddy per man in Hlaing township. Price of paddy from Rs. 90 to 100 per 100 baskets.
Pegu	*Nil*	Total rainfall 118·83. Few cases of fever and small-pox in town otherwise public health good. Crops promising. Price of paddy Rs. 95 to 100 per 100 baskets.
Tharrawaddy (Oct. 13th)	3·90	Total rainfall 98·97. Public health good. 15 deaths of cattle in two, townships, elsewhere health of cattle good. Ploughing, sowing, and transplanting progressing. Damaged crops last reported being replanted. More rain wanted in northern circles of Gyobingouk township. General appearance and progress of crops good. Price of paddy Rs. 90 to 125 per 100 baskets.
Do. („ 20th)	......	No report received.
Prome ..	*Nil*	Total rainfall 45·62. Public health and health of cattle good. Ploughing and transplanting progressing. Crops reported in good condition, but if more rain does not fall, failures must be expected. Price of paddy Rs. 90 per 100 baskets
Thonegwa ...	·17	Total rainfall 82·81. Public health and health of cattle good. Replanting still going on in Shweyloung township, but supply of seedlings for replanting insufficient General appearance of young crops, except in the Kyotow circle, Pyapau township, where crops are slightly damaged by floods, good, but replanting continues. General prospects good. Price of paddy Rs. 90 to 95 per 100 baskets.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
British Burma—*contd.*		
Henzada ...	*Nil*	Total rainfall 80·28 Public health and health of cattle good. General appearance of crops good.
Thayetmyo ...	*Nil*	Total rainfall 39·67. Public health good. Crop prospects unchanged. 40 deaths of cattle in Myede sub-division. Price of paddy Rs. 100 per 100 baskets.
Shwaygyin ...	·22	Total rainfall 137·46. Public health and health of cattle good. Crops progressing favourably. Price of paddy Rs. 80 per 100 baskets.
Tavoy ...	*Nil*	Total rainfall 190·36. Public health and health of cattle good. Prospects of crops good.
Mergui (Oct. 13th)	4 49	Total rainfall 161 29. Crops healthy with exception of 42 acres destroyed by blight in two circles. 35,000 acres ploughed. 17 deaths of cattle in Taiyet, Burma circle, otherwise health of cattle good. Price of paddy Rs. 100 per 100 baskets.
		General Remark.—Scarcely any rain has fallen during the week. The total rainfall up to date is much less over most of the provinces than last year. The deficiency varies from 12 to 20 per cent. in different districts. Crop prospects are reported favourable, although in parts of Prome, Bassein, and Amherst districts. The drought of the past week appears to have injuriously affected the crops in the higher and lighter lands. Public health continues good. Cattle mortality not increasing anywhere. Price of paddy keeping steady.
Assam— (Oct 24th)		
Gauhati ...	No rain	Weather seasonable. Mornings and nights foggy and cool. Public health fair. Prospects of crops good. Land being ploughed for mustard.
Sylhet ...	·37	Crop prospects good. Small-pox and cholera in places.
Silchar ...	·44	Days warm Nights cool. Reaping of *aus* crops finished. Prospect of *sali* crops good. Ploughing for winter crops progressing. Common rice 17¾ seers per rupee. Four deaths from small-pox reported from Sadr and 3 from Katigora.
Dibrugarh ..	·20	Weather getting cold. Prospect of crops good. District healthy.
Mysore and Coorg— (Oct. 24th)		
Bangalore ...	2·79	Crops in good condition. *Ragi* fast ripening. Prospects favourable. Water and pasturage ample.
Mysore ...	1·07	Rain general in district. Crops revived and doing well. Prospects promising.
Mercara ...	·16	Coffee berries are ripening. Paddy crop coming into ear in some parts of the country. *Ragi* crop harvested Yield short.
		General Remarks.—Rain from 2·0 to 4 72 all over the province. Agricultural operations continue. Condition of standing crops in all district reported on favourably. Public health good. Prices almost stationary.
Berar & Hyderabad— (Oct. 24th)		
Amraoti ...	5·75	The crops have been injured to some extent from excessive rain and *rabi* sowing has been delayed. Wheat 16 and *juari* 26 seers per rupee.
Akola ...	5·80	Rain unseasonable and injurious to standing crops.
Hyderabad ...	·88	Total from 1st January 29 83. *Abi* crops prospering. *Kharif* crops in some places damaged by excessive rain. *Rabi* and *tabi* sowing commenced. GOVERNMENT OF INDIA.

DEPARTMENT OF FINANCE AND COMMERCE.

REPORT ON SITES IN THE BOMBAY PRESIDENCY SUITABLE FOR PAPER MILLS WORKED BY WATER.

No. 7073, dated 22nd September 1883.

From—J. MONTEATH, Esq., Acting Under-Secretary to the Government of Bombay, Revenue Department,

To—The Secretary to the Government of India, Department of Finance and Commerce.

The reports of the Executive Engineers who were directed, as stated in my letter No. 987, dated 6th February last, to make the further enquiries ordered by the Government of India in their letter No. 4036, dated 28th September last, regarding suitable sites having a water-supply sufficient for the purposes of paper mills, having now been received, I am instructed by His Excellency in Council to communicate, for the information of His Excellency the Viceroy and Governor General in Council, the results of the enquiries instituted by those officers. The object of the Government of India is to ascertain if there exist in this Presidency suitable sites "where there would be an unfailing supply of 150 cubic feet of water per minute all the year round," and it is stated (paragraph 3) that it is desirable that the site to be selected for the establishment of such a mill should be near the coast in order that the foul water issuing from the mill should pass at once into the sea. The enquiries of the officers who were entrusted with the duty have accordingly been confined to sites situated on or near the sea coast.

2. It appears from the reports received on the subject that the following are the only sites which satisfy the requirements specified :—

(1) Wanta Gavier in Surat. The site is about 6 miles below Surat.

(2) Varacha situated about 5 miles above Surat.

(3) Sasu-Naoghar in the Bassein taluka in the Thana Collectorate.

3. At site No. 1 there is an unfailing supply of more than 150 cubic feet of water per minute all the year round, but the water is said to be brackish for about four months in the year. The Executive Engineer who inspected the spot states that it will only be necessary to construct here a filtering well with a force pump to draw water to a height of about 40 feet from the river, and estimates that the cost of constructing such a well and pump will be about Rs. 6,000.

4. The site at Varacha has also, it is reported, an unfailing water-supply of more than 150 cubic feet of water per minute all the year round with the advantage that the water is sweet. A filtering well with a pump to draw water to a height of about 60 feet from the river will have to be constructed as at site No. 1, with piping to the extent of about a mile to carry off dirty water into a ditch (called Kankru Khari cut). The cost of constructing these works is estimated at Rs. 15,000.

5. A sketch map showing the positions of these two sites with their neighbourhoods prepared by the Executive Engineer is herewith forwarded. It will be observed that the Wanta Gavier site has both road and water communication with Surat, where there is a railway station; the communication between the Varacha site and Surat does not appear to be so good, but the distance is not great.

6. The site at Sasu-Naoghar is situated about 6 miles east of Bassein on the north bank of the Bassein creek immediately opposite Ghodbandar in the Salsette taluka. A sketch map prepared by the Executive Engineer, Northern Konkan, showing the position of this site and other particulars is appended. A paper mill was established at this site some years ago by Messrs. Johnson and Littlewood. The works were commenced in 1871, and completed in about 1877, and the manufacture of paper was commenced ; but the undertaking failed almost immediately, principally on account of the want of sufficient capital and of a sufficient supply of cheap material and by reason of sickness amongst the employés. The works constructed consisted of a masonry dam across the stream, forming a small reservoir from which water was raised for the use of the mill by a pumping engine, three large corrugated iron roofed sheds containing the boilers, engines and paper manufacturing machinery and two masonry filtering and settling tanks. The total cost of the works is estimated by the Executive Engineer to have been Rs. 80,000 or thereabouts.

7. The site is said to possess the following advantages for the establishment of a paper manufactory :—

(a) For water supply there is already available a small perennial stream, which in the hot weather has a constant flow of from 10 to 15 cubic feet per minute and considerably greater at other seasons.

(b) Great facilities for largely increasing this supply at a small cost by constructing a small dam across the narrow gorge through which the stream flows from the hills to the plain.

(c) The waste and foul water from the mill can be discharged at once into the stream below the dam and thence into the creek. The small village of Sasu-Naoghar, which is the only village on its course, could be supplied with water at a small cost from the water system of the mill.

(d) The site can be placed within fair communication with Bombay and so with the rest of India by sea, rail and road. It is about six miles from the Bassein Road Station of the Bombay, Baroda and Central India Railway to which, however, there is no road beyond a country track. It is three-fourths of a mile only from the bank of the creek, where country boats from Bombay can touch, though there is at present neither road nor landing stage. From Ghodbandar, which is immediately opposite to the site, a good made road seven miles long leads to the Baroli Station of the Bombay, Baroda and Central India Railway and thence to Bombay.

8. As regards the water-supply, the Executive Engineer states that the present supply from the stream was apparently considered sufficient for the purposes of the mill started there by Messrs. Johnson and Littlewood, as the dam already constructed is not intended to form a large storage reservoir, but merely a pool for retaining the night's flow of water in the hot season and for the convenience of feeding the suction pipe of the pump. He thinks, however, that if necessary a larger supply can be secured at but a small cost, as the valley possesses peculiar facilities for accumulating a very large quantity of water with only a short low dam. It will be seen from the sketch plan appended that several valleys, together with a very large catchment area, unite into one wide flat valley, the only outfall from which is a narrow rocky gorge affording an excellent position for a dam.

9. With reference to the question of the cost which would have to be incurred in the construction of the necessary storage and other works the Executive Engineer observes:—

"Without taking an accurate survey and levels of this valley and gorge, it is of course impossible to give any details as to storage capacity of the reservoir at different levels and as to heights and length and therefore of the cost of the dam required. But from inspection it would appear that a dam about 20 feet high would form a very large reservoir that would much more than supply any possible requirements, while such a dam would not exceed 60 to 80 feet in length at the deepest part and 120 to 150 at the top. The mill too being immediately below the site of the dam, there would be no heavy outlay for iron piping.

"The machinery, &c., already constructed was not protected in any way, and remains exactly as on the day the mill stopped work. As the sheds are open at the sides, it has been completely exposed to the weather, is greatly damaged by rust and rendered almost useless. The masonry dam and tanks, however, only need small repairs to make them again serviceable It would require a sum of Rs. 30,000 to Rs. 40,000 to re-establish these works."

10. The Executive Engineer suggests that if it is ever intended to make use of the works already constructed and thus to resume operations at this place, it would be necessary to pay particular attention to the selection of a good site for the erection of sheds or huts for the work-people and the construction of the sheds on a sufficiently high plinth or platform, a thorough clearance of the jungle and vegetation for some distance around the place, and the clearing of the stream of vegetation and dead leaves. He attributes the sickness which prevailed among the employés of the mill to neglect on the part of the owners of these precautions, especially the last, as the small stream which supplies drinking-water is overgrown in places with jungle and also receives the drainage of rice-fields. If, however, the valley be dammed and a reservoir formed, there would, in his opinion, be no danger from a contaminated water-supply.

11. It will be seen from the foregoing remarks that of the three sites mentioned, that at Sasu-Naoghar possesses decided advantages for the establishment of a paper mill at a comparatively small cost. Judging from the description given of it by the Executive Engineer, the site appears to His Excellency in Council to be suitable in all respects for the establishment of a paper mill on a sufficiently large scale to allow of its being worked economically, the only drawback being the unhealthiness of the place. This evil, however, can be minimized by the adoption of the precautionary measures suggested by the Executive Engineer and such other arrangements as experience may show to be necessary, and no serious obstacle need therefore be apprehended from it.

12. I am to state that an application was lately received from Messrs. Pelly and Company for the grant of a site at Panvel in the Thana Collectorate for the establishment of a paper mill; but on enquiry it appeared that the site applied for was unsuited for the purpose, and applicants have been so informed.

No. 3875, dated 26th October 1883.

ORDER.—Ordered, that the above be published in the Supplement to the *Gazette of India* for general information.

D. M. BARBOUR,
Secretary to the Government of India.

Printed and Published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL BRANCH PRESS, *Simla.*

III.—Every other Candidate *not producing the Certificate* mentioned in Clause I, must prove his age by statutory declaration, and should also, if possible, produce a record of birth or baptism from some official Register; under which term may be included the Parochial Registers of baptism, the non-Parochial Registers of baptisms and births deposited at Somerset House under Acts of Parliament, the Register kept at the India Office of persons born in India, &c., &c. This Regulation applies—

1. To all candidates not born in England or Wales.
2. To candidates, who, though born in England or Wales, cannot produce the Registrar-General's certificate.

The Civil Service Commissioners reserve to themselves the right of deciding in each case upon the sufficiency of the evidence produced, but they subjoin the following general rules for the guidance of candidates:—

(*a*) The declaration should specify precisely the date and place of birth, and should, if possible, be made by the father or mother of the candidate. If made by any other person, it should state the circumstances which enabled the Declarant to speak to the fact. If an entry in a Bible or other family record be referred to, the Bible or other record must be produced at the time of making the declaration, and must be mentioned in the declaration as having been so produced.

(*b*) If the candidate was born in England or Wales, the declaration must contain a statement that after due inquiry no entry has been found in the books of the Registrar-General; or a separate declaration must be made to that effect.

(*c*) If no extract from any Register is produced, the Declaration must contain a statement, that after due inquiry no such record is believed to exist; or a separate Declaration must be made to that effect.

(*d*) Statutory Declarations must be exactly in the form prescribed by the Act of 5 & 6 William IV., c. 62. A printed Form, if required, will be supplied on application to the Civil Service Commissioners.

N.B.—Clergymen who are not Magistrates, are not qualified to take Declarations.

CIVIL SERVICE OF INDIA.

FORM OF APPLICATION; TO BE FILLED UP BY CANDIDATES.

**** This Form must be sent so as to be received at the Office of the Civil Service Commission on or before the 31st March, 1884.*

Date ____________

SIR,

BEING desirous to offer myself as a candidate at the examination for the Civil Service of India, which is appointed to commence on the 3rd of June 1884, I transmit herewith, as required by the Regulations—

(1) A certificate of my birth, showing that I was born on the day of 18 , and that therefore my age was above 17 years and under 19 years on the 1st of January, 1884.

(1) If a General Register Office certificate cannot be obtained, the instructions printed on the other side will show what evidence should be supplied. If evidence is already in the hands of the Commissioners, strike out "A certificate of my birth," and insert "Evidence is already in the possession of the Commissioners."

(2) A certificate signed by of my having "no disease, constitutional affection, or bodily infirmity unfitting me, or likely to unfit me, for the Civil Service of India."

(2) The terms indicated by the marks of quotation must appear in the certificate, which must be given after personal examination, and bear date not earlier than 1st March, 1884.

(3) Proof of my moral character, *viz.*,—

(1) A testimonial from

(2) A testimonial from

(3) Two testimonials must be sent bearing date not earlier than 1st March, 1884 One of them should be given by an intimate acquaintance (not a relative) of not less than three or four years' standing; the other, if the candidate has recently left school, should be given by his late schoolmaster, or if he has had employment of any kind, by his late employer. If the candidate has been at any University, he should send a certificate of good conduct from his College tutor.

*(4) A statement of the branches of knowledge in which I desire to be examined.

(4) This should be given on the form herewith. If the History of England or English Literature be named, the schedule should also be filled up.

I have also to state, with reference to Section 2, Clause (i) of the Regulations, that I am a natural-born subject of Her Majesty.

I am, SIR,

Your obedient Servant,

PART I.

Government of India Notifications, Appointments, Promotions, &c.

MILITARY SECRETARY'S OFFICE.

NOTIFICATIONS.

Simla, the 1st October 1883.

His Excellency the Viceroy and Governor General will hold a Levée at Government House, Calcutta, on Wednesday, the 5th December 1883, at 9-30 P.M.

All Civil and Military Officers are invited to attend.

Gentlemen purposing to attend the Levée are requested to send their names to the Aide-de-Camp in waiting not later than the 1st December 1883, after which none will be received. Gentlemen who have not already been presented at the Court of St. James or at Government House will be good enough to add the names of Gentlemen who will present them.

The Levée will be closed by the Native Officers of the Garrison being presented by their Commanding Officers.

Gentlemen wearing uniform will appear in full dress.

Gentlemen not wearing uniform will appear in evening dress.

The carriages of Gentlemen (except such as have the private entrée) attending the Levée will enter by the North-East Gate, set down under the Grand Staircase, and pass out by the North-West Gate.

Their Excellencies the Viceroy and the Marchioness of Ripon will hold a Drawing Room at Government House, Calcutta, on Friday, the 7th December 1883, at 9-30 P.M.

Ladies purposing to attend the Drawing Room are requested to send their cards and addresses to the Aide-de-Camp in waiting not later than the 3rd December 1883, after which "*No Cards*" will be received, and to bring with them to the Drawing Room two cards with their names legibly written on them—one to be given on

entering Government House, and the other to the Aide-de-Camp in waiting at the time of presentation.

Ladies who have not already been presented at the Court of St. James or at Government House are requested to send their Cards with their addresses and the name of the Lady by whom they are to be presented to the Aide-de-Camp in waiting as soon as possible.

Ladies who present others should themselves attend the Drawing Room.

The Carriages of those who have the private entrée will enter by the South-East Gate and set down at the South Entrance of Government House.

All other carriages will enter by the North-East Gate, set down under the Grand Stairs, and pass out by the North-West Gate.

The 5th October 1883.

His Excellency the Viceroy and Governor General will leave Simla on Tuesday, the 16th October, and will arrive in Calcutta, *vid* Kashmir and Lahore, on Saturday, the 1st December 1883.

All covers intended to reach His Excellency the Viceroy and Governor General and party* during His Excellency's journey should be addressed "Governor General's Camp," without the addition of any post town.

* H. W. Primrose, Esq., Private Secretary to the Viceroy.
Captain Lord William Beresford, V.C., Military Secretary to the Viceroy. (*a*)
Rev. Father H. S. Kerr, Chaplain to the Viceroy.
Surgeon-Major J. Anderson, C.I.E., Surgeon to the Viceroy.
Captain T. Hope, Under Secretary to Government, Foreign Department. (*b*)
Colonel A. H. Bamfield, Inspector General of Police, Punjab. (*d*)
Lieutenant the Hon'ble C. Harbord, (*c*)
Lieutenant Lord A. F Compton,
Lieutenant F. S. St. Quinton, } Aides-de-Camp.

(*a*) Will leave the Viceregal party at Jummoo.
(*b*) Will join the Viceregal party at Umballa on 17th.
(*c*) Do. do. Sialkot on 18th
(*d*) Do. do. Jummoo on 19th

All communications connected with business of a mere routine nature should be sent, as usual, to the head-quarters of the several Departments.

By Command,

WILLIAM BERESFORD, *Captain,*
Military Secretary to the Viceroy.

PART III.

Advertisements and Notices by Private Individuals and Corporations.

IN THE COURT OF THE JUDICIAL ASSISTANT COMMISSIONER, LAHORE.

IN THE MATTER OF THE INDIAN COMPANIES ACT, 1882, AND OF THE PUNJAB BANK, LIMITED.

Upon the application of the Official Liquidator, notice is hereby given that the Court will, on the 16th day of October 1883, proceed to pass orders in reference to the distribution of the remaining assets of the Punjab Bank, Limited.

The more immediate question for disposal is whether depositors are entitled to interest; or whether (depositors having been paid the amount of their respective deposits in full with interest to 30th June 1877) the whole of the surplus assets should be divided amongst the shareholders.

All persons concerned are desired to attend this Court on the above date, and to bring forward anything they may have to state in regard to the above question.

E. W. PARKER,
Judl. Asst. Commr., Lahore.

LAHORE,

PART IV.

Acts of the Governor General's Council assented to by the Governor General

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[First publication.]

The following Act of the Governor General of India in Council received the assent of His Excellency the Governor General on the 4th October, 1883, and is hereby promulgated for general information:—

ACT NO. XVI OF 1883.

An Act for the protection of Inventions exhibited in the Exhibitions of India.

WHEREAS it is expedient that such protection as is hereinafter mentioned should be afforded to the inventors of new manufactures who are desirous of exhibiting them at Exhibitions to be held in India; It is hereby enacted as follows:—

Short title.

1. *(1)* This Act may be called the Protection of Inventions Act, 1883;

Commencement.

(2) And it shall come into force at once.

Act to be read with Act XV of 1859.

2. It shall be read with, and taken as part of, Act XV of 1859 (*for granting exclusive privileges to inventors*).

Inventions exhibited when to be deemed new though publicly used or made publicly known.

3. If, within six months from the time of the opening of an Exhibition, a person, being the inventor and exhibitor of any manufacture exhibited at that Exhibition, petitions the Governor General in Council, under Act XV of 1859, for leave to file a specification of his invention, the circumstance that the invention has at any time after the opening of the Exhibition been publicly used or made publicly known shall not prevent the invention being deemed to have been at the time of presenting the petition a new invention for the purposes of the said Act.

Meaning of term "Exhibition."

4. In this Act, "Exhibition" means the International Exhibition to be held in the years one thousand eight hundred and eighty-three and one thousand eight hundred and eighty-four at Calcutta, and any Exhibition to be held in India which the Governor General in Council may, on the application of any persons desirous of holding the Exhibition, by notification in the *Gazette of India*, declare to be, in the judgment of the Governor General in Council, calculated to promote Indian art or industry, and to prove beneficial to the mercantile, agricultural or industrial classes of Her Majesty's subjects in India.

D. FITZPATRICK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[First publication.]

The following Act of the Governor General of India in Council received the assent of His Excellency the Governor General on the 4th October, 1883, and is hereby promulgated for general information:—

ACT No. XVII OF 1883.

An Act to amend the Native Passenger Ships Act, 1876.

II of 1876. WHEREAS it is expedient to amend the Native Passenger Ships Act, 1876, with a view to provide for the better regulation of the passenger-traffic between British India and ports in the Red Sea; It is hereby enacted as follows:—

Short title. 1. (1) This Act may be called the Native Passenger Ships Act, 1883; and

Commencement. (2) It shall come into force on such day as the Governor General in Council directs by notification in the *Gazette of India*.

II of 1876. Addition to section 11 of the Native Passenger Ships Act, 1876. 2. After clause (e) of section eleven of the Native Passenger Ships Act, 1876, the following clause shall be added:—

"(ee) in the case of any ship sailing to any port in the Red Sea, that she is propelled principally by steam, and, if she is carrying more than one hundred passengers being Natives of Asia or Africa, that she has on board a medical officer licensed in accordance with rules made under this Act."

Substitution of new section for section 26 of same Act. 3. For section twenty-six of the same Act the following section shall be substituted:—

Bond where ship clears for port in Red Sea. "26. In the case of every ship sailing from any port in British India to any port in the Red Sea, the officer whose duty it is to grant a port-clearance for any such ship shall not grant the clearance unless and until the owner, agent or master of the ship and two sureties resident in British India have executed in favour of the Secretary of State for India in Council a joint and several bond, for the sum of Rs. 5,000, conditioned—

"(a) that the ship shall touch at Aden on the outward voyage and there obtain a clean bill of health, and shall do the same on the homeward voyage if the ship continues to carry more than sixty passengers; and

"(b) that the master and medical officer (if any) of the ship shall comply with on the outward voyage, and also on the homeward voyage if the ship continues to carry more than sixty passengers, the provisions of this Act and of such rules relating to ships sailing between ports in British India and ports in the Red Sea as the Governor General in Council may, from time to time, make under section forty-six."

Amendment of section 27 of same Act. 4. In section twenty-seven of the same Act, for the word "thirty" the word "sixty" shall be substituted.

Addition to section 28 of same Act. 5. To section twenty-eight of the same Act the following words shall be added:—"and the authority empowered to grant the same may refuse to grant a bill of health in the case of any ship on board of which the requirements of the rules made under section forty-six are not complied with."

Addition of new sections after section 28 of same Act. 6. After section twenty-eight of the same Act the following sections shall be added:—

Certain ships to carry medical officer. "28A. Every ship sailing from or to any port in British India to or from any port in the Red Sea and carrying more than one hundred passengers being Natives of Asia or Africa shall have on board a medical officer licensed in accordance with rules made under this Act.

Certain ships to be propelled by steam. "28B. Every ship sailing from or to any port in British India to or from any port in the Red Sea shall be propelled principally by steam.

Power for Local Government to direct medical inspection of passengers. "28C. (1) The Local Government may, from time to time, direct that no passenger shall be received on board any ship or any ship of a specified class sailing from any port in British India to any port in

the Red Sea unless and until he has been inspected, at such time and place as the Local Government may fix in this behalf, by a medical officer to be appointed by the Local Government in this behalf.

"(2) If, in the opinion of the officer making an inspection under this section, a passenger is suffering from any dangerously infectious or contagious disease, the passenger shall not be permitted to embark."

Addition of new sections after section 38 of same Act.

7. After section thirty-eight of the same Act the following sections shall be added:—

Penalty on master or medical officer of certain ships disobeying rules.

"38A. If the master of any such ship as is referred to in section twenty-seven, or any medical officer in charge of any such ship, wilfully breaks, or omits or neglects to obey, any rule with regard to those ships made under section forty-six, he shall be punished with fine which may extend to five hundred rupees, or with imprisonment for a term which may extend to three months, or with both.

Penalty on master of certain ships sailing without medical officer.

"38B. If any ship sailing from or to any port in British India to or from any port in the Red Sea and carrying more than one hundred passengers has not on board a medical officer as required by section 28A, the master of the ship shall be punished with fine which may extend to five hundred rupees, or with imprisonment for a term which may extend to three months, or with both.

Penalty on owner and master of certain ships not propelled by steam.

"38C. If any ship sailing from or to any port in British India to or from any port in the Red Sea is not principally propelled by steam, the owner and master shall each be punished with fine which may extend to five hundred rupees, or with imprisonment which may extend to three months, or with both.

Penalty on master receiving passenger in contravention of section 28C.

"38D. If the master of any ship, while a direction under section 28C is in force, knowingly receives on board his ship any person in contravention of that section or of the direction, he shall be punished with imprisonment which may extend to three months, or with fine which may extend to five hundred rupees for each person so received, or with both."

Additions to section 46 of same Act.

8. After clause (b) of section forty-six of the same Act the following clause shall be added:—

"(bb) the licensing and appointment of medical officers in cases where they are required, under this Act, to be carried;"

and after clause (e) of the same section the following clauses shall be added:—

"(ee) the functions of the master, medical officer (if any) and other officers of the ship during the voyage;

"(eee) the access of intermediate or between decks passengers to the upper deck."

New section added to same Act.

9. To the same Act the following section shall be added, namely:—

Power to exempt ship from provisions of Act.

"50. The Local Government may, from time to time, with the previous sanction of the Governor General in Council, for any special reason and subject to such conditions as it thinks fit, exempt any ship or class of ships from any provision of this Act."

PART V.

Bills introduced into the Council of the Governor General for making Laws and Regulations, or published under Rule 22.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[First publication.]

The following Bill was introduced into the Council of the Governor General of India for the purpose of making Laws and Regulations on the 4th October, 1883, and was referred to a Select Committee:—

No. 21 OF 1883.

A Bill to amend the Legal Practitioners Act, 1879, and the Indian Stamp Act, 1879.

XVIII of 1879.

WHEREAS it is expedient to amend the Legal Practitioners Act, 1879, in manner in this Act appearing;

I of 1879.

And whereas it is also expedient to amend the Indian Stamp Act, 1879, in so far as it relates to the duty chargeable on the enrolment of legal practitioners;

It is hereby enacted as follows:—

Short title.

1. (*1*) This Act may be called the Legal Practitioners Act, 1883; and

Commencement.

(*2*) It shall come into force at once.

Amendment of section 4 of Act XVIII of 1879.

2. In section 4 of the Legal Practitioners Act, 1879, for the words "as an advocate on the roll of the Chief Court of the Panjáb" the words "under section 41 of this Act" shall be substituted.

Addition of a proviso to section 13 of same Act.

3. To section 13 of the same Act the following proviso shall be added:—

"Provided that in any case in which the party on whose behalf any such pleader as aforesaid is retained is—

(*a*) a pardánashín woman, or

(*b*) unable for any sufficient cause to instruct the pleader in person,

the High Court shall not suspend or dismiss the pleader because he has taken instructions from a relative of the party deputed by him or her to instruct the pleader."

New section substituted for section 41 of same Act.

4. For section 41 of the same Act the following section shall be substituted, namely:—

Power for certain High Courts to enrol advocates.

"41. (*1*) A High Court not established by Royal Charter may, from time to time, with the previous sanction of the Local Government, make rules as to the qualifications and admission of proper persons to be advocates of the Court, and, subject to such rules, may enrol such and so many advocates as it thinks fit.

(*2*) Every advocate so enrolled shall be entitled to appear for the suitors of the Court and to plead or to act, or to plead and act, for those suitors, according as the Court may by its rules determine, and subject to those rules.

"(*3*) The High Court may dismiss any advocate so enrolled or suspend him from practice:

"(*4*) Provided that an advocate shall not be dismissed or suspended under this section unless he has been allowed an opportunity of defending himself before the High Court which enrolled him, and, except in the case of the Chief Court of the Panjáb, unless the order of the High Court dismissing or suspending him has been confirmed by the Local Government."

New section added to same Act.

5. To the same Act the following section shall be added, namely:—

Repeal of Acts I of 1846 and XX of 1853.

"42. Act I of 1846 (*for amending the law regarding the appointment and remuneration of pleaders in the Courts of the East India Company*), and Act XX of 1853 (*to amend the law relating to pleaders in the Courts of the East India Company*) are repealed."

Amendment of Schedules I & II of Act I of 1879. (Duty on enrolment of advocates.)

I of 1879.

6. In Article 27 of Schedule I of the Indian Stamp Act, 1879, the words "in exercise of powers conferred on such Court by letters patent," and in clause (*a*) of Article 11 of Schedule II of the same Act, the words "established by Royal Charter" are repealed.

STATEMENT OF OBJECTS AND REASONS.

THE object of this Bill is to amend the Legal Practitioners Act, 1879, in certain respects in which experience has shown that the existing law is defective.

2. Section 13 of the Legal Practitioners Act, 1879, contains a provision that the High Court may suspend or dismiss any pleader who takes instructions in any case except from the party on whose behalf he is retained, or from a private servant of such party, or from some person who is the recognized agent of such party within the meaning of the Code of Civil Procedure. It has been brought to the notice of the Government that the practical operation of this provision is in certain cases attended with inconvenience to litigants and pleaders. In litigation in which pardánashín women are concerned, instructions must often, as a matter of necessity, be given through their near relatives. Again, there are cases in which male litigants, who have not the means of employing private servants, are unable from various causes, such as physical incapacity or old age, to instruct their pleaders in person. In such cases it seems right to allow the relatives of the litigants to instruct pleaders on their behalf. Section 3 of the Bill accordingly adds a proviso to section 13 of the Act enabling pleaders to take instructions from a relative of the party deputed by him or her to instruct the pleader when the party is a pardánashín woman or unable for any sufficient cause to instruct the pleader in person.

3. Under the Legal Practitioners Act, 1879, an advocate not ordinarily practising in his own province must, if he wishes to practise in such a province as the Central Provinces, for example, where the Judicial Commissioner has at present no power of enrolling advocates, first enrol himself as a pleader. As this state of the law is felt by certain persons to be a grievance, a new section has been added to the Act, empowering all High Courts not established by Royal Charter to enrol advocates as the Chief Court of the Panjáb is at present empowered to enrol them. As the power of suspension or removal would, except in the case of the Panjáb Chief Court, be vested in a single officer if it were conferred absolutely on the High Court, it has been thought well to make every order by any High Court, other than the Panjáb Chief Court, suspending or removing an advocate subject to confirmation by the Local Government.

4. The new section 42, which section 5 of the Bill adds to the Act, provides for the repeal of Acts I of 1846 and XX of 1853 in all places to which that section may be extended. The Madras High Court has noticed that these Acts have not as yet been expressly repealed in that Presidency, though a great portion of the Legal Practitioners Act, 1879, has been brought into operation there. These Acts are, it is believed, already repealed in all the provinces to which the Legal Practitioners Act, 1879, extends *proprio vigore*; but it is possible that they may be still unrepealed in some of the other provinces to which that Act has either already been or may hereafter be extended under the power conferred by its first section. The new section 42, taken with the first section of the Legal Practitioners Act, will enable the Local Government of any such province to repeal these Acts if still in force in it.

5. Lastly, section 6 of the Bill amends article 27 of schedule I and article 11 of schedule II of the Indian Stamp Act, 1879, by omitting the words which confine their operation to advocates of the chartered High Courts. As section 41 of the Legal Practitioners Act, 1879, empowers the Chief Court of the Panjáb to enrol advocates, and as the Bill will confer similar powers on the other non-chartered High Courts, the words in question are, as represented by the North-Western Provinces High Court, out of place, so far as advocates are concerned, and should therefore be omitted.

PUBLIC DEBT OFFICE,
BANK OF BENGAL;
Calcutta, the 1st October 1883.

R. HARDIE,
Secretary and Treasurer.

ORDERS BY THE VICE-CHANCELLOR AND SYNDICATE OF THE CALCUTTA UNIVERSITY.

The following changes in the Regulations for the Examinations of Female Candidates having been sanctioned by the Senate and approved by His Excellency the Governor General of India in Council, are published for general information.

For the Regulations for the First Examination in Arts, Bachelor of Arts, and for the Degree of M. A., the following Regulations have been substituted, with effect, as regards the First Examination in Arts, from 1st of January 1884, and as regards the Bachelor of Arts, and for the Degree of M. A., from 1st of January 1885.

The first alteration refers to Rule 3 in the Regulations for the F. A. Examination of Female Candidates the word "Physics" has been substituted for the words "the subjects included in the second Mathematical paper in the F. A. Examination."

The second alteration refers to the omission of Rule 2 in the Regulations for the B. A. Examination of Female Candidates.

The third alteration refers to the omission of the 1st Clause of Rule 3 in the Regulations for the B. A. Examination of Female Candidates.

The fourth alteration adds the Regulations that "The M. A. Examination shall be the same for females as for males."

G. BELLETT,
Registrar.

SENATE HOUSE,
The 11th August 1883.

TELEGRAPH DEPARTMENT.

NOTIFICATION.

Calcutta, the 5th October 1883.

No. 10.—Mr. G. L. Towers, an Assistant Superintendent of the 1st grade, is allowed furlough for 12 months under Section 49 of the Civil Leave Code, with effect from the forenoon of the 11th September 1883.

A. J. L. CAPPEL.
Director General of Telegraphs in India.

AGENT, GOVERNOR GENERAL, FOR CENTRAL INDIA.

NOTIFICATIONS.

Indore Residency, the 29th September 1883.

No. 2625.—In continuation of Notification No. 2218, dated 27th August 1883, Lieutenant-Colonel A. L. Playfair, Cantonment Magistrate, Morar, is granted extension of privilege leave from 10th to 31st October 1883.

By Order,
C. E. YATE, *Capt.,*
for 1st Asst. Agent, Govr. Genl., for Central India.

No. 2629.—Captain George Edward Money, Bengal Staff Corps, 3rd Squadron Commander, Central India Horse, is granted ninety days' privilege leave from the 20th November 1883, or such subsequent date as he may avail himself of it.

By Order,
A. M. MUIR,
2nd Asst. Agent, Govr. Genl., for Central India.

AGENT, GOVERNOR GENERAL, FOR CENTRAL INDIA, P. W. D.

NOTIFICATIONS.—ESTABLISHMENT.

Indore, the 27th September 1883.

No. 14.—Mr. R. Ewing, Executive Engineer, 4th Grade, Personal Assistant to Superintending Engineer, Central India, and in charge of Works at Indore, ceased to hold the Office of Personal Assistant from the afternoon of the 13th instant, on which date he was relieved of the charge of the Works.

No. 15.—Mr. H. E. Grant, Assistant Engineer, 2nd Grade, and Mr. R. Ewing, Executive Engineer, 4th Grade, respectively, made over and received charge of the Gwalior Division on the afternoon of the 18th instant.

By Order,
C. S. THOMASON, *Col., R.E.,*
Secy. to Agent, Govr. Genl., for Central India, P. W. D.

BOARD OF REVENUE.

NOTIFICATION.

Calcutta, the 27th September 1883.

No. 1135½ B.—The following rules have been made under section 9 of Act VIII of 1878 by the Board of Revenue, Lower Provinces, with the sanction of the Local Government, and are under Section 204 of the same Act notified for general information:—

CALCUTTA INTERNATIONAL EXHIBITION, 1883-84.

Custom House Arrangements.

1. All entries of goods for the Exhibition must be passed at the Custom House in accordance with the arrangements made by the Collector of Customs.
2. In respect of dutiable goods the Exhibition building is appointed a public warehouse under the provisions of section 15 of Act VIII of 1878, of which Mr. Jules Joubert shall be deemed to be the keeper for the purposes of section 96 of that Act.
3. Packages containing dutiable goods, upon which duty has not been paid, must be entered for bond and appraised and taken in charge of an officer to the Exhibition building in the usual manner. Pending appraisement and removal to the Exhibition building, all such packages will be allowed to remain rent-free in a portion of the Custom House premises set apart for the purpose.

4. At the close of the Exhibition, exhibitors will have to account to the Custom House authorities for all dutiable goods admitted into the Exhibition in accordance with the bond bill of entry. Goods intended for delivery in Calcutta on sale or otherwise will on payment of duty be cleared from bond, and goods intended for re-exportation will be re-shipped from bond in the usual manner.
5. The charges mentioned in the schedule attached to these rules are remitted in respect of goods intended for the Exhibition.
6. No duty will be payable for wines, spirits, or other liquors consumed in the Exhibition for tasting or judging purposes, and a certificate of the amount thus consumed must be obtained from the Secretary to the Executive Committee of the Exhibition and presented by exhibitors to the Custom House officer when accounting for the dutiable goods admitted into the Exhibition. Without such certificate duty will be assessed on all dutiable goods shown by the bills of entry as having been admitted into the Exhibition and which are not forthcoming at its close.
7. The Custom House officers will not have custody of, or be in any way responsible for, goods in the Exhibition building, the custody of which as a public warehouse will rest with Mr. Jules Joubert.
8. These rules apply only to goods intended *bonâ fide* for Exhibition.

SCHEDULE.

	R	a.	p.
Entry.			
1. Wharf rent for any time over four days during which they lie at the Custom House .		...	
2. Form of bond	1	0	0

TREASURE TROVE.

It is hereby notified, under Section 5 of the Indian Treasure Trove Act (VI of 1878), that in March 1882, treasure, consisting of 60 silver one-rupee coins, were found in the ruined house of one Vencataragava Charry, in the village of Melnallathur, in the Trivellore Taluq, of the Chingltput District.

All persons claiming the treasure, or any part thereof, are required to appear personally or by agent before the Collector of Chingleput, at his Office at Saidapet, on the 5th day of February 1884, in order to the matter being inquired into and determined in accordance with the provisions of this Act.

FREDERICK HILL,
Collector.

TREASURE TROVE.

It is hereby notified, under Section 5 of the Indian Treasure Trove Act, VI of 1878, that on or about the 11th August 1883, the undermentioned articles, valued at about R18, were found under ground in the vacant house site of Thevanai a resident of Kolanipalayam, hamlet of Mettupalayam village, Dharapuram Taluk, Coimbatore District:—

3	Rupees of	1835.
13	do.	1840.
2	do.	1862.
18		

All persons claiming the said treasure, or any part thereof, are hereby required to appear personally or by agent before the Collector at his Office, on Tuesday, the 11th March 1884, at 10 A.M., in order that the matter may be enquired into and determined in accordance with the provisions of the Act.

G. D. LEMAN,
Collector.

COIMBATORE COLLECTOR'S OFFICE,
The 24th September 1883.

TREASURE TROVE.

Notice is hereby given under Section 5 of the Indian Treasure Trove Act, VI of 1878, that in the village of Amalner, Taluka Jamkhed, of the Ahmednagar District, the undermentioned treasure was found on the 17th August 1883, in the field (Survey No. 19) of one Piraji *alias* Potitboa wd. Khanduji:—

	R	a.	p
Gold Ornaments.			
1. Getha (necklet worn by men) .	127	0	0

HENRY F. BLANFORD,
Meteorological Reporter
to the Government of India.

THE INDIAN LAW REPORTS.

PUBLISHED UNDER AUTHORITY.

The "Indian Law Reports," published under the authority of the Governor General in Council, will appear in monthly parts, published as soon as possible after the first of each month at Calcutta, Madras, Bombay, and Allahabad, and will comprise four series,—one for the Calcutta High Court, a second for the Madras High Court, a third for the Bombay High Court, and a fourth for the Allahabad High Court. The cases heard by the Privy Council on appeal from each High Court will be reported in the Series for that High Court. Cases heard by the Privy Council on appeal from Provinces in India not subject to any High Court will be reported in the Calcutta Series. The Parts of each Series can be had separately, or all four Parts can be had stitched into one wrapper at the option of subscribers and purchasers. It will be observed from the following statement of the terms of subscription and sale, that a considerable reduction is allowed to persons taking the complete set:

Terms of subscription, payable annually in advance.

	Without Postage.	With Postage.
For the CALCUTTA SERIES .	R35	R37-8
" MADRAS SERIES .	" 8	" 9
" BOMBAY SERIES .	" 8	" 9
" ALLAHABAD SERIES .	" 8	" 9
Complete set	" 45	" 47-8

The price of each Part purchased separately will vary according to the amount of matter it contains, and will be printed on the wrapper. It will, however, never be below the following:—

	R	a.
For a Part of the CALCUTTA SERIES .	R3	8
" " MADRAS SERIES .	" 1	0
" " BOMBAY SERIES .	" 1	0
" " ALLAHABAD SERIES	" 1	0
Complete set	" 4	0

Persons desiring to subscribe for or purchase the Reports, should apply to—

MESSRS. THACKER, SPINK AND CO., CALCUTTA;
MESSRS. THACKER AND CO., BOMBAY;
MESSRS. HIGGINBOTHAM AND CO., MADRAS;
THE GOVERNMENT CENTRAL BOOK DEPOT, BOMBAY;
THE GOVERNMENT BOOK DEPOT, ALLAHABAD.

Orders and Subscriptions for 1875 should be at once remitted.

THE BENGAL LAW REPORTS.

A few sets of the Bengal Law Reports (Volumes 1 to 15) are available at Messrs. Thacker, Spink & Co., Calcutta, at R375 a set.

Transport of Troops by Sea. *Price, R2-8;*

packing and postage, 4 annas.

SUPPLEMENT TO
The Gazette of India.

Nº 40.] CALCUTTA, SATURDAY, OCTOBER 6, 1883.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

D. BARBOUR.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 2nd OCTOBER 1883.

GENERAL REMARKS.—In the Madras Presidency rain has fallen in varying quantities in all districts except Travancore, but more is still needed for dry crops in a few places. In Mysore the dry crops are withering in all districts from want of rain. In the Bombay Presidency rain has fallen in most districts, but more is urgently wanted in the Southern Mahratta Country. No rain fell in Sind during the week, and the river was on the 1st instant 2 feet 4 inches below the previous year's level. In Hyderabad and the Berars the rainfall has been again heavy and a break is needed. In Rajputana and the Central India States, light and fairly general rain fell during the week, and prospects are on the whole good. In British Burma rain has fallen in all districts and the agricultural condition of the province continues satisfactory. In Assam and Bengal the rainfall has been general, and the weather continues seasonable. More rain is however wanted in several places in the Bengal Presidency for the transplanted rice crop, especially on the high lands. Rain has continued in the southern and eastern districts of the Central Provinces, and the prospects of the rice crop are improving. A break is needed in Nagpur and Wardah for the cotton and millets and in the north of the provinces for preparation of ground for *rabi* sowings. In the North-Western Provinces and Oudh no rain has fallen during the week, and the rainy season is believed to be over. Prospects are on the whole fair, but more rain would be beneficial in many districts. In the Punjab the rainfall of the week has been confined to three districts only, but prospects are on the whole good.

Harvesting of paddy, *cumboo, ragi*, gingelly, &c., continues in the Madras Presidency, and the *kharif* is being cut in a few places in the Bombay Presidency. *Rabi* sowing is also in progress in Bombay. The damage from locusts is reported to be slight. In the North-Western Provinces and Oudh, Punjab, Rajputana, and the Central India States the *kharif* harvest is in progress and ploughing and sowing for the *rabi* are also commencing. In Bengal the early crops have been almost all harvested, with a generally fair outturn, though in some districts the jute crop is below the average.

There has been no increase of cattle-disease in British Burma, and elsewhere it is slight. A few deaths from cholera are still reported and seasonal fever is prevalent in some places, otherwise the public health is good.

Prices are either stationary or falling.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Oct. 3rd)		
Bellary ...	·43 (average of five stations).	Standing crops wet generally good. Dry withering in black and red soils.
Kurnool ...	1·85 (average of seven stations).	Rain still wanted in three taluks. Standing crops withered in Cumbum division; elsewhere good. Harvest *cumboo* and indigo, yield one-half to three-fourths. Cattle-disease in six taluks.
Ganjam ...	1·10 (average of seventeen stations).	Standing crops generally thriving.
Kistna ...	1·51 (average of twelve stations).	Dry crops generally recovering, but still need rain. Harvest *cumboo* and gingelly, yield below half. Small-pox and cattle-disease in parts.
Chingleput (Madras) ...	·51 (average of seven stations).	Standing crops withering for want of rain. Harvest *kar*, paddy, &c., yield one-fourth. Measles and cattle-disease slight in parts.
Coimbatore ...	·50 (average of three stations).	Dry crops want rain in nine taluks. In one improved from recent rain. Harvest paddy, *cholum, ragi*, and *cumboo* in parts, yield average. Nine deaths from cholera in two taluks. Fever and small-pox in parts.
Tanjore ...	·92 (average of four stations).	Standing crops generally good, but rain needed in all but three taluks. Harvest paddy, *cholum, ragi, cumboo*, and gingelly, yield below average. 32 deaths from cholera.
Madura ...	·53 (average of four stations).	Standing crops fading. Harvest paddy in two taluks, yield average in one and poor in the other.
Malabar ...	·27 (average of six stations).	Standing crops good. Harvest continues. Second crop cultivation progressing. Small-pox in nine taluks; fever in four. Cattle-disease slight in one taluk.
Travancore ...	......	Harvesting almost over. One death from small-pox; fever and dysentery prevail. Rain still needed in parts.
		General Remarks.—General prospects fair.
Bombay—(Oct. 3rd)		
Kurrachee ...	No rain	River at Kotri on 1st 9 feet 10 inches against 12 feet 2 inches on same date last year. Rats doing some damage to rice crops in talukas Tatta and Shahbandar. *Kron* worm still in Tatta. Fever in six talukas. Cattle-disease in four talukas. Small-pox prevalent in three villages, in districts 14 fresh cases, 5 deaths, 1 remaining sick. Wheat, red rice, and *bajri* in Kurrachee 24, 28 and 34, in Sehwan 32 and 35, in Ghorabari 20, 30 and 36, and in Shahbandar 20, 32 and 42 lbs. per rupee, respectively.
Hyderabad ...	......	*Kharif* harvesting in progress. River has fallen 1 foot 10 inches since last week and was 2 feet 4 inches lower on 1st October than on the same date last year. Small-pox in one, fever in three, and cattle-disease in three talukas. Wheat 25, *bajri* 39, *juari* 48, red rice 26, and white rice 22 lbs. per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Ahmedabad ...	·37	Total rainfall 20·05. Crops healthy. Slight fever in some talukas. *Bajri* 28 and wheat 25½ lbs. per rupee.
Baroda ...	·72	Total rainfall 45·11. Crops in good condition. Public health fair. Cholera decreasing in Naosari division. *Bajri* 27 and rice 22 lbs. per rupee.
Surat ...	4·01	Total rainfall 51·84. Crops healthy. Cholera in Pardi, 14 cases, 3 fatal, 11 recovered. Destruction of locusts carried on. *Juari* 40 and *nagli* 42 lbs. per rupee.
Nasik ...	Heavy and continuous rain throughout district.	Cotton, *bajri*, and *urd* damaged. *Rabi* sowings retarded for want of break. Locusts throughout the district doing damage to crops in rare cases. No cholera. Wheat 28, *bajri* 28, and rice 22 lbs. per rupee.
Colaba (Bombay) ...	Slight rain daily, 1·97.	Total rainfall to date 79·00, being 10·79 above average. Abnormal temperature 3° to 1° cool. Vapour in air normal. Abnormal wind northerly. Thunder on 27th and 29th.
Poona ...	Good rain throughout district.	Cholera has almost disappeared. *Bajri* 40 and *juari* 49, in Poona *bajri* 34 and *juari* 43 lbs. per rupee.
Ahmednagar ...	Rain in all talukas—maximum at Shrigonda, 8·99; minimum at Sangamner, 3·05.	The excessive rain is reported to have injured the *bajri* crops in some places and to have retarded the sowing operations for the *rabi* crops. Cholera 45 attacks, 15 deaths. *Bajri*—maximum 60 lbs. in Jamkhed, minimum 36 in Kopargaon. *Juari*—maximum 72 in Jamkhed, minimum 48 in Kopargaon.
Sholapur ...	3·46	Total rainfall 36·68. *Kharif* crops in good condition. *Rabi* sowings commenced everywhere. Cholera 32 cases, 18 fatal. *Juari* 63 and *bajri* 51 lbs. per rupee.
Dharwar ...	Slight rain at nine out of fourteen stations; maximum being ·60 at Hubli, and minimum ·12 at Karajgi.	Rain wanted urgently everywhere both to save standing crops which are withering and to enable late crops, including cotton, in some parts to be sown. *Ragi* and *sawan* being harvested in western talukas. Cotton seed has not germinated well in some talukas for want of sufficient moisture. Public health fair. Prices steady.
Kanara ...	Karwar, 4·63; Kumpta, 3·11; Sirsi, ·13; Hallial, ·16.	Total rainfall 136·07. Small-pox in Honawar. Rice harvest continues on coast. Common rice in Karwar 12½, in district average 14½ seers per rupee. Weather fair.
Rajkot ...	·60	Total rainfall 25·97. General health good. Weather cool. Cholera in Paprali, Und, and Chavangar. *Bajri* 29 and *juari* 34 lbs. per rupee.
		General Remarks.—Rain in most districts of the Presidency. Heavy in some, but urgently wanted in the Southern Mahratta Country. River low in Sind. *Kharif* harvested in a few districts. *Rabi* sowing in progress. Little damage from locusts. Slight fever, small-pox, and cattle-disease in a few places.
Bengal—(Oct. 3rd)		
Chittagong ...	7·14	Weather seasonable. Prospects favourable. Rain has done good to standing crops. Prices steady. Cattle-disease still continues.
Dacca ...	1·26	*Aus* rice and jute being cut. Prospects of crops in Nawabgunge unfavourable owing to sudden rise of water.
24-Pergunnahs (Calcutta)	2·26	Prospects of late rice continue favourable, but more rain is required. Threshing of early rice still going on. Price of common rice stationary. Health of people generally good.
Moorshedabad ...	·57	Weather hot and cloudy with occasional slight showers. Rainfall during week very beneficial to late rice crop which has however suffered greatly from late drought. A good deal of fever in north of district
Rajshahye ...	·34; slight rain in north.	Weather generally clear. Rain urgently wanted for transplanted paddy. Sugarcane fair.
Burdwan ...	·43; Culna, 3·54; Cutwa, 2·69; Raneegunge, ·05.	Rice crops likely to suffer seriously if rain does not fall immediately, in Cutwa especially. Prospects are unfavourable. Public health fair.
Rungpore ...	·94	Weather seasonable. Prospects of crops fair. But more rain is wanted. Fever prevalent in some places.
Bhagalpur ...	*Nil*	Rain urgently wanted for high land paddy. Otherwise prospects favourable.
Purneah ...	·24	Prospects of crops fair. More rain wanted. Fever prevalent.
Patna ...	*Nil*	Gathering of *bhadoi* crops nearly completed. Much rain wanted in South Behar. Cholera still reported from Behar sub-division.
Durbhunga ...	·45	Weather hot. Rain badly wanted for rice crop which was looking very well. Outturn of *bhadoi* crops fair.
Hazaribagh ...	·05	Days warm. Mornings and evenings cool. *Bhadoi* crops harvested with a fair outturn. Fields being prepared for *rabi* crops. A general want of rain being felt for standing paddy crop. Public health good.
Cuttack ...	·71	Weather hot and clear. Early rice being reaped and gathered. Late rice growing well. Prospects of crops good. Public health good. Cattle-disease in some places in Kendrapara sub-division.
		General Remarks.—Rain in varying quantities fell in almost all districts during the week, but the fall in most parts of the province was very slight. More rain is very urgently wanted in several places for the transplanted rice crop, especially on the high lands. Early crops have been almost all gathered in generally with a fair outturn, though in some districts these crops especially jute have been under average. Fever is prevalent in some districts; otherwise public health is still pretty fair.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
N. W. Provinces and Oudh—		
Benares (Oct. 2nd)	No rain	Anxiety beginning to be felt for want of rain. Fever continues. Prices steady. Condition of cattle good.
Allahabad („ 3rd)	......	Rainy season over and autumnal commenced. Crops doing fairly well. Early rice being harvested. Cholera cases *nil.* Slight autumnal fever. Prices easy.
Gorakhpur (Sept. 30th)	......	Weather bright and clear during the week. Crops flourishing, but more rain required to secure a full rice crop and for the *rabi* sowings. Prospects excellent. Prices steady with a tendency to fall. Cholera has disappeared from the jail, but is spreading in the city.
Jhansi (Oct. 1st)	No rain	Prospects good. More rain would be an advantage. *Bajri, tili*, and cotton are in flower. Prices stationary. Health of people and cattle good.
Agra („ 2nd)	No rain	Fever in four parganas. Prices stationary. Rain needed both for present crops and *rabi* sowings, none having fallen for more than two weeks.
Bareilly („ „)	......	*Rabi* sowings begun. Rain badly wanted. Cholera almost gone.
Meerut („ „)	No rain	General condition favourable. *Rabi* ploughings in progress and gram being sown. Prices steady
Kumaun („ „)	No rain	Weather seasonable. Reaping of *kharif* in progress. Outturn fair. Ploughing for *rabi* commenced. Prices stationary. Cattle-disease prevalent. Health good.
Lucknow („ „)	No rain	Weather clear. Rice is being cut and threshed. *Hewat* crops excellent. Condition of people good and of cattle normal. Markets well supplied. Prices steady.
Partabgarh („ „)	No rain	Prices almost stationary. *Kuari dhan* being cut; *jarhan* suffering from drought in parts of tahsil Patti. Slight fever reported in Kunda and cattle-disease in Sadr.
Sitapur („ „)	No rain	General health good. Gram sowings commenced, but west wind drying soil too quickly. Prices on the whole falling.
Fyzabad („ „)	No rain	*Kharif* crops are being cut. Prospects good. Public health good.
Rae Bareli („ 1st)	No rain	Weather bright. Wind westerly. More rain wanted. Health of men and condition of cattle good. Supplies abundant. Prices steady.
Cawnpore („ 2nd)	No rain	Sky almost cloudless. Rain needed for *rabi* sowings. *Juari* and *bajri* will be about 12 annas. Rice almost entirely failed, but is not one of the staple crops. Cholera is reported from one police station only and fever is prevalent. Cattle-disease in parganas Akbarpur, Sarh, and Salempur. Prices slightly fallen.
Farukhabad („ „)	......	Bright clear weather in early part of week, now very slightly overcast and warmer. Fever is prevalent in the parts which had the heaviest rainfall and where there is new canal irrigation.
		General Remarks.—No rain has fallen during the week and the rainy season appears to be over. More rain would be an advantage in many districts, but prospects are on the whole fair. Cholera has disappeared from Allahabad and almost disappeared from Barielly, it is reported from one police station in Cawnpore, and is spreading in Gorakhpur city. Season fever is reported from several districts.
Punjab—(Oct. 2nd)		
Delhi ...	......	Health good. Prices of barley and *juari* slightly risen. Prices of other food-grains stationary.
Hissar ...	......	Health good. Rain required in Rohtak and Jhajjar. Crops elsewhere in good condition. Prices stationary.
Umballa ...	......	Health good. *Kharif* yield expected to be below the average. *Rabi* sowings delayed for want of rain. Prices stationary.
Jullundur ...	......	Health and *kharif* prospects good. Prices falling.
Amritsar ...	......	Health and condition of crops good. Prices falling.
Sialkot ...	......	Health and harvest prospects good. Prices stationary.
Ferozepore ...	......	Health and *kharif* prospects good. Prices falling.
Lahore ...	......	Health and *kharif* prospects good. *Rabi* ploughings continue. Prices falling.
Rawal Pindi ...	·40	Fever in two tahsils. *Kharif* prospects good in four tahsils and average in four others. Prices rising.
Mooltan ...	......	Health and *kharif* prospects good. Prices stationary.
Dera Ismail Khan ...	·70	*Kharif* crops in *daman* and *thall* lands average; in irrigated lands fair. *Rabi* ploughings commenced. Prices slightly rising.
Peshawar ...	·10	Rain much more wanted. Slight fever prevalent. Prices falling.
		General Remarks.—Slight rain has fallen in the Rawal Pindi, Dera Ismail Khan, and Peshawar districts. Seasonal fever in Rawal Pindi and Peshawar; health elsewhere good. The crop prospects are generally good, and the prices of food-grains are either falling or stationary.
Central Provinces—(Oct. 3rd)		
Nagpur ...	1·17	Weather cloudy. Clear weather needed for crops. Cholera abating. Prices of wheat and *juari* slightly fallen.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Central Provinces— *contd.*		
Jubbulpore ...	......	Weather clear with bright sunshine. Crops in fair condition. Cotton in flower and thriving. Rain wanted. Prices stationary. Health good.
Saugor (Oct. 2nd)	1·7	Rain not general. Weather hot. Prospects favourable. A few showers would be beneficial to crops and to *rabi* ploughings. Prices stationary. Health fair.
Seoni ...	......	Weather cloudy and unusually hot. Sowings commenced. Fever prevalent. Wheat 22¼ and rice 16 seers per rupee.
Hoshangabad ...	Occasional showers	Weather hot and cloudy. Prospects good. Land ready for *rabi* sowings. Health good. Wheat 15 and rice 9 seers per rupee.
Khandwa ...	·30	Weather occasionally cloudy. Seventeen deaths from cholera. Prices stationary.
Raipur ...	·38	Crops thriving, but more rain wanted. Grasshoppers numerous and destructive to rice in Simoga. Cholera in Raipur and a few villages in Droog.
Sambalpur (Sept. 29th)	3·91	Weather very favourable. Prospects in north and west improving. Fever increasing. Common rice 36 seers per rupee. *General Remarks.*—Rain has continued in the south and east of the provinces, and the prospects of the rice crops are improving. Clear weather is needed in Nagpur and Wardha for the cotton and millets, and to allow of the proper preparation of the ground for the *rabi* sowings in the north of the provinces. There has been little or no rain, and some moderate falls would be beneficial.
British Burma— (Sept. 29th)		
Akyab	3·28	Rainfall to date 174·69. One death from cholera in town, otherwise public health good. 114 deaths of cattle in Writtang and Minbya, elsewhere health of cattle good. Transplanting season over. General appearance of crops good. Season favourable.
Rangoon ...	2·34	Rainfall to date 73·33. One death from small-pox, otherwise public health good. Price of paddy from Rs. 79 to 88 per 100 baskets.
Bassein ...	1·72	Rainfall to date 82·34. Public health good. Slight cattle-disease in Lemyethna and Yegyi townships, 63 deaths in Keboung township. Paddy plants in good condition. Price of paddy Rs. 80 to 100 per 100 baskets.
Amherst (Moulmein) ...	2·25	Rainfall to date 162·23. Public health good. 31 deaths of cattle reported from Hlaingbwey township. Crops healthy in Moulmein town. Public health good. Progress and general appearance of crops good. No damage from drought, flood, or insects. Health of cattle good.
Toungoo ...	1·64	Rainfall to date 73·64. Public health and health of cattle good. Transplanting progressing. Price of paddy Rs. 65 per 100 baskets.
Kyoukphyoo (Sept. 22nd)	0·82	Rainfall to date 152·65. The following deaths from cholera are reported:—Kyoukphyoo township, Thaludoung circle 2, Kinmugiu 6, Raucree township, Myoma circle 8, Thinbegine 4, Hounnyouk 1, Ponsabgin 1, Cheduba township, Minbyin circle 2 and Dabyncha-ing circle 1. Health of cattle good. Crops progressing favourably.
Sandoway („ „)	1·62	Rainfall to date 195·87. Public health good. Crops continue healthy.
Hanthawaddy ...	......	Public health and health of cattle good. Three-fourths of land has been ploughed in Hlaing township; ploughing has been completed in Hmajbi and Tamanding townships. Some of the crops in the Aingkaloung, Bawlé, and Myoungtango circles, Hlaing township, have been destroyed by floods. Wages of ploughing labour 60 baskets of paddy per man in Hlaing township. Prices of paddy from Rs. 80 to 100 per 100 baskets.
Pegu ...	3·28	Rainfall to date 114·61 Four deaths from fever in Pegu, otherwise public health good. Slight cattle-disease in Kadanbaw circle and Syriam township, 2 deaths returned from latter. Prospects of crops good, although rain scanty. Price of paddy Rs. 80 to 85 per 100 baskets.
Tharrawaddy ...	2·80	Rainfall to date 89·97. Public health good. Fifteen deaths of cattle in Minhla and Tapun townships; health of cattle in all other townships, except Gyobingouk where slight cattle-disease prevails, good. Ploughing, sowing, and transplanting progressing. Transplanting and sowing nearly completed. Crops healthy. Price of paddy Rs. 93 to 125 per 100 baskets.
Prome ...	1·28	Total rainfall to date 40·88. Public health and health of cattle good. Mahathaman however reports 5 deaths of cattle. Ploughing and planting progressing. More rain wanted in some places, but no loss owing to drought has been reported. Standing crops are in good condition. Price of paddy Rs. 90 per 100 baskets.
Thonegwa ...	4·27	Total rainfall to date 75·39. Public health and health of cattle good. 3,500 acres destroyed by flood in Thagain circle, Donabyoo township. Increase of cultivation in other parts of the township owing to protection offered by embankments. Area of crops destroyed in Shwayloung township not yet ascertained. Inquiries are being made. Slight damage to low lying crops in Pantanow township. Crops in Pyapon and Didaye townships good. Price of paddy Rs. 90 to 95 per 100 baskets. Seedlings for transplanting insufficient in Shwayloung township. Transplanting progressing in damaged areas of Thonegwa and Yandoon townships.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
British Burma—*contd.*		
Henzada ...	0·62	Rainfall to date 76·72. Two deaths from small-pox in Henzada township, otherwise public health good. Plants in good condition in Henzada sub-division. Information from Myanoung not received.
Thayetmyo ...	0·90	Rainfall to date 29·47. Public health good. Forty-three deaths of cattle in Myede. Rice crop still suffers seriously for want of rain.
Shwaygyin ...	2·33	Rainfall to date 130·62. Public health fair. Fifty-two deaths of cattle reported from Mou and Kyankmaw circles. Transplanting and sowing nearly finished. General appearance of crops good. Crops suffer from floods in low ground, but on the whole a fair increase in total cultivation may be expected. Price of paddy Rs. 75 per 100 baskets.
Tavoy ...	2·40	Rainfall to date 181·80. Public health and health of cattle good. General appearance of crops good.
Mergui ...	......	No report received.
		General Remarks.—Rainfall for the week considerably less than the corresponding week of last year, especially on the coast and in the interior of the Tennasserim division. Total rainfall up to date still deficient compared with last year, notably in Bassein and the Tennasserim coast districts. Public health good. No increase of cattle-disease with the exception of parts of Thyetmyo, in which the crops are suffering from want of rain and in parts of Thonegwa, where there have been destructive floods. The agricultural condition of the Province is satisfactory, and prospects good. Price of paddy keeps up.
Assam—(Oct 3rd)		
Gauhati ...	·79	Weather seasonable. Mornings and nights cool. Prospects of *sali* crops good. Public health fair. Cattle-disease still reported from the interior.
Sylhet ...	0·33	State and prospects of crops good. Public health also good.
Cachar ..	2·00	Weather warm. Prospects of *sali* crops good. Reaping of *aus* crops continues. Common rice 16⅜ seers per rupee. Four deaths from small-pox reported from Sadr.
Dibrugarh ...	3·10	Weather seasonable. Prospects of crops good. Public health good.
Mysore and Coorg—(Oct. 3rd)		
Bangalore ..	·38	Dry crops withering for want of rain. Prospects critical for dry crops Wet crops in good condition. Public health good.
Mysore ..	No rain	Dry crops withering. Prospects of season doubtful. Agricultural operations partly suspended.
Mercara ...	·55	Coffee crops ripening fast. Picking of cardamoms proceeding. Outturn good. Rice crops doing well. *Ragi* harvest commenced. Outturn under the average. Prices of food-grains continue to fall. Public health generally good.
		General Remarks.—Dry crops withering in all districts from want of rain. General health good. Prices stationary. Murrain prevalent in the Kadur district.
Berar & Hyderabad—(Octr. 3rd)		
Amraoti ..	2·23	Continuous rainfall has done some injury to cotton and millet crops. The break now in the weather, if it continues, will improve the crops. Wheat 16 and *juari* 26 seers per rupee.
Akola ...	2·17	Crops in good condition. Generally a long break is now needed.
Hyderabad ...	Average rainfall 2·10	Total from 1st January 28·18. Standing crops flourishing. Reaping of *kharif* crops continues. Cholera prevails in one taluka and fever and ague in another. Prices—wheat 15¾, coarse rice 10¾, white *juari* 24, yellow *juari* 26¼, and tur 23¼ seers per current sicca rupee.
Central India States—(Oct. 3rd)		
Indore ...	1·37	Prices slightly falling.
Morar (Gwalior) ..	*Nil*	Fever in Lashkar. Prospects good.
Sutna ...	0·32	Prospects good.
Rutlam ...	......	No report received.
Neemuch ...	0·31	Reaping of *mukka* completed. Land being prepared for *rabi*. Agricultural prospects and public health good.
Goona ..	0·25	Wheat 23 seers 12 chittacks per rupee. Health and crops good.
Bhopal ...	.. ..	No report received.
Agar ...	*Nil*	Crops and prospects good.
Sehore ...	*Nil*	Weather clear. Crops and public health good.
Nowgong ...	*Nil*	*Kharif* prospects fair. Prices steady. Health good.
Manpur (Bhopawar) ...	2·20	Prospects good. Late showers have helped to fill the tanks. Slight cholera reported at Barwani.
Rajputana—		
Abu (Oct. 3rd)	·72	Weather occasionally heavy and cloudy with thunderstorms and showers; otherwise clear and seasonable.
Sirohi (Sept. 30th)	·33; two or three heavy showers.	Tanks and wells full. Health and crop prospects very fair. Weather warm.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Rajputana—*contd.*		
Marwar („ 28th)	No rain	Four months' water in Jodhpore city. Tanks and wells filling up. Health and crops good. Sky daily clear and cloudless. Weather close and sultry. Prospects of rain. Prices stationary.
Meywar („ 29th)	·13	Tanks and wells full. Health good. Crops fairly good. *Rabi* sowings commenced.
Harowti („ „)	*Nil*	*Rabi* operations continue, but rain needed. Weather cloudy, heat great. Health good. Prices stationary. Small-pox among cattle in Kherar district.
Jhallawar („ 28th)	......	Weather seasonable. Health and prospects good.
Ajmere (Oct. 2nd)	......	*Kharif* being harvested. *Rabi* cultivation going on. Thunderstorm with slight rain on first.
Jeypore („ „)	Slight rain	Weather cloudy. More rain wanted for *rabi*. Prices steady. Fever prevalent.
Bhurtpore ...	......	No report received.
Ulwur (Oct. 2nd)	No rain	Prices steady. Health good.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House, Simla, on Thursday, the 4th October, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.

His Excellency the Commander-in-Chief, G.C.B., C.I.E.

Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.

The Hon'ble C. P. Ilbert, C.I.E.

The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.

The Hon'ble T. C. Hope, C.S.I., C.I.E.

The Hon'ble Rájá Siva Prásád, C.S.I.

The Hon'ble W. W. Hunter, LL.D., C.I.E.

The Hon'ble J. W. Quinton.

The Hon'ble D. G. Barkley.

PROTECTION OF INVENTIONS BILL.

The Hon'ble Mr. Ilbert moved that the Report of the Select Committee on the Bill for the protection of inventions exhibited in the Exhibitions of India be taken into consideration. He stated that the Bill appeared to have been

generally accepted as useful and sufficient, and the only alterations made by the Committee were alterations of a verbal nature.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill as amended be passed.

The Motion was put and agreed to.

NATIVE PASSENGER SHIPS ACT, 1876, AMENDMENT BILL.

The Hon'ble MR. ILBERT also moved that the Report of the Select Committee on the Bill to amend the Native Passenger Ships Act, 1876, be taken into consideration. He said :—

"The object of this Bill is to give effect to certain international arrangements with respect to the pilgrim-traffic in the Red Sea. On looking into the matter, it was found that most of what was required could be effected by means of alterations in the rules made under our Native Passenger Ships Act, but that it would also be necessary to make one or two amendments in the Act itself, and it was for this purpose, and this purpose only, that the present Bill was prepared.

"The local officers have directed attention to various points, other than those covered by the amending Bill, in which it appears to them that the Passengers Act is defective. We admit the existence of some of these defects, and the question as to the best mode of remedying them is at this moment under the consideration of the Home Department, and will shortly be brought under the consideration of the Legislative Department. But in the meantime, as the present Bill is urgently required, we think it desirable not to postpone its passing until the more general amending measure can be prepared and passed. I mention this in order that it may not be supposed that some of the very useful suggestions which we have received have been overlooked. Some of the criticisms which have been passed on the Bill seem to be based on an imperfect apprehension of the limited scope of the Act which we propose to amend. For instance, it has been suggested by some that the provisions of the Bill may interfere in an inconvenient manner with the traffic of cargo-ships trading to the Red Sea, and by others that we ought to obtain a more extensive control over all passenger-ships trading to or from ports in the Red Sea to British India or elsewhere. But if you look at section 2 of the Passengers Act, you will find that the scope and operation of the Act are restricted within very narrow limits. The Act extends to the whole of British India, and applies—

"to all subjects of Her Majesty within the dominions of Princes and States in India in alliance with Her Majesty;

"to all Native Indian subjects of Her Majesty without and beyond British India; and

"subject to the exceptions mentioned in section 2, to vessels carrying more than thirty passengers, being Natives of Asia or Africa."

"But the section expressly provides that nothing in the Act is to apply—

"to any ship of war or transport belonging to, or in the service of, Her Majesty;

"to any ship of war belonging to any Foreign Prince or State;

"to any sailing vessel not carrying as passengers more than thirty Natives of Asia or Africa;

"to any steamer not carrying as passengers more than sixty of such Natives; or

"to any sailing vessel or steamer not intended to convey passengers to or from any port in British India.

"The Act does not apply to mere cargo-ships; it does not apply to ships carrying passengers, other than Native passengers as defined by the Act; it does not apply even to those ships unless they carry a minimum number of such passengers, nor unless those passengers happen to be bound either to or from some port in British India. Thus, the Act would not apply to a ship carrying Native passengers from Jeddah to Ceylon, or *vice versâ*, even though

PROTECTION OF INVENTIONS BILL.

The Hon'ble Mr. Ilbert moved that the Report of the Select Committee on the Bill for the protection of inventions exhibited in the Exhibitions of India be taken into consideration. He stated that the Bill appeared to have been

generally accepted as useful and sufficient, and the only alterations made by the Committee were alterations of a verbal nature.

The Motion was put and agreed to.

The Hon'ble Mr. Ilbert also moved that the Bill as amended be passed.

NATIVE PASSENGER SHIPS ACT, 1876, AMENDMENT BILL.

The Hon'ble Mr. Ilbert also moved that the Report of the Select Committee on the Bill to amend the Native Passenger Ships Act, 1876, be taken into consideration. He said :—

"The object of this Bill is to give effect to certain international arrangements with respect to the pilgrim-traffic in the Red Sea. On looking into the matter, it was found that most of what was required could be effected by means of alterations in the rules made under our Native Passenger Ships Act, but that it would also be necessary to make one or two amendments in the Act itself, and it was for this purpose, and this purpose only, that the present Bill was prepared.

"The local officers have directed attention to various points, other than those covered by the amending Bill, in which it appears to them that the Passengers Act is defective. We admit the existence of some of these defects, and the question as to the best mode of remedying them is at this moment under the consideration of the Home Department, and will shortly be brought under the consideration of the Legislative Department. But in the meantime, as the present Bill is urgently required, we think it desirable not to postpone its passing until the more general amending measure can be prepared and passed. I mention this in order that it may not be supposed that some of the very useful suggestions which we have received have been overlooked. Some of the criticisms which have been passed on the Bill seem to be based on an imperfect apprehension of the limited scope of the Act which we propose to amend. For instance, it has been suggested by some that the provisions of the Bill may interfere in an inconvenient manner with the traffic of cargo-ships trading to the Red Sea, and by others that we ought to obtain a more extensive control over all passenger-ships trading to or from ports in the Red Sea to British India or elsewhere. But if you look at section 2 of the Passengers Act, you will find that the scope and operation of the Act are restricted within very narrow limits. The Act extends to the whole of British India, and applies—

"to all subjects of Her Majesty within the dominions of Princes and States in India in alliance with Her Majesty;

"to all Native Indian subjects of Her Majesty without and beyond British India; and

"subject to the exceptions mentioned in section 2, to vessels carrying more than thirty passengers, being Natives of Asia or Africa."

"But the section expressly provides that nothing in the Act is to apply—

"to any ship of war or transport belonging to, or in the service of, Her Majesty;

"to any ship of war belonging to any Foreign Prince or State;

"to any sailing vessel not carrying as passengers more than thirty Natives of Asia or Africa;

"to any steamer not carrying as passengers more than sixty of such Natives; or

"to any sailing vessel or steamer not intended to convey passengers to or from any port in British India.

"The Act does not apply to mere cargo-ships; it does not apply to ships carrying passengers, other than Native passengers as defined by the Act; it does not apply even to those ships unless they carry a minimum number of such passengers, nor unless those passengers happen to be bound either to or from some port in British India. Thus, the Act would not apply to a ship carrying Native passengers from Jeddah to Ceylon, or *vice versâ*, even though

the ship happened to touch at Aden on its way. Again, the section to which I have referred is so framed as to exclude from the operation of the Act those ships over which we have no jurisdiction, and over which our Indian legislature, with its limited powers, cannot give us jurisdiction. We have done our best to meet the difficulty arising from want of jurisdiction in such cases by requiring the owner, agent or master of every ship carrying Native passengers, and proceeding from a port in British India to the Red Sea, to execute a bond which is conditioned for the observance of the requirements of the Act both on the outward and on the homeward voyage, and which can be enforced in Indian Courts. We are only concerned with the pilgrim-traffic to and from British India, and I have been informed—though I cannot vouch for the accuracy of the information—that almost all the ships engaged in this traffic start from British Indian ports and sail under the British flag. If that is the case, I do not apprehend that there will be any practical difficulty in enforcing the provisions of the Act. But whether it is so or not, we cannot exceed the powers of our legislature, and if it should appear desirable to obtain more extensive control over foreign ships or over British ships when outside British Indian waters, we must seek the assistance of the British legislature, acting if necessary in concert with the Governments of foreign States. A precedent for legislation of the kind required will be found in the Imperial Merchant Shipping Act of 1876 (39 and 40 Vict., c. 80, s. 37).

"Under these circumstances, we have not thought it necessary to make more than two substantive alterations in the Bill as introduced. The first of the alterations which we have made relates to the power to be conferred on the Government to require an assurance as to the state of health of the passengers before embarkation. The Bill as introduced empowered the Government to require passengers to produce a medical certificate, but it has been pointed out that, while the obtaining of such certificates might in many cases involve considerable trouble and delay to those concerned, the certificate would not always afford a guarantee that the holder of it was not at the moment of embarkation free from disease. We have accordingly substituted for the power to require certificates a power to subject passengers to a medical inspection before embarkation, and to prevent the embarkation of any person who may appear to be suffering from any dangerously infectious or contagious disease.

"The other alteration which we have made consists in the addition to the Bill of a section empowering the Local Government, with the previous sanction of the Governor General in Council, to exempt for sufficient reason any class of ships from any provision of the Act. This section has been inserted at the suggestion of the Bombay authorities, who represent that, under exceptional circumstances, some of the provisions of the Act as now amended might operate inconveniently; for instance, if at a time when steamers were being taken up for a military expedition and only sailing vessels could be procured for Native passenger-traffic, we were to insist rigidly on the condition as to a Native passenger-ship bound for the Red Sea being propelled principally by steam.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill as amended be passed.

The Motion was put and agreed to.

LEGAL PRACTITIONERS BILL.

The Hon'ble MR. ILBERT introduced the Bill to amend the Legal Practitioners Act, 1879, and the Indian Stamp Act, 1879, and moved that it be referred to a Select Committee consisting of the Hon'ble Sir Steuart Bayley, the Hon'ble Mr. Quinton and the Mover.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill and Statement of Objects and Reasons be published in the local official Gazettes in English and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

CATTLE-TRESPASS ACT, 1871, AMENDMENT BILL.

The Hon'ble MR. ILBERT also presented the Report of the Select Committee on the Bill to amend the Cattle-trespass Act, 1871.

PANJÁB LOCAL SELF-GOVERNMENT BILL.

The Hon'ble MR. BARKLEY presented the Report of the Select Committee on the Bill to make better provision for Local Self-government in the Panjáb.

INDIAN PORTS ACT, 1875, AMENDMENT BILL.

The Hon'ble MR. ILBERT moved for leave to introduce a Bill to amend the Indian Ports Act, 1875. He explained that this was a small Bill which had been prepared at the suggestion of the Financial Department, and that its object was to amend section 47 of the Indian Ports Act, 1875, in such a way as to make it clear that the pensions of port-officers might be charged against the port-account.

The Motion was put and agreed to.

The Council adjourned to Wednesday, the 10th October, 1883.

PART V.

Bills introduced into the Council of the Governor General for making Laws and Regulations, or published under Rule 22.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[Second publication.]

The following Bill was introduced into the Council of the Governor General of India for the purpose of making Laws and Regulations on the 4th October, 1883, and was referred to a Select Committee:—

No. 21 of 1883.

A Bill to amend the Legal Practitioners Act, 1879, and the Indian Stamp Act, 1879.

XVIII of 1879. WHEREAS it is expedient to amend the Legal Practitioners Act, 1879, in manner in this Act appearing;

I of 1879. And whereas it is also expedient to amend the Indian Stamp Act, 1879, in so far as it relates to the duty chargeable on the enrolment of legal practitioners;

It is hereby enacted as follows:—

Short title. **1.** (*1*) This Act may be called the Legal Practitioners Act, 1883; and

Commencement. (*2*) It shall come into force at once.

XVIII of 1879. Amendment of section 4 of Act XVIII of 1879. **2.** In section 4 of the Legal Practitioners Act, 1879, for the words "as an advocate on the roll of the Chief Court of the Panjáb" the words "under section 41 of this Act" shall be substituted.

Addition of a proviso to section 13 of same Act. **3.** To section 13 of the same Act the following proviso shall be added:—

"Provided that in any case in which the party on whose behalf any such pleader as aforesaid is retained is—

(*a*) a pardánashín woman, or

(*b*) unable for any sufficient cause to instruct the pleader in person,

the High Court shall not suspend or dismiss the pleader because he has taken instructions from a relative of the party deputed by him or her to instruct the pleader."

New section substituted for section 41 of same Act. **4.** For section 41 of the same Act the following section shall be substituted, namely:—

"41. (*1*) A High Court not established by Royal Charter may, from time to time, with the previous sanction of the Local Government, make rules as to the qualifications and admission of proper persons to be advocates of the Court, and, subject to such rules, may enrol such and so many advocates as it thinks fit.

Power for certain High Courts to enrol advocates.

(*2*) Every advocate so enrolled shall be entitled to appear for the suitors of the Court and to plead or to act, or to plead and act, for those suitors, according as the Court may by its rules determine, and subject to those rules.

"(*3*) The High Court may dismiss any advocate so enrolled or suspend him from practice:

"(*4*) Provided that an advocate shall not be dismissed or suspended under this section unless he has been allowed an opportunity of defending himself before the High Court which enrolled him, and, except in the case of the Chief Court of the Panjáb, unless the order of the High Court dismissing or suspending him has been confirmed by the Local Government."

New section added to same Act. **5.** To the same Act the following section shall be added, namely:—

"42. Act I of 1846 (*for amending the law regarding the appointment and remuneration of pleaders in the Courts of the East India Company*), and Act XX of 1853 (*to amend the law relating to pleaders in the Courts of the East India Company*) are repealed."

Repeal of Acts I of 1846 and XX of 1853.

6. In Article 27 of Schedule I of the Indian Stamp Act, 1879, the words "in exercise of powers conferred on such Court by letters patent," and in clause (*a*) of Article 11 of Schedule II of the same Act, the words "established by Royal Charter" are repealed.

Amendment of Schedules I & II of Act I of 1879. (Duty on enrolment of advocates.) I of 1879.

STATEMENT OF OBJECTS AND REASONS.

THE object of this Bill is to amend the Legal Practitioners Act, 1879, in certain respects in which experience has shown that the existing law is defective.

2. Section 13 of the Legal Practitioners Act, 1879, contains a provision that the High Court may suspend or dismiss any pleader who takes instructions in any case except from the party on whose behalf he is retained, or from a private servant of such party, or from some person who is the recognized agent of such party within the meaning of the Code of Civil Procedure. It has been brought to the notice of the Government that the practical operation of this provision is in certain cases attended with inconvenience to litigants and pleaders. In litigation in which pardánashín women are concerned, instructions must often, as a matter of necessity, be given through their near relatives. Again, there are cases in which male litigants, who have not the means of employing private servants, are unable from various causes, such as physical incapacity or old age, to instruct their pleaders in person. In such cases it seems right to allow the relatives of the litigants to instruct pleaders on their behalf. Section 3 of the Bill accordingly adds a proviso to section 13 of the Act enabling pleaders to take instructions from a relative of the party deputed by him or her to instruct the pleader when the party is a pardánashín woman or unable for any sufficient cause to instruct the pleader in person.

3. Under the Legal Practitioners Act, 1879, an advocate not ordinarily practising in his own province must, if he wishes to practise in such a province as the Central Provinces, for example, where the Judicial Commissioner has at present no power of enrolling advocates, first enrol himself as a pleader. As this state of the law is felt by certain persons to be a grievance, a new section has been added to the Act, empowering all High Courts not established by Royal Charter to enrol advocates as the Chief Court of the Panjáb is at present empowered to enrol them. As the power of suspension or removal would, except in the case of the Panjáb Chief Court, be vested in a single officer if it were conferred absolutely on the High Court, it has been thought well to make every order by any High Court, other than the Panjáb Chief Court, suspending or removing an advocate subject to confirmation by the Local Government.

4. The new section 42, which section 5 of the Bill adds to the Act, provides for the repeal of Acts I of 1846 and XX of 1853 in all places to which that section may be extended. The Madras High Court has noticed that these Acts have not as yet been expressly repealed in that Presidency, though a great portion of the Legal Practitioners Act, 1879, has been brought into operation there. These Acts are, it is believed, already repealed in all the provinces to which the Legal Practitioners Act, 1879, extends *proprio vigore;* but it is possible that they may be still unrepealed in some of the other provinces to which that Act has either already been or may hereafter be extended under the power conferred by its first section. The new section 42, taken with the first section of the Legal Practitioners Act, will enable the Local Government of any such province to repeal those Acts if still in force in it.

5. Lastly, section 6 of the Bill amends article 27 of schedule I and article 11 of schedule II of the Indian Stamp Act, 1879, by omitting the words which confine their operation to advocates of the chartered High Courts. As section 41 of the Legal Practitioners Act, 1879, empowers the Chief Court of the Panjáb to enrol advocates, and as the Bill will confer similar powers on the other non-chartered High Courts, the words in question are, as represented by the North-Western Provinces High Court, out of place, so far as advocates are concerned, and should therefore be omitted.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[First publication.]

The following Bill was introduced into the Council of the Governor General of India for the purpose of making Laws and Regulations on the 10th October, 1883, and was referred to a Select Committee:—

No. 22 OF 1883.

A Bill to amend the Indian Ports Act, 1875.

WHEREAS it is expedient to amend section 47 of the Indian Ports Act, 1875, so as to provide that the pensions or gratuities (if any) of persons employed in any port under that Act shall be charged to the Port Fund account of the port; It is hereby enacted as follows:—

XII of 1875.

1. In the fourth paragraph of section 47 of the said Act, for the words "All expenses, including the pay and allowances of all persons upon the establishment of the port" the words "All expenses, including the pay, allowances, pensions and gratuities (if any) of all persons employed in the port" shall be substituted.

Amendment of section 47 of the Indian Ports Act, 1875.

STATEMENT OF OBJECTS AND REASONS.

IT has recently been ruled by the Government of India in the Finance Department that service in establishments paid from port funds managed by the Government is qualifying service for pension, provided that the port fund pays for such service. It has now been brought to notice by the Government of Bombay that section 47 of the Indian Ports Act, 1875, which regulates the accounts of port-dues, does not authorize provision for pensioning employés either by investment of part of the port funds, or by the purchase of pensions from Government, or otherwise. As it seems to the Government that, when it administers a port fund, it should have the power of ordering the payment of pensions out of that fund, the present Bill, which modifies section 47 of the Indian Ports Act so as to give the Government the desired powers, has been prepared.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[First publication.]

The following Bill was introduced into the Council of the Governor General of India for the purpose of making Laws and Regulations on the 10th October, 1883:—

No. 23 of 1883.

A Bill to give effect to certain unregistered instruments of partition relating to immoveable property in the Madras Presidency, and to remove doubts as to the titles conferred thereby.

WHEREAS it is expedient to give effect to certain unregistered instruments of partition relating to immoveable property in the Madras Presidency, and to remove doubts as to the titles conferred thereby; It is hereby enacted as follows:—

Certain unregistered instruments of partition to have same force and effect as registered instruments.

1. Notwithstanding anything contained in any Act to the contrary, instruments of partition relating to immoveable property in the Madras Presidency, which have been executed before the passing of this Act and have not been registered, shall have the same force and effect as if they had been registered under the law in force at the time when they were executed:

Provided that this Act shall not—

(a) apply to any unregistered instrument of partition which has been superseded by an instrument of partition duly registered, or

(b) affect the title of a transferee in good faith of property, whether he has or has not had notice of an unregistered instrument of partition relating to that property, or

(c) affect any right established by a final decree of a Court of competent jurisdiction.

Compensation to person deprived of right owing to transfer under section 1, clause (b).

2. When any person to whom any right has accrued on the partition or any person claiming under that person has by any such transfer as is mentioned in section one, clause (b), been deprived of any right created by the partition, he shall be entitled to recover compensation in damages from any sharer who has joined in the transfer or, if the sharer is dead, from the assets, if any, in the hands of the heirs of the sharer:

Provided that suit be brought within three years after the date on which this Act comes into force or within three years from the date of the transfer, if the transfer is made after this Act come into force.

STATEMENT OF OBJECTS AND REASONS.

SECTION 17 of the Registration Act, XX of 1866, relates to instruments of which the registration is compulsory, and section 18 to instruments of which the registration is optional.

2. Clause (7) of the latter section includes "Instruments of Partition" among other instruments. The High Court at Madras, shortly after the passing of the Act, recorded an extra-judicial opinion that partition-deeds relating to immoveable property were governed by section 18 of the Act, and that their registration was therefore optional. This opinion was promulgated and acted upon.

3. The Act of 1866 was repealed by the Registration Act, VIII of 1871, which, however, reproduced clause (7), section 18 of the former Act; but the Act of 1871 was in turn repealed by the Registration Act, III of 1877. Section 18 of this Act revised the list of documents the registration of which was optional, and partition-deeds have been omitted from the list.

4. The Madras High Court now says that, of late, grave doubts have been entertained as to the correctness of the opinion recorded by it in the matter of the registration of partition-deeds referred to above, and recommends that, in view of the serious consequences to persons who may have acted on the opinion of the Court, and of the dissensions which may be excited in families by the disturbance of such arrangements, resort should be had to legislation to quiet titles. The High Court further suggests that such legislation should take the form of the present Bill. Under these circumstances, the Government of India deems it the most fitting course to accept the proposals of the High Court without modification, and accordingly the present Bill has been prepared.

MILITARY SECRETARY'S OFFICE.

NOTIFICATION.

Simla, the 12th October 1883.

Programme of His Excellency the Viceroy's Arrival in Calcutta.

His Excellency the Viceroy and Governor General will arrive in Calcutta by a special train on Saturday, the 1st December 1883, at 8 A.M. Railway time.

His Excellency will be received at the Howrah Railway Station by the Chairman of the Corporation and Commissioner of Police for the Town of Calcutta and the Magistrate of Howrah, and at Government House by the Lieutenant-Governor of Bengal, Members of His Excellency's Council, the principal Civil and Military Officers, and other Gentlemen who are desirous of attending.

A Guard of Honor of Native Troops, with Band, will be drawn up outside the Howrah Railway Station.

The route taken will be by the Hooghly Bridge, Strand Road, and Esplanade Row.

His Excellency will be escorted from Howrah Station to Government House by His Excellency's Body-Guard.

A Guard of Honor of British Infantry, with Band, will be drawn up in front of the Grand Staircase of Government House.

A Viceregal Salute will be fired from the Ramparts of Fort William as His Excellency passes the Hooghly Bridge.

Full dress will be worn by Officers entitled to uniform. Gentlemen not entitled to wear uniform will appear in morning dress.

By Command,

WILLIAM BERESFORD, *Captain,*
Military Secretary to the Viceroy.

2. Future appointments to the Marine service will be made by the Secretary of State for India. Applications from candidates in India will be forwarded through the Director of Marine to the Government of India for submission to Her Majesty's Government.

3. Letters of appointment to the Indian Marine bearing the signature of the Viceroy and Governor General will in future be issued to officers of the Marine service, and Warrants under the signature of the Director to all warrant officers.

No. 43.—PRECEDENCE—

The officers of the Indian Marine will be graded as follows in the Table of Precedence :—

Commanders—To stand below "Under Secretaries to the Government of India" in No. 72, Officers of the 2nd class graded list of Civil officers.

First Grade Officers of six years' seniority and Chief Engineers—To stand below "Superintendents, Telegraph Department, 1st and 2nd grades," in No. 77, Officers of the 3rd class graded list of Civil officers.

Port Officers—The eight appointments of Port Officer enumerated in G. G. O. No. 41 to be included in No. 70, Master Attendants.

Deputy Director in No. 69.

2. The Governor General in Council is pleased to assign to Commanders the official title of Captain, such designation to carry with it no relative rank or precedence beyond what is above accorded.

3. The following officers of the late Indian Navy holding shore appointments are also granted the official title of Captain :—

Captain G. O'B. Carew	... Deputy Director, Indian Marine.
Lieutenant A. W. Stiffe	... Port Officer, Calcutta.
" G. B. Hewett	... Staff Officer, Bombay Dockyard.
" F. Warden	... Port Officer, Rangoon.
" H. Morland	... " " Rangoon.
" G. C. Parker	... " " Karachi.
" J. Brebner	... Acting Port Officer, Calcutta.
Mr. W. H. Thynne	... Port Officer, Aden.

No. 44.—PORTS—

The following Port appointments are to be filled by officers of the Indian Marine :—

Port Officer, Calcutta.
" " Madras.
" " Bombay.
" " Rangoon.
" " Karachi.
" " Aden.
" " Akyab.
" " Moulmein.

Assistant Port Officer, Calcutta.
" " " Madras.
" " " Bombay.
" " " Rangoon.
Conservator, River Indus.

2. Marine officers on appointment as Port officers or to the Dockyard staff will be seconded in their respective grades on the Marine list.

3. The tenure of the above port and other shore appointments is limited to five years.

No. 45.—GUARDS—

Military guards for services as Marines on board Indian Government vessels will be detailed from the Native Army under the orders of the senior local Military officer on the application of the Director of Marine.

No. 46.—COLORS—

With the sanction of the Lords Commissioners of the Admiralty, all vessels of the Indian Marine will wear the blue ensign of Her Majesty's Fleet, with the Star of India in the fly as its distinguishing badge.

MARINE SURVEYS.

No. 47.—With reference to Marine Circular No. 20, dated the 24th August, 1883, the Governor General in Council is pleased to direct that the officers of the Indian Marine Survey shall be graded as follows, with effect from he 15th June 1883 :—

Surveyor in charge.

Commander L. S. Dawson, R N.

Assistant Surveyors, 1st Class.

Lieutenant A. Channer, R.N.
Navigating Lieutenant T. C. Pascoe, R.N.

Assistant Surveyor, 2nd Class.

Commander P. J. Falle, Indian Marine.

Assistant Surveyors, 3rd Class.

Mr W. H. Searle, Indian Marine.
Mr. H. B. Simpson, ditto.

Assistant Surveyors, 4th Class.

Mr. E. J. Beaumont, Indian Marine.
Mr. H. A. Livermore, ditto.
Mr. A. G. Mallock, ditto.
Mr. S. Warden, ditto.

The Assistant Surveyors are arranged alphabetically in each grade, and the arrangement does not indicate precedence, or seniority.

RESIGNATIONS.

No. 48.—Mr. K. Martin, Assistant Engineer, Indian Marine, is permitted to resign his appointment.

No. 49.—The services of Messrs. W. Legate, Assistant Engineer, 1st class, and J. W. Peacock, Assistant Engineer, 2nd class, Indian Marine, who have absented themselves without leave, are dispensed with. Dated 9th September, 1883.

G. CHESNEY,
Secretary to the Government of India.

PUBLIC WORKS DEPARTMENT.

NOTIFICATIONS.

Simla, the 10th October 1883.

No. 226.—Major T. J. Willans, R.E., Executive Engineer, 1st Grade, is appointed to officiate as Superintending Engineer and Secretary to the Chief Commissioner of Assam in the Public Works Department, during the absence on privilege leave of Lieutenant-Colonel J. M. McNeile, R.E., or until further orders.

The 11th October 1883.

No. 229.—Mr. W. C. Rennie, Executive Engineer, 1st Grade, sub. *pro tem.*, Railway Branch, is transferred from the Establishment under the Government of Bengal to that under the Director General of Railways.

Mr. C. H. Croudace, Executive Engineer, 2nd Grade, Railway Branch, is transferred from the Establishment under the Chief Commissioner, Assam, to that under the Government of Bengal for employment in the Railway Branch.

The 12th October 1883.

No. 230.—The services of Mr. M. J. Monckton, Executive Engineer, 4th Grade, temporary rank, Bengal, are placed temporarily at the disposal of the Foreign Department for employment in the Meywar State.

TELEGRAPH.

The 10th October 1883.

No. 227.—The following is published for general information :—

No. 287T., dated 9th October 1883.

RESOLUTION—By the Government of India, Public Works Department.

Utilisation of Postal agency in the operations of the Telegraph Department.

Read—

Paragraph 6 of Public Works Department Resolution No. 169-90T., dated 31st May 1881.

Letter from Director General of Telegraphs, No. 454, dated 14th July 1883.

Public Works Department letter No. 253T., dated 22nd August 1883, to the Director General of Telegraphs.

Letter from Director General of Telegraphs, No. 480T., dated 29th August 1883.

OBSERVATIONS.—In pursuance of the orders of the Government of India, the Director General of Telegraphs now submits a scheme, drawn up in consultation with the Director General of the Post Office, for utilising the agency of the Post Office in extending the operations of the Telegraph Department. The following are the main heads of this scheme, which has the cordial approval of the Government of India :—

1. To constitute every Post Office in the empire a receiving office or depôt for the receipt of "Inland" telegrams from the public, whence "Inland" telegrams will be despatched by post to the nearest telegraph station, whether such station be a Government office or an office of a licensed telegraph system.

The charge to the public for a telegram received at a Post Office to be the same as the charge for a telegram received at a Telegraph Office.

2. To train a number of Post Office officials in telegraph duties (their pay while under training and all connected expenses being borne by the Telegraph Department) for the purpose—

(*a*) of combining telegraph with postal work at telegraph stations where the work can be done efficiently and cheaper by using the agency of the Post Office ; and

(*b*) of working branch telegraph stations, off the present main routes, which it is proposed to establish in Post Offices.

3. To erect short lines of telegraph inexpensively constructed, connecting the existing telegraph system with the Post Offices in towns in the vicinity, with the object of bringing the advantages of the telegraph within the reach of people off the main routes, thus providing a large extension of its sphere of usefulness at the least possible expense to the State.

The extent of these connections must be limited by financial considerations, but it is hoped that Local Governments and Administrations will be ready to contribute towards the expense involved, when it is known that this expense under the arrangements now sanctioned will be reduced to a minimum.

4. It has also been proposed by the two Directors General that, in order to remove friction and to facilitate the combined working, the Postal Department shall make no charge for postage, registration, &c., of articles on Telegraph service, and that all telegrams sent by the Post Office shall be considered as "on the service" "of the Telegraph Department," and transmitted without charge over the lines of the Telegraph Department, and of all licensed telegraph systems. This proposal is approved by the Government of India, and may be carried into effect from such date as may be arranged by the two Departments.

5. Detailed rules for the guidance of Postal telegraph receiving offices will be drawn up by the heads of the two Departments concerned, but it may be generally stated that inland telegrams tendered at such offices may be paid for either in cash or in postage labels, while in the case of branch telegraph stations established in Post Offices payment may be made in telegraph stamps also.

6. As regards the adjustment of accounts between the Postal and Telegraph Departments, the former will debit the latter with the usual discount on the sale of postage stamps used in payment for telegrams, and with the actual extra expenditure incurred in working Postal telegraph offices.

7. The Government of India is unwilling to bind either Department by the issue of further precise instructions, and confidently leaves the development of the scheme in the hands of the two Directors General, subject to their submitting from time to time such of their proposals as may require the sanction of higher authority.

The desired economical extension of the telegraph will depend largely on cautious tentative measures adopted, with the consent of both Departments, in the light of experience gained by actual working.

8. In conclusion, His Excellency the Viceroy in Council desires to express his recognition of the spirit in which the two Directors General have taken up this scheme for the development of telegraphic communication in India, and his appreciation of the liberal and ready manner in which the Director General of the Post Office has met the proposals of the Director General of Telegraphs.

ORDER.—Ordered, that copy of this Resolution be forwarded to the Local Governments and Administrations noted on the margin, to the Department of Finance and Commerce and to Her Majesty's Secretary of State for information; also that copy be forwarded to the Director General of Telegraphs for information and guidance and to the Publisher of the *Gazette of India* for publication in the Gazette.

The Governments of Madras, Bombay, Bengal, North-Western Provinces and Oudh, and the Punjab, Public Works Department.
The Chief Commissioners, Central Provinces, British Burma, Assam, and Coorg.
The Resident at Hyderabad
The Agents to the Governor General for Central India, Rajputana, and Biluchistan.
The Accountant General, Public Works Department.
The Director General of Railways.
The Director General of Telegraphs in India.
The Director-in-Chief, Indo European Telegraph.

No. 228.—With reference to the above Resolution, the Governor General in Council is pleased under the provisions of Section 8 of Act I of 1876, entitled an Act to amend the law relating to Telegraphs in India, to prescribe the following revision of Rule 12 of the "General Rules relating to the conduct of all Electric Telegraphs licensed under the Telegraph Act to transmit paid messages for the public," issued under Government of India, Public Works Department, Civil Works Resolution No. 203-35T., dated Simla, May 2nd, 1882, *viz.*:—

12. Messages on the service of the Government Telegraph Department shall be transmitted without charge to or from all licensed Telegraph Offices. Messages on the service of the Government Telegraph Department shall include messages on the service of the Postal Department.

No. 47 C. & I.

RESOLUTION—By the Government of India, Public Works Department.

Warora Colliery and Wardah Coal Railway.

Read—

Report by the Chief Engineer, Central Provinces, on the working of the Warora Coal Mines, dated 2nd May 1882.

Public Works Department letter to the Chief Commissioner, Central Provinces, No. 322 R.A., dated 16th April 1883, calling for a detailed statement of expenditure on works connected with the Warora Colliery.

Letter from Central Provinces, No. 3618, dated 18th June 1883, submitting the statement.

RESOLUTION.—Coal was first raised from the Warora Colliery to any considerable extent in 1876-77, when the output was 10,700 tons. In 1877-78 the output was increased to nearly 41,000 tons, and in 1878-79 to 43,000 tons. These quantities were obtained from the pits known as Nos. (1) and (2), of which No. (1) was merely a pumping shaft, the coal being raised from No. (2); and as the demand for coal increased, it became necessary to sink another pumping shaft, known as No. (3), to the south and to the dip of Nos. (1) and (2), as well as another pit, No. (4), to the west and rise of No. (3). No. 3 shaft was commenced first, and had been sunk to a depth of 18 feet, when the pumping

machinery broke down (in the beginning of 1879), and the sinking of this shaft had to be stopped until October 1879. It was then recommenced, and by December of that year had reached a depth of 148 feet, when further accidents to the pumping machinery and the necessity for thorough examination and repairs delayed work until December 1880. No. 3 shaft was then completed and connected with the main workings, and in February 1881 No. 4 pit was finished. In consequence of these arrangements the output of coal rose to 7,000 tons a month in the beginning of 1882, when a fifth pit was commenced to the south of Nos. 3 and 4, with the aid of which it is calculated that the output can be raised to 12,000 tons a month. Of this amount it is estimated that about 9,000 tons would be large coal—a quantity sufficient to meet all demands likely to arise during the next few years.

2. The total quantity of Warora coal consumed on Indian Railways during the year 1882 was 47,892 tons. The consumption per train mile was 104 lbs. on the Wardah Railway and 67 lbs. on the Nagpur-Chhattisgarh. This coal is inferior to Bengal coal in quality. At its best 3 tons of Warora coal may be taken as capable of doing the work of 2 tons of Karharbali coal, which is nearly equal to English coal. The inferior quality must necessarily somewhat restrict the demand for locomotive purposes; the consumption might, however, be greatly increased during the next few years if the price at the pit's mouth could be reduced.

Great Indian Peninsula Railway	...	38,813
Nagpur-Chhattisgarh	...	5,188
Wardah Coal State Railway	...	3,591
Total	...	47,892

3. The actual cost of cutting and raising the coal is about Rs. 1-4 per ton, but the price at present charged is Rs. 5 per ton, which would appear more than sufficient to cover all expenses and give a fair return on the capital which has been expended on the works.

4. If the price at the pit's mouth can be reduced to Rs. 3 per ton, there is every reason to believe that the area of demand would be greatly increased and that more than double the present quantity would be sold.

It may also be fairly assumed that the quality will improve as the collieries are more developed and the coal is worked to the dip.

The Rajputana Railway could probably consume some 20,000 tons per annum on the Khandwa-Neemuch section of that line; the Great Indian Peninsula might profitably take another 20,000 tons or more in addition to their present demand for use on the Dhond-Manmad, and on the section of their main line between Bhusawal and Nandgaon; and the quantity consumed on the Wardha Coal line would be largely increased by the extra traffic.

The Nagpur-Chhattisgarh line will in any case consume a much larger quantity than it has done in previous years, owing to its extension being now completed and open for traffic.

5. On the whole, the total annual consumption of coal from these collieries on Railways during the next few years will doubtless (if the above reduction in its price can be effected) fall but little short of 1,00,000 tons, distributed roughly as follows:—

	Tons.
By the Great Indian Peninsula Railway	60,000
„ Rajputana	20,000
„ Nagpur-Chhattisgarh	12,000
„ Wardha State Railway	6,000
	98,000

In the event of the Nagpur-Bengal Railway being constructed, another 10,000 tons per annum might possibly be consumed.

6. The capacity of the coal-field was estimated by Mr. Walter Ness, after trial borings, to amount to 20 million tons of easily workable coal, and this estimate is considered to be rather under than over the mark. The field will therefore suffice for the supply of all demands likely to be made upon it during the next 150 years. The existing arrangements provide for working an area of 191 acres, from which it is calculated that 1,600,000 tons can be raised without any difficulty, so that no large expenditure on new works is likely to be necessary for another 10 or 12 years at least.

7. Up to the close of the year 1878-79, the Warora Colliery was treated as a separate undertaking, the accounts being separately recorded. For various reasons, the Government of India considered it advisable that the colliery and the Wardah Valley State Railway should be combined and placed under one common management. This arrangement was carried into effect from the 1st April 1879, the combined undertaking being designated the Wardah Coal State Railway. The Capital Account of the colliery was closed on 31st March 1879, when it was ruled that all future expenditure of whatever nature connected with the collieries should be charged to Revenue.

8. The Capital Account of the Colliery, as now shown by the accounts, stands at Rs. 7,04,710, *viz.* :—

	Rs.
Works	3,40,031
Tools, Plant and Machinery	2,03,960
Establishment	1,62,525
	7,06,516
Less—Refunds on Capital Account	1,806
	7,04,710

but in addition there has been expended on new minor works to close of the year 1882-83 a sum of Rs. 2,67,112, which under the special orders issued in connection with the colliery has been charged to Revenue, but which would ordinarily have been charged to Capital.

The Revenue Accounts, as they now stand, show a net loss to end of 1882-83 of Rs. 62,724 ; and if to this be added the interest on capital sunk in the undertaking, the loss to the State will stand at Rs. 3,44,569.

9. The following table shows in detail the capital expended, the interest thereon, the net revenue realised, and the net profit or loss to the State to close of the year 1882-83, according to the accounts as they now stand :—

Year.	Amount of Capital expended	Interest on Capital.	Total.	Net Revenue realised.	Interest more than Revenue realised.	Revenue realised more than Interest.
	Rs.	Rs.	Rs.	Rs	Rs.	Rs.
1871-72	69,852	1,081	70,933	...	1,081	...
1872-73	1,01,234	5,164	1,06,398	...	5,164	...
1873-74	2,16,318	12,357	2,28,675	...	12,357	...
1874-75	1,66,583	21,101	1,87,684	...	21,101	...
1875-76	99,316	27,369	1,26,715	—1,386	28,755	...
1876-77	41,539	30,573	72,112	—26,569	57,142	...
1877-78	1 ,290	31,631	47,924	63,952	...	32,318
1878-79	13,703	32,311	46,014	43,555		11,244
1879-80	—20,155	32,165	12,010	—42,003	74,169	...
1880-81	...	31,712	31,712	—2,03,906	2,35,618	...
1881-82	...	28,189	28,189	13,812	14,377	...
1882-83	...	28,189	28,189	89,822	...	61,633
Total ...	7,04,710	2,81,845	9,86,555	—62,724	3,44,569	...

10. Although the financial results as given in the above table appear far from satisfactory, the Government of India is satisfied that the colliery has been successfully worked, at least during later years. Drawbacks have occurred from various causes beyond the control of officers connected with the management, due chiefly to the absence of new and suitable machinery—a want which has now been supplied,—and the results appear the more unfavorable owing to the heavy charges for new works which during the past few years have been made against the Revenue Account. The charges for new works debited to Revenue amount, as stated above, to Rs. 2,67,112, and the account has also been burdened with an excessive charge on account of certain machinery

3

supplied, on which account a rebate of Rs. 23,756 has just been allowed. Excluding these charges, the net receipts to the close of 1882-83 would stand at Rs. 2,28,144.

11. After a careful review of the working of the colliery, the Government of India has determined to revise its accounts since its amalgamation with the Railway, and to reclassify the expenditure on the following general principles, which will in future govern the incidence of charge between Capital and Revenue :—

I.—The cost of executing all workings (including borings, shafts, adits, and drains) shall be treated as working expenses, except that, whenever the total outlay in respect of sinking any shaft shall exceed Rs. 10,000, the whole cost of sinking such shaft shall be charged to Capital, and no part thereof shall be treated as working expenses of the colliery, nor be charged to Revenue.

II.—Capital shall bear the cost of new works, additional rolling stock, plant and machinery, and substantial additions to, and improvements of, old works, stock, plant and machinery.

III.—The cost of repairs, restorations, renewals, replacements, or substitutions shall be borne by Revenue.

IV.—Provided nevertheless that the cost of any item of expenditure properly chargeable to Capital in accordance with the above rule, but not exceeding Rs. 2,000, be charged to Revenue.

In accordance with this decision, a sum of Rs. 2,67,112 will now be written back from Revenue to Capital in the accounts of the year 1883-84. Allowing for the necessary adjustments to be made in the accounts the financial results of the past few years will stand approximately as follows :—

Year.		Amount of Capital expended	Interest on Capital.	Total.	Net Revenue realised	Interest more than Revenue realised.	Revenue realised more than Interest.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
To end of 1878-79	...	7,24,865	1,61,590	8,86,455	79,552	82,038	...
1879-80	...	5,856	32,750	38,606	—15,993	48,743	...
1880-81	..	1,31,773	35,847	1,67,620	—48,377	84,224	..
1881-82	...	72,860	35,958	1,08,818	86,672	...	50,714
1882-83	...	36,468	38,144	74,612	1,26,290	...	88,146
Total	...	9,71,822	3,04,289	12,76,111	2,28,144	76,145	...

12. The net revenue for the years 1881-82 and 1882-83, according to the accounts as amended, amounts to Rs. 86,672 and Rs. 1,26,290, equivalent to a return on the capital expended to the close of each year of 9·2 per cent. and 12·9 per cent. respectively. The net revenue from the starting of the works down to the close of the year 1882-83 fell short of the total interest charges by Rs. 76,145 only.

13. As a considerable portion of the outlay standing at the debit of the Capital Account, which has been expended in sinking shafts, erecting engine houses and the like, as well as the Capital charges on account of establishment in superintending these works, will cease to have any value when the coal which can be won by their means has been exhausted, it becomes necessary to establish a sinking fund in order to recoup the Capital Account. For the present it has been determined that a sum of 5 annas a ton for large coal and 2 annas a ton for small coal raised and sold shall be set aside to form a sinking fund for the redemption of the capital sunk on works which will in time cease to be remunerative.

ORDER.—Ordered, that copy of this Resolution be published in the *Gazette of India* for general information.

W. S. TREVOR, *Colonel, R.E.*,
Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 9th OCTOBER 1883.

GENERAL REMARKS.—Rain in fair quantity fell during the past week throughout the Madras Presidency and Mysore, which has revived the dry crops; but more is still needed in some parts. In the Bombay Presidency excessive rain has caused injury in three districts of the Deccan, while in others more rain would be beneficial. In Guzerat the crops are in good condition, but in Sind the river continues low. Some damage has also been done by heavy rain in Berar, but prospects there and in Hyderabad remain favourable. Good rain has fallen in Marwar, and lighter showers in other parts of Rajputana and the Central India States. The crops in both Rajputana and Central India promise fair, but rain is needed in Ulwar.

In Burma and Assam rice prospects are on the whole good, though in the former province the deficient rainfall of the season has injured the crop in three districts. Floods have also caused some destruction.

In Bengal, Central Provinces, North-Western Provinces and Oudh, and Punjab there has been little or no rain during the week under report, and the late rice crop of Bengal is in a precarious state.

Harvesting of the *kharif* is going on in most parts of India, and ploughing and sowing for the *rabi* are also in general progress, though retarded in Bengal and Northern India by the early cessation of the rains. The outturn of the *kharif* is not yet known, but will probably be below average, especially in North-Western India.

The condition of cattle has improved, but mild cattle-disease still prevails.

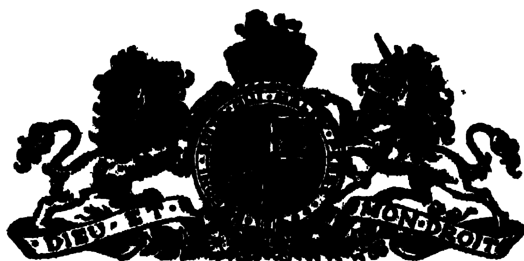
Except for the prevalence of autumnal fever, the public health is fair.

Prices show a tendency to rise in Bengal, owing to the unseasonable weather. Elsewhere they are either stationary or falling.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Oct. 10th)		
Bellary ...	1·64 (average of eight stations).	Standing crops wet generally good. Dry recovering a little on account of recent rain. Harvest gingelly, yield below average.
Kurnool ...	1·99 (average of nine stations).	Standing crops fair. Week's rainfall sufficient. Excessive in parts. Harvest *cumboo*, *sajja*, and indigo, yield half to three-fourths. Cattle-disease in six taluks.
Ganjam ...	·73 (average of eleven stations).	Standing crops generally thriving.
Kistna ...	2·04 (average of thirteen stations).	Standing crops generally recovering. Rain still needed in some taluks. Harvest *maize* and *cumboo*, yield below half. Small-pox, fever, and cattle-disease in parts. Ten deaths from cholera.
Chingleput (Madras) ..	2·78 (average of eleven stations).	Standing crops reviving in three taluks on account of recent rain. Withering in two taluks. Harvest *kar*, paddy, &c., yield half. Small-pox, measles, and cattle disease in parts.
Coimbatore ...	·94 (average of fourteen stations).	Standing crops, dry crops want rain in five taluks and slightly improving in others from recent rain. Harvest paddy, *cholum*, *ragi*, and *cumboo* in parts, yield average. Eleven deaths from cholera in two taluks. Fever and small-pox in parts.
Tanjore ..	3·78 (average of thirteen stations).	Standing crops generally good. Rainfall general and beneficial. Harvest paddy, *cholum*, *rag.*, and *cumboo*, yield below average. Thirty deaths from cholera
Madura ...	1·26 (average of eight stations).	Standing crops fading. Harvest paddy in two taluks, yield average in one and poor in the other
Malabar ..	1·44 (average of fourteen stations).	Harvesting continues. Second crop cultivation progressing in nine taluks. Existing cultivation good. Small-pox in nine taluks; fever in four. Cattle-disease slight in one taluk.
Travancore ..	·051	Harvest almost over. Preparations for next year progressing. Fever and dysentery preval. One death from small-pox. *General Remarks.*—Prospects good.
Bombay—(Oct. 10th)		
Kurrachee ...	No rain	River at Kotri on 8th 8 feet 11 inches against 10 feet 10 inches on same date last year. Fever in eight talukas. Cattle-disease in four talukas. Loss of 166 buffaloes and cows in Tatta. Small-pox in two talukas, 3 fresh cases, 1 death. Wheat, rice, and *bajri* in Kurrachee 26, 28 and 45, in Manjhand 22, 28 and 40, in Tatta 24, 30 and 37, and in Sujawal 24, 36 and 38 lbs. per rupee, respectively.
Hyderabad ...	......	*Kharif* harvesting still continues. River has fallen 11 inches since last week and was 1 foot 11 inches lower on 8th instant, than on same date last year. Fever in six, small-pox in one, and cattle-disease in three talukas. Wheat 25, *bajri* 39, *juari* 48, red rice 26, and white rice 22 lbs. per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Ahmedabad ...	......	Rain wanted for rice in some talukas. Crops healthy. Cholera in the city, 1 case fatal; slight fever in some talukas. *Bajri* 28 and wheat 25 lbs. per rupee.
Baroda ...	·15	Total rainfall 45·26. Crops in good condition. Cholera has disappeared *Bajri* 27 and rice 23 lbs. per rupee.
Surat ...	3·39	Total rainfall 55·77. Crops good and thriving. Cholera in Pardi, 27 cases, 3 fatal. *Juari* 38 and *nagli* 43 lbs. per rupee.
Nasik ...	Rain continuous	The heavy rain has damaged *bajri*, cotton, *urd*, and *mung* crops. *Rabi* sowings retarded for want of break. Locusts throughout the district doing damage to crops in places. Cholera in Kalwan taluka, 1 attack, 1 death. *Bajri* 31, wheat 28, and rice 22 lbs. per rupee.
Colaba (Bombay) ...	·78; slight rain on 6th and 8th.	Total rainfall to date 79·88, being 10·48 above average. Temperature normal. Vapour in air excessive. Abnormal wind southerly on 3rd and 4th. Thunder and lightning daily.
Poona ...	Rain in all talukas	Standing crops good. *Rabi* sowings in progress. *Bajri* 40 and *juari* 50 lbs., in Poona *bajri* 34 and *juari* 43 lbs. per rupee.
Ahmednagar ...	Rain in all talukas—maximum at Sangamner, 3·02; minimum at Karjat, ·58.	*Kharif* crops injured on account of excessive and continuous fall of rain, and *rabi* sowings retarded. Cholera 51 attacks, 15 deaths. Cattle-disease in Kopargaon and Sangamner. *Bajri*—maximum 57 lbs. in Jamkhed, minimum 39 in Akola. *Juari*—maximum 69 lbs. in Jamkhed, minimum 48 in Akola.
Sholapur ...	·04	Total rainfall 36·72. *Kharif* crops in good condition. *Rabi* sowings nearly completed. Cholera 12 cases in Madha taluka, fatal none. *Juari* 65 and *bajri* 52 lbs. per rupee.
Dharwar ...	There has been general rain throughout the district, the heaviest being at Bankapur, 4·2; between 2·0 and 3·0 at Dharwar, Navalgund, Gadag, Ron, and Kalghatgi; minimum ·88 at Nargund and Kod.	Crops which were withering are reviving, but more rain wanted for some crops, especially rice. Prospects promising. Slight ague and cattle-disease in three talukas. *Juari* 61 and rice 32 lbs. per rupee.
Kanara ...	Karwar, ·48; Kumpta, 1·85; Sirsi, ·71; Haliyal, 1·32.	Total rainfall 136·55. Small-pox 4 cases, 1 death in Siddapur. Plucking bettlenut and cardamoms continues. Common rice at Karwar 14, in district average 15 seers per rupee.
Rajkot ...	1·66	Total rainfall 27·63. General health fair. Weather hot. *Bajri* 29 and *juari* 34 lbs. per rupee.
		General Remarks.—River continues low in Sind. Rain in almost all the districts of the Presidency, still wanted in parts of Ahmedabad, Belgaum, and Dharwar. Crops in good condition in Guzerat, Poona, and Sholapur, but injured by excessive rain in Nasik, Khandesh, Ahmednagar, and part of Kaladgi. *Rabi* sowings in progress in some districts. Little damage from locusts. Cholera, fever, and cattle-disease in a few places.
Bengal—(Oct. 10th)		
Chittagong ...	·43	Weather seasonable. Outturn of *aus* rice fair. Prices stationary. Cattle-disease still continues.
Dacca ...	*Nil*	*Aus* rice and jute still being cut. Harvesting of *ashini* paddy continues. Prospects of crops good.
24-Pergunnahs (Calcutta)	*Nil*	Early crops harvested. Rice crop in low lands good, but rain much wanted for the crop in high lands. Public health good.
Moorshedabad ..	*Nil*	Weather hot and dry during the day, cool in the mornings. Rain much wanted for late rice which is gradually drying up; there is now very little hope of an average crop.
Rajshahye ..	Culna, ·79; Raneegunge, ·35.	Weather hot and rainless. Late rice suffering much for want of rain. Some cholera reported.
Bardwan ..	*Nil*	Weather intensely hot for the time of the year. Rain much wanted everywhere. Prospects unfavourable.
Rungpore ...	*Nil*	Weather hot. Prospects of crops fair. Rain much wanted. Fever prevalent.
Bhagalpur ...	*Nil*	More rain wanted. Rice crop in high lands has suffered much from protracted drought. That in low lands still doing well. Preparation of lands for *rabi* sowings being delayed.
Purneah ...	*Nil*	Prospects of crops on high lands suffering for want of rain. Prices rising. Fever prevalent.
Patna ...	*Nil*	Rain much wanted for paddy, *juari*, and *rahar*. Sugarcane and cotton growing well. Plantation of potatoes going on. Cholera still reported from Barrh and Behar sub-divisions.
Durbhunga ...	*Nil*	Weather very hot. Prospects of crops becoming worse. Rain badly wanted and no indication of any coming. Public health generally good.
Hazaribagh ..	*Nil*	Days warm. Mornings and evenings cool. Paddy suffering in all parts of the district owing to absence of rain for a considerable time. Public health good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Cuttack ...	*Nil*	Early rice being threshed and gathered. Late rice being weeded, but rain urgently wanted. Price of rice stationary. Public health good.
		General Remarks.—Slight rainfall reported from Chittagong and parts of Burdwan, but none from the other reporting districts. Want of rain is generally much felt throughout the province. In several places the standing rice crop on high lands is suffering a great deal, but on low lands it is still generally doing well. Unless rain falls soon the general prospects of this crop will be seriously affected. The *bhadoi* crops have been gathered in, but there is no sufficient moisture in the soil to permit of the *rabi* crops being sown. In some districts prices show a marked tendency to rise owing to the apparent early cessation of the rains. Fever is prevalent in some districts, otherwise the general health is fair.
N. W. Provinces and Oudh—		
Benares (Oct. 9th)	No rain	Both *rabi* and *kharif* harvests will suffer from want of rain. Fever in places. Prices falling, except rice and barley.
Allahabad („ 10th)	......	Weather hot and dry. Nights cool. More rain wanted for *rabi* sowings. Harvest of *sawan*, *kakun*, and *makra*, fair average. No sickness. Prices of *bajri* and *juari* risen and *arhar* slightly. Early rice fallen 4 seers, other prices easy.
Gorakhpur („ 7th)	......	Cloudless weather. Rain wanted. Crops promising. Some cholera in the city and cattle-disease in east of district. Prices steady.
Jhansi („ 8th)	No rain	Heat great for this season of the year. *Kharif* crops doing well. Rain is much needed for sowing of *rabi*. Tanks and wells have not been filled as usual. Prices fluctuating. Health of people and cattle good. Grass deficient.
Agra („ 9th)	No rain	*Rabi* ploughings in progress and gram being sown, but west wind drying soil quickly. *Kharif* crops reported to be drying up. Fever in four parganas. Prices steady.
Bareilly („ „)	......	Crops suffering from drought and west wind. *Rabi* sowings and *kharif* harvest in progress. General health good.
Meerut („ „)	No rain	Prospects generally favourable, but more rain wanted for sowing of *rabi*. Ploughing for *rabi* in progress and gram being sown. Health good. Prices steady.
Kumaun („ „)	......	Weather fair. Crops all cut. General health good. Cattle-disease continues. Prices unchanged.
Lucknow ...	......	No report received.
Partabgarh (Oct. 9th)	No rain	Prices rising slightly. Owing to *rabi* sowings, the late rice *jarhan* is suffering from drought. Slight fever reported at Kunda.
Sitapur („ „)	......	Rain wanted throughout. *Dhankar* lands cannot be sown. Public health good. Prices somewhat fluctuating.
Fyzabad („ „)	No rain	*Kharif* crops are being cut. Public health good.
Rae Bareli („ 8th)	No rain	Wind westerly. Fields are being prepared for *rabi*. *Kharif* is being harvested. General health good. Supplies plentiful. Prices steady.
Cawnpore („ 9th)	No rain	For *rabi* sowings rain is very desirable. Some slight injury has been done to sugarcane and *bajri* by insects in pargana Sarh, Salempur. Fever and cholera still prevailing, but on the whole the health of the people is good. Cattle-disease in a few villages of two parganas continues. Prices almost stationary.
Farukhabad („ „)	......	Clear sky. Hot in the day time, cool mornings and evenings, and almost cold at night. Fever severe where rainfall has been greatest and where is now canal irrigation. *Bajri* and *juari* to some extent withering in the northern tahsils.
		General Remarks.—No rain has fallen. The *kharif* crops in several districts have suffered some injury from drought, while in others they are reported to be satisfactory. Rain is generally wanted for the *rabi* sowings. Cholera is reported in Gorakhpur and Cawnpore, and there is severe fever in parts of Farukhabad, otherwise the public health is good. Prices are generally steady.
Punjab—(Oct. 9th)		
Delhi ...	......	Health good. Rain wanted. Prices of barley and *juari* falling. Prices of other food-grains stationary.
Hissar ...	......	Health good. Crops thriving. Prices stationary.
Umballa ...	......	Health good. *Kharif* crops being harvested, yield expected to be below the average. Rain wanted for *rabi* sowings. Prices stationary.
Jullundur ...	......	Health and crop prospects good. Prices stationary.
Amritsar ...	......	Health and condition of crops good. Prices falling.
Sialkot ...	......	Health and harvest prospects good. Prices falling.
Ferozepore ...	......	Health and harvest prospects good. Prices falling.
Lahore ...	......	No report received.
Rawal Pindi ...	·30	Health good. Crop prospects good and average. Prices fluctuating.
Mooltan ...	......	Health good. *Kharif* being harvested. Prices stationary.
Dera Ismail Khan ...	......	*Kharif* crops in *daman* and *thall* lands average, in irrigated lands fair. *Rabi* ploughings in progress. Prices steady.
Peshawar ...	......	Fever decreasing. *Kharif* crops suffering for want of rain. Prices falling
		General Remarks.—Slight rain in the Rawal Pindi district. Health and *kharif* prospects are generally good.



Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Central Provinces—(Oct. 10th)		
Nagpur ...	·32	Weather bright and sunny. Prospects fair. *Rabi* sowings begun. Health good. Prices steady.
Jubbulpore ...	*Nil*	Weather clear and hot. Crops in fair condition. Cotton in flower. More rain wanted. Prices stationary. Health good.
Saugor (Oct. 9th)	*Nil*	Weather cloudy and threatening rain. A few showers would be beneficial to crops. Prospects favourable. The unsettled state of the weather is retarding the *rabi* sowings. Prices steady. Health fair.
Seoni ...	·91	Weather cloudy and oppressive. Reaping of minor crops in hand. *Rabi* sowings commenced. Fever prevalent. Prices stationary.
Hoshangabad ...	*Nil*	Weather hot and cloudy. Prospects good. Land ready for *rabi* sowings. Rice being harvested. Health good. Wheat 15 and rice 10 seers per rupee.
Khandwa ...	·44	Weather cloudy and close. Prospects good. Four deaths from cholera. Prices falling.
Raipur ...	*Nil*	Rain much wanted. *Rabi* sowings commenced. Cholera in Raipur and a few villages in Droog. Prices steady.
Sambalpur (Oct. 6th)	*Nil*	Weather very favourable. Later rice crops attacked by insects. Health good. Common rice 34 seers per rupee.
		General Remarks.—More rain would be beneficial in the northern districts, and is reported to be needed in the rice districts to the east of the provinces. Ground in excellent order for *rabi* sowings which have in some places been commenced.
British Burma—(Oct. 6th)		
Akyab ..	1·81	Total rainfall 176·50. Public health good. 44 deaths among cattle have occurred in three townships, elsewhere health of cattle good. Crop prospects favourable. An increase of about 4,700 acres expected in five townships
Rangoon ...	2·00	Total rainfall 75·33. One death from small-pox, otherwise public health good. Prices of paddy from Rs 81 to Rs. 91 per 100 baskets.
Bassein ...	1·37	Total rainfall 83·71. Public health good Eight deaths of cattle in Kyoupyau circle, 62 in Thadaung and 13 in Kangvidaung townships. Partial floods in Kyoukpyau and Myoma townships. Partial blight in a few circles on the whole. Paddy plants promising. Price of paddy from Rs. 80 to Rs. 100 per 100 baskets.
Amherst (Moulmein) ...	1·04	Total rainfall 163·27. Public health and health of cattle good. Crops healthy. In Moulmein town public health good. General appearance and progress of crops good. No damage from drought, flood or insects. Health of cattle good.
Henzada ...	2·79	Total rainfall 79·52. One death from small-pox in Henzada township, otherwise public health good. Health good. Health of cattle good. Transplanting except in Kyangin completed. General appearance of crops good.
Thayetmyo ...	0·68	Total rainfall 30·15. Public health good. 72 deaths of cattle in Myedi. 18 cases of cow-pox in Kama. In Myedi the area planted is one-sixth less than last year. Rain wanted. Grain will be light in Thayetmyo township. Crops cannot exceed one-third of full crops, may be less in Kama Paddy reported as withering from drought. In Mindon only half culturable area planted. Drought prevalent.
Shwaygyin ...	3·03	Total rainfall 133·65. Small-pox reported at Thayetpende and Kyaukkhy circle and Ahgu Yehla circle, otherwise public health good Health of cattle good. Sowing and transplanting completed Crops progressing favourably. Price of paddy Rs. 74 per 100 baskets.
Pegu ...	... ..	No report received.
Tharrawaddy ...	5·10	Total rainfall 95·07. Public health good. Eight deaths of cattle in two townships; health of cattle in all other townships, except Gyobingouk where slight cattle-disease prevails, good. Ploughing, sowing, and transplanting progressing. 200 acres destroyed by floods in Gyobingouk township. Crops healthy. Price of paddy Rs. 90 to Rs. 125 per 100 baskets.
Prome ..	0·35	Total rainfall 41·21. Public health good. Twelve deaths of cattle in Padaung. Ploughing and planting progressing. Crops reported in good condition Price of paddy Rs. 80 per 100 baskets.
Thonegwa ...	4·82	Total rainfall 80·21. Public health good. Twelve deaths of cattle in Dedaige township. 5,000 acres destroyed by floods in Kyoubauk circle, 1,000 acres in Kyoupadok circle, Shwelaung township. Replanting going on in Kyoubauk and other circles of Shwelaung township. Crops good in Donabyu, Pyapon, and Dedaye township and Maubin. Price of paddy Rs. 90 to 95 per 100 baskets.
Toungoo ...	2·30	Total rainfall 75·94. Public health and health of cattle good. Transplanting progressing. Price of paddy Rs. 65 per 100 baskets.
Kyoukphyoo (Sept. 29th)	1·39	Total rainfall 154·04. Eight deaths in Myanbun, 5 in Ramoi, and 6 in Dyoukphu townships occurred from cholera. Health of cattle continues good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
British Burma—*contd.*		
Kyoukphyoo (Oct. 6th)	0·05	Total rainfall 154·09. The following deaths from cholera are reported:—Ngakobyin circle 2, Kyoukphyoo 1, Sekkow 3, Muyin 7, Migyaungdet 1, Hoamyauk 1, Yaibadaig 5, Ramoi Myoma 3, Cheduba Myoma 1, Moyehaung 3, total 27. No deaths of cattle reported. Crops much in want of rain.
Sandoway (Sept. 29th)	4·51	Total rainfall 200·38. Three deaths from cholera in northern township, elsewhere public health good. No fresh cases of cholera reported. Crops flourishing.
Do. (Oct. 6th)	2·95	Total rainfall 203·33. Public health good. No fresh cases of cholera reported. Crops flourishing.
Hanthawaddy ...	*Nil*	Public health and health of cattle good. 14,300 acres have been ploughed in Hlaing township. Crops destroyed by flood in Hlaing township. In some parts replanting going on. Wages of ploughing labour 60 baskets of paddy per man in Hlaing township. Price of paddy from Rs. 80 to Rs. 100 per 100 baskets.
Mergui (Sept. 22nd)	4·95	Total rainfall 149·0. Public health good. Crops and cattle healthy. 34,500 acres ploughed and sown. Price of paddy Rs. 60 per 100 baskets.
Do. („ 29th)	9·05	
Tavoy ...	3·63	Total rainfall 185·43. Public health and health of cattle good. Prospects of crops good.
		General Remarks.—Rain up to date still deficient compared with the rainfall of last year, with the exception of a slight increase of cholera in Kyoukphyoo district. Public health good. No marked increase of cattle mortality. Agricultural prospects favourable, except in Thayetmyo where owing to continued drought crops are suffering seriously in Kyoukphyoo. The deficiency of rain is telling against the crops in parts of Hanthawaddy and Thonegwa. Considerable damage caused by floods. The price of paddy keeps up.
Assam—(Oct. 10th)		
Gauhati ..	.....	No report received.
Sylhet ..	*Nil*	State and prospect of crops good. Public health also good.
Cachar ..	*Nil*	Weather warm. Prospects of *sali* crops good. More than half of *aus* crops reaped. Common rice 17 1/8 seers per rupee. Public health good.
Dibrugarh	0·18	Weather seasonable. Prospects of *sali dhan* good. Ploughing for winter crops in progress. District healthy.
Mysore and Coorg—(Oct. 10th)		
Bangalore ..	3·69	Prospects of season improved owing to recent rains. Crops generally in good condition
Mysore .	2·68	Crops in good condition. Prospects favourable. Sowing operations recommenced
Mercara .	4·18	Rainfall beneficial for rice crops, but injurious to drying of cardamoms. Coffee berries fast ripening. The *gul ragi* crop is being reaped. Prices stationary. Public health good.
		General Remarks.—Rain has fallen generally all over the provinces. Standing crops improved. Prospects favourable. Public health good. No material change in prices.
Berar & Hyderabad—(Oct. 10th)		
Amraoti ...	·25	Crops in good condition. Preparations for *rabi* sowings in progress Wheat 16 and *juari* 26 seers per rupee.
Akola ...	2·78	Crops slightly injured from excessive rain. The break now in the weather will be beneficial
Hyderabad ...	Average rainfall ·70	Total from 1st January 28·88. Rainfall of the week benefited *rabi* crops damaged and *kharif* crops to slight extent in one taluka. In general standing crops are prospering. Cholera continues in a mitigated form in one taluka. No cattle-disease reported by Nizam's Government, but foot and mouth disease has broken out amongst cattle of heavy field battery at Trimulgherry. Prices—wheat 15¼, coarse rice 10¾, white *juari* 23, yellow *juari* 27, and *tur* 22, seers per current sicca rupee.
Central India States—(Oct. 10th)		
Indore ...	0·28	Weather close and cloudy. Rain apparently impending Agricultural prospects favourable.
Morar (Gwalior) ...	*Nil*	Prospects good. *Rabi* sowings commenced.
Sutna. ...	*Nil*	Prospects good.
Rutlam ...	.....	No report received.
Neemuch ...	*Nil*	Weather seasonable. Land being prepared for *rabi*. Public health good.
Goona ...	0·23	Health and prospects good.

Presidency or Province and District.			Rainfall for week under report.	State of agricultural prospects.
Central Provinces— *contd.*				
Bhopal		...	Manpur, 1·0	Prospects good. Thirteen cases of cholera reported from Barwani between 25th September and 1st October 1883, 5 fatal. Prices stationary.
Agar		...	0·9	Agricultural prospects satisfactory. Health good.
Sehore		...	0·5	Crops and public health good
Nowgong		...	0·6	Agricultural prospects favourable. Health good. Prices falling.
Manpur (Bhopawar)		...	......	No report received.
Rajputana—				
Abu	(Oct.	10th)	2·39	Weather clear with occasional clouds and thunderstorm. Weather seasonable.
Sirohi	(„	7th)	2·40	Tanks and wells full. Health good. Crop prospects good. Weather fine and warm. Very violent rain and thunderstorm on 2nd.
Marwar	(„	5th)	3·30; splendid showers on 1st.	Eight months' water in Jodhpore city. Tanks and wells fast filling up. Health good. Weather cloudy and rainy. Prospects fair. Prices stationary. More rain expected.
Meywar	(„	6th)	·37	Tanks and wells full. Health good. A little fever prevalent. Crop prospects good. Showers during week beneficial for sowings of spring crops.
Harowti	(„	„)	Kotah, ·37; Tonk, ·60; Shahpura, ·01.	Prospects good. Weather sultry and close. Health good.
Jhallawar	(„	5th)	·20	Health and prospects good.
Ajmere	(„	9th)	No rain	Weather seasonable. Prospects unchanged.
Jeypore		...	......	No report received.
Bhurtpore		..	......	No report received.
Ulwur	(Oct.	9th)	No rain	Crops suffering from want of rain. Gram and barley rising, otherwise prices steady. Health good.

A. FILGATE, *Lieut.-Colonel, R.E.,*
Accountant General, P. W. Dept.

Simla, the 6th October 1883.

BOARD OF REVENUE.

NOTIFICATION.

Calcutta, the 27th September 1883.

No. 1135½ B.—The following rules have been made under section 9 of Act VIII of 1878 by the Board of Revenue, Lower Provinces, with the sanction of the Local Government, and are under Section 204 of the same Act notified for general information:—

CALCUTTA INTERNATIONAL EXHIBITION, 1883-84.

Custom House Arrangements.

1. All entries of goods for the Exhibition must be passed at the Custom House in accordance with the arrangements made by the Collector of Customs.

2. In respect of dutiable goods the Exhibition building is appointed a public warehouse under the provisions of section 15 of Act VIII of 1878, of which Mr. Jules Joubert shall be deemed to be the keeper for the purposes of section 96 of that Act.

3. Packages containing dutiable goods, upon which duty has not been paid, must be entered for bond and appraised and taken in charge of an officer to the Exhibition building in the usual manner. Pending appraisement and removal to the Exhibition building, all such packages will be allowed to remain rent-free in a portion of the Custom House premises set apart for the purpose.

4. At the close of the Exhibition, exhibitors will have to account to the Custom House authorities for all dutiable goods admitted into the Exhibition in accordance with the bond bill of entry. Goods intended for delivery in Calcutta on sale or otherwise will on payment of duty be cleared from bond, and goods intended for re-exportation will be re-shipped from bond in the usual manner.

5. The charges mentioned in the schedule attached to these rules are remitted in respect of goods intended for the Exhibition.

6. No duty will be payable for wines, spirits, or other liquors consumed in the Exhibition for tasting or judging purposes, and a certificate of the amount thus consumed must be obtained from the Secretary to the Executive Committee of the Exhibition and presented by exhibitors to the Custom House officer when accounting for the dutiable goods admitted into the Exhibition. Without such certificate duty will be assessed on all dutiable goods shown by the bills of entry as having been admitted into the Exhibition and which are not forthcoming at its close.

7. The Custom House officers will not have custody of, or be in any way responsible for, goods in the Exhibition building, the custody of which as a public warehouse will rest with Mr. Jules Joubert.

8. These rules apply only to goods intended *bonâ fide* for Exhibition.

SCHEDULE.

	R	a.	p.
Entry.			
1. Wharf rent for any time over four days during which they lie at the Custom House	...		
2. Form of bond	1	0	0

HENRY F. BLANFORD,

Meteorological Reporter to the Government of India.

THE INDIAN LAW REPORTS.

PUBLISHED UNDER AUTHORITY.

The "Indian Law Reports," published under the authority of the Governor General in Council, will appear in monthly parts, published as soon as possible after the first of each month at Calcutta, Madras, Bombay, and Allahabad, and will comprise four series,—one for the Calcutta High Court, a second for the Madras High Court, a third for the Bombay High Court, and a fourth for the Allahabad High Court. The cases heard by the Privy Council on appeal from each High Court will be reported in the Series for that High Court. Cases heard by the Privy Council on appeal from Provinces in India not subject to any High Court will be reported in the Calcutta Series. The Parts of each Series can be had separately, or all four Parts can be had stitched into one wrapper at the option of subscribers and purchasers. It will be observed from the following statement of the terms of subscription and sale, that a considerable reduction is allowed to persons taking the complete set :

Terms of subscription, payable annually in advance.

	Without Postage.	With Postage.
For the CALCUTTA SERIES	R35	R37-8
" MADRAS SERIES	" 8	" 9
" BOMBAY SERIES	" 8	" 9
" ALLAHABAD SERIES	" 8	" 9
Complete set	"45	"47-8

The price of each Part purchased separately will vary according to the amount of matter it contains, and will be printed on the wrapper. It will, however, never be below the following:—

For a Part of the CALCUTTA SERIES	.	R3	8
" " MADRAS SERIES	.	" 1	0
" " BOMBAY SERIES	.	" 1	0
" " ALLAHABAD SERIES		" 1	0
Complete set	.	" 4	0

Persons desiring to subscribe for or purchase the Reports, should apply to—

MESSRS. THACKER, SPINK AND CO., CALCUTTA;
MESSRS. THACKER AND CO., BOMBAY;
MESSRS. HIGGINBOTHAM AND CO., MADRAS;
THE GOVERNMENT CENTRAL BOOK DEPOT, BOMBAY
THE GOVERNMENT BOOK DEPOT, ALLAHABAD.

Orders and Subscriptions for 1878 should be at once remitted.

THE BENGAL LAW REPORTS.

A few sets of the Bengal Law Reports (Volumes 1 to 15) are available at Messrs. Thacker, Spink & Co., Calcutta, at R375 a set.

For sale in Rajputana to Officers stationed there.

Moore's Manual of Family Medicine for India, 4th Edition. *Price—*
To Government Officers (except those mentioned below) and to the public at large, *R4.*
To all Officers employed in Government Departments who are in receipt of salaries under R500 per mensem, on a certificate being furnished declaring that the book is to be purchased only for the personal use of the officer, *R3; packing and postage, 8 annas.*
Apply to the Superintendent, Commissioner's Office, Ajmer.

☞ The following books may be purchased from the Office of Superintendent of Government Printing, India, No. 166, Dhurrumtollah Street, for private use only, which should be stated in the requisition.

No orders can be attended to unless accompanied by a remittance. When postage stamps are forwarded, one anna additional should be sent for every Rupee's worth of stamps, for discount in exchanging them for cash. Service labels or Court Fee stamps are not received.

Books required for the public service cannot be supplied on payment; they are only issued on the authority of the Department to which the indenting officer is subordinate. Applications for them should be made through the Local Government under which the applicant serves.

Just published.

PART III.

Advertisements and Notices by Private Individuals and Corporations.

IN THE COURT OF THE JUDICIAL ASSISTANT COMMISSIONER, LAHORE.

IN THE MATTER OF THE INDIAN COMPANIES ACT, 1882, AND OF THE PUNJAB BANK, LIMITED.

Upon the application of the Official Liquidator, notice is hereby given that the Court will, on the 16th day of October 1883, proceed to pass orders in reference to the distribution of the remaining assets of the Punjab Bank, Limited.

The more immediate question for disposal is whether depositors are entitled to interest; or whether (depositors having been paid the amount of their respective deposits in full with interest to 30th June 1877) the whole of the surplus assets should be divided amongst the shareholders.

All persons concerned are desired to attend this Court on the above date, and to bring forward anything they may have to state in regard to the above question.

E. W. PARKER,
Judl. Asst. Commr., Lahore.

LAHORE,
The 14th June 1883.

SURVEY OF INDIA.

NOTIFICATION.

Simla, the 15th October 1883.

No. 386.—Mr. Benjamin Robert Hughes is appointed an Assistant Surveyor, 3rd Grade, with effect from 15th October 1883, to fill an existing vacancy.

G. C. DEPRÉE, *Colonel,*
Offg. Surveyor General of India.

AGENT, GOVERNOR GENERAL, FOR CENTRAL INDIA.

NOTIFICATION.

Indore Residency, the 10th October 1883.

No. 2721.—Captain Donald Robertson, Officiating Political Agent of the 3rd Class, 1st Assistant to the Agent, Governor General, for Central India, availed himself, on the forenoon of the 10th September 1883, of the privilege leave granted to him in Central India Agency Notification No. 2115, dated 15th August 1883, and was recalled from privilege leave for duty on the afternoon of the 28th September 1883. The unexpired portion of the leave, eleven days, is hereby cancelled.

By Order,

D. ROBERTSON, *Captain,*
1st Asst. Agent, Govr. Genl., for Central India.

AGENT, GOVERNOR GENERAL, FOR RAJPUTANA.

NOTIFICATION.

Mount Abu, the 13th October 1883.

No. 3844 G.—With reference to this Office Notification No. 2338 G., dated 12th July 1883,

Lieutenant R. H. Jennings, R.E., on boundary duty in Jhallawar, returned to duty on the forenoon of the 6th October 1883, from the privilege leave granted him in this Office Notification No. 1348 G., dated 5th May 1883.

The 15th October 1883.

No. 3896 *G.*—Major W. J. Muir, Political Agent, Harowtee and Tonk, is granted one month and four days' privilege leave, with effect from the 10th October 1883.

Lieutenant-Colonel C. A. Baylay, Political Agent, Kota, will hold charge of the current duties of the Harowtee and Tonk Agency Office, in addition to his own, during Major W. J. W. Muir's absence.

By Order,

E. A. FRASER,

1st Asst. Agent to the Govr. Genl.

CHIEF COMMISSIONER OF COORG.

NOTIFICATION.

Camp Mysore, the 8th October 1883.

No. 1121-363.—Chevakapuvana Devaya, Subedar, Nanjarajpatna Taluk, Coorg, is granted one month's privilege leave from the 1st instant, or such subsequent date as he may avail himself of it.

Kutati Chengappa, Parpattigar and 3rd Class Magistrate, Mercara Nad, is appointed to act as Subedar and 3rd Class Magistrate, Nanjarajpatna Taluk, during the absence of C. Devaya on leave, or until further orders.

By Order,

H. WYLIE, *Major*,

Secretary to the Chief Commr. of Coorg.

IN THE COURT OF THE JUDICIAL COMMISSIONER OF COORG.

Criminal Side.

RULE OF PRACTICE No. 5.

Bangalore, the 18th September 1883.

No. 1127-367.—Under Section 553 of the Code of Criminal Procedure and with the concurrence of the Chief Commissioner, the Acting Judicial Commissioner has framed and issues the following Rule directing the necessary endorsements to be made on Warrants issued under Act XIII of 1859 and the Code of Criminal Procedure in bailable offences :—

In cases under Act XIII of 1859, the law leaves it to the discretion of the Magistrate, specially empowered under the Act, to issue either a summons or a warrant. Offences under the Act are not specifically bailable offences. The Acting Judicial Commissioner is of opinion, however, that, except in cases where the Magistrate has good reason to believe that the accused will not obey it, a summons should in the first place ordinarily issue. When the Magistrate issues a warrant for the arrest of persons accused of offences under Act XIII of 1859, and of offences specifically described as bailable in the Code of Criminal Procedure, the Magistrate should endorse on the warrant the particulars required by paragraph 2, Section 76, Code of Criminal Procedure.

By order of the Court,

S. HAMAJEE RAO,

Registrar.

TELEGRAPH DEPARTMENT.

NOTIFICATION.

Calcutta, the 19th October 1883.

No. 11.—Mr. H. Carson, an Assistant Superintendent of the 1st Grade, is allowed furlough for one year, under Section 51 of the Civil Leave Code, with effect from the forenoon of the 6th of October 1883.

A. J. L. CAPPEL,

Director General of Telegraphs in India.

DIRECTOR GENERAL OF RAILWAYS.

NOTIFICATION.—ESTABLISHMENT.

Simla, the 15th October 1883.

No. 50.—With reference to Public Works Department Notification No. 229, dated 11th October 1883, Mr. W. C. Rennie, Executive Engineer, 1st Grade, sub. *pro tem.*, is posted to the Jhansi-Manickpur Railway.

H. F. HANCOCK, *Col., R.E.*,

Offg. Director General of Railways.

BOARD OF REVENUE.

NOTIFICATION.

Calcutta, the 27th September 1883.

No. 1135½ *B.*—The following rules have been made under section 9 of Act VIII of 1878 by the Board of Revenue, Lower Provinces, with the sanction of the Local Government, and are under Section 204 of the same Act notified for general information :—

CALCUTTA INTERNATIONAL EXHIBITION, 1883-84.

Custom House Arrangements.

1. All entries of goods for the Exhibition must be passed at the Custom House in accordance with the arrangements made by the Collector of Customs.

2. In respect of dutiable goods the Exhibition building is appointed a public warehouse under the provisions of section 15 of Act VIII of 1878, of which Mr. Jules Joubert shall be deemed to be the keeper for the purposes of section 96 of that Act.

3. Packages containing dutiable goods, upon which duty has not been paid, must be entered for bond and appraised and taken in charge of an officer to the Exhibition building in the usual manner. Pending appraisement and removal to the Exhibition building, all such packages will be allowed to remain rent-free in a portion of the Custom House premises set apart for the purpose.

4. At the close of the Exhibition, exhibitors will have to account to the Custom House authorities for all dutiable goods admitted into the Exhibition in accordance with the bond bill of entry. Goods intended for delivery in Calcutta on sale or otherwise will on payment of duty be cleared from bond, and goods intended for re-exportation will be re-shipped from bond in the usual manner.

5. The charges mentioned in the schedule attached to these rules are remitted in respect of goods intended for the Exhibition.

6. No duty will be payable for wines, spirits, or other liquors consumed in the Exhibition for tasting or judging purposes, and a certificate of the amount thus consumed must be obtained from the Secretary to the Executive Committee of the Exhibition and presented by exhibitors to the Custom House officer when accounting for the dutiable goods admitted into the Exhibition. Without such certificate duty will be assessed on all dutiable goods shown by the bills of entry as having been admitted into the Exhibition and which are not forthcoming at its close.

7. The Custom House officers will not have custody of, or be in any way responsible for, goods in the Exhibition building, the custody of which as a public warehouse will rest with Mr. Jules Joubert.

8. These rules apply only to goods intended *boná fide* for Exhibition.

SCHEDULE.

THE INDIAN LAW REPORTS.

PUBLISHED UNDER AUTHORITY.

The "Indian Law Reports," published under the authority of the Governor General in Council, will appear in monthly parts, published as soon as possible after the first of each month at Calcutta, Madras, Bombay, and Allahabad, and will comprise four series,—one for the Calcutta High Court, a second for the Madras High Court, a third for the Bombay High Court, and a fourth for the Allahabad High Court. The cases heard by the Privy Council on appeal from each High Court will be reported in the Series for that High Court. Cases heard by the Privy Council on appeal from Provinces in India not subject to any High Court will be reported in the Calcutta Series. The Parts of each Series can be had separately, or all four Parts can be had stitched into one wrapper at the option of subscribers and purchasers. It will be observed from the following statement of the terms of subscription and sale, that a considerable reduction is allowed to persons taking the complete set:

Terms of subscription, payable annually in advance.

	Without Postage.	With Postage.
For the CALCUTTA SERIES	R35	R37-8
" MADRAS SERIES	" 8	" 9
" BOMBAY SERIES	" 8	" 9
" ALLAHABAD SERIES	" 8	" 9
Complete set	"45	"47-8

The price of each Part purchased separately will vary according to the amount of matter it contains, and will be printed on the wrapper. It will, however, never be below the following:—

PART III.

Advertisements and Notices by Private Individuals and Corporations.

IN THE COURT OF THE JUDICIAL ASSISTANT COMMISSIONER, LAHORE.

IN THE MATTER OF THE INDIAN COMPANIES ACT, 1882, AND OF THE PUNJAB BANK, LIMITED.

Upon the application of the Official Liquidator, notice is hereby given that the Court will, on the 16th day of October 1883, proceed to pass orders in reference to the distribution of the remaining assets of the Punjab Bank, Limited.

The more immediate question for disposal is whether depositors are entitled to interest; or whether (depositors having been paid the amount of their respective deposits in full with interest to 30th June 1877) the whole of the surplus assets should be divided amongst the shareholders.

All persons concerned are desired to attend this Court on the above date, and to bring forward anything they may have to state in regard to the above question.

E. W. PARKER,

Judl. Asst. Commr., Lahore.

LAHORE,
The 14th June 1883.

PROMISSORY NOTES.

Lost

The Government Promissory Note, No. 040062, of the 5 per cent. of Treasury Note, 1872, for ₨500, originally standing in the name of Gopika Baee, Manager of Vittal Rukhmai, Ramtek, the proprietor, by whom it was never endorsed to any other person. Payment of the above Note and the interest thereupon have been stopped at the Public Debt Office, Bank of Bengal, and application is about to be made for the issue of duplicate in favour of the proprietor.

GOPIKA BAEE,

Ramtek Tahsil, Ramtek,
Zilla Nagpur, C. P.

Lost

The lower half of Government Promissory Note, No. 032555, of the 4 per cent. of 1842-43, for ₨5,000, originally standing in the name of the Bank of Bengal, and last standing in the name of the proprietor Mr. J. L. Gallott, by whom it was never endorsed to any other person. Payment of the above Note and interest thereon have been stopped at the Public Debt Office, and an application is about to be made to Government for the issue of a duplicate in favour of the proprietor Mr. J. L. Gallott.

SUPPLEMENT TO

The Gazette of India.

No 42.} CALCUTTA, SATURDAY, OCTOBER 20, 1883.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

GENERAL REPORT OF THE PUNJAB OIL LANDS, BY BENJAMIN SMITH LYMAN, MINING ENGINEER, PUBLIC WORKS DEPARTMENT OF THE GOVERNMENT OF INDIA.

1.—SITUATION.

The oil lands of the Punjab all lie between north latitude 32° 31′ and 33° 47′ and east longitude 71° 22′ and 73° 9′; say within a space of 102 miles long east and west, by 88 miles wide north and south, with Rawalpindi two miles inside the eastern edge and eleven miles inside the northern edge. Outside of these limits no lands can properly be called oil lands, although around Murree, and perhaps elsewhere, the lime rock is in many places impregnated with bitumen, and sometimes even has small drops of tar in it large enough to be seen.

The north-easternmost oil spring is the one near Rutta Otoor, 11 miles north by east of Rawalpindi; the next so-called oil spring is in the first Cheerpar Mountain near Runneeal, and eight miles south-west of Pindi; then comes the oil spring in the Seel River at the mouth of the Bussala near Moorut, and 10½ miles south-west by west of Pindi; then the Loondeegar asphalt and oil, also near Moorut, and 14 miles south-west of Pindi; the Gunda oil wells, 23 miles west of Pindi; the Chhurrut old oil boring at Chhurrut village, and 28 miles west of Pindi; the Boraree old oil well near Chhurrut and 28½ miles

west of Pindi; the Jafir old oil boring near Jafir, and 29 miles west of Pindi; the Dulla asphalt between Boota and Buttiot and 38½ miles west of Pindi; the Punnoba oil springs at Punnoba (Kohat District) near Shekh Khan, 25 miles east of Kohat, and 67 miles west of Pindi; the Aluggud asphalt and rock tar, on the Aluggud brook (Bunnoo District), ten miles and a half south of Eesa Khêl, and 124 miles south-west by west of Pindi; the Chhota Kutta oil springs near Jaba (Bunnoo District), 10 miles south-east of Kalabagh, and 59 miles south-west by west of Pindi; the Burra Kutta oil springs, half a mile south-east of the last; the Sadeealee rock tar near Nara (Jhelum District), and 90 miles south-west of Pindi; the Chinnoor rock tar near Murdowal (Shahpoor District), and 83 miles south-west of Pindi; the Hungooch rock tar near Dhuddur and Murkoom (Shahpoor District), and 81 miles south-west by south of Pindi; and the Dooma rock tar near Kubbukkee (Shahpoor District), and 77 miles south-west by south of Pindi.

Many of these are places where only very small and unimportant traces of oil or asphalt are found; yet they are well known to the inhabitants of the country for miles around, so familiar do they become in tending their flocks with almost every foot of ground in the mountains. As careful inquiry from them has brought to light no other traces even of oil, it is pretty certain that none such exist, except possibly a few quite insignificant ones.

The oil is commonly called by the natives "muttee ka têl" (earth oil), and at Jaba it is said "gunduk ka tel" (sulphur oil); the rock tar or blackened oil is called at Aluggud and at Jaba "kalapani"; at Sadeealee, "leleera"; at Hungooch and Dooma, "leloora"; the solid asphalt is often called "moomeeai," sometimes "meemeeai."

2.—LAY OF THE LAND.

The River Indus flows south-south-westerly from the northern edge of the region described to its south-western corner, falling in that space from about 800 feet above the sea to about 650. It is joined midway by the Sohan, which comes to it with a general west-south-westerly course from near Rawalpindi, where its waters are about 1,700 feet above the sea. The Jhelum River runs (about 700 feet above the sea) south-westerly across the very south-eastern corner past Pindi Dadun Khan. The Koorum empties into the Indus on the west just south of Eesa Khêl. A dozen miles north of Pindi are several parallel high ridges that run in a north-east and south-west direction on the edge of Rawalpindi and Hazara Districts. A dozen miles west of the meridian of Pindi these ridges die away; and half a dozen miles south of their end begin the Choor Hills, that run first westerly, and then west-north-westerly to the Indus, and are perhaps continued beyond in the hills of Punnoba; but these run south-westerly, and then west-south-westerly, and soon west again, and there are several parallel ranges south of them for 25 miles. At Moorut, near the Bussala and Loondeegar oil places, begins a ridge some 3,100 feet high above the sea, called the Khairee Moorut (often called Gibraltar in Pindi), which runs south-westerly for about 20 miles and dies away. Half a dozen miles east of Moorut are three or four parallel north-east and south-west ridges of 200 or 300 feet high, called the Cheerpar Mountains, running nearly to the meridian of Pindi. Along the southern edge of the region the Salt Range, rising in places even to 5,000 feet above the sea, runs at first west-south-westerly, then about the middle of the southern edge, which it just crosses, it turns sharply north-north-westerly to the Indus a few miles below the mouth of the Sohan, and continues the same course, and a more northerly one on the west of the Indus, until it meets the east and west ranges already mentioned. In the south-western corner the Kafirkot double range, with the Aluggud Valley between, rises to 2,200 feet above the sea, and runs southerly west of the Indus and south of the Koorum. The country south and south-west of the Salt Range is flat and about 700 feet above the sea; the country north of the Salt Range between the mountains and hills already mentioned, and few other small parallel ones, is comparatively flat, and from 1,200 feet above the sea on south and along the Indus to 1,800 feet on the north-east; of course the streams cut valleys in this comparative plain, making it a rolling country. The smaller narrow valleys as far south as the Sohan, even near its mouth, and this river,

also show a striking parallelism to the general course of the mountain ranges on either side.

3.—GEOLOGY.

a. Structure.—Almost all of the mountain ranges already mentioned seem to be formed of rocks that lie in saddle form, and most of the ranges have several such parallel ridges. The Cheerpar Mountains, however, are quite small, and, as they seem to have but one dip, are perhaps formed by only one-half of a saddle. The Salt Range has also been said by some to have on its southern edge a northerly dip, as if the southern half of a saddle were wanting, but this survey did not lead to an examination of that part of the range. The rocks, then, of the oil region lie in waves, the tops of the waves in certain places forming mountain ranges; but in the greater part of the region, both the tops of the waves and the hollows between them are covered over with nearly level layers of much newer rocks, of old alluvial age. Where the streams have cut down through these alluvial rocks, the older steep dipping rocks form ridges, and give to the smaller valleys the parallelism that has been already noticed. For a dozen or two dozen miles north of the Salt Range the dip of the older rocks, beginning with a steep dip, on the south, becomes quite gentle, and then nearly or quite level; so that the old alluvial rocks, if they rest upon them, are conformable to them, whereas further north these alone remain level, while the lower rocks have a steep dip, and the unconformability is striking. The axes of the saddles run south-westerly on the eastern edge of the region, westerly in the middle of it, then north-westerly and northerly, on the western edge; but in the north-western corner, south-westerly and then westerly. The dips are commonly quite steep, sometimes reversed as far as 70°, and seldom less than 45°, except along the northern side of the Salt Range near Dooma (6°), Hungooch (26½°), Chinnoor and Sadeealee, and at Aluggud (25°).

b. Rock Beds.—The following seems to be the section downward of the old alluvial rocks as exposed along the Seel River near Moorut:—

Concretionary lime rock or travertine	about	100 feet.
Coarse brown pebble rock	„	3 „
Soft brown sand rock	„	30 „
Coarse brown pebble rock	„	2 „
In all .	„	135 feet.

In the banks of the Indus for a dozen miles above Mukhud and as many below it a much greater thickness of these older alluvial rocks seems to be exposed, including several thick but not persistent layers of very coarse (6-inch) pebble rock, varying sometimes very rapidly from a thickness of 100 feet in one bed to three separate layers of six feet.

The following seems to be the section downward of the portion of the older rocks that contains all the oil found in the Punjab:—

Soft gray sand rock estimated by some writers as much as 10,000 feet at Aluggud more at any rate than . .	about	100 feet.
Red and greenish gray clays, with a few layers of brown sand and pebble rock (Aluggud, Jaba, and whole northern side of western part of Salt Range) . .	„	700 „
Coarse (up to six-inch) pebble rock, perhaps sometimes wanting (Aluggud)	„	40 „
Brown sandy lime rock, with productus and other fossils; in some places becoming merely soft gray sand rock, with the oil of Aluggud brook (Aluggud)	„	40 „
Soft gray sand rock (Aluggud)	„	100 „
Brown and gray shales (Aluggud)	„	180 „
Aluggud group .		? 1,150

Gray sand rock, with a few layers of pebble rock, and near the bottom some dark red shales, and with gray shale; tar of Dooma, Hungooch, Chinnoor, and probably Sadeealee near the bottom (Jaba and northern slope of Salt Range)	about 700 feet.	
Blue gray lime rock, with nummulites, echinoderms, and other fossils; oil of Chhota Kutta and Burra Kutta (Jaba) near the top; and oil of Kutta Otoor, Dulla, and Punnoba near the bottom	„ 1,100 „	
Jaba group .	?	1,800
Red sand rock and shales (the whole at Punnoba, the lower part at Gunda)	„ 500 feet.	
Brown sand rock and shales, with nummulites, oil of Gunda, and perhaps Cheerpar (Gunda, Chhurrut, Boraree)	„ 100 „	
Gray lime rock, with nummulites and gray shales, with some red shales near the bottom; oil of Chhurrut, Boraree, and perhaps Bussala and Loondeegar (Gunda, Chhurrut, and Boraree)	„ 190 „	
Red shales, salt (Gunda, Chhurrut, Boraree), perhaps more than	„ 60 „	
Gunda group .		850
In all .		3,800 ft.

As nummulites abound from the lime rock of the Gunda group up to the top of the lime rock of the Jaba group, all these rocks probably belong to the so-called nummulitic age, although the Gunda rocks seem to hold the place of rocks that in the Salt Range have commonly been assigned to a much older age. It should also be stated that the Gunda rocks may prove on more complete examination not to underlie the Jaba group, as here considered to be the case; but the absolute determination of this point was immaterial to the objects of the oil survey, and would have taken too much time for it to be on the whole desirable.

A like uncertainty exists in regard to the position of the lower 360 feet of the Aluggud group with reference to the Jaba group. The upper sand rock and clays (in all 800 feet) of the Aluggud group are undoubtedly the same that are found for many miles along the Salt Range at a distance of about a thousand feet above the Jaba lime rock; and the sand rock and shales of the bottom of the Aluggud group much resemble the sand rock and shales from 700 to 1,000 feet above the Jaba lime rock. The chief cause of doubt in the matter is the occurrence of the fossil productus, and perhaps other fossils as certain terebratulæ and spirifer) in the Aluggud lime rock—fossils which are universally reckoned far older than nummulites, and have given rise to the belief that this rock was carboniferous. In case it be carboniferous, there is a wide gap below the red and greenish gray clays, where at least the whole Jaba group should be together with 350 feet of gray sand rock and shales above it (to be seen at Jaba), in all over 2,000 feet that would be quite missing at Aluggud, all thinned out and disappeared within a distance of 30 miles (from Jaba), and that would be almost incredible. There would also seem to be no rocks below the Jaba lime rock in the Salt Range, though so near, that would correspond in appearance to the lower rocks of the Aluggud group. Indeed, those rocks below the Jaba lime rock, although from their fossils they have hitherto been reckoned oolitic, carboniferous, or older in age, resemble rather the Gunda rocks (with some variations not to be wondered at in a distance of 75 miles); but the Gunda rocks are full of nummulites. It seems absolutely necessary to admit either that the productus and its accompanying fossils are found in rocks far newer than the carboniferous, or else that the nummulites are found in rock much older than the tertiary. Possibly it will turn out that both these admissions must be made, and that all these rocks belong to an age between the carboniferous and tertiary.

Doctor Fleming reports finding in what he calls carboniferous limestone (not the rock at Aluggud, but of like age with it in his opinion) ceratites and "fossils bearing a considerable resemblance to belemnites," both of later age

than the carboniferous. There is also found in the pebble rock just above the Jaba lime rock, and apparently quite conformable with it, pebbles of a pink or flesh-colored lime rock that answers to Doctor Fleming's description of some of the carboniferous lime rock of the Salt Range; and in these pebbles are found nummulites.

The thousand feet of greenish gray sand rock and shales above the Jaba lime rock (at Jaba), and the red and greenish gray clays above that (both at Jaba and Aluggud), and the gray sand rock (called by some writers 10,000 feet thick or more) above that, have all hitherto been reckoned as of Sivalik age, without, however, the evidence of fossils. To the positive determination of that point this survey had no occasion to devote any time, and has no light to throw upon it. It is, however, clear that the steeply dipping rocks found at Gunda, Chhurrut, and at some other points, although they have been called Sivalik, cannot be so, for they abound in nummulites, to say nothing of the reasons for believing them to be even older than the great nummulitic lime rock of Jaba. As the mistake has therefore been made of supposing the Gunda group to belong to the sand rocks above the red and greenish gray clays, it is quite possible, to say the least, that the thickness of these upper sand rocks may prove to be after all much less than the unusual one of 10,000 feet. On the northern side of the Salt Range near Dooma, south-west of Tullagung, the red and greenish gray clays, and the sand rocks over them, dip very gently (about 5°) northerly, and the dip grows more and more gently northward until it is nearly or quite level. At some point not yet determined, but probably south of Tallagung, the sand rocks pass below the pebble and the sand rocks of the older alluvium; and these last keep a nearly level dip throughout their extent northward, while the so-called Sivalik sand rocks probably share the steeper dip of the lower rocks that is clearly shown by the valleys just north of the Sohan, as well as by the course of the Sohan itself. The outcrop of these sand rocks, then, just north of the Salt Range, with a very gentle dip, cannot probably be more than some 15 miles wide at most, and their thickness so exposed can hardly be more than 3,000 feet. It is barely possible, however, that this exposure may not show the whole thickness.

It would seem, then, from the section that what (the Aluggud lime rock) has until now been thought to be below the Jaba lime rock is really above it, while what (the Gunda group) has been thought to be above the Jaba lime rock is really below it. This matter is, however, quite unimportant with reference to the oil lands; for it must be borne in mind that the oil-bearing beds found at different points in the section are only very locally so, commonly for a distance of only a few yards or scores of yards,—rarely as on the Aluggud brook, for 500 yards or more, or, as at Jaba, for half a mile or more. Beyond these narrow limits the same beds are often seen in their outcrops to be quite barren of oil, and in other cases the absence of any discovered spring is commonly proof enough (in a country so minutely explored as this has been by the natives) that the beds can yield no oil. Not only therefore is it necessary to study each place separately for itself, but it is quite needless to trace out thoroughly the outcrop of each of these beds with the hope of finding oil by borings here and there all along it, or with the idea of boring say from any point in the Jaba group down to the oil-bearing beds of the Gunda group. Such a random attack upon even a bed that is known to be oil-bearing at some one place, though it might possibly prove successful, would have in its favor scarcely one chance in a thousand million.

4.—OIL, TAR AND ASPHALT.

a. Mode of occurrence.—The oil is in all cases in the Punjab of a dark green color when fresh, but turns black in drying or in becoming tar or asphalt; and the tar that melts in the sun from the asphalt is also black. At the Chhota Kutta and Burra Kutta (Jaba) main oil springs there is green oil to be seen that has freshly come from the rock, but it soon mixes with the black, partly dried tarry oil that surrounds it.

At Rutta Otoor, Dulla, Punnoba, Chhota Kutta, and Burra Kutta (Jaba), and partly at Aluggud, the oil (or asphalt) comes from the cracks in beds of

lime rock; in all other cases in the Punjab it oozes from sand rock or sandy shales, sometimes perhaps calcareous. In almost all cases the natural springs are at points where brooks cross the outcrop of the oil-bearing beds, and lay them bare; but the Gunda wells are in a little plain between the head of two brooks; the Aluggud oil comes partly from the face of a cliff high above the brook; and the Loondeegar asphalt is on a gently sloping hillside; not to speak of the trifling Cheerpar oil that comes from the roof of a small cave in the face of a cliff 70 feet above the plains.

In nearly all cases where liquid oil is found, it seems to flow with water from the rock, and in the springs is found floating upon it. In the Gunda boring No. 1, however, very little water is now found to come with the oil from the rock; and at Aluggud (where the so-called oil is, much of it, merely tar melted by the sun from a secondary or wash deposit of asphalt), although the tar is commonly found floating upon water in small holes in the bed of the brook, the two liquids did not come together from the rock. The water in this case is probably merely the common rain or spring water of the brook, protected from drying up by the layer of tar above it. The presence of some of the water in the other springs may be accounted for in the same way, and in some oil springs at certain seasons the presence of water may all be due to this cause.

The water that accompanies at least a part of the oil at the oil springs of Chhota Kutta and Burra Kutta (Jaba) is highly sulphureous, and it is possible that sulphur water may likewise be found at some of the other oil springs (more particularly at Punnoba), but the presence of sulphur is not noticeable in them.

The brook water near the oil springs of Punnoba is strongly salt (in the dry season), and there are traces of salt near the Chhurrut and Boraree oil wells, as also near the Chhota Kutta and Burra Kutta (Jaba) oil springs; but near the other oil springs very little or no salt is to be found.

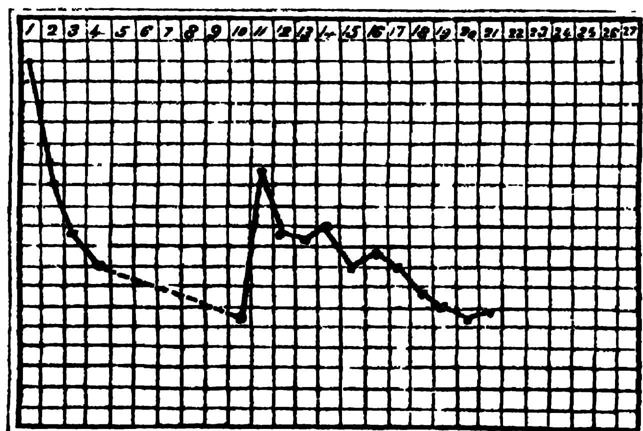
Perhaps no point regarding rock oil is more commonly or more widely misunderstood than its mode of occurrence. Most men seem to be possessed with the idea that the oil has come to the place where it is found from a great depth below. Many believe that the oil is flowing hither or thither through vast fissures in the deep rocks, or fills large cavities or reservoirs in the bowels of the earth, whence it issues to the surface by small cracks at the springs above, and that you only need to bore deep enough there to tap these reservoirs, and get an indefinitely large supply. Even some professed geologists imagine that the oil has come to the rocks in which it is now found from the natural distillation of bituminous shales or coal below it. What is more strange is, that really eminent men of science have maintained that the oil is formed by the chemical reactions of certain purely mineral bodies in the interior of the earth, basing their views upon the established fact that similar products may be made by chemists from mineral bodies which may be believed to exist in the interior of the earth and also on the well-known presence of oil near mud vulcanoes. How much simpler and more natural than any of these far-fetched opinions is the now well-established fact, that the oil was first formed and has always remained in the same rock beds from which it now issues, and that it first came from the slow decomposition of plants and animals buried in the rock as it formed, just as marsh gas (kindred with oil) is formed by the slow decay of vegetable matter at the bottom of ponds. Plants that grow on the ground or in the air, having woody fibre, would in case of burial and slow decomposition leave bituminous coal, which, under favourable circumstances, might lose its bituminous or oily part without losing the woody part, and would then become anthracite. But plants that grow in the water (such, for example, as sea weeds of all kinds down to the most delicate and microscopic), having no woody fibre, leave in such a case only oil or bitumen (including gas), and a like result would come from the slow decomposition of the flesh of animals, which in some cases might have been buried, in vast quantities, though seldom probably comparable to the accumulations of weeds that are found even now-a-days in the sea. It is not, however, to be supposed that the plants or animals that gave rise to the oil in a thick bed of rock were all buried at once; the burial was in most cases probably very gradual, going on from year to year as the rock itself was formed

by the gradual dropping of sand or mud to the bottom of the sea. The frequent presence of salt in beds of rock near the oil is therefore not to be wondered at, for they may likewise have been formed, not merely at the bottom of salt sea water, and therefore naturally salt themselves, but may have been formed in a shallow bay or temporarily closed inlet, where the sun's heat so dried up the water as to leave layers even of crystallised salt. The presence of sulphur with the oil is of a piece with its presence in coal or other organic remains.

Mud volcanoes owe their eruptions merely to the oil gases that are buried under a covering of mud, and push their way out from time to time. The cases of fissures filled with oil that have seemed to some the channels by which the oil rose to the surface from the lowermost depths of the earth, and have seemed to others the vast reservoirs from which the springs above are supplied, are much rarer and more insignificant in size than is commonly thought. Of the thousands of oil wells in the world, scarcely a dozen (if so many) have each yielded a hundred thousand barrels of oil from such a source. Yet a hundred thousand barrels would not fill a fissure 200 feet long by 150 feet deep and half a foot wide; and it is more likely that a fissure of that capacity would be longer or deeper, and only an inch or two wide, and still more likely that such a yield would come from a network of much narrower cracks or seams in the rock. It is unlikely that some open fissures would extend to any great depth where the beds of hard rock are thin and separated at short distances by soft shales or clays (as is the case, for example, in the Gunda group of rocks.) A deep fissure, extending far below the oil-bearing bed, would be very sure to cross rocks containing water, as all porous rocks do below the drainage level of the region, and below the effects of the sun's drying power. This water would of course tend to fill the fissure, and the oil would float upon it; so that the hope of striking such an oil-field cavity at a considerable depth below the oil-bearing bed is not justifiable.

It has been maintained by some that a given oil-bearing bed yields most abundantly at the point where it forms the top of a saddle, because the oil is pushed upward through the pores and fissures of the rock by the water below, and because too the fissures would be most numerous at this point. Certain oil regions have been pointed to as confirming this view, by the fact that most of their wells are near the top of a saddle of the rocks. The real cause of this fact seems, however, to be merely that at a greater distance from the top of the saddle the oil-bearing bed is at a greater depth from the surface, and that boring into it is therefore less practicable. However true it may be that water in a fissure would have the oil floating upon it, and so push it upward until some obstruction was met, it is highly improbable that such pressure would cause the oil to pass through the pores of the rock, and give up its place in them to the water. Indeed, if such action took place even slowly, the steeply dipping rocks of the Punjab would no doubt, ages ago, have had all their oil thoroughly pushed out at their outcrops by the water rising from below.

As the oil was formed from materials gathered in the rock when this was lying flat at the bottom of a sea, it is clear that the position or shape of the oil-yielding part of the bed can have in general no reference in the present shape of the ground, hills or valleys. But it is possible that the part of the oil-bearing bed, which now lies high above the drainage level, may have lost some of its oil by drainage and by the drying effect of atmospheric influences; and this would account for the fact that almost all the Punjab oil springs are found just at the place where a brook crosses the outcrop of the bed, that is, at the lowest drainage level. The wells at Gunda even, which seems an exception, may be at the lowest point where the oil-bearing part of the bed crops out. Still, such a draining away and drying up of the oil must be extremely slow, and it is very likely that it has deprived of most of its oil only a narrow strip along the outcrop on the hillsides.



The outline of the oil-bearing part of the rock bed below the outcrop has of course no reference either to the present shape of the surface or dip of the rocks, and can only be determined by numerous borings or trial pits. As the outline depends on the shape of the original mass of materials (plants or ani-

mals) that formed it, and that upon the currents of the sea or winds, of the storms, or barriers of the shore, or depth of the bottom, it would not be possible to infer the shape of one deposit from the shape of another at a distance, especially if in a different bed of rock of a different age, as is almost always the case in the Punjab. The shape (in plan) of the original mass of materials for the oil in still-water, leaving the influence of the shore and bottom out of account, would probably be circular, but a current in the water or a storm would tend to lengthen this shape to an ellipse, and the shore or bottom might give this an ess shape, or otherwise irregular shape.

The length of the deposit along the outcrop may be known, at least roughly (for example, as great or little) by the absence of oil springs or noticeable traces of oil along it, even where well exposed and at low points of drainage. For this reason among others it is desirable to study out more or less exactly the course of the outcrop near a spring of oil. Whatever shape the original mass of oil-forming materials had, the present line of outcrop would plainly be as likely to cross it in one part as in another; the portion on one side of the line is that which has been swept away by the rains and rivers that have scooped out the hollows in the present surface; the other portion still lies underground. As the outcrop line is as likely to pass on one side of the centre of the original oil-bearing part of the bed as on the other, the width of the underground part at right angles with the outcrop may be taken as probably something like the half of the length of the outcrop.

b. Yield.—The chief yield of oil has been at the Gunda wells, where boring No. 1 and the dug well in which it is, have yielded all the oil, with perhaps a trifling exception. From the 8th of April 1870 to the 22nd October 1870, the whole yield here has been about 1,963 gallons, or an average of ten gallons a day; but from the 29th June to 1st August, 33 days, no oil was taken owing to the caving in of the well; and in general none was taken on Sundays, and three other days were lost, making the average for the days that oil was taken, 14$\frac{4}{5}$ gallons a day. The yield at the beginning of boring work (8th April) was about five gallons a day; on the 28th of May the yield was about fifty gallons, the greatest yield of any one day. From that time until the caving in the decrease in the daily yield was almost continuous, to about ten gallons a day. On the 1st of August the yield was again 10 gallons a day, but on the 10th of August a fixed pump had been put into the bore hole, and the yield rose to 30 gallons a day. From that time until the 22nd of October the daily yield has again gone with some fluctuations down to ten gallons a day. The yield in gallons in each full week of gathering the oil from 30th May to 22nd October was about 180, 120, 97, 80 (55, 128, 98), 94, 99, 79, 88, 79, 66, 58, 59; in the weeks "55, 128, 98," one day was lost from the work each week, besides Sunday.

A drawing to represent these variations of yield shows that the yield at the end of this year (1870) will probably be about 35 gallons a week, and that by the middle of next year it will be hardly a gallon a day, and that the whole

future yield will be about a thousand gallons, or one-half of the past yield since the boring was begun, making about 3,000 gallons in all that the well will have yielded. These results are a good illustration of the character of the yield of

oil wells in general greatest at first, then rapidly diminishing; after that diminishing more and more slowly until the yield finally becomes too small to pay for pumping. The curve representing this decrease is clearly a parabola.

The yield at all the other places is from natural springs. At the Chhota Kutta (Jaba) springs the oil yield is perhaps three quarts a day; at the Punnoba springs two quarts a day; at the Burra Kutta (Jaba) springs three pints a day; at the Rutta Otoor spring half a pint a day; at the Bussala springs one gill a day; at the Loondeegar, Chhurrut, and Boraree places a mere trace;—at all the rest no oil proper at all, making the whole oil yield of the springs perhaps seven quarts a day. Of asphalt there is at Loondeegar perhaps 1,000 cubic yards, or 1,500 tons; at Aluggud brook 350 cubic yards, or 550 tons; at Gunda 15 cubic yards, or 19 tons; at Chhurrut 15 cubic yards, or 19 tons; at Boraree brook six cubic yards, or seven and a half tons; at Dooma one-half cubic yard, or two tons; at Dulla half a cubic yard, or five-eighths of a ton; at the other places none at all to speak of, making in all perhaps 1,388 cubic yards, or 2,098 tons, capable at a rough guess of yielding as much gas as 700 tons of crude oil, that is, something more than 15 million cubic feet. Of rock tar there is at the Aluggud brook perhaps 100 gallons; at Dulla, Sadeealee, Chinnoor, Hungooch, and Dooma scarcely more than mere traces; and at the other places none at all to speak of.

c. Outcrop.—The Gunda group of rocks seems to crop out all along the southern edge of the Choor Hills, and most likely also on the northern edge, and further east to the southern edge of the hills at Rutta Otoor. They probably also appear here and there in the whole region between the Choor Hills and Khairee Moorut, and on the south-eastern side of the Khairee Moorut as far south as the Sohan River. South of this river, as well as in most of the country north of it, they seem to be covered up by rocks of older alluvial age, and only to reappear on the southern edge of the Salt Range.

The Jaba lime rock ("nummulitic limestone of the Salt Range") appears not only all along the Salt Range, but is probably the material of the Khairee Moorut, Choor Hills (including the hills of the Punnoba), and the hills about Rutta Otoor.

The Jaba sand rock (just above the lime rock) crops out all along the northern slope of the Salt Range, and perhaps is also to be found among the steep dipping rocks north of the Sohan and near Khooshialgurh, on the western side of the Indus. The upper part of this sand rock, just below the red and greenish gray clays, seems to be the same as the oil-bearing rocks of the Aluggud brook also skirting with its outcrop the western edge of the valley.

d. Working.—It would be hopeless, as already hinted, to bore or dig for oil along these outcrops, except very near to the places where oil springs, or at least asphalt deposits, are known. Indeed, the first borings should be as near as may be to these, not more than a few yards distant; and if they should prove successful, the oil-bearing bed may be tested in the same way to a greater and greater distance. As the bed near the surface may have been somewhat affected by ages of natural drainage and of atmospheric influences, it is desirable to test it at some depth, and to bore rather to the dip from the springs than along the outcrop, although this is not to be altogether neglected when the springs give encouragement. Still in boring to the dip it would not be well to make the first boring more than from fifty to a hundred feet deep, for the expense of such a shallow boring is less, and so is also the risk of striking the bed outside of the oil-bearing part of it. Other borings may afterwards be made still further to the dip, as well as to the right and left on the same level, that is, along the strike. It is commonly easy to measure the dip near the spring with the exactness enough to fix upon the place of a boring that would pass through the bed at a depth of from fifty to a hundred feet. After one or more borings are made, the dip will be still better known from them, so as to be a guide for other borings.

As the specific gravity of porous sand rock is about one-fifth less than that of quartz, it is plain that about one-fifth of the bulk of the rock is taken up by

pores or empty spaces between the grains of sand. One cubic foot of oil, then, say eight gallons, would fill the pores of five cubic feet of such sand rock, and 3,000 gallons (the whole past and future yield of Gunda boring, No. 1) would in the same way saturate in round numbers 2,000 cubic feet of rock. Capillary attraction, however, would prevent more than perhaps a tenth of the whole amount of oil in the rock from draining into a boring, but this proportion would depend on the coarseness of the rock. Only that part of the rock next the boring would, however, be fully drained at first, while that at the outer limits of drainage would be drained infinitely little; the average amount of drainage then would be perhaps only one-twentieth of what is in the rock. The 3,000 gallons then would drain from twenty times 2,000 cubic feet, or say 40,000 cubic feet, or 2,000 square feet of a bed (like that at Gunda), 20 feet thick, that is, a circle about 50 feet in diameter. According to this, the wells should not be nearer than 50 feet apart upon the oil-bearing bed; but something more might be allowed for the possibility of draining to a greater distance by reason of exceptional seams in the rock here and there; and if the rock seemed on trial to be rich in oil, intermediate wells might finally be placed half way between those of the first set, so as to drain more thoroughly the less perfectly drained part of the rock. After a season of rest, the better drained portions of the rock would tend to fill up partially again from the less drained portions.

It would not be well then to put the borings, at least at first, nearer to each other than some 50 or 100 feet, because not only does each bore-hole drain the rock more or less to some 25 feet or more all around it, but the exploration of the limit and yield of the oil-bearing part of the bed will go on more rapidly if the holes are not put too close together. It is better to bore than to dig shafts through the rock, partly because it is cheaper, especially for a mere exploratory test of the bed, and partly because the very explosive gases given out by the oil render the digging of a shaft of any depth highly dangerous, and the gases are likewise very dangerous to the life of the laborers, who breathe them in large quantity. Even artificial ventilation of such pits might well prove insufficient to remove these dangers.

As to the yield of future borings, it is clear from what has already been said of the nature of oil deposits, that it must be quite impossible to make anything better than the very roughest guess. The bore-hole may hit upon a portion of the deposit where the rock is much fissured or coarsely porous, so as to give a very large yield, or it may fall quite outside of the deposit. The yield of a natural spring, however, gives some little clue as to whether the yield of borings is likely to be great or little, although the spring may in running for ages have now nearly run dry, that is, drained all the oil from the adjoining rock, or the small cracks in the rock through which the spring is fed may have become so clogged as to allow only a very small yield compared with that of a bore-hole. As the bore-hole passes through the whole thickness of the oil-bearing bed, the yield of course is likely to be greater (other things being equal) the thicker the bed is. The oil-bearing bed at Chhota Kutta and Burra Kutta (Jaba) seems from the place of the different springs to be about 100 feet thick; the bed at the Aluggud brook seems to yield oil through a thickness of some 50 feet; that at Punnoba 20 feet; at Gunda 20 feet; at Rutta Otoor 15 feet; at the Bussala River 12 feet.

The order in which the different places deserve to be tried by boring, taking the oil-yielding merits of each into consideration, is this:—Gunda, Chhota Kutta, Aluggud, Punnoba, Burra Kutta, Rutta Otoor, Bussala, Loondeegar (at the asphalt). The other places do not deserve trial at all, except possibly Chhurrut and Boraree, which however derive their chief importance from the unsuccessful trials made there last year by Mr. Fenner.

But considering also the distance of each place from the points to which the oil is destined, and from the head-quarters of superintendence, the order of trial would be somewhat different. If the oil be destined to the Rawalpindi gas work alone, the trial would perhaps best be made in this order,—Gunda, Rutta Otoor, Chhota Kutta, Burra Kutta, Bussala, Punnoba, Aluggud, Loondeegar.

The boring No. 1 at Gunda yielded for six months an average of about

11 gallons a day. It would seem, then, that for the supply of the Rawalpindi gas works (100 gallons a day), about nine such wells would be needed at a time. But as boring No. 1 will probably go on yielding something (a trifle at least) for 9 or 12 months longer, making its future yield about 1,000 gallons more, or 3,000 in all in the course of 18 months, its whole yield will probably be about one-eighteenth of the whole amount needed for the gas works in the 18 months. It would need, then, but one such new well every month to keep up a supply of 100 gallons a day; but that supply would not begin until a number of wells were at work—indeed 18 of them, if they were sunk only so fast. But if the oil be allowed to accumulate at first, without being used, to the amount of about 4,000 gallons, or for about the four first months of the yield of such a series of wells, then the series would yield enough to keep up the supply until the full number of wells come to yielding altogether. But as the very possible failure of some attempted wells and other delays must be provided against, a stock of oil should also besides be on hand before beginning its use, enough to last say three months; or else, what is about the same thing, three wells of the afore-mentioned whole yield of 3,000 gallons each should have been bored before reckoning the series as begun, which, after storing up 4,000 gallons, is to yield regularly the desired supply. If then the boring of the wells should go on regularly once a month, and each should yield as much as the first one is yielding, it would take four months after the finishing of the fourth well (that is, until the eighth well has been bored) before it would be at all safe to begin the use of the oil—in other words, before an uninterrupted supply of 100 gallons a day could be counted upon with any reasonable likelihood.

It seems quite likely (to make a very rough guess) that the Chhota Kutta oil lands would yield 30 such wells; the Burra Kutta 20; the Aluggud 20; the Punnoba 20; the Gunda 5, and the Rutta Otoor, Bussala, and Loondeegar, all together 5, making 100 in all. Yet so uncertain is the matter that it might well turn out that Chhota Kutta alone would yield more than 100. And it would not be very astonishing if a single well here should yield 100 times as much as the Gunda boring No. 1, that has been taken as the standard; for although the limits of each little oil district are very narrow, the yield of single wells within those limits might be very large since a well draws its supply from so short a distance around it. Still the rough guess just given does not seem wild either in overrating or in underrating the prospects of the places.

A supply of 100 gallons of oil a day may then be counted on with some likelihood for 100 months, or some eight years. Although the supply may well prove to last much longer, it may also prove to be much less; and uncertain and probably small as it is, it would hardly be worth while to put up gas works for its use. As, however, the gas works have already been put up, it may on the whole (rather than remove them to another place where gas material is more abundant) be best to make the needful borings, and use the oil while it lasts. When the railroad reaches Rawalpindi, other gas material may perhaps be got from a distance.

The asphalt seems to be enough in quantity to supply as much gas as a 100 gallons of oil a day for three or four years, lengthening out the term of the gas works to 12 years. To use the asphalt alone, the present retorts of the works would probably be too small, but it is quite likely that the asphalt could be dissolved again in a small quantity of the rock oil, and so used in combination with it in the present retorts. At the same time the pebble and sand could be separated from the asphalt after it has been reduced to the liquid form by dissolving in the oil.

As the oil all belongs to the class of heavy oils, it would be (like Rangoon oil) especially well suited for lubricating purposes; and it may well be that its most profitable use will be in that way, particularly after the railroad is finished to Rawalpindi.

5.—SHIPMENT.

The Rutta Otoor oil spring is 13 miles by road from Rawalpindi, the first mile only a bridle path, the rest passable for carts, and eight miles of it a

good metalled road. The Bussala oil spring is 11 miles by road from Rawalpindi, two miles and a half of which are a bridle path, the rest nearly or quite passable to carts. The Loondeegar asphalt is 16 miles by road from Rawalpindi, about six miles a mere bridle path, the rest passable for carts. The Gunda wells are about 30 miles by a wagon road, mostly good, from Rawalpindi. The Punnoba oil springs are 87 miles by road from Rawalpindi; the dozen miles next the springs are not passable for carts, but the rest are. The Aluggud asphalt is $145\frac{1}{2}$ miles by road from Rawalpindi, of which distance about 10 miles are quite impassable for carts, but the rest is nearly or quite passable for them. The Chhota Kutta and Burra Kutta (Jaba) oil springs are 102 miles by road from Rawalpindi, the first dozen miles or so quite impassable for carts, and the rest perhaps so in places. If the hire of a camel be taken as eight rupees a month, and his load 50 gallons of oil and a march as about a dozen miles, the carriage of a gallon of the oil by camels from each of these places would at least cost as follows:—Rutta Otoor and Bussala, $2\frac{1}{3}$ pies; Loondeegar, 3 pies; Gunda, $7\frac{2}{3}$ pies; Punnoba 1 anna $5\frac{1}{4}$ pies; Chhota Kutta and Burra Kutta (Jaba), 1 anna $7\frac{2}{3}$ pies; Aluggud, 2 annas $3\frac{2}{3}$ pies.

6.—REPORTS AND MAPS.

A special report has been written upon each of the places where oil, tar, or asphalt is found, and geological and topographical maps have been made for the Rutta Otoor, Bussala, Loondeegar, Gunda, Chhurrut, Boraree, Dulla, Punnoba, Aluggud, Chhota Kutta, and Burra Kutta oil lands. It was not thought worth while to map the other places, and even some of these derive their chief importance much less from their own merits than from the boring and digging that were formerly done at them.

The report for each place treats specially of the situation; the lay of the land; the geology, both the structure and the rock beds; the oil, its mode of occurrence, yield, outcrop and working; salt, sulphur or any other minerals found near the oil; the shipment; and finally, the books and papers that speak of each place. The aim has been to make the reports as full as may be, without giving needless and confusing details, and to give not only the observed facts, but the inferences drawn from them without, however, giving mere inferences as observed facts. All the reports, though final, have by requirement been wholly written in the jungle, as it were, and are therefore defective of course in some points where a reference to books and collections would be needed.

The maps of the Gunda, Chhurrut, Aluggud, Chhota Kutta, and Burra Kutta oil lands are based upon a rough survey; the others, mostly less important, are based upon a very rough survey, and are therefore called mere sketch maps. Each map shows a space of half a mile square with the oil springs in the centre, and by the side of the map are given an upright section of the rock beds and a long section of the basins and saddles. The maps are all on a scale $\frac{1}{6000}$ or 500 feet to an inch, and show the shape of the ground by contour lines 10 feet apart in level, and the position of the oil-bearing bed of rock by what may be called its contour lines 100 feet apart in level, and the outcrop by a hatched line. The observed dips are shown by arrow heads, and the number of degrees attached. The basin section is on the same scale as the map, and with the same vertical as horizontal scale, so as not to distort the structure. The rock section is on a scale of $\frac{1}{1200}$ or 100 feet to the inch, so as to make it possible to show a bed of one foot in thickness, or even less. The aim has been to make the maps as full and as independent of the reports as possible, and, as in the reports, to state as fully as consistent with clearness, not only the observed facts, but also the inferences drawn from them; yet in such a way that the two classes of statement should not be confounded. The mere guess of one who has been on the ground and carefully studied the matter is of value to those who have not been there, provided it be given as a guess, and not as a positive observation. At the same time, if the original observations are truly given, nothing prevents others from drawing their own inferences independently of the observer's inferences.

Of course the rougher the survey has been, the less trustworthy in intricate cases will the inferences be; but that is indicated by the very title of the map ("sketch map" or "map of a rough survey"). In the maps in question it would not have been worth while to make the survey very minute and time-taking, because what is chiefly wanted is a guide in beginning borings, or a proof of the general nature of the geology and structure of the place. They will show not only the probable general course of the outcrops and underground position of the oil-bearing beds, that is, where to look for them, but will show where borings can best be begun. The errors of these indications are in general likely to be greater the farther a point is from the oil springs themselves; but for other reasons it is desirable to bore at first quite near to the springs, so that the errors are of less importance. The borings themselves as they advance will give more and more exact knowledge of the position of the oil-bearing bed. The maps indeed are not intended as finally accurate statements of the geology, but rather as guides to finding it out, and something on which to base the corrections furnished by further explorations.

7.—BOOKS AND PAPERS.

The Punjab oil springs are spoken of in a "Report on the Salt Range," by Doctor Andrew Fleming, Journal of the Asiatic Society of Bengal, Volume XVII, No. 23, November 1848, page 517; in a "Report on the Structure and Mineral Wealth of the Salt Range," by Doctor Andrew Fleming, Journal Asiatic Society, Bengal, Volume XXII, 1853, No. 3, pages 264 and 265, No. 4, page 347; in "Notes on the Geology of the Punjab Salt Range," by W. Theobald, junior, Journal Asiatic Society, Bengal, Volume XXIII, No. 7, 1854, page 669; in a "Memorandum on Petroleum in the Rawalpindi Division," by Colonel R. Maclagan, R.E., Secretary to the Punjab Government, Public Works Department, Supplement to the *Punjab Government Gazette*, 5th February 1862, pages 23, 28; in a "Memorandum on the Results of a Cursory Examination of the Salt Range, and parts of the Districts of Bunnoo and Kohat, with special view to the mineral resources of these Districts," by Thomas Oldham, D.D., Superintendent of Geological Survey of India, Calcutta, April 1864, reprinted in a Supplement to the *Gazette of India*, 24th August 1867, page 780; in a "Report on Petroleum Operations," by A. Fenner, Assistant Engineer, Proceedings of the Government of Punjab, Public Works Department, 17th June 1866, about five pages; in a "Letter on the Gunda Oil," by Doctor T. E. B. Brown, Chemical Examiner, Supplement to the *Punjab Government Gazette* for 7th February 1867 (about six pages of foolscap manuscript); in a paper on the "Geology of Cashmere, the Western Himalaya, and Afghan Mountains," by Doctor A. M. Verchère (or Verchere), Journal Asiatic Society, Bengal, Part II, No. 1, 1867, page 13; in a manuscript Memorandum, No. 220, by Major C. H. Hall, Deputy Commissioner, 5th February 1868, on file in the Public Works Department at Lahore, one page; in a "Report on Borings for Petroleum," by A. Fenner, Executive Engineer, Proceedings of the Government of Punjab, Public Works Department, July 1869, pages 2-6; in a manuscript "Report on the Jaba Petroleum Springs near Kalabagh," by Lieutenant J. A. Armstrong, Executive Engineer, December 1869, on file in the Public Works Department at Lahore, pages 1-4; in a "Note on the Petroleum Locality of Sudkal," by A. B. Wynne, F.G.S., Geological Survey of India, Records of the Geological Survey of India, Volume III, No. 3, 1870, pages 73-74; and in a manuscript Report of his last winter's field work in the Salt Range, by A. B. Wynne, F.G.S., Geological Survey of India, on file in the Office of the Geological Survey of India at Calcutta, 1870.

Report on the Rutta Otoor Oil Lands, Rawalpindi District, Punjab, accompanied by a Geological and Topographical Sketch Map, by* BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.

1.—SITUATION.

The Rutta Otoor oil spring is 11 miles north by east from Rawalpindi, and 350 yards north of the hamlet of Rutta Otoor.

2.—LAY OF THE LAND.

The hamlet lies upon a small brook called the Kutta, just in a gap in the most southerly of the several parallel ranges of high hills or mountains that border the Rawalpindi District on the north next to the Hazara District. The general course of the first range is north-easterly and south-westerly, while the brook here runs for some distance nearly due south. East of the hamlet the ridge is divided in two by a long hollow, with two or three smaller branches. At the northern foot of the northern half of the range, and about 100 yards east of the brook, is the oil spring on the northern bank of a small branch of the brook, about 2,000 feet above the sea. A little more than a quarter of a mile north of the spring is another high ridge, likewise cut through by the brook; and the space between that ridge and the first is pretty flat for a width of say 100 yards near the brook, but rises easterly and westerly to high hills.

3.—GEOLOGY.

a. Structure.—The rocks seem to form a saddle to the north of the oil spring, and a basin to the south of it, with a southerly dip of about 50° near the spring, a southerly one of about 85° at the hamlet, and a northerly one of about 88° some 50 yards south of the hamlet. It is probable that the axis of the saddle is not far north of the spring, perhaps 100 yards; and that the axis of the basin is at the southern edge of the hamlet.

b. Rock Beds.—The only rocks exposed about the spring and near the hamlet are a dark gray lime rock, with nummulites and other fossils, belonging therefore to the nummulitic formation. It is probably the same as the so-called nummulitic lime rock of the Salt Range, in which the Kutta oil springs near Jaba occur. There are probably here and there layers of gray or light brown shales between the layers of lime rock. The thickness of this lime rock, including the shales that go with it, must be at least 750 feet. Scarcely 200 yards southerly from Rutta Otoor on the road to Shah-ka-Noorpoor is exposed a gray slightly reddish sand rock that dips about 45° north-westerly, seeming to pass under the lime rock just mentioned, and 20 yards further south a similar sand rock contains a six-inch layer of reddish and gray sandy lime rock. This sand rock belongs probably a short distance above to the Gunda group of rocks, and would in that case be also of nummulitic age. Indeed, reddish, gray and red shales are exposed a mile or two south-east of Noorpoor that look extremely like some of the rocks near Gunda.

4.—OIL AND ASPHALT.

a. Mode of occurrence.—At the oil spring scarcely any digging at all has been done; the earth has merely been scooped out of a hole some two feet long and six inches wide, and at most some nine inches deep. This hole is commonly filled with water from a natural spring, and a thin layer of dark green oil rests upon the water, and flows very slowly away. The oil seems to come from the cracks of a bed of the lime rock, perhaps 15 feet thick, at a distance of some 250 feet above the highest sand rock. In the bed and sides of the small water-course, about 40 yards below the oil spring, is some asphalt, partly in the wash, and partly in the cracks of the lime rock. It is merely dried oil that once flowed here from the cracks of the rock, as it still does at the spring. The heat of the sun softens it sometimes, and changes it into a black tar.

b. Yield.—The oil of the spring, if gathered every day, would amount perhaps to half a pint a day, perhaps even less. The asphalt extends for some two yards in length, with an average width of perhaps one yard and thickness of six inches, and amounts therefore to about a third of a cubic yard, and would weigh perhaps half a ton, as it is impure with earth.

c. Outcrop.—The outcrop of the oil-bearing bed of lime rock runs probably north-easterly and south-westerly from the spring and asphalt exposure, in a direction not far from straight, but bending round a little towards the north on account of the rise of the ground, combined with the south-easterly dip of the bed. Some 200 yards north of the spring would perhaps be found the corre-

sponding outcrop of the same bed on the north-eastern side of the saddle, and it would likewise run north-easterly and south-westerly, with a corresponding southerly bend on either hand. Some 200 yards south-east of Rutta Otoor there would probably be another outcrop of the oil-bearing bed, with a course nearly parallel to the one of the springs. As these outcrops run along the hill-sides for long distances, and would no doubt give rise to the oil springs here and there if it continued to contain oil, it is probably quite barren of oil (beyond perhaps a trace of bitumen) except close about the spring.

d. Working.—In making borings, then, it would be advisable to make them at first very near the spring or asphalt. By boring south-easterly from the spring or asphalt the oil-bearing bed would be found at greater and greater depth, the greater the distance from those points. This depth would probably be 100 feet below the level of the spring for a distance from it of say 80 feet; 200 feet at a distance of 150 feet; 300 feet at a distance of 200 feet; 400 feet at a distance of 240 feet; 500 feet at a distance of 270 feet; and so on, growing rapidly greater until a depth of 1,000 feet is reached at a distance of about 350 feet. Of course, for the depth from the surface of the ground at any of these points, the height of that point above the level of the oil spring must be added to the depths just given. It would not be best to bore at first where the oil-bearing bed would be more than from 50 to 100 feet deep from the surface; and the result of the boring would be an additional guide, not merely as to the prospects of a deeper boring, but as to the dip and consequent probable position of the bed at greater depth. The yield of the spring at present would seem, on the whole, small as it is, to justify the Government in making the experiment of a boring not more than 50 or 100 feet deep.

5.—SHIPMENT.

In case oil should ever be found here in quantity, it could be carried on the backs of camels or other animals by a narrow bridle-path to Shah-ka-Noorpoor, one mile distant, and thence by a good unmetalled wagon road four miles to the Rawalpindi and Murree big road, and then on an excellent metalled road eight miles to Rawalpindi, making in all thirteen miles.

Report on the so-called Oil Spring in the Cheerpar Mountain, Rawalpindi District, Punjab, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

1.—SITUATION.

The so-called oil spring in the Cheerpar Mountain, discovered by Udhul Moosulleo, is three-quarters of a mile south-west of the village of Musrot, which is a mile and a half south of Runneeal, a village on the Tullagunge road, six miles and a quarter south-west of Rawalpindi; in all therefore eight miles south-west of Rawalpindi.

SO-CALLED OIL.

a. Mode of occurrence.—The first Cheerpar Mountain (the most north-westerly of three or four) in its upper parts is very thin, and consists of yellowish brown sand rock, dipping about 80° south-easterly. At the point where the oil is said to be found, half-way up the steep, almost vertical southern side of the mountain, about 70 feet above the little plain below, there is, along a cleavage plane, a horizontal cave, in some places as much as six feet deep from the face of the rock and three or four feet high. It is said that in the hottest season, say in June or July, oil drips down from the roof of this cave, and forms white stalactites, six or eight inches long; but through the rest of the year, as at the time of this survey, there is nothing of the kind to be seen. In the rock of the roof there are three or four small dark discolored patches which seem to yield the oil. The largest one is of irregular shape, but at most about two yards long north-east and south-west, and two feet wide; and another two yards south-west of that is about two yards long by one foot wide, and has a still narrower spot alongside of its south-western end, and about a foot from it.

The white substance of the stalactites described is probably natural paraffine, which melts in the great heat of mid-summer and drips from the rock. The rock probably belongs to the age of the middle of the Gunda group, that is nummulitic.

d. Working.—The amount to be obtained from so small a deposit as this seems to me would be far too little to justify any expense in the way of further explorations, such as boring or digging. It seems in fact to be confined to the dark-colored patches just described, and the chances of hitting upon other like patches by digging or boring into the rock below are extremely small, and the likelihood of hitting upon a larger deposit of the kind there is still smaller.

Report on the Bussala Oil Lands, on the Seel River, Rawalpindi District, Punjab, accompanied by a Geological and Topographical Sketch Map, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

1.—SITUATION.

The oil spring on the Seel River at the mouth of the Bussala in the Rawalpindi District of the Punjab is 10 miles and a half south-west by west of Rawalpindi, and one mile and three-quarters east of Moorut village.

2.—LAY OF THE LAND.

Both banks of the Seel and of the Bussala (here some 1,500 feet above the sea) are very steep, and much gullied with many precipices. Back from these the land lies nearly flat, rising to a height of 100 or 125 feet from the beds of the rivers; but it is broken up in many directions by the steepsided gullies of the smaller streams, and to the north-east are two or three small chains (two or three miles long) of low hills rising above the general level.

3.—GEOLOGY.

The older beds of rocks near the spring all dip about 75° south-easterly, with a strike of north 57° east; but the newer rocks rest upon these quite unconformably, and are nearly level or quite so.

These newer rocks are of older alluvial age, and consist at the top of a very much contorted concretionary lime rock or travertine, full of irregular holes and of hollow tubes, probably broken fossil stems of plants, and of fossil leaves; and this rests possibly here, as it clearly does elsewhere within three miles, on a very coarse pebble rock with pebbles of fist size or larger. The travertine is exposed on the eastern bank of the Bussala about 100 yards above the mouth in a cliff some eight feet high. The pebble rock is exposed on the east bank of the Seel about 60 yards above the mouth of the Bussala, and is from nothing up to three feet in thickness according to the erosion that had taken place in the underlying rocks before the deposition of the pebble rock. The cliffs, some 40 feet high along the banks of the two rivers, seem to consist mainly of a soft yellowish brown sand rock that rests immediately upon the coarse pebble rock where this is exposed. At the crossing of the Seel, about two miles north of this place, near the village of Tulhceun, the concretionary limestone to the thickness of 100 feet or so is seen resting upon the coarse pebble rock; and this about three feet thick, upon the soft brown sand rock which reaches to the water's edge—all of these with no dip or nearly none above steeply dipping rocks in the beds of the river. It is likely therefore that there are at least two layers of pebble rock, one between the travertine and soft sand rock and not seen at the oil spring, the other below the sand rock.

The older rocks at the oil spring are probably of the nummulitic formation, of the same age as the Gunda group; and the following section was noticed

there on the east bank of the Seel, about 60 yards north-east of the spring. Downward—

Shales	about	5 feet.
Limy sandy shales	„	8 „
Blue sandy, clayed, and (limy ?) shales, with a thin layer of lime rock near the bottom like the next	„	15 „
Bluish gray lime rock, broken up into thin cross cleavage layers, nearly at right angles with the bedding . .	„	12 „
In all	about	40 feet.

The oil would seem to come from the blue shales. About 100 yards up the Bussala from its mouth there is a thin layered, almost slaty, light brown sand rock with a like dip, which must be therefore about 350 feet below the section just given, and on one of its blocks are a few spots of black, as if some body had spilt some tar there. It was pointed out as a deposit of mineral tar, but would seem not to be a natural one, nor to have the least importance in any case.

4.—OIL.

a. Mode of occurrence.—The oil rises up through the extremely shallow water of the river; one drop at a time every minute or two gives rainbow colors to the surface of the river for the space of a few inches, then floats away and disappears. At a distance of about 20 yards north-easterly, apparently on the outcrop of the same bed of shales, is another like show of oil; also at one or two other places between these extremes.

b. Yield and working.—The whole yield is plainly very small indeed, at most say a gill a day,—too little probably to justify any boring to test the bed, especially as this at its exposure on the bank close by seems to be quite barren of oil. Still it may at some time be thought worth while (more particularly on account of the nearness of Rawalpindi) to test the same bed at some little depth, and in that case it is clear where borings should be made. As this and other deposits of the kind in this Province seem to be of but very limited extent, perhaps a few yards only, it would not be well to make the first boring very far from the points where the oil and gas are seen to rise. As the bed dips some 75° to the south, 33° east, it will be needful to go in this direction 28 feet and two-thirds only to bore upon the bed at a depth of 100 feet below the river level, twice that distance for 200, and so on. Of course the height of the boring site above the rivers should be borne in mind as adding to the depth of the boring. In this way the bed can be bored upon at any desired depth, and the bed can be tested at the same depth below water level in a north-easterly or south-westerly direction, bearing in mind that the strike is north 57° east, and going in that direction from the point found out as just described for any given depth.

5.—SHIPMENT.

The place is quite accessible, as it is only two miles and a half from the big road that passes through Tulheeun south-eastward, and that road connects without any bad stream to cross with the Tullagung road south of Runneeal. The only bad place in respect to carriage is up the steep, gullied river bank, close by the oil spring; but this could easily be improved, and is already quite passable to horses and camels. The oil spring is by the road three miles and three quarters from Runneeal, and 11 miles from Rawalpindi.

Report on the Loondegar Oil Lands, near Moorut, Rawulpindi District, Punjab, accompanied by a Geological and Topographical Sketch Map, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

1.—SITUATION.

The asphalt and oil places near the house called Loondegar, on the land of Goolab Shah, a Lumberdar of Moorut, Rawalpindi District, Punjab, are two miles and a half south-west by west of the main Moorut village, and 14 miles south-west by west of Rawalpindi.

2.—LAY OF THE LAND.

The two places are about 1,550 feet above the sea near the head-waters of some small streams that flow south-easterly into a brook that comes down from

the southern side of the Khairee Moorut, and empties into the Seel River, and are about half-way between the mountain and the river. The asphalt place is on a gently sloping hillside; and the oil place, a quarter of a mile south-westerly of that, is on the bank of a small watercourse. Between the two is a ridge about 80 feet high, running north-west and south-east, and a couple of hundred yards north of the asphalt is a ridge of about the same height, running for some 300 yards east-north-easterly. North of that is a wide plain, and south of it the land is nearly flat, and slopes gently south-easterly. The land to the south-west of the oil place is also nearly flat, except where gullied by the small watercourse and its tributaries.

3.—GEOLOGY.

At the asphalt place the solid rocks are not at all exposed, so that the dip and strike are not to be seen, but at the oil place the strike is seen to be about north 55° east; and as the direction from one place to the other is the same, they are both probably on the outcrop of one bed. The dip at the oil place is about 85° north-westerly; but some 45 yards north of that, the dip, although in the same direction, is only about 60°. Some 10 yards still further north the rocks, with the same dip, are covered by a nearly or quite level bed of concretionary limestone or travertine, about two feet thick. This is plainly such travertine as that on the Bussala River near its mouth, and therefore of older alluvial age. The steeply dipping rocks are of the nummulitic formation (probably of the Gunda group), and many nummulites are to be found on the hillside east of the oil place. The rocks exposed at the oil place, and at 40 or 50 yards north of it, are all a coarse greenish gray soft sandstone, and it is the source apparently of all the oil that has flowed at either place.

4.—ASPHALT AND OIL.

a. Mode of occurrence and yield.—The asphalt occurs in the form of bituminous earth, or earthy asphalt, plainly the product of a natural spring of oil that has in former times flowed here, and whose oil in drying has become solid, and remained mixed with sand and small pebbles. It has been dug into at one point to the depth of two feet and a half or three feet without coming to the bottom of it, and extends over a surface, roughly a triangle in shape, about 60 yards long, and about 1,000 square yards in surface extent. Taking its average thickness at a yard (and it seems to be fully that, though not yet properly tested by digging), the amount would be about 1,000 cubic yards. No test of its capacity to yield oil or gas seems ever to have been made, although it is said that 10 maunds of it were taken by Government agents to Rawalpindi some two years ago. By mere guess it would seem likely to yield to the cubic yard at least as much gas as half a ton of oil, that is to say, some 11,000 feet. The specific gravity of the asphalt has not been tested either; but as it is earthy, a cubic yard would weigh perhaps a ton and a half, certainly not more than two tons, and probably not less than one ton. The whole thousand cubic yards would weigh then about 1,500 tons.

The oil occurs at both places in extremely small quantity, but chiefly at the asphalt place, and is found only in the hot weather, evidently the effect of heat upon the asphalt at the one place, and on the bituminous rock at the other place. This bituminous rock seems to be of very small extent, a mere blotch in the coarse green soft sand rock, some 15 yards long (north-west and south-east) and three yards wide (north-east and south-west), and only exposed to a depth of two feet by a small trial pit. There are four other such oily spots in the rock close by, all small ones, varying from two feet to two yards long.

d. Working.—The proper place to bore, or dig, to test the yielding capacity of the bed at any desired depth from the surface, is to the north-west ("to the dip") from either the asphalt or the oil place. As the bed dips at an angle of about 85° at the oil place, and perhaps at the same angle at the asphalt place, it will be needful to go only eight feet and three quarters to the dip to find the bed at a depth of 100 feet, or to go 17 feet and a half to find it at 200 feet, and so on. The bed at any such depth may be followed north-easterly or south-westerly by going in the direction of the strike, about north 55° east. There is, however, little or no encouragement to boring except close by the asphalt that seems to have come from a considerable deposit of oil in the rock which may not have been exhausted. It is plain that all such deposits in this

region are, like the small ones at the oil place here, quite limited in extent, and it is therefore not best to bore far from a spot where oil is known to occur. A well elsewhere sunk at random on the bed might possibly hit upon a good deposit, but the chances are very greatly against it.

5.—SHIPMENT.

The places are by a road passable to horses and camels, but hilly two miles and a half from Moorut village, which is three miles by a good bridle-path from Tulhceun, and thence it is ten miles and a half by larger roads to Rawalpindi, or 16 miles in all. But it is only five miles from the asphalt and oil, over a pretty good country for making a road, to the Tallagung road at a point 10 miles and a half from Rawalpindi.

Report on the Gunda Oil Lands, Rawalpindi District, Punjab, accompanied by a Geological and Topographical Map of a Rough Survey, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

1.—SITUATION.

The Gunda oil wells are on a tract of three acres and a half of land owned by the Government, about 100 yards west of the big road from Futtehjung to Campbellpoor, and two miles and a half north-west of Futtehjung, and are 23 miles slightly south of west of Rawalpindi. They are one mile south-south-east of Ajoowal, and one mile and three furlongs north-west of Sukal, and have by different writers been called by the name of each of these villages.

2.—LAY OF THE LAND.

The wells, about 1,700 feet above the sea, lie in the middle of a plain about 300 yards wide north and south about 100 yards on the west from the head of a small stream flowing westward into the Bugwan, and 400 yards on the east from the head of another small stream flowing eastward and north-eastward to the Nundna. This plain is separated on the south by a ridge about 15 feet high from the wide plain that reaches several miles west of Futtehjung. On the north are three ridges, the highest some 40 feet above the wells, within about 300 yards between the little plain and the valley in which lies the village of Ajoowal. Easterly from the wells for half a mile the ground is little broken and slopes gently, but westward it is much broken by hills, rising 30 feet or so above the wells, and narrow valleys some 75 feet below the level of the wells.

3.—GEOLOGY.

a. Structure.—The little plain of the wells lies in a basin of the rocks which seems to extend for several miles both easterly and westerly. The first ridge north of the well is formed by a saddle in the rocks, but seems to lie within the main basin, which is bounded rather by the rock saddle of the double ridge, about 200 yards further north. The low ridge south of the wells seems to be composed of two or three chains of rock saddles, but to be in the main the northern half only of a large saddle, having the general dip of its rocks northerly. Subordinate to this main structure are many small saddles and basins, the larger ones in general parallel to each other and to the main basin, but the smaller ones filling up the spaces between each other and the larger ones with great variety and apparent irregularity in their directions. The general course of the main basin seems to be about north 80° east, but that of the larger of the small basins seems to be north 70°, or only 60° east. The dip is often quite steep, often in fact reversed (as far as 70°), and is seldom less than 45°. Owing to this, and the fact that there are so many small basins and saddles with various directions, it is very hard to form a good opinion as to the precise place of any given bed in almost any place where the rocks are unexposed for a few yards. But in the central part of the basin the rocks are somewhat less disturbed and irregular than at the sides.

b. Rock Beds.—The rocks that share the structure just described belong to the nummulitic formation, and are the only ones that are clearly in place within

200 yards of the oil wells. But a little more than a quarter of a mile southwest of them are exposed some rocks, probably of older alluvial age, lying nearly level upon steeply dipping nummulitic rocks, and capping the hills on the northern edge of the great plain. These rocks, of alluvial age, are a brown pebble rock, with pebbles of walnut and filbert size, some 10 feet thick, covered by a coarse concretionary light buff (but weathering dark bluish gray) limestone or travertine, full of irregular holes, perhaps five feet exposed. Many blocks of this same limestone are scattered on the hill tops between that and the wells, and in some places are seen also traces of the pebble rock, and some of this seems to be in place. In the little plain of the oil well there is also a thickness of a few feet (perhaps generally from three to a dozen or even more) of wash or soil and recent alluvium that covers the rocks in the hollows. Indeed, well No. 2 of this year has now been dug to a depth of over 111 feet before coming to solid rock, and a great part of this depth is probably in wash.

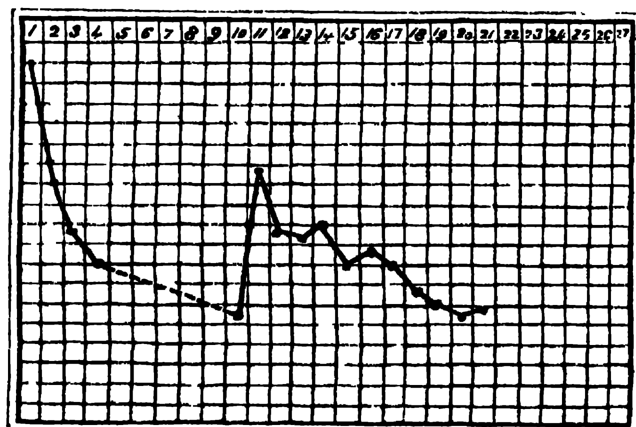
The following seems to be the section downward of all the rocks of nummulitic age exposed within a quarter of the oil wells, and perhaps also within a much greater distance, for the many saddles bring the rocks again to the surface, perhaps with some changes of texture, or hardness, or thickness, or color, in the same beds :—

Thin layered, reddish brown, fine grained, hard calcareous sand rock with softer, thinner, redder layers . .	about 12 feet.
Gray, slightly reddish, soft coarse sand rock	„ 12 „
Red, coarse, calcareous, thin layered, sand rock, with white calc spar seams	„ 8 „
Soft greenish gray, coarse sand rock	„ 30 „
Coarse gray, slightly reddish sand rock	„ 30 „
Coarse brown pebble rock, thinning out	„ 5 „
Bright red shales, mostly soft, but with some hard layers .	„ 30 „
Brown shaly sand rock, thin layers, with shales between .	„ 4 „
Greenish gray shales and sand rock	„ 2 „
Bright red shales (partly hidden)	„ 4 „
Gray, slightly reddish, weathering dark brown, hard, rather coarse, compact, a little cross bedded sand rock . .	„ 10 „
Bright red shale (partly hidden)	„ 15 „
Bright red shale, with some layers of greenish gray (partly hidden)	„ 8 „
Chiefly red or reddish gray sand rock and red shales .	. . 170
Light yellowish brown, soft, irregularly bedded sand rock, with some thin (six inch) layers of harder nodules and some brown shales	about 10 feet.
Yellowish brown, hard sand rock, extremely full of nummulites	„ 3 „
Brown hard, nodular sand rock, made up of little and big nodules, very irregularly joined together . . .	„ 4 „
Very soft greenish gray and brown sand rock or shales, with some harder, six-inch, layers of brown sand rock, *oily or bituminous*	„ 20 „
Brown, very coarse pebble rock ; the pebbles are rounded, and mostly of sandstone, and some of them six inches long or more ; some of them were of a brighter yellowish brown than the rest of the rock ; a few small ones are of limestone, from two feet to six feet, say . . .	„ 4 „
Very light brown soft sand rock	„ 7 „
Pebble rock like that just described	„ 1 foot.
Light brown, very coarse soft sand rock	„ 7 feet.
Fine pudding rock, full of nummulites, hard (calcareous ?)	„ 1 foot.
Very light brown soft sand rock or shales, with here and there a harder rib of the same, and perhaps some red near the bottom	„ 20 feet.
Light brown or slightly brownish gray, very coarse thin layered shaly sand rock	„ 3 „
Chiefly brown sand and pebble rocks . .	. . 80
Red shales	about 2 feet.
Light brown calcareous sand rock or sandy lime rock in thin (four-inch) layers exposed	„ 1 foot.
Red shales or clay, with about one foot of the same sandy lime rock, in thin layers, about two-thirds of the way down	„ 20 feet.

Dove-colored rather pure-looking, thin layered lime rock	about	3 feet.
Red shales? hidden	„	2 „
Same lime rock as last, but irregularly bedded	„	2 „
Red shales or clay	„	15 „
Same but less pure-looking lime rock	„	3 „
Red clay? mostly hidden	„	2 „
Reddish and greenish hard calcareous shale	„	1 foot.
Red clay? hidden	„	9 feet.
Rather pure-looking dove-colored lime rock, such as above, and shales of a like kind, and softer shales, partly hidden and partly exposed, a succession of beds	„	100 „
Bright red clay or fine shales	„	10 „
Same succession of lime rock, hard and soft shales, partly hidden	„	20 „
Gray lime rock, red and gray shales		190
Bright red shales, perhaps		60
Whole series exposed		500

4.—OIL AND ASPHALT.

b. Yield.—The oil wells were first dug in 1866 by Mr. Fenner near a natural spring. There are seven or eight holes dug by him lying in a general north-east and south-west direction, and within 70 yards north-east and 50 yards south-west of the main well, and within about 20 yards of each other. Two or three of the holes are shallow, and most of them have fallen in, and seem never to have yielded oil. One however, 50 yards north-west of the main well, is said to yield a little oil, but much less than the main well, and it is therefore neglected. It is 13 feet deep, and goes something over half of that distance into the sold rock.



Another hole (now filled up), 20 yards south-west of the main well, yielded still less oil, and a few drops were seen upon the water that was there; one or two of the other holes show a trace of oil also at times. The main well was the most promising when all these holes were 15 feet deep, according to Mr. Fenner's report, and yielded "25 seers a day," about six gallons. It was therefore deepened by him in 1869 to 35 feet, and yielded then, he reported, "seven to nine *garrahs* every morning," which would be about 25 gallons, allowing a gallon or two for waste in the "wasteful manner of gathering" which he speaks of. At the end of March 1870 the same well yielded about five gallons a day (one *garrah* and a half to two *garrahs*) when the oil was gathered every day; but when the well had been neglected for a week, the yield would be about 30 gallons for the first day.

On the 8th of April 1870 a boring was begun in the bottom of this well, and was carried to a depth of 75 feet from the surface. The largest yield of the well and boring on any one day was 50 gallons on the 28th of May, just after the boring was finished. The whole yield of the well and boring since the 8th of April has been—

From the 8th of April 1870 to 28th of May 1870	about	500	gallons.
In the week ending 4th June 1870	„	180	„
Do. 11th „ „	„	120	„
Do. 18th „ „	„	97	„
Do. 25th „ „	„	80	„
On the 27th and 28th „ „	„	23	„
In the week ending 6th Aug. „	„	55	„
Do. 13th „ „	„	128	„
Do. 20th „ „	„	98	„
Do. 27th „ „	„	94	„
Do. 3rd Sept. „	„	99	„
Do. 10th „ „	„	79	„
Do. 17th „ „	„	88	„
Do. 24th „ „	„	79	„
Do. 1st Octr. „	„	66	„
Do. 8th „ „	„	60	„
Do. 15th „ „	„	58	„
Do. 22nd „ „	„	59	„
		1,963	

From the 28th of June to the end of July no oil was gathered owing to a caving in of the well. On the 9th of August a pump was fixed in the well for the first time, and the increased yield from about that time seems to be mainly due to frequent pumping, but partly perhaps also to the re-opening of crevices on the rocks by the water of the rains that soaked through them, and was pumped out by the borehole. The irregularity of the yield in the last weeks (which is still more striking in the daily record) may perhaps be owing either to irregularity of pumping or else to changes of weather not reported.

A diagram showing the foregoing weekly yield of the well gives what is

clearly a broken parabolic curve, and shows that the well will, at the end of this year (1870), yield some 30 or 40 gallons a week, and that the yield will continue worth pumping until 1st July or 1st October 1871, although very small at last. The diagram shows also that the future yield of the well will be about 1,000 gallons, making its whole yield about 3,000 gallons.

On the surface near the main well, and north-easterly from it towards the next best yieding hole, is a quantity of hardened mineral pitch or asphalt (called by the natives "moomeeai") upon the surface of the ground, clearly the result of the drying of oil that has flowed here naturally in past times. This asphalt covers a space about 30 yards long, and averaging say three yards wide, with perhaps an average thickness of six inches, and making the whole quantity some 15 cubic yards. It is in parts pretty pure, but in other parts much mixed with sand and gravel. It would probably weigh on the average something like a ton and a quarter to the cubic yard, or in all about 19 tons. Of gas it would yield to the cubic yard probably somewhat more than as much as half a ton of oil, or some 11,000 cubic feet.

c. Outcrop.—In the main well (or well No. 1) and in the hole close by it, and on the surface of the ground for a few yards north-east of it, is exposed a soft greenish gray sand rock, and the position of the asphalt shows that the oil issued from it, especially from cracks in it; but the whole rock seems impregnated with bitumen or dried oil, and looks brown on the inside, while weathered gray outside. There is also exposed near to this rock a hard, rather shaly (limy?) sand rock quite filled with nummulites. The soft greenish gray sand rock which contains the oil (perhaps from the decomposition of the soft parts of the bodies of the nummulites, so wonderfully numerous) seems to be the rock about 20 feet thick, noted as bituminous in the general section, about 17 feet below the top of the series of brown sand rocks and shales. The outcrop of this bed of rock runs probably about north 80° east from the wells, but is not exposed there within half a mile at least. Westward it runs nearly in the same direction, with some crooks for about a quarter of a mile, without any good exposure, and then turns northerly and then north-easterly around the middle of the basin. At this turn it is partly exposed, and seems to contain no bitumen, but from about 50 yards north-east of the turn for about 200 yards in that direction it is seen to be impregnated with bitumen in the same way as at the oil wells, and, although weathered greenish gray outside, looks brown

inside, and gives out a bituminous smell. This exposure of bituminous character is a quarter of a mile north-west of the main well, just below a dam across a small watercourse, and along the hillsides on either hand. No asphalt, apart from what impregnates the sand rock, is seen here. About 450 yards north-east of the turn northward the outcrop is cut short by a fault nearly at right angles with it, and thrown about 160 yards south-easterly to the ridge next north of the wells, and then runs north-east for half a mile or so at least. The oil-bearing bed crops out likewise along the brow (nearly east and west) of the second hill north of the oil wells, about 360 yards north of them, with a northerly dip, the northern side of a saddle. Another saddle, with so steep a southern dip as to amount to a fault in some places, brings up the same bed again along the brow of the nearly parallel ridge, some 60 yards still further to the north. But in all these outcrops, wherever exposed, it seems not to be bituminous, except in the places already mentioned. Indeed, the deposit of oil at the wells seems, like those found elsewhere in the district, to be of very limited extent—perhaps a few score yards at most.

d. Working.—It is clear, then, that any digging or boring should be made at first very near to the main well, so as not to fall quite outside of the deposit. As the rock just here dips steeply some 60° or more north-easterly, every 55 feet in that direction will find the bed at 100 feet greater depth if the dip should continue uniform. The rock however, as seen in the digging close to the oil well, changes its dip here two or three times within four or five yards, with little saddles and basins, so that its place at the distance of 55 feet cannot be counted on with certainty: still its most probable place is as just mentioned. It is possible that if the oil-bearing bed should be bored into at the depth of 100 feet or thereabouts, it might yield more oil there than at the present well; but it is not very probable.

The whole cost of the boring and digging of this year has, however, been at least equalled by the value of the oil taken; for that expense up to the end of September was about Rs. 1,200, or a little more, making the 2,000 gallons of oil cost about 10 annas a gallon. The cost in America of refining crude oil is about five annas or less a gallon; even if it were double that here, the cost of refined oil from this source would be but 20 annas a gallon, or less than half what it costs in the Rawalpindi market. If the crude oil yields 80 cubic feet of gas to the gallon as expected, the cost of this oil for gas would be at the rate of one anna for eight feet, or Rs. 7-13 for 1,000 feet.

On the 23rd May 1870 another well for a boring ("well No. 2") was begun at 50 feet north-west by west from boring No. 1 (by mistake this point was taken instead of "30 feet north-north-west," as directed); and on the 1st of October it had been dug to a depth of over 111 feet without coming to any solid rock on which to begin boring,—nothing but red and gray mottled clay. The object of the boring was to test the oil-bearing bed at a depth of 75 or 100 feet quite under cover, but not far from the first boring. The bed at the place taken for the well will, however, be somewhat deeper than that—say 150 feet to the bottom of it. If the dip should have grown steeper than at boring No. 1, or prove greater than 60 degrees, the depth may be still greater.

In August (contrary to the indications of this survey) a second boring was begun alongside of boring No. 1 in the same well; but, at the depth of about eight feet, was stopped by the sticking fast of a chisel that could not be removed. The boring of another hole so near the first was not advised, because the first would probably drain the rock of oil for some distance around it so thoroughly as to make another boring unlikely to pay its expense.

On the 24th September 1870 a third boring was begun at 88 feet east-north-easterly from boring No. 1, to be carried on at the same time with the digging of the second well, and to test the oil-bearing bed at a distance of 100 feet or so from the first well along the strike. On the 4th October 1870 a hole was likewise begun about 80 feet north-north-west of boring No. 3 to test the bed again at a depth of about 75 or 100 feet. If these holes should give encouragement, a hole might well be bored about 50 yards north-easterly from boring No. 1 near an old hole that has a show of oil in it; after that, if still

encouraged by the borings already made, one might be make at 30 feet north-north-west of this last, and so on, feeling the way along the strike north-easterly, and at the same time north-westerly to the dip. If these borings near the outcrop are successful, still deeper ones might be made to the dip. The borings themselves will give, as they go on, better and better information in regard to the course of the bed, both strike and dip, and be a guide to future borings.

5.—SHIPMENT.

As the well is close by the big road from Futtehjung to Campbellpoor, the oil or asphalt can be carried away either on camels or in bullock carts. The distance by the old road to Rawalpindi is 27 miles and a half; by the new road about 30 miles.

7.—BOOKS AND PAPERS.

The Gunda oil springs are spoken of in the "Report on Petroleum Operations" by A. Fenner, Assistant Engineer, Proceedings of the Government of Punjab, Public Works Department, 17th June 1866; in a letter on the Gunda Oil by Doctor T. E. B. Brown, Chemical Examiner, Supplement to the *Punjab Government Gazette* for 7th February 1867; in a manuscript Memorandum, No. 220, by Major C. H. Hall, Deputy Commissioner, 15th February 1868, on file in Public Works Department, Lahore; in a "Report on Borings for Petroleum by A. Fenner, Executive Engineer, Proceedings of the Government of Punjab, Public Works Department, July 1869, pages 2, 3, and 6; and in a "Note on the Petroleum Locality of Sudkal," by A. B. Wynne, F G.S., Geological Survey of India, Records of Geological Survey of India, Vol. III, 1870, No. 3, pages 73 and 74.

Report on the Chhurrut Oil Lands, Rawalpindi District, Punjab, accompanied by a Geological and Topographical Map of a Rough Survey, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

1.—SITUATION.

The Chhurrut oil well is 150 yards south-east of the village of Chhurrut, five miles and a half west by north of Futtehjung, and 28 miles in a straight line west of Rawalpindi.

2.—LAY OF THE LAND.

The oil well is in the middle of a little valley that stretches with a flat bottom for 200 yards to the east and 125 yards to the west, with a width of 40 yards at the oil well, but of 60 yards further east. This little valley is separated only by a narrow ridge, 60 feet high, from the Bugwan River on the south, which is here about 1,500 feet above the sea, and has a general east and west course. The little valley, only 10 feet above the river in level, is drained into the river around the western end of this hill. On the south side of the river is a flat about eight feet above the river in level and 100 yards wide. South of that is a long double east and west ridge of 80 feet or more in height, followed on the south by a narrow plain and other parallel ridges. North and west of the oil well the land rises to a level of 40 or 50 feet above the river, and reaches back in a plain, 400 yards to the north, to a long east and west ridge, some 40 feet higher, followed closely by other parallel ridges to the north. The village is built on the southern edge of the plain just mentioned.

3.—GEOLOGY.

a. Structure.—The rocks of the first long ridges on the north and south are in the main the same and dip away from the river, giving the whole valley between the appearance of a rock saddle valley or anticlinal valley, of half a mile wide. But the saddle is not a simple one, and has within it some eight or ten smaller saddles, and perhaps the southernmost of them should rather be considered as giving an anticlinal character to the southern mountain, and possibly the corresponding anticlinal on the north, which is half hidden, should

cause the valley to be regarded rather as a rock basin with smaller rolls within it. At the oil well itself the rocks form, it seems, a very small saddle; 40 yards south is another, and about 140 yards south of that probably another, and 80 yards south of that is another, and 100 yards south of that still another. On the north there seem to be small saddles at 50, 110, and 210 yards north of the oil well, and perhaps still others at 290 and 400 yards north of it.

b. Rock Beds.—The rock beds exposed in this neighbourhood are in the main the same as those seen around the Gunda oil wells, three miles to the east, but with some variations, and are of nummulitic age, except perhaps near the bottom. The following sections are exposed near the Chhurrut place:—

In the double ridge south of the Bugwan very soft greenish gray sand rock	about	6 feet.
Rather hard greenish gray sand rock	„	10 „
Hidden	„	4 „
Greenish gray soft sand rock	„	30 „
Hard coarse gray sand and pebble rock	„	2½ „
Greenish gray soft sand rock	„	5½ „
Red shales	„	2 „
Greenish gray soft sand rock	„	5½ „
Hard pebble rock (brown pebbles up to two inches)	„	4½ „
Greenish gray very soft sand rock (only 2½ feet exposed at top)	„	20 „
Greenish gray soft, partly hard, sand rock	„	23 „
Greenish and brownish gray sand rock and shales		about 113
Gray nummulitic shale, and two (two-inch) layers of gray lime rock	about	4 feet.
Very light gray lime-rock, crystalline and nummulitic	„	0½ „
Gray shales, full of nummulites	„	2 „
Light gray thin layered lime rock	„	1 foot.
Nummulitic shaly lime rock	„	2½ feet.
Mottled, white, brown, red, but dark weathering lime rock	„	1 foot.
Brown shales	„	2½ feet.
Nummulitic shaly lime rock	„	3 „
Gray lime rock shales	about	17
A gap here of perhaps	„	50

Then on the north side of the same ridge—

Hard shaly lime rock with iron ore (brown hematite altered from pyrites) in small crystalline nodules	about	3 feet.
Brown shales	„	6 „
Hard gray shaly lime rock	„	4 „
Gray lime rock and shales		about 13
Here a gap of perhaps		„ 30

Then in the north-east corner of the little flat in which the oil wells lie—

Light and dark gray lime rock beds, with gray shales between (in these the oil occurs, and at the well at least the lime rock is sandy)	about	30 feet.
Red shales (thick)	„	? „

Likewise, probably, the lower part of this last section in the north bank of the Bugwan, just south of the oil well—

Gray lime rock	about	4 feet.
Grayish green shales or clay	„	10 „
Red shales or clay	„	8 „
Hidden	„	5 „
Dark purple shales	„	4 „
		31 feet.

OIL AND BITUMEN.

a. Mode of occurrence.—The oil seems to flow from the crevices of the sandy gray lime rock marked bituminous in the section, and from the more

G

sandy shales between the layers of lime rock, and to come then from the lower part of the sandy lime rock and shales of the Gunda section. The oil when fresh is dark green in color, but turns brown or black in the air.

b. Yield.—At the oil well a hole was dug by Mr. Fenner in 1869, 20 feet deep according to his report, and a bore hole sunk, he says, to the depth of 72 feet from the surface. He reports that the hole yielded two seers (or say half a gallon) of oil daily. The digging at the time of this survey (April 1870) was almost quite full of muddy water through which many bubbles of gas rose; but the amount of oil on the surface was extremely small, perhaps hardly a spoonful, and the villagers said that there had never been any more. As the oil does not seem to be gathered at all, the amount of it on the water must be the accumulation of a long time, so that the daily, or even monthly, yield would seem now to be extremely little.

On the surface of the ground and of the gray limestone rocks that crop out near the well are irregular deposits of solid mineral pitch or asphalt, sometimes a little softened in the heat of the sun, in some parts quite pure, but in others much mixed with sand and fine gravel. These deposits reach to 33 yards east of the well, and to 47 yards west of it, with a gap of 20 yards where none is exposed, just west of the well. The whole length then is about 60 yards; its average width is perhaps 1½ yards, and its average thickness ⅙ yard, making the whole amount 15 cubic yards. This impure asphalt would perhaps weigh a ton and a quarter to the cubic yard making 19 tons in all, and perhaps yield of gas as much to the cubic yard as half a ton of oil, or say 11,000 cubic feet. In the south bank of the Bugwan River, about 275 yards south-east of the oil well, are exposed within a space of 50 yards four deposits of solid impure asphalt, plainly thrown down by the river in a former bed. They are 1, 5, 3, and three yards long, and average about one-sixth of a yard in thickness, and reach into the bank perhaps one yard on the average, giving in all two cubic yards or 2½ tons. There would be then in all 17 cubic yards, or 21½ tons.

d. Working.—As the rocks here are in a saddle form, with a steep dip of about 70° on either side, it is necessary of course in boring to bore either along the top of the saddle, or within a short distance of it on either side. The northern dip of the saddle is the plainest, and the oil-bearing bed would be found at 100 feet greater depth for about every 17 feet of level distance in this direction. The small yield of the present holes, however, does not give encouragement to expect much oil from any deep borings. This oil deposit seems, in common with the others of the Punjab, to be of very limited extent; and it would therefore be necessary in boring to keep at the outset very near to the surface exposure of bitumen.

5.—SHIPMENT.

The bituminous earth or any oil that may hereafter be found could be carried either on camels or mules three miles to the big road at Gunda, and could thence be carried either in the same way or in carts 27 miles and a half to Rawalpindi, or 30 miles and a half in all by the old road, say 33 by the new.

7.—BOOKS AND PAPERS.

This oil place is spoken of in the "Report on Petroleum Operations," by A. Fenner, Assistant Engineer, Proceedings of the Government of Punjab, Public Works Department, July 1866; and in the "Report on Borings for Petroleum," by A. Fenner, Executive Engineer, Proceedings of Government of Punjab, Public Works Department, July 1869, pages 3, 4, 5, and 6.

Report on the Boraree Oil Lands, near Chhurrut, Rawalpindi District, Punjab, accompanied by a Geological and Topographical Sketch Map, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

1.—SITUATION.

The Boraree well, Rawalpindi District, Punjab, is three quarters of a mile south-west of Chhurrut, 6½ miles west of Futtehjung and 28½ miles in a straight line west of Rawalpindi.

2.—LAY OF THE LAND.

The oil well is in the bed of a very small brook, at its union with a somewhat larger brook called the Buraree Kussee, both coming from the west, and flowing 230 yards further east into a still larger brook that comes from the south, and flows 300 yards further northerly into the Bugwan River, just at a great bend it makes from running westward to running northward. The river here is about 1,500 feet above the sea-level, and the oil well some 15 feet higher. North of the oil well there are four or five ridges, rising from 50 to 70 feet above the river level, with narrow valleys between them, all within a distance of 300 yards. North of that the land is gently rolling for about 500 yards, with a general level of about 50 feet above the river, and then to the north are parallel ridges of some 50 feet high. South of the oil well rises steeply an east and west ridge, of 160 feet in height, followed on the south by a parallel ridge of some 90 feet above the river level, and then by a comparatively flat region with low parallel ridges. West of the oil well the land rises very steeply into two east and west ridges, 130 feet or more in height, or perhaps rather one ridge, with outliers on the south between it and the high ridge, just spoken of. To the east of the oil place the land is in parallel east and west ridges, some 60 or 80 feet high, with high rough valleys between.

3.—GEOLOGY.

a. Structure.—The high hill or mountain just south of the oil place seems to be made up of rocks in saddle form in the main, but with two subordinate rolls on the south side, and one or two others on the north side. South of these is perhaps another saddle, still within a quarter of a mile of the oil well; just south of the well seems to be another saddle, and some 40 yards north of the well a very sharp up-throw or fault of perhaps 50 yards, and at about 190 and 260 yards north of the oil well other saddles.

b. Rock Beds.—The rock beds exposed are the same as those to be seen near the oil well at Chhurrut, and in the main the same as those about the Gunda oil wells, four miles to the east, but with some variations, and are of nummulitic age. The following sections (downward) are exposed near the Boraree well. South of the mountain and south of the oil places—

Reddish sand rock, with white calc spar seams, perhaps .	about 50 feet.
Reddish gray soft shaly sand rock	„ 2½ „
Slightly reddish gray sand rock	„ 5½ „
Reddish sand rocks and shales .	„ . 58

On the north and south side of the same mountain—

Brown sand rock and shales? hidden	about 74 feet.
Red-pebbled pebble rock	„ 3 „
Gray (brown weathering) sand rock	„ 20 „
Brown and gray pebble rock, sandy	„ 12 „
Greenish gray, rather soft, sand rock	„ 3 „
Brown sand rock and shales .	„ . 112

On the south side of the same mountain, and at about two hundred yards east of the oil well—

Light gray lime rock	about 5 feet.
Gray nummulitic lime pudding rock	„ 20 „
Red shales, perhaps	„ 10 „
Greenish gray sand rock	„ 1 foot.
Gray (weathering brown) sandy lime rock	„ 5 feet.
(In parts a greenish gray sand rock, in other parts a pebble rock).	
Greenish gray sand rock	„ 20 „
Red shales	„ 8 „
Greenish gray shaly sand rock	„ 1 foot.
Red and green shaly clays, with salt and bitumen .	„ 30 feet.
Gray lime rock and shales .	100
	270

4.—OIL AND ASPHALT.

a. Mode of occurrence.—The asphalt here, then, seems to be near the upper part of the 190 feet of gray lime rock and shales of the Gunda section. For some 15 yards west of the digging the shales are bituminous, and 3 feet in thickness of them richly so. But the well (some 2½ yards in diameter, and, it is said, about six feet deep), although in line with these bituminous shales, exposes only a surface deposit of earthy asphalt, merely wash or alluvium that has been thrown down by the brook in its former bed. The whole is nearly full of muddy water, so that anything below this is hidden. Gas bubbles rise almost constantly in the water, especially in warm weather, seeming to be set free from the asphalt by the heat of the sun. The same heat likewise, as it seems, causes small streams of oil to flow from the edge of the same deposit of asphalt for a distance of some 18 yards east of the whole where the asphalt is covered by a bank of red earth on the north side of the bank. The amount of this asphalt seems to be about six cubic yards (9 yards long by 1⅜ yard average width, and ⅝ yard average depth); more may be hidden under the gravel and clay of the bank, which seems somewhat bituminous. The amount of oil is insignificant, perhaps a spoonful a day from the little streams on the bank; and in the whole there is on the water scarcely a trace of oil. About 175 yards east of the hole are exposed likewise in the north bank of the same stream, about two feet apart, to wash deposits of asphalt or bituminous red clay, oily in the sun's heat. They are each some 3 feet long by perhaps 18 inches wide and a foot thick, and would yield therefore about one-third of a cubic yard. These deposits of earthy asphalt on the Boraree Kussee would perhaps weigh a ton and a quarter on the average to the cubic yard, and yield perhaps as much gas to the cubic yard as half a ton of oil, or say 11,000 cubic feet.

b. Boring.—It is plain that any borings to be made to test the richness in oil of the main deposit must be made very closely along the line of outcrop, that is, about north 86° east and south 86° west of the present digging; for the dip here is almost vertical, say 87°. The dip is northerly, so that the borings should be made rather on that side of the outcrop than on the other; but with a dip of 87° the bed would sink 100 feet in about five feet of level distance northerly. The deposit, however, seems to be, like the others in the Punjab, one of very limited extent, as the same beds do not seem to be bituminous at any great distance, even 20 yards west of the digging, so that any borings should be made very near to the present hole. The prospect, however, is little encouraging for any such expense, and the better plan would be to dig the bituminous earth alone, and be satisfied with this easily won though at this point rather scanty source of oil and gas.

5.—SHIPMENT.

The bituminous earth could be carried only on the backs of animals by the present roads, either mules or camels, to Gunda, three miles and three quarters, and thence on the big roads either in the same way or by carts 27 miles and a half to Rawalpindi, in all say 31 miles, or by the new road 34 miles.

Report on the Jafir Oil Bore of 1869, Rawalpindi District, Punjab, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

The Jafir boring, made for oil in 1869 by Mr. A. Fenner, is on the east bank of the Ramora brook, one mile and a half north of Jafir, one mile and five-eighths south-west of Chhurut, six miles and a half west of Futtehjung, and 29 miles west of Rawalpindi. Mr. A. Fenner reports that he bored here 42 feet deep, chiefly or wholly in red sandstone, but that he found at most only a slight trace of oil. At present nothing is to be seen here but a hole, about four feet in diameter, nearly full of water, with a small exposure on one side of bluish gray soft shaly sand rock. The rock has a strike of about north 87°

east, and a dip of about 60° northerly. There is not the slightest trace of oil nor sign of its existence, and none is known ever to have been found there except the slight trace mentioned by Mr. Fenner. He does not think any further exploration here advisable, and certainly every thing seems to give strength to his opinion.

7.—BOOKS AND PAPERS.

The work at this place is described by Mr. A. Fenner, Executive Engineer, in his report on "Borings for Petroleum" in the Proceedings of the Government of Punjab, Public Works Department, July 1869, pages 5 and 6.

Report on the Dulla Oil Lands, Rawalpindi District, Punjab, accompanied by a Geological and Topographical Sketch Map, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

1.—SITUATION.

The Dulla oil lands are 38 miles and a half due west of Rawalpindi, 16 miles west north-west of Futtehjung, three miles south south-west of Boota, and two miles and a half north-north-west of Buttiot.

2.—LAY OF THE LAND.

The Dulla brook is a small stream that winds through the central parts of the Choor Mountains. Near the old Dulla trial pit the course of the brook is about north, and the pit is in the southern corner of a little flattish piece of ground, about 100 yards wide north and south, 300 yards long east and west. About 100 yards up-stream, south, is another flat of about the same size and parallel to the other, and through it the brook, and for a mile or more to the east, flows westerly; 200 yards north of the pit the brook turns from its northerly course, and flows again westerly for a mile or more, and then northwesterly; 600 yards west of the Dulla pit the Oodee brook, still smaller than the other, runs a little west of north into the Dulla brook, and at its mouth is another flat somewhat larger than the two already mentioned, and here is the deserted house that was once the Oodee salt chowkee. On the Oodee brook, a third of a mile west south-west of the Dulla pit, is the Oodee pit in a flat about 50 yards long and wide, and above this the brook has a north-easterly course, and is very small. Both pits are about 1,750 feet above the sea. The space between the two brooks and the two pits is filled by a steep hill, rising at one point to a height of about 270 feet above the pits, or perhaps 350 feet above the junction of the two streams. East and north of the Dulla pit are other steep hills of less height, and south and west of the Oodee pit are others still.

3.—GEOLOGY.

The rocks near the two trial pits lie in saddle form; those at the Dulla pit dip some 60° northerly, and those at the Oodee pit about as steeply southerly. Some 10 yards north of the Oodee pit the place of the axis is to be seen, and its dip seen to be some 20° westerly. The course of the axis is probably about north 83° east. The dip on the north side of the saddle seems to be gentler than that on the south, and, within a quarter of a mile of the axis, becomes about 30° only.

The chief rocks exposed are a bluish gray lime rock, in great part flaggy with perhaps some gray or light brown shales between the layers here and there. The whole thickness of these rocks would seem to be something more than 1,100 feet. No fossils have been found in it, but its age is probably the same as that of the Rutta Otoor lime rock, and also of the Punnoba lime rock, both nummulitic, and probably, too, the same as the main nummulitic lime rock of the Salt Range, as, for example, that of the Burra Kutta and Chhota Kutta oil springs near Jaba, a dozen miles east of the Indus.

Something more than 300 feet above the lowest exposed beds of rocks there is found a small amount of asphalt in the cracks of the lime rock through a thickness of some six feet.

Above the nummulitic lime rock, and uncomformable with it, are about five feet of a brown pudding rock and travertine, like those of Gunda and near the mouth of the Bussala River. It lies nearly or quite level, seems never to have been disturbed, and is of very small extent, only seen near the Dulla pit.

4.—OIL AND ASPHALT.

The asphalt is merely dried oil that was once liquid in this place, and might still be found so at a distance from the surface of the ground. It is exposed in both of the old trial pits, and in the heat of the sun a small portion of it melts, and becomes a black tar. There is also a small quantity of the asphalt in the wash near the Dulla pit, cementing together the rounded pebbles of the old bed of the brook. This deposit is some six feet long and about three feet thick at most, with an average thickness of say two feet, and a width of perhaps a yard though this is hidden in bank. Allowing one-half for the larger pebbles, there would be, then, some nine cubic feet of earthy asphalt. At the Oodee pit there is exposed in the cracks of the rock something like a cubic foot and a half of like asphalt. In all, counting some that is exposed in the rock of the Dulla pit, there is perhaps half a cubic yard of earthy asphalt, which would weigh say five-eighths of a ton.

There is no liquid oil exposed at all; the nearest approach to it is a few spoonfuls of black tar that has melted out of the asphalt in the sun's heat.

The outcrop of the oil-bearing or asphalt-bearing bed probably runs on the north side of the saddle is not far from a straight line from the Dulla pit to the Oodee pit, and near this turns and runs for a quarter of a mile at least a little south of east. East of the Dulla pit its course is about east.

As the outcrop of this bed through all this course has not been observed to be oil-bearing, it is highly probable that this character does not extend far from the pits in any direction. In order to test this point, therefore, by boring or deep digging, it would plainly be best to try at first only a very short distance from the pits, and then, if encouraged by success, to go further and further from them by degrees. The first boring ought to be, where the bed would lie, of not more than 50 or 100 feet deep below the surface of the ground, that is, not more than about 50 feet northerly from the Dulla pit, or 90 feet south-westerly from the Oodee pit. If the result of such a trial should be encouraging, a deeper boring might be made 120 feet northerly from the Dulla pit, or 150 feet south-westerly from the Oodee pit, so as to strike the oil-bearing bed about 200 feet below the surface. These borings would themselves show more precisely than is known at present the dip of the bed at either place, and would be a guide to further borings.

But the very unpromising amount of asphalt at either pit gives small encouragement for such borings, and the smallest of them would only be advisable on the part of the Government (never of any private individual) after meeting with fine success on other oil lands of the Punjab.

5.—SHIPMENT.

The inaccessibleness of the place is another drawback. It would be possible, however, to transport oil or asphalt down the Dulla brook, then up the Oodee brook, to the Oodee digging, a distance of three quarters of a mile; or a smoother road, but steeper, might be taken across the ridge between the two pits, rising to a height of 175 feet above them, but going a distance of only a third of a mile. From the Oodee pit the road leads south-westerly to Buttiot, a distance of three miles. Most of the distance from Dulla pit to Buttiot is by an extremely bad road, though a well-travelled one; it runs where possible through the bed of the water-courses, and is very narrow, and much encumbered with large stones. From Buttiot there is a bridle path eastward to Chhurrut, 11 miles and a half, and thence still eastward to Gunda, three miles. Thence south-easterly by big wagon road, two miles and a half to Futtehjung, and thence easterly by a big road, 25 miles to Rawalpindi, or 17 miles and a half of bridle-path from Oodee pit to Gunda, and 27 and a half of big road from Gunda to Rawalpindi, 45 miles in all. The big road might instead be struck at

Jafir, seven miles west of Futtehjunj, but the whole distance would still be about the same.

7.—BOOKS AND PAPERS.

The workings at Dulla are described in the report on "Borings for Petroleum," by Mr. A Fenner, Executive Engineer, in the Proceedings of the Government of Punjab, Public Works Department, July 1869, pages 4, 5 and 6.

Report on the Punnoba Oil Lands, Kohat District, Punjab, accompanied by a Geological and Topographical Sketch Map, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

1.—SITUATION.

The Punnoba oil springs, in the Kohat District, are in a straight line, 67 miles due west of Rawalpindi, 25 miles due east of Kohat, three miles and a half north of Shekh Khan, the same distance west north-west of Choorlukkee Meeshuk, and half a mile south-east of the village of Punnoba, some five miles south-east of the boundary of the land of the Afreedees.

2.—LAY OF THE LAND.

The springs, three in number, within 25 feet of each other, are about 1,150 feet above the sea in the eastern edge of the Punnoba brook, or close beside it just where the brook cuts through the first south-eastern high ridge of the mountains that separate British India in this region from Afreedeestan. This ridge runs north-easterly and south-westerly, is about 400 feet high, and has a quarter of a mile to the south-east a parallel ridge of about 70 feet high, and south of that a plain many miles wide. North-west of the main ridge, at a distance of a quarter of a mile, is another nearly parallel ridge, about 100 feet high; north-west of that is a narrow valley in which lies the very small village of Punnoba (deserted during the hot season, and without drinking water then), and north-west of that are high mountains in parallel ranges. The brook flows south-easterly from the village to the oil spring, then southerly for a quarter of a mile to the low ridge, then easterly 300 yards, then southerly around the eastern end of the ridge, and then easterly again. The slopes of the ridges are quite steep, especially where the brook breaks through the one by the oil springs.

3.—GEOLOGY.

The rocks at the oil spring dip steeply (70°) south-easterly; but it seems to be a reversed dip on the north-western side of a rock saddle that composes the high ridge, with a gentler dip on the other side. About 175 yards south-easterly from the oil springs there is another saddle in the rocks, with a dip of about 45° on the northerly side, and of about 80° or more on the southerly. Scarcely 30 yards south-easterly from this saddle the dip changes again to a steep northerly one, at first some 45°, then even 90°, then 70°, and at length, a quarter of a mile south of the oil springs, only 30°. The first ridge north-west of the oil springs is formed by a rock saddle with dips of about 45° on either side, and there seems to be but one basin between this and the oil springs.

The rocks all seem to be of nummulitic age; at the top some 500 feet of gray lime rock, mostly in thin much broken layers with some shales; below that some 500 feet of bright red sand rock and red shales, somewhat limy in the upper part, with white calc spar seams, and below that brown sand rock and brown shales, with some small pebble rock beds. The lime rock contains nummulites and other fossils, particularly a small bivalve shell, like an oyster, three quarters of an inch long, and it is probably the same as the great nummulitic lime rock of the Salt Range. The red sand rock and shales below seem to have no fossils, but closely resemble some of the red sand rocks at the top of Gunda group, to which they probably belong. The brown sand rock at bottom, with its pebble rock beds and shales, likewise resembles closely the brown sand rock, pebble rock, beds and shales of the Gunda group, and although less filled with fossils, what seemed an imperfect nummulite was found in it.

4.—OIL.

The oil of the springs seems to come from the cracks in the lime rock through a thickness of some 20 feet of the bed, at a distance of some 175 feet above the red rocks.

The three springs altogether would yield perhaps half a gallon a day if gathered daily; but it is only taken by the natives at odd times and with the help of wisps of grass, which sop it up, and are afterwards squeezed by the hand. They use it to burn in lamps; but it is so far inflammable that it can only be used with a lamp that has a tube expressly for the wick. If burned with the wick unprotected by such a tube (as the Gunda oil is burned safely), the oil all blazes up.

The outcrop of the oil-bearing layers of rock runs from the springs north-easterly and south-westerly, probably in nearly a straight line (say north 62°, east), with a very steep northerly dip or a quite vertical one, or a reversed southerly one. Some 250 yards north-westerly of this outcrop is probably another nearly parallel outcrop of the same rocks, with a south-easterly dip of say 45°, and consequently with bends to the north where the ground rises into hills. About 350 yards north-westerly of the oil springs is probably still another outcrop of the same layers, with a north-westerly dip of about 45° with corresponding bends to the south wherever the ground is high. No other oil springs have been discovered along these outcrops, even where they cross the brook; and is not likely that the oily character of the rocks extends to any great distance from the three springs. It is clear, therefore, that any borings to test the yield of the oil-bearing bed at some depth below the surface of the ground should be made to begin with as near as may be to the oil springs. As the dip there is some 70° south-easterly, a distance of about 36 feet in that direction would bring the bed to a depth of 100 feet deeper still, and so on. It is probable, however, that the dip of the bed in following it down soon changes to a northerly dip, which grows gentler and gentler to the middle of the basin where the bed is probably only about 500 feet below the level of the oil springs. It would be best, therefore, to make the first boring only 10 yards or so southerly from the oil spring, and it will probably strike the bed within 80 feet below the level of the spring, and follow it to a depth of 200 feet or more from the level of the springs. The bed can also be traced along by borings, say 100 feet north-easterly and south-westerly near the outcrop.

Salt.—The brook for a quarter of a mile above the springs and one-eighth of a mile below them, but especially within 75 yards above them, has a great many pools of very salt water, and even the village spring, about a quarter of a mile above the oil springs, is quite brackish at the end of April. The saltness of the water comes from that character in the rocks and shales from which it seems to have issued; the brook above and below is quite dry.

5.—SHIPMENT.

A bridle-path leads from the oil springs south-easterly to the big road about two miles and a half; and by this big road, very good for mules and camels, but hardly fit for carts, the distance is nine miles to the big wagon road that leads west 26 miles to Kohat, and east four miles and a half to the Indus at Khooshialgurh and thence 71 miles to Rawalpindi, and in all 37 miles and half to Kohat, and 87 to Rawalpindi.

Report on the Aluggud Oil Lands, Bunnoo District, Punjab, accompanied by a Geological and Topographical Map of a Rough Survey, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

1.—SITUATION.

The Aluggud oil lands are on the Aluggud brook, about 10 miles and a half south of Eesa Khêl, Bunnoo District, Punjab, two miles north-west across the mountains from the ancient ruins of Kafir Kot, and 124 miles south-west by west of Rawalpindi.

2.—LAY OF THE LAND.

The oil lands lie near the foot of a north-west and south-west ridge, about 500 feet high, that has a slope of nearly 25° on the south-western side, and is much steeper on the other. Between this and other parallel ridges on the south-west, from 100 to 200 feet high, the Aluggud brook (here about 750 feet above the sea) winds in a general northerly direction. It comes to the oil lands in a north-westerly course through gaps in these lower ridges, makes an oxbow 200 yards across towards the west, then, instead of cutting through a narrow neck of a ridge of clay, it makes a curious cut in oxbow shape again to the east, about 100 yards across through the lower part of the high ridge just mentioned in very hard rocks; the cut at first scarcely eight yards wide, afterwards 40, and then at the lower end half a dozen yards again, and throughout bordered by cliffs up to 150 feet or so in height. After that the brook flows half a mile or so westerly, and then north-westerly and northerly in a valley perhaps half a mile wide. The high ridge is cut through from east to west by three small valleys. The ridges east of the high one first mentioned are still higher, and rise to 2,200 feet above the sea.

3.—GEOLOGY.

The geological structure throughout these oil lands is extremely simple; the rocks all dip south-westerly, and a nearly uniform dip of about 25°, and they seem to form the westerly part of a great rock saddle.

The following is a section downwards of the beds of rock exposed here:—

Soft gray sand rock exposed here, say . . .	about	100	feet.
Red and greenish gray clays with a few layers of brown sand and pebble rock [at 202 feet from the top such a layer (sand and pebble) three feet thick; at 340 feet one (sand) three feet thick; at 370 feet one (sand and pebbles) three feet; at 380 feet one of three feet; at 400 feet one of three feet; at 450 feet one of five feet; and at 475 feet one (sand) of 10 feet] . .	„	700	„
Coarser (up to six inches) pebble rock, with pebbles of crystalline rocks of metamorphic red sand rock, of magnetite, especially for two feet at the bottom, and of cherty lime-stone, with imperfect encrinite (?) fossils	„	40	„
Brown sandy lime rock (with productus and other fossils, weathering gray, in places seeming to become merely a soft gray sand rock, in places richly bituminous)	„	40	„
Brown and gray shales	„	180	„
Soft gray sand rock, also bituminous in parts . .	„	100	„
Gray sand rock ??			
In all .	„	1,160	

The gray sand rock at the top of the section, and the 700 feet of red and gray clays below it, seem plainly to be the same as that at Jaba, in the Salt Range, near Kalabagh, and lie at some 1,100 feet above the nummulitic lime rock, and have commonly been called Siwalik in age. The coarse pebble rock and the underlying lime and sand rocks seem to hold the place of sand rocks of similar nature that lie at Jaba between those clays and the nummulitic lime rock. The rocks of the sections of the two places correspond in fact very well. But the productus and other fossils in the Aluggud lime rock seem to show these rocks to be of carboniferous age.

4.—ASPHALT, TAR AND OIL.

a. *Mode of occurrence.*—The oil that the oil-bearing rocks contained has partly oozed out of it where exposed in cliffs along the brook, and in drying has turned into a thin coating of black asphalt on the rock. At other places along the brook the oil in like manner formed pools that in drying became masses of asphalt. This asphalt partly melts in the heat of the summer sun, and small pools of black tar are formed, some of the smaller ones all of tar, but most of them a mere coating of tar from an eighth of an inch to an inch

deep upon pools of water which the tar protects from drying up. There is now no flow at all of oil proper.

b. Yield.—The asphalt deposits extend in spots for about a quarter of a mile along the east side of the brook, at most some 25 feet wide and one foot thick, and amount in all to about 350 cubic yards. It is somewhat impure from sand and pebbles mixed with it, and would weigh perhaps in all 550 tons. Of the liquid tar in the pools there was in May 1870 about 100 gallons; and this is likewise somewhat impure from leaves and sticks in it, and perhaps a little sand.

c. Outcrop.—The outcrop of the oil-bearing bed of rocks is to be seen in the cliffs along the brook in the oxbow cut in the lower part of the ridge mentioned as 500 feet high and rises to the top of this ridge on either side of the three narrow valleys that cut across it from east to west, that is, the outcrop has a general south-east and north-west course parallel to the strike of the rocks, but with these three long bends to the west where the rocks are cut through by small streams.

d. Working.—As the oil-bearing bed shows no signs of bearing oil, except near the exposures and asphalt deposits already mentioned, it is not likely that it continues bituminous to any great distance. A test by boring should therefore clearly be made as near as may be to these exposures. The most convenient places for the first borings would be in the little flats, just above where the brook enters the gorge in the high hill, and just below where it issues from the hill again. At both the entrance to this gorge and the issue from it the oil-bearing bed is near the water-level of the latter point, and dips south-westerly at such a rate as to be 100 feet lower below that level for about every 200 feet of distance. Owing to the thickness of the oil-bearing rocks, it seems highly probable that borings would meet with success as to the yield of oil. The great hardness, however, of the 40 feet bed of coarse pebble rock would make the boring slow and costly, and perhaps the pebbles by separating now and then from the sides of the bore hole (although they seem in general firmly cemented together) would cause vexatious and serious difficulties in the boring. Should this be found to be the case, it would be desirable to protect this part of the whole by tubing as soon as bored.

6.—SHIPMENT.

The asphalt, tar, or oil could be carried by a good bridle-path (that could at small expense be made passable even for carts) two miles and a half north to the mouth of the Aluggud Valley thence likewise by bridle-path either five miles south to the River Indus at Kafir Kot (whence it could be carried in boats up the river by towing, or down the river by drifting and rowing) or eight miles north to Eesa Khel; thence by wagon road north, 28 miles to Kalabagh, and thence likewise by wagon road (now out of repair near the Indus), 107 miles through Futtehjung to Rawalpindi, or in all 145½ miles to Rawalpindi.

7.—BOOKS AND PAPERS.

The oil place is mentioned in the "Report on the Geological Structure of the Salt Range," by Dr. A. Fleming, Journal of the Asiatic Society of Bengal, Vol. XXII, 1853, No. 3, pages 264, 265, 268.

Report on the Chhota Kutta Oil Lands, near Jaba, Bunnoo District, Punjab, accompanied by a Geological and Topographical Map of a Rough Survey, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

1.—SITUATION.

The oil springs on the Chhota Kutta brook, near Jaba, Bunnoo District, Punjab, are a mile and a half south by west of Jaba, 10 miles south-east of Kalabagh, and 95 miles south-west by west of Rawalpindi.

2.—LAY OF THE LAND.

Three or four oil springs lie within a distance of about 50 yards along the banks of the Chhota Kutta close beside the water's edge, at most some six feet above its level, which is about 1,450 feet above sea-level. The main spring is about midway between the uppermost and lowermost ones. They are just at the outlet (north-eastern end) of a narrow gorge square across the north-easternmost of the higher ridges of the Salt Range, running here north-westerly, and this ridge rises steeply on either side of the brook to a height of 600 or 700 feet, and within a mile or two to twice that height. The land north-east of the ridge is much broken into low hills, up to some 200 feet in height, growing gradually lower towards the great plain to the north-east. South-west of the main ridge there is a valley half a mile wide, bounded by a still higher ridge on the south-west, and the Chhota Kutta has its head in this valley up towards the north-west.

3.—GEOLOGY.

a. Structure.—The rocks that form the high ridge by the oil springs lie in the form of a saddle, with a dip of about 60° at the springs, and some 5° more in the gorge 60 yards south-west. The axis of the saddle crosses the brooks about 220 yards above the main oil-spring. A dozen yards from the axis the north-easterly dip is 54° and 25 yards from the axis on the other side the south dip is 73°. On either side, however, the dip soon lessens from the outcrop of the oil-bearing beds to 45°, and a third of a mile north-west of the oil springs even to 30°.

b. Rock Beds.—The following is a very rough section of the rocks exposed within a quarter of a mile of the oil spring. Downward :—

Greenish gray sand rocks and shales	about	190	feet.
Greenish gray sand and filbert pebble rock . . .	,,	10	,,
Greenish gray sand rock (and shales?)	,,	125	,,
Brown pebble rock	,,	4	,,
Greenish gray sand rock and shales?	,,	316	,,
Greenish gray sand rock	,,	30	,,
Dark red shales	,,	25	,,
Greenish gray sand rock (with red shales at bottom) .	,,	75	,,
Brown fine pebble rock	,,	6	,,
Red clay	,,	6	,,
Gray soft sand rock	,,	3	,,
Greenish sand rock and shales	,,	10	,,
Gray shales	,,	25	,,
Greenish gray sand and fine pebble rock	,,	6	,,
Red and greenish gray shales alternating	,,	64	,,
Blue gray (weathering brown filbert and larger pebble rock)	,,	5	,,
Greenish gray sand rock and shales, with some fine pebble rock and red shales	,,	900	
Blue gray lime rock (and perhaps some gray shales), with nummulites, echinoderms, and other fossils . .	,,	500	
In all	,,	1,400	

The top of the section is only some 150 feet below red and gray clays that seem to be the same as those of the upper part of the Aluggud group of rocks, and the greenish gray sand rock not only seems to hold the same place as the lower rocks of that group but to resemble them closely in appearance. But both the sand rock and the clays above have at Chhota Kutta been commonly called of Siwalik age, while the rocks below the clays at Aluggud have been called carboniferous.

The pebble rock, just above the lime rock, is made up in great part of limy concretions, many of these having water-worn pebbles, as a core. In at least one of these water-worn pebbles, of a pinkish lime-stone different from the gray concretions, was found a nummulitic.

The lime rock at the bottom of the section is the so-called nummulite lime-stone of the Salt Range.

4.—OIL.

a. Mode of occurrence.—The oil comes from the cracks of the gray lime rock through a space of about 100 feet, that is, from 50 to 150 feet below the top of the lime rock, and the main spring comes from about the middle of that thickness. There are three oil springs (the uppermost ones) on the eastern side of the brook near the water's edge (under water in the wet season it is said), and a fourth (the lowest one) on the western edge of the brook near where the brook leaves the upper edge of the lime rock; and perhaps some of the pools of the brook that are covered with a film of oil are supplied with it by other springs. These pools of water come from strong and very sulphury springs; and as the water is uninhabitable for fishes and other animals, the bottom and sides of the pools are covered with a thick white, pink, and red leathery fungus-like vegetable growth. The oil upon the pools of the brook is black, the color that comes from exposure to the air; but in the larger springs the oil can easily be seen to be green when it first rises, although even here there is much black or tarry oil. The oil in the springs rises with water, and floats upon it. At two or three of the larger springs holes have been dug, say a foot and a half across and two feet deep. At the main springs gas is constantly bubbling up.

b. Yield.—Last winter the oil from these springs and from those of the Burra Kutta, half a mile south-east, was gathered by a chowkidar every two or three days for three months and the whole amount, according to his account, was about 90 gallons, or an average of about a gallon a day. Since that, however, this gathered oil partly dried up or leaked away, so that there was only about two-thirds as much to be seen at the time of the survey, even if it was not over-estimated at first. It would seem, therefore, fair, on the whole, to take the average yield of Chhota Kutta springs, if skimmed daily, as about three quarts a day, for they yield decidedly more than the Burra Kutta springs.

c. Outcrop.—The outcrop of the oil-bearing bed runs in general north-west and south-east from the springs along the hill side, but with a bend to the north-east at the springs owing to the depth of the hollow there combined with the north-easterly dip of the rocks.

d. Working.—It would of course be best, as at the other Punjab oil springs, to make the first borings to test the oil-bearing bed as near as may be to the springs, but rather towards the dip. The dip of the bed is such that the middle of it lies at a depth of 100 feet at about 75 feet north-easterly from the main spring, 200 feet deep at about 160 feet from the spring, 300 feet deep at about 250 feet distant, 400 feet deep at about 350 feet distant, 500 feet deep at about 450 feet distant, 1,000 feet deep at about 1,000 feet north-easterly from the spring. As the oil-bearing beds amount to a thickness of 100 feet, the middle of them would be at 100 feet deep near the lowermost oil spring on the brook where the upper edge of the beds comes to the surface. This would be a good place to make the first boring, as it would be some 200 feet to the bottom of the beds, and this would be a good test of their capacity at no great distance from the springs nor from the surface, yet where the beds are wholly under cover. Afterwards other borings might be made either deeper and deeper to the dip, or along the outcrop south-eastward towards the oil springs of the Burra Kutta brook on the same beds. From the size of the springs, the thickness of the oil-bearing beds, and from the fact that they continue oil-bearing so far as the Burra Kutta, half a mile off, it seems highly desirable and worth while that borings should be made here.

Gypsum and Sulphur.—On the hill side on the either side of the brook at the springs there is a large quantity of a porous gypsum, seemingly produced by the action of the sulphur water upon the lime rock. It is said also that a great deal of sulphur was formerly gathered here, but none is now to be seen in the old holes on the hill side west of the springs. It is said to have been visible in small yellow particles in the gypsum, and is probably still to be found so below the surface in a fresh hole. There seem to be some thousands of tons of gypsum (perhaps 20); but the amount of native sulphur in it is quite unknown.

5.—SHIPMENT.

The oil gathered here could be carried on camels or mules a mile and a half by a very rough bridle-path (that would need improvement for at least 100 yards near the springs) to Jaba, thence by better and better roads, the worst of them very good for camels, and perhaps even passable for carts, 100 miles and a half to Rawalpindi, in all 102 miles. Calling this eight marches and a half for a camel, and a load of a camel 50 gallons, and his cost Rs. 8 a month, the carriage of oil to Rawalpindi would cost at least 1 anna and 7⅗ pies a gallon.

7.—BOOKS AND PAPERS.

These springs are mentioned in a "Report on the Salt Range," by Doctor A. Fleming, Journal Asiatic Society of Bengal, Vol. XVII, November 1848, page 517; in a "Report on the Structure and Mineral Wealth of the Salt Range," by Doctor A. Fleming, Journal Asiatic Society of Bengal, Vol. XXII, 1853, No. 4, page 347; in "Notes on the Geology of the Punjab Salt Range," by W. Theobald, Junior, Journal Asiatic Society of Bengal, Vol. XXIII, 1854, No. 7, page 669; in a "Memorandum on Petroleum in the Rawalpindi Division," by Colonel R. Maclagan, R. E., Secretary to Government, Punjab, Public Works Department, Supplement to the *Government Gazette*, 5th February 1862, page 23; in a "Paper on the Geology of Kashmir, Western Himalaya and Afghan Mountains," by Doctor A. M. Verchere, Journal Asiatic Society of Bengal, Part II, No. 1, 1867, page 13; in a "Manuscript Report on the Jaba Petroleum Springs near Kalabagh," by Lieutenant J. A. Armstrong, Executive Engineer, December 1869, on file in the Public Works Department at Lahore, 4 pages; and in a "Manuscript Report of his last season's Field Work in the Salt Range," by A. B. Wynne, F. G. S., Geological Survey of India, 1870, on file at the Office of the Geological Survey of India at Calcutta.

Report on the Burra Kutta Oil Lands, near Jaba, Bunnoo District, Punjab, accompanied by a Geological and Topographical Map of a Rough Survey, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

1.—SITUATION.

The oil springs on the Burra Kutta brook, near Jaba, Bunnoo District, Punjab, are a mile and three quarters south of Jaba, 10 miles and a half south-east of Kalabagh, and 95 miles south-west by west of Rawalpindi.

2.—LAY OF THE LAND.

The three or four springs lie within a distance of about 60 yards along the western bank of the Burra Kutta brook close to the water's edge at low water, and about on the same level with it, which is about 1,450 feet above sea-level. The main spring, a dozen yards south of the northernmost spring, is just at the outlet or northern end of a narrow gorge that cuts in a crooked but generally south-eastern direction across the north-easternmost of the higher ridges of the Salt Range, running here north-westerly; and this ridge rises on either side of the brook at first with high cliffs, and then steeply to a height of 600 or 700 feet, and within a mile or two to twice that height. The land north-east of the ridge is much broken into low hills, up to some 200 feet high growing rather lower towards the great plain to the north-east. The gap in the main ridge is just at a point where the ridge is double, the north-western part standing a little in advance (north-east) of the south-eastern part, which begins just behind it, and quickly rises to be the main ridge easterly, while the other dies away. The brook comes to the gorge in a south-easterly course after flowing round the western end of this south-western ridge, behind which to the south-east the brook takes its rise in a narrow valley between this ridge and a still higher ridge on the south-west.

3.—GEOLOGY.

a. Structure.—The rocks of the ridge at the oil springs lie in the form of a saddle, with a reversed south-westerly dip of about 80° on the north-eastern side

near the main spring, and a like dip in the same direction on the other side of the saddle, just south of the southernmost oil spring. This saddle seems to be the same that is seen at the Chhota Kutta oil springs, half a mile to the north-west, but is much narrower and sharper here than there, and seems to be dying away very fast to the south-east. The northerly dip here as there grows rapidly gentler to about 45°, which continues for a quarter of a mile, and then grows less and less until perhaps nearly level at a distance of a few miles. This saddle seems to be accompanied here on the south-west by a smaller saddle (with dips of 80° or more on the north-east, and 50° or 60° on the south-west), which rides upon the side of a larger saddle still further south-west, with dips of about 60° or more on the north-east, and perhaps 45° on the south-west. Both of these last saddles are within a quarter of a mile of the springs, and they seem to rise south-easterly and take the place of the northern saddle which dies away, and is crowded out by them.

b. Rock Beds.—The following is a very rough section of the rocks exposed within a quarter of a mile or a little more of the oil springs. Downwards:—

Red and greenish gray clays, in all perhaps . . .	about	700	feet?
Greenish gray sand rock (and gray shales?) with some red shales, about 100 feet from the top, and with some layers of fine pebble rock	,,	825	,,
Dark red shales	,,	25	,,
Greenish gray sand rock (with red shales at bottom ?) .	,,	75	,,
Brown fine pebble rock	,,	6	,,
Red clay	,,	6	,,
Gray soft sand rock	,,	3	,,
Greenish gray sand rock and shales ?	,,	10	,,
Gray shales ?	,,	25	,,
Greenish gray sand and fine pebble rock	,,	6	,,
Red and greenish gray shales alternating	,,	64	,,
Blue gray (weathering brown) filbert and larger pebble rock	,,	5	,,
Greenish gray sand rock and shales, with some fine pebble rock and red shales	,,	1,750	,,
Blue gray lime rock (and perhaps some gray shales), with nummulites and other fossils	,,	250	,,
In all .	,,	2,000	,,

The red and greenish gray clays at the top of the section are no doubt the same as those near the top of the Aluggud group of rocks; it has commonly been reckoned as of Siwalik age. The greenish gray sand rock and shales would seem to hold the same place as the similar sand rock of the Aluggud group below the clay; but this has been called hitherto carboniferous in age owing to the productus and other fossils found near its top at Aluggud. Here, however, although no fossils have been noticed in the rock, its age must be newer than that of the lime-stone below, and this has from its nummulites and other fossils been called the nummulitic lime-stone. If the Aluggud so-called carboniferous rock be really older than this nummulitic lime-stone, then not only that lime-stone, perhaps 1,100 feet thick in all, but the 1,050 feet of sand rock and shales above it and below the red and greenish gray clays, or more than 2,000 feet in all, must have thinned out and disappeared between Burra Kutta and Aluggud, a distance of only 30 miles.

4.—OIL.

a. Mode of occurrence.—The oil comes from the cracks of the gray lime rock through a space of about 100 feet in thickness, and the main spring comes from about 100 feet below the top of the lime rock. The oil is dark green in color at the main spring when quite fresh from the rock, but in the air quickly becomes dark brown or black and tarry, as it is at all the other places near. The main spring is some six feet long and a foot or two wide, and quite shallow, and other springs are only a foot or two wide. At high water the springs are no doubt quite overflowed. Near the oil springs, as on the Chhota Kutta, there are sulphur water springs, but not so strong ones as there.

b. Yield.—The yield of the springs here amounts perhaps altogether to three pints a day.

c. Outcrop.—The outcrop of the oil-bearing bed comes to these springs in a south-easterly course from the Chhota Kutta oil springs; it seems barely to cross the Burra Kutta brook, then to return westerly and north-westerly again towards the Chhota Kutta. There is perhaps also a small nearly circular outcrop of the bed on the Burra Kutta, about a furlong south-west of the spring.

d. Working.—The springs yield so much oil naturally, and the oil-bearing bed is so thick, that it seems quite worth while to test the oil-bearing bed by boring into it at some distance below the outcrop. Of course it would be best to make the first boring as near as may be to the springs, although the Chhota Kutta oil-springs on the same bed seem to show that it is oil-bearing throughout the space between the two sets of springs. Owing to the steepness, and even reversal, of the dip at the Burra Kutta main spring, a boring close by it would go through the oil-bearing bed for perhaps 200 feet. At a distance of only 60 feet north-easterly from the main spring the middle of the bed would be at a depth of about 200 feet; at a distance of 130 feet about 300 feet deep; at 240 feet distant about 400 feet deep; at 340 feet about 500 feet deep; and so on to 840 distant, where it would be about 1,000 feet deep. The strike of the bed towards the Chhota Kutta springs is about north 53° west, and borings in this direction would be likely to yield as well as at the Burra Kutta.

5.—SHIPMENT.

The oil gathered here could be carried on camels or mules about two miles by a very rough bridle path to Jaba, thence by road, quite good for camels, and growing better and better as you go on, 100 miles and a half to Rawalpindi, say 102 miles in all. Calling this eight marches and a half for a camel, and his load 50 gallons, and his cost R8 a month, the carriage of oil to Rawalpindi would cost at least 1 anna and $7\frac{2}{3}$ pies a gallon.

Report on the Sadeealee Rock Tar Spring, near Nara, Jhelum District, Punjab, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

The Sadeealee rock tar spring, in the Jhelum District, Punjab, is about 90 miles south-west of Rawalpindi, seven miles south-east of Lawa, four miles south east of Nara, and two miles east of a salt chowki. It was described by a chowkidar of Lawa, one of the very few in that region who had ever seen it, as yielding a very small quantity of a black liquid (tar) that the people there called "Leleera," of whose nature they were quite ignorant. He said that it floated upon the water of a small pool, and covered with a thin film a space of perhaps eight or ten inches in diameter; that he skimmed off some with a stick, and then held the stick over a fire, but that it would not burn, would only hiss and give out smoke. He and the chowkidar of the salt chowki (the latter of whom made little pretence of knowing the way to the spring) tried to show where the spring was, but on getting, as they said, very near to it, were quite unable to point it out. As the dark-colored liquid seemed at the time unlikely to be tar, but rather some vegetable scum upon water, and its quantity was at any rate extremely small, the search was abandoned. After a survey, however, of the Chinnoor, Hungooch, and Dooma rock tar springs, where the tar is called "Leloora," it was clear that the "Leleera" of Sadeealee was also tar; but as it was also clear that its quantity was quite unworkable, as at those places, it seemed plainly not worth while to try again to find the place. The chowkidars, in trying to find the spring, led to a spot where the gray sand rock was exposed below the red and greenish gray clays, and with a gentle dip northward, all precisely corresponding to what is seen at the other three places. The geological position of the Sadeealee tar and the mode of occurrence, as well as the yield, are beyond a doubt the same as at the other three places. Even if it should be desired to bore here at any future time, the circumstances are so pre-

cisely similar to those at the other three places, that the instructions given for them would also apply here, and no doubt could possibly arise as to the mode of proceedings.

Report on the Chinnoor Rock Tar Springs, near Murdawal, Shahpur District, Punjab, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

The Chinnoor rock tar springs, in the Shahpur District, Punjab, are 83 miles south-west of Rawalpindi, two miles and a half north-north-west of Murdowal, and one mile and a half west-south-west of the Hungooch rock tar.

The springs are near the union of two branches of the Chinnoor brook, one coming from the east, the other from the south, while the main stream flows northerly. Between the two forks of the stream the land rises southerly without any great hollows in it, but north of the easterly fork and west of the southerly fork, and on either side of the main stream, hills rise to a height of 300 or 500 feet, with very steep cliffy sides towards these streams, but with a much gentler slope northerly.

The dip of the rock is gentler northerly, perhaps 25°, and its uniformity is the cause of the uniformity and comparative gentleness of the slopes of the surface of the ground in that direction, while the slopes in other directions are extremely steep and irregular. The slope between the two forks of the stream is formed by almost the very uppermost surface of the great nummulitic (bluish gray) lime rock (that of the Jaba group and of the Salt Range generally). The hills on either side of the main stream are formed by the brownish gray sand rock which reaches up to the red and greenish gray clays, exposed a little further north, and is no doubt the same as the thick sand rock in a similar position in the Jaba group.

The rock tar (called here by the natives "Leloora") issues from the rock in these places on the easterly fork perhaps 200 yards above the union of the two forks, on a small branch of this fork about 150 yards west of the first place, and on the northerly fork about 50 yards west of the second place. The tar at the first (easternmost) of these places comes from the lime rock, but very close to its upper surface; at the two other places it comes from the brownish gray sand rock quite near to its lower surface.

The amount of tar at the eastern place is scarcely a tea-spoonful, at the middle place perhaps half a pint, and at the western place at the time of the survey none at all, although some white scum was to be found here like that to be seen with the tar at Hungooch.

The outcrop is easily to be traced along the junction of the said rock and lime rock in a general east and west course; and the uniformity of the dip, as well as its gentleness makes it easy to dig or bore upon the tar-yielding bed at some depth below the surface by going to a little distance northerly from the outcrop. It would, however, be the height of folly to go to the expense even of boring, for it is very clear that the deposit, or rather the three deposits are extremely small ones, limited to a few feet or even inches from the places observed.

Report on the Hungooch Rock Tar Springs, near Dhuddur, Shahpoor District, Punjab, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

The Hungooch rock tar springs, in the Shahpoor District, Punjab, are 81 miles south-west by south of Rawalpindi, and two miles and a half north-west of the village of Dhuddur.

The tar springs are only 25 feet apart in the bed of a brook which flows thence north-westerly. The land rises south and south-easterly of the springs in a comparatively gentle and uniform slope, but on the east and west it rises steeply, and with high cliffs to some 500 feet. From this height the hills slope down rather gently and uniformly northward.

These gentle and uniform northerly slopes correspond to the uniform dip, about 25° of the rocks in the same direction. The lowest rock exposed is the bluish gray nummulitic lime rock of the Jaba group, and it here also contains nummulites. It is exposed here and there all over the hill side south of the tar. Upon the lime-stone, and forming the high hills on either side of the brook is brownish gray sand rock, clearly the same as the great sand rock in the same position at Jaba, and there 1,000 feet thick or so. Above it half a mile north of the tar, is seen the red and greenish gray clays found just above the Jaba group and near the top of the Aluggud group.

The tar issues from the brownish gray sand rock within a few feet of its bottom, and the two springs come from layers about six feet apart. The one from the upper layer is owing to the northerly dip (rather steeper than the slope of the ground), the more northerly of the two, and is the larger, but the whole amount of both together is hardly a pint.

The outcrop of the tar-bearing bed has a general east and west course; but bends round to the south from the springs on either side owing to the presence of the high hills along whose foot it runs near the upper surface of the lime-stone that forms the gentle hill-side between.

As the sand rock that yields the tar is well exposed at the springs, it is plainly seen that the bituminous matter from which the tar comes must be a very small deposit, not only a very thin layer, but almost certainly of very limited horizontal extent. It would therefore be very unwise to make borings here in hopes of finding a greater yield; but uniformity of the dip shows very plainly where borings should be made if it should ever be wished to test the bed at any depth The bed plunges beneath the surface of the ground at the springs, and would be found uniformly at a greater and greater depth in a northerly direction.

Report on the Dooma Rock Tar Springs, near Kubbukkee, Shahpoor District, Punjab, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

The Dooma rock tar springs are on the Wudda Dooma and Nikka Dooma brooks, within 40 yards of their union, which forms the Dooma brook. They are 77 miles south-west by south of Rawalpindi, and three miles and a half north-north-east of Kubbukkee.

The Nikka Dooma (the smaller of the two) comes to the springs from the south-east, and the Wudda Dooma comes from the south-west; the Dooma below the springs has, though crooked, a general northerly course for half a mile at least. The land between the two forks and on either side of the main stream is from 200 to 400 feet higher than the brooks, and has high cliffs along their borders, but above slopes gently northward, generally speaking.

The cause of this gentle and uniform northern slope is the uniform gentle dip (about 7°) of all the rocks in that direction. About a quarter of a mile southerly of the springs is seen the same bluish gray lime rock as that of Hungooch and Chinnoor, and the same as the great nummulitic lime rock of the Jaba group of rocks. It then passes below the greenish gray (brown weathering) sand rock, the same as that of Hungooch and Chinnoor, and as that of the Jaba group. The sand rock is much false-bedded, and in places pebbly. About three quarters of a mile north of the tar springs are seen resting upon the sand rock the red and greenish gray clays (perhaps 700 feet thick), which are seen at those other places, and also near the Aluggud oil springs.

The tar issues from the sand rock very near its bottom, perhaps within 30 feet of it, at four places on the Wudda Dooma within 40 yards of the union of the two brooks, and at one place 24 yards above that point on the Nikka Dooma. All the places are within a thickness of perhaps five feet of the rock, or even less. The tar seems to melt in the sun's heat from a small quantity of asphalt imbedded in the rock, but may perhaps issue first as oil, and then turn to black tar on exposure to the air. At two or three of the

places the tar has dried to asphalt, rather impure from pebbles and sand mixed with it.

There is perhaps a cubic yard and a half of this asphalt in all. The liquid tar amounts to scarcely a trace at the place on the Nikka Dooma, to perhaps a gill at the lower place on the Wudda Dooma, to two spoonsful at the next place, to a quarter at each of the other two, making half a gallon in all. Although the yield here is more than at Hungooch, and is spread over a greater space, it seems clear that the yield to be hoped for from a boring would be far too little to pay for the expense.

The outcrop can, however, easily be followed along the base of the cliffs on either side of the streams until it gradually rises southward to their northern face, always close above the lime rock, and takes in general an east and west course.

To bore from the top of the high lands above the cliffs would be very costly owing to the height above the tar or oil-bearing bed; and the only place where it could be reached from a comparatively short distance (without going far from the springs) is in the channel of the Dooma below the tar. A boring, however, is in any case not at all likely to pay for its cost, and the deposit is to be looked on rather as analogous to the little coal beds, of no value, often seen formed by a single plant or two turned to coal.

BENJAMIN SMITH LYMAN,

Mining Engr., P. W. Dept. of the Govt. of India.

Lahore, 5th November 1870.

SUPPLEMENT TO THE REPORT ON THE OIL LANDS OF THE PUNJAB.

Report on the Loonekee Kussee Sulphur Pits, Kohat District, Punjab, by BENJAMIN SMITH LYMAN, *Mining Engineer, Public Works Department of the Government of India.*

1.—SITUATION.

The Lunekee Kussee (or salt brooks) sulphur pits, in the Kohat District, Punjab, are near the western bank of the Indus, about a mile south-west of Dundee, on the other bank, and about two miles north-east of Choorlukkee Meeshuk, and on the road from this village to Dundee. They are about 900 feet above the sea, and perhaps 100 above the Indus.

2.—LAY OF THE LAND.

The pits are on the northern edge of what is in the main a great plain, but here it is very much cut down in steep-sided hollows, through one of which the Loonekee runs with a south-easterly course to the Indus. From this brook extends eastward for about 175 yards an oval-shaped hollow that is about 50 yards wide, and about 10 feet above the bed of the brook. Around the sides of this little hollow are traces of digging, and the sulphur is said to have been taken in large quantities from the earth here until the region came under British rule. North and south of the hollow the ground rises steeply to a height of 50 feet above the brook. About 150 yards north of the hollow is a low ridge of nodular lime rock; north of that still lower brown sand rock ridges or ledges, and north of them red sand rock and red shales.

5.—GEOLOGY.

The lime rock dips northerly some 60°, and therefore probably passes below the brown and red sand rocks. It seems, then, to hold the place of the lime rock of the Gunda group of rocks below brown and red sand rocks, which are no doubt the same that lie at the Punnoba oil springs in this order below what

seems to be the great nummulitic lime rock of the Salt Range. The lime rock of the ridge near the sulphur pits is grey, nodular, and thin-layered, and contains nummulites, and is therefore of nummulitic age.

But south of this ridge and at the sulphur pits the only rocks exposed lie nearly or quite level, and are plainly of the same older alluvial age as the rocks of the same position and appearance at Gunda along the Seel River, and along the Indus near Mukhud. The following section downwards is exposed in the banks of the Looneeke Kussee, just west of the surphur pits :—

Gray lime rock, full of holes, and with broken nummulitic lime rock pebbles, up to four inches long	about 5	feet.
Pebble rock, in parts hard, in other parts soft	„ 10	„
Salt shales, in parts very rich in salt, and covered with a white crust	„ 10	„
In all .	„ 25	„

In the bed of the brook is loose gravel containing also salt, and about a cubic yard of earthy asphalt scattered in spots for a distance of some 30 yards.

Sulphur.—The sulphur was got by sublimation from the loose earth (mostly red and mottled clay) of the pits, and probably occurred in the form of small yellow particles. None of it, however, is now to be seen in the surface earth, and it has probably disappeared by exposure to the weather for a little distance (a few inches at least) from the surface. In order, then, to determine its amount, it would be necessary to dig holes here and there, and to test the amount of sulphur that a given quantity of the earth would yield, and to extend these pits and trials until the limits of the deposit, both horizontally and vertically, had been made out. Such an examination would take more time than would have been compatible with the survey of the Punjab oil lands, to which this visit to the sulphur pits was merely incidental. The extent of the old pits and the traditions of the neighbourhood seem, however, to show that the amount of sulphur here is very large.

Gypsum.—Gypsum is exposed in little crystals in the earth here and there at the sulphur pits; but its amount has been left quite undetermined for similar reasons to the one just given. It would seem, however, to be quite a large amount; but the gypsum, so far as observed, was much mixed with clay and other impurities.

Salt.—The salt shales are exposed with their coating of salt for some 40 yards, and the salt seems to be gathered in all quantities by the country-people. There seems to be nothing approaching a bed of rock salt, and it seems highly unlikely that either the richness of the shale bed in salt or its extent will permit of the manufacture of salt here, except on a very small scale perhaps for the benefit of the immediate neighbourhood.

Asphalt.—The asphalt amounts (so far as exposed) to only about a cubic yard, and is therefore of trifling value. It seems to be a secondary deposit, washed here by the brook, and from what source it came does not appear. It no doubt issued somewhere from the solid rock as oil, then dried to solid asphalt, and then probably was washed by the brook from its original place to the little spots where it is now seen. It may even have formed at one time a small deposit in the older alluvium before this action of the brook, and in this case might be far removed from its original source, as far, say, as from Punnoba.

The amount of the asphalt is in any case so small as to give little encouragement to a search for the oil-bearing rock from which it first issued.

Report on the Punnoba Sulphur Pits, Kohat District, Punjab, by **BENJAMIN SMITH LYMAN,** ***Mining Engineer, Public Works Department of the Government of India.***

1.—SITUATION.

The Punnoba sulphur pits, Kohat District, Punjab, are about half a mile north-east of the Punnoba oil springs, about three quarters of a mile east of

Punnoba village, about four miles north-west of Choorlukkee Meeshuk, about four miles north of Shekh Khan, and about nine miles north of Khooshialgurh, on the Indus. They are about 1,500 feet above the sea, and about 350 feet above the oil springs.

2.—LAY OF THE LAND.

The pits are on the north-western side of the first (south-easternmost) high ridge of the mountains that border British Territory here next to Afreedeestan, the same ridge in which the oil springs occur at the gorge of the Punnoba brook. The general slope near the sulphur pits is north-westerly, but there are many small hollows cut down with steep sides by the small streams : and the pits are just at the top of a narrow "divide" between two heads of valleys at the point where the main ridge is joined by a small one that runs westerly from it.

3.—GEOLOGY.

This smaller ridge is formed by a saddle in the rocks, with dips of about 45° on either side. The rocks of the main ridge at the one or two points where they are exposed (about 150 yards south-west of the pits) dip about 45° south-easterly. Above the rocks that show these dips is in places a certain amount of loose earth or rock, with no dip that can be made out.

This loose stuff is partly bright red earth and partly gypsum, and perhaps partly gravel. The rocks that show the dips are gray limerock, no doubt the same as that of the Punnoba oil springs, of nummulitic age, and probably the same as the great nummulitic lime rock of the Salt Range.

Sulphur.—The sulphur has not been dug here for some 20 years, since the British rule began; but there are still traces of a number of small holes within a space of 15 or 20 yards across. The sulphur is not now to be seen in the earth here at the surface, but has probably disappeared merely from the action of the weather. It probably occurs in the form of small yellow particles scattered through the earth and gypsum, and it was formerly got from them by sublimation. The amount of sulphur that a given quantity of earth would yield is quite unknown, and the extent and depth through which the earth yields it is not known. Until these points are tested by digging at numerous points and trying the richness of the earth at each of them, it will be impossible to estimate the amount of sulphur that exists here. The delay of such an examination would have interfered far too much with the progress of the oil survey, and was therefore not undertaken. Although the holes seem much fewer, and within a narrower space than those of Looneekee Kussee, it may be chiefly owing to the less convenient accessibility of the place, and it is very likely that a large amount of native sulphur is scattered through the gypsum.

Gypsum.—Southerly from the sulphur pits and close to them rises upon the side of the main ridge a little hill that seems to be wholly made up of porous crystalline gypsum, similar to what is seen near the Chhota Kutta oil springs of Jaba in the Salt Range, about 10 miles east of the Indus. In both cases the origin of the gypsum is probably the same, namely, the effect of the water of a sulphur spring upon the gray nummulitic lime rock. This little hill of gypsum at the Punnoba sulphur pits rises some 75 feet above the pits, and the gypsum reaches to 100 yards or so south of them, and runs some 75 yards or more east and west. There are, then, perhaps 200,000 tons of gypsum here, but more of it may be hidden under loose gravel near by. The inhabitants of the region seem quite ignorant of the great value of the gypsum for its various uses, and it lies quite neglected.

BENJAMIN SMITH LYMAN,
Mining Engineer, P. W Department.

Calcutta, the 25th November 1870.

No. 99, dated 12th October, 1866.

From—T. E. B. Brown, Esq., M.D., Chemical Examiner, Punjab,
To—The Secretary to the Government of Punjab, in the Public Works Department.

I have the honour to acknowledge the receipt of your office letter No. 99C,

dated 19th July, and of the petroleum referred to in it, and to state concerning the latter, that I find it to be as follows :—

A greenish black fluid when examined in mass, but greenish red when looked at in thin layers, with a peculiar, rather unpleasant smell; its specific gravity is 931. It is not very inflammable, as it may be heated up to the temperature of 220°, or above the boiling point of water, without catching fire, even when a light is brought near it, but at 230° Fahrenheit it catches fire from any naked flame, and burns with a bright white light, giving off an abundant black smoke, which settles on any cool surface, forming carbon or lamp-black mixed with water. This proves that the substance is composed of carbon and hydrogen, but that it contains no oxygen is shown by the fact that not only is the metal potassium not ignited by contact with this petroleum, but that even if globules of potassium are thrown into a vessel containing both petroleum and water, they will be ignited by contact with the water, but immediately extinguished on rising into the petroleum.

The above experiment indicates that petroleum has great power in preventing oxidation in metals, or rusting, as it is called, when referring to iron, and combined with its oily qualities, indicates that it would be useful in lubricating machinery and preventing the corrosion of iron, and it has been found useful for lubricating machinery in America.

If the petroleum is heated to 230° Fahrenheit it will take fire on a light being applied, and burn with a bright flame, giving out much heat; this flame is not easily extinguished by the addition of water, but can be at once arrested by covering over the vessel, and thus stopping the influx of air. Petroleum has been largely used as a fuel in steamers. It is stated in the "Scientific American" that the volume of flame of petroleum was so great as to pass entirely through the tubes of the boiler and heat the smoke pipe red hot for several feet from the base.

The time of generating steam from water of equal temperature to 20lbs. pressure above the atmosphere was for the oil, an average of 20 minutes, and for the coal, 60 minutes, or in favour of the oil, 14 per cent. One of our iron-clads, by its successive use, would be able to keep the sea under steam three times as long with less labour and greater convenience as compared with the use of coal, equal weights of each on board being considered.

It is also stated that a frigate which can carry 10 days' coal costing about £1,000 could carry 20 days' petroleum costing £500.

If the petroleum be carefully distilled, a clear reddish fluid comes over, from which, if shaken with 5 to 10 per cent. of strong sulphuric acid and then allowed to rest for 24 hours, a dark fluid subsides, and the upper liquid becomes yellow; if this is then mixed with caustic lime and distilled, a nearly white volatile oil passes over, which has the appearance and all the properties of kerosine, and might be burnt instead of that substance in the proper lamps.

It is stated in the papers that kerosine lamps are ordered to be used in barracks in Bengal, and it is, without doubt, a clear, brilliant light and economic when the kerosine is procurable at a low price.

If the petroleum is allowed to flow slowly into an iron vessel heated to nearly redness, it is rapidly converted into a pure carburated hydrogen gas, which burns with a bright white flame; this I have prepared, and find that the process can be easily performed. It is stated also that the residue, after gas so obtained, contains much paraffine, and may be used for the preparation of candles, but I have not yet succeeded in effecting this, as it requires extreme cold to separate the paraffine.

It is also stated with respect to the American petroleum, that paint oils and varnishes are also prepared from it, and the benzine (*i.e.*, the liquid called kerosine) is used as a substitute for oil of turpentine. Some of the most beautiful and durable colours now worn are obtained from the waste petroleum, after refining, and after the separation of the naphtha; it has likewise been found a valuable substitute for pit oil in tanning, and produces a better and stronger quality of leather.

It is also recommended in medicine, to be used in skin diseases, and it has been employed at the hospital under my charge, with effect in some of these.

Mixed with powdered kunkur, it forms a solid substance which does not melt in a fierce sun, but can be spread by a red hot iron into a smooth surface, impervious to water. This deserves a trial on a roof, with respect to its powers of rendering houses water-proof in the Punjab, and if sufficient petroleum be sent I will have much pleasure in superintending this.

In cold climates, petroleum, boiled and mixed with lime, is used as a pavement, but I greatly doubt its applicability to this use under the burning sun of the Punjab.

Lastly, I would state that I believe there is little danger in storing petroleum of this kind, since it is stated that petroleum which does not ignite when poured on water heated to the temperature of 200°, and a flame applied, may safely be kept, while the specimen sent to me did not ignite even at 220°, but it is possible that other specimens may be more combustible than the above sample.

The experiment of pouring the oil on boiling water, and applying flame to it, can, however, easily be tried.

Dated 21st December, 1866.

From—T. E. B. Brown, Esq., M.D., Chemical Examiner, Punjab,
To—The Secretary to the Government of the Punjab, in the Public Works Department.

The constituents of American petroleum are numerous compounds of hydrogen and carbon, similar in composition to marsh gas, but most of them are liquids. It also contains paraffine, a solid of the same nature.

The Hydrocarbons are as follows :—C standing for Carbon, and H for Hydrogen.

			Specific gravity.	Boiling point.
Hydride of Ethyle,	C 4,	H 6	Gas.	...
„ of Propyle,	C 6,	H 8	„	...
„ of Butyle,	C 8,	H 10	600	39·2
„ of Othyle,	C 10,	H 12	628	86
„ of Caproyle,	C 12,	H 14	669	154·4
„ of Oenontlylene,	C 14,	H 16	669	198
„ of Capryle,	C 16,	H 18	726	242
„ of Elaene,	C 18,	H 20	741	278
„ of Paramylene,	C 20,	H 22	757	320
Unnamed	C 22,	H 24	766	361
	C 24,	H 26	776	392
	C 26,	H 28	792	422
	C 28,	H 30	Not ascertained.	464
	C 30,	H 32	„	500

Besides these, it contains paraffine, a solid hydrocarbon, which varies in composition, but is usually C 54, H 56.

It always contains two proportions of hydrogen more than the proportions of carbon, as the above series of liquid hydrocarbons do also.

2. I regret that I have not the means of separating these various substances at present, but from the different temperatures at which the Punjab petroleum boiled, and the fact that it contains carbon and hydrogen only, there is a great probability that most of these hydrocarbons would be found in this petroleum with the exception of the first three.

These all boil at a very low temperature, and are inflammable at the ordinary temperature of the air. I have never found any such vapours given off from the petroleum sent to me, but as that has probably been obtained from the surface, and therefore exposed to the high temperature of our summers, it is probable that the liquids which boil below 112° would be driven off, and it is quite possible that such easily inflammable vapours might be found in petroleum taken from a greater depth in the earth.

Note by Mr. H. B. Medlicott, *Superintendent, Geological Survey of India, dated 17th July 1883.*

Mr. Lyman's judgment on the Punjab petroleum can by no means be taken as final, except for the supply within shallow depths; although his

apparent reserve upon the question of deep borings seems really to amount to an adverse opinion when looked at through the very dogmatic views he enunciates as to the origin and distribution of the oil. At page 8, paragraph 4 of his report (in India), he makes out that the average extent in depth would be only about half the length of the oil-bearing outcrop, and having found this in every case to be small, he implies that the extension in depth would correspond, but such a limitation of a fossiliferous (oil-producing) deposit is quite inadmissible.

In previous paragraphs he gives a crude discussion upon the mode of origin of petroleum, and announces as a "now well established fact" that the oil is only found in the holes in which it was first formed by the slow decomposition of organic remains. Now it is absolutely certain that petroleum and its derivative asphalt occur extensively in cracks and fissures in which it cannot have thus originated, and such a mode of distribution is all the more likely in rocks so disturbed as those of the Punjab oil region. For the same reason the lighter oils seldom occur in such rocks.

Mr. Lyman had probably only worked in the flat oil-measures of the Eastern States. The man to try the Punjab ground should have worked in troubled rocks, as in California.

Nothing but boring trials will decide the question.

The geological description of the ground will be found in Mr. Wynne's Salt Range reports, *viz.* :—

Trans-Indus.

Memoirs, G. S. I., Volumes XIV and XVII, Part 2.

Mr. Wynne's note on the tertiary zone and underlying rocks in North-West Punjab,—Records, Volume X, Part 3.

But Mr. Lyman's *original* report *with the 11 plans*, give the most practical view of the nature of the ground.

Note by MR. H. B. MEDLICOTT, *Superintendent, Geological Survey of India, dated 15th August 1883.*

The note I appended to the petroleum file points out not only that Mr. Lyman's report gives no direct opinion upon the main feature of the case, the occurrence at greater depths, but also that the theoretical views he records bearing upon that point are demonstrably erroneous, 1st, the accumulations of fossils in circular patches from which he deduces the rule that the local limit of depth of an oil-bearing bed is equal to half the length of its local outcrop—the notion is untenable; 2ndly, his contention that the occurrence of oil out of the bed in which it was formed is quite an exceptional phenomenon—is scarcely less opposed to nature and experience. That oil will remain indefinitely in its original bed so long as this is undisturbed is likely enough; but that in contorted and broken rocks oil will not obey the laws of fluids and go where pressure or gravitation leads it would be too much to expect, and the fact of its being extensively found in cracks and fissures is quite beyond question.

The oil rocks of the Punjab are greatly disturbed and broken, and I should think that scarcely any of the original oil beds have escaped the action of underground drainage.

What I say is, that Mr. Lyman's report leaves us no wiser than we were before as to the oil resources of the Punjab. Oil-forming conditions seem at least to have been very widespread there; and as well as I can judge from published accounts, oil has been found abundantly by deep boring where the surface symptoms were not better than those. I am therefore decidedly of opinion that Government should not abandon the investigation. Large sums have recently been spent there in a search for coal where the chances of success were indefinitely less, indeed, in my opinion, *nil*. As for recommending any particular site for boring, it will be understood from what I have said regarding its probably promiscuous mode of occurrence in broken ground, that scientific judgment would be of very little use. It is just the case where the instinct formed by experience would be the only guide, so it would be a pity not to give the undertaking the benefit of such experience.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

BENGAL TENANCY BILL.

No. 484-116R., dated 1st May, 1883.

Office Memo. from—The Offg. Under-Secy. to the Govt. of India, Revenue and Agricultural Dept.,
To—The Secretary to the Government of India, Legislative Department.

The undersigned is directed to forward, for consideration by the Select Committee in charge of the Bengal Rent Bill, copies of the papers noted in the margin, regarding rent rates in Darbhanga, Murshidábád, Sháhábád, &c.

Bengal Government No. $\frac{753}{205}$L.R., dated 3rd March, 1883.
Do. " $\frac{754}{207}$L R., dated 3rd March, 1883.
Do. " $\frac{752}{206}$L.R., dated 3rd March, 1883, and enclosures.

Endorsement by the Officiating Under-Secretary to Government, Bengal,—(No. $\frac{753}{205}$L.R., dated 3rd March, 1883).

Copy, with copies of the enclosures and the plan in original, submitted to the Government of India, in the Department of Revenue and Agriculture, for information, in continuation of my endorsement No. $\frac{752}{205}$L.R. of this date.
The return of the original plan is requested.

No. 121A., dated Calcutta, the 19th February, 1883.

From—H. J. S. Cotton, Esq., Secretary to the Board of Revenue, L. P.,
To—The Secretary to the Government of Bengal, Revenue Department.

In continuation of the Board's letter No. 23A., dated 8th January, 1883, I am directed to submit copy of a report (with enclosures), dated 10th February, 1883, from Mr. M. Finucane, on the result of the enquiries made by him in the villages of the Narhun estate as well as in those belonging to other zamindars of pergunnah Sureysa, and to observe as follows:—

Hon'ble H. L. Dampier, C.I.E.

2. In paragraphs 4 and 5 of his report, Mr. Finucane has adopted the convenient plan of summarising his conclusions, and they need not be here repeated. The statements contained under head VI of paragraph 4 of the report justify all that has been said as to the evil effects of the Behar system of thikadari leases and the extortionate demands made under it.

3. It is impossible for the Court of Wards to interfere effectually on behalf of the ryots of the villages of the Narhun estate, which are leased to the manager of the Dalsingserai factory until the farming leases expire. The Commissioner might, however, remonstrate with the manager of the factory against his enhancements. The recent so-called temporary enhancement of rents, as explained by the manager in his letter, which is extracted in the margin of paragraph 11 of the memorandum on mouzah Tubka khas, seems to have been most inconsiderate. If the produce of the lands which paid their rents in kind was short, presumably the produce of the lands which paid money rents must have been short also, and the enhanced demand must have pressed severely on the ryots. Head IX of paragraph 5 of the report shows that the special measures, which have all along been recognized as necessary for Behar, are indeed required.

4. From clause 1 of paragraph 4 of the report it will be seen that the ryots are able to resist excessive enhancement of rents if they are well advised.

5. Head III of paragraph 5 of the report shows that there exist the same difficulties in the way of framing tables of rates in other estates as in those of the Narhun ward. It will be observed that the average rate of rent in the ward's estate is below that which prevails in neighbouring properties.

6. The remarks made in paragraph 6 of the report regarding village Jaezpotee show that lightness of the Government demand is no factor towards preventing excessive demands of rent.

7. Mr. Dampier agrees with Mr. Finucane that the state of things existing in North Behar, as brought out in his present report and compared with that existing in South Behar, Lower Bengal, and in the North-Western Provinces, calls for the introduction in the Rent Bill of a provision for a reduction of the existing rents where they are found to be excessive, and also for provision to check arbitrary enhancements. If the extension of this latter provision to any district, part of a district, estate or tract were left optional to the Government, the knowledge that such a power might be exercised would act as a check upon landlords inclined to excessive enhancement of rent. Such a check against arbitrary enhancement, as

is proposed, is provided in the twenty-second and following sections of the Chota Nagpore Landlord and Tenant Procedure Act I (B. C.) of 1879.

8. The most convenient method of making the landlords file jummabundis, as proposed in clause 1 of paragraph 7 of Mr. Finucane's report, would be to order a re-valuation of the district under the Road Cess Act, by which procedure the knowledge that cesses will be assessed on the jummabundi filed under that Act, provides a check against the insertion of rates in excess of what are really payable.

9. The Board are separately considering in the Wards Department whether any steps should be taken in the direction of reducing rents in the villages of the Narhun estate, which are held khas.

10. In paragraph 7 (*a*) of his letter Mr. Finucane writes that the ryot must take the initiative and assert his rights in courts before he can get the benefit of the restrictions on enhancements proposed by the Rent Law Commission. This is not strictly correct as a general proposition. Proceedings for the settlement of the land revenue show that the ryot has only to remain passive under the first demand of enhanced rent. The landlord must then sue him for the enhanced amount of rent, and the ryots would only have to plead those restrictions.

11. It is only in the case of enhanced rent recorded under the Bengal Settlement Act VIII of 1879 as payable to a landlord by a revenue officer in the course of proceedings for the settlement of the land revenue that the amount so recorded is binding against the ryot, unless he contests the enhancement in the courts. The suggestion made in paragraph 8 of the report, that the Board should be empowered to declare that the tables of rates or other authoritative declarations in connection with the determination of rents payable shall be in force for thirty years instead of ten, might also be adopted to meet the extreme cases contemplated by Mr. Finucane.

12. The line of distinction which Mr. Finucane in paragraph 9 of his report represents to exist in the minds of the Behar zamindars and ryots generally, between ryots of ancient standing and other ryots, is just what Mr. Dampier himself represented some twenty years ago in a report on the working of the Rent Act of 1859 from his experience as Collector of Tirhoot. He then said that thirty or forty years' tenancy rather than the twelve years period of the Rent Law might be taken as representing the ill-defined line of distinction which existed in the ideas of zamindars and their tenants between ancient ryots who are entitled to special consideration, and other ryots who are not entitled to any such consideration.

Dated Camp, the 10th February, 1883.

From—M. FINUCANE, Esq., C.S., on Special Duty,

To—The Secretary to the Board of Revenue, L. P.

I have the honour to report that, since submission to the Board of my last report, I have again gone over tract II, pergunnah Sureysa, of which I forwarded a map with my letter of the 18th December, and that I have made detailed enquiries regarding the history of enhancement of rent in each village, the facilities for communication and irrigation, number of non-occupancy and occupancy ryots, &c. I have also made enquiries from patwaris of villages appertaining to the estates of other proprietors, which are intermixed with Narhun villages, regarding amount and number of rates prevailing in them; but I have not gone into villages of this class for the purpose of making enquiries on the spot, as I have not been able to obtain the zamindar's consent to my doing so.

(1) Tubka Khas.
(2) Tubka Mughribee.
(3) Mahomedpore Sankura.
(4) Dalsingserai.
(5) Kooksa.
(6) Tubka Kishanpore.
(7) Baghopore.
(8) Gungowlee.

2. I now beg to forward copies of the notes which I have made on each of the villages noted in the margin.

3. It will be seen that two mehals included within the tract were brought under permanent settlement in 1242 to 1247 F.S. (1835 to 1840 A.D.)

Narhun villages.
(1) Tubka Khas.
(2) Surowlee.

Villages of other zamindars.
(1) Damodupore.
(2) Jaezpotee.

The settlement papers which have been received from the Durbhanga Collectorate make it possible to institute a comparison between the rates and prices prevailing at the time of settlement (1840) and those prevailing at the present time. The areas under cultivation in 1840 A.D. in the villages noted in the margin are given in these papers, while in the case of other villages only the prevailing rates are given.

Facts established regarding Narhun villages.

4. The following facts seem to me to be established from the village reports and statements now submitted.

(*a*) As regards the rates and rentals of Narhun villages—

I.—That of the two villages of the Narhun estate, Tubka Khas and Surowlee, for which *data* for comparison are available, cultivation has extended during the past 45 years by 47 per cent. in one and by 39 per cent. in the other, while the gross rental has in the same period increased by 321 and 269 per cent. respectively. (*Report on village Tubka Khas appended.*)

II.—That while the average rise in prices of staple crops for the past forty-five years has been only 73 per cent., the increase in rent-rates in these villages has been respectively 188 and 164 per cent.

III.—That as regards all the villages in this tract appertaining to the Narhun estate (shown in statement I), there has been an average increase in rates of 136 per cent. during the past forty-five years, the rise in prices in staple products during the same period being only 73 per cent. (*Statement I annexed to this report.*)

IV.—That there having been no increase in productiveness of soil, the only ground for enhancement of rent-rates was rise in prices.

V.—That the enhancement in gross rentals and in rent-rates has therefore far outrun the rise in prices.

VI.—That these enhancements were arbitrarily made by tikkadars during the lifetime of the late proprietor on each recurring septennial renewal of their tikka leases without reference to increase or decrease in prices, and that such enhancements were not regulated by law nor controlled by custom. (*For a specimen of the arbitrary way in which these enhancements were made, the annexed reports on Dalsingserai and Mahomedpore Sankura villages may be referred to.*)

VII.—That such arbitrary enhancements are even now being made by the manager of the Dalsingserai factory in villages leased to him. (*See annexed reports on villages Tubka Khas, Tubka Mughribee, Tubka Kishanpore, and Raghopore.*)

VIII.—That inasmuch as good lands near village sites have been taken up for indigo, and inasmuch as ryots' cultivation has, for that and other reasons, extended to inferior outlying lands, it follows that not alone are the rates all round now paid two to three times the rates paid forty-five years since, but these higher rates are paid for land which is, on an average, inferior to the land for which lower rates were formerly paid.

IX.—That this state of things is peculiar to North Behar, and has probably no parallel in any other part of India. (*See report on village Tubka Khas, section 9, headed "Determination of rates," and authorities quoted thereon.*)

If fair and equitable rates were now made out with reference to the rates of 1242-47, great reduction in existing rates necessary.

If fair and equitable rates were now to be fixed by reference to the standard of rates and prices prevailing in 1242 to 1247 F.S. (1835 to 1840 A.D.), existing rates would have to be reduced in the six villages (shown in statement III) by from 19 to 50 per cent. In one village in which the ryots resisted enhancements in court the rates are low, and would have to be enhanced. Taking the other villages together, the reduction would on an average be 39 per cent. on the existing rates.

But though the enhancements made since 1847 F.S. (1840 A.D.) are excessive and arbitrary, it would not be in accordance with law, and possibly it would not be in accordance with equity, to ignore them in now fixing fair rates. In Alapore pergunnah of North Durbhanga it was found that rates had been similarly enhanced out of all proportion to increase in prices within the last 40 years; but it was felt that it would be unjust to the proprietor to suddenly reduce them wholesale. A middle course was therefore adopted, and rates were reduced to the figure at which they stood in 1275 F.S. (1868 A.D.) before recent enhancements were made. I would be disposed to adopt a similar procedure were I called upon to make a re-assessment in this estate.

Facts established regarding other estates.

5. The following facts seem to me to be established regarding estates which are not the property of the Narhun minor but in which enquiries have been made :—

I.—That the number of rates varies in one village from a maximum of 95 to a minimum of 4, and that the average number for eight villages is 34.

II.—That the amount of the rates varies from a maximum of R10 to a minimum of 10 annas in the same village, and for all eight villages from R15 to 2 annas per local beegah of 3,600 square yards.

III.—That therefore the same difficulties would arise in framing tables of rates as have arisen in the Narhun property.

IV.—That as regards two villages, Damodurpore and Jaezpotee (see statement II), for which alone the data for comparison exist, the area under cultivation has increased by 31 per cent. in the former village and decreased by 3·9 per cent. in the latter since 1247 F.S. (1840 A.D.), while the rental of these villages has increased by 200 per cent. and 500 per cent. respectively in this same period.

V.—That while the average rate all round for Narhun villages is R3-6 per local beegah of land under cultivation, or R5-6-4 per acre, the average rate all round for the non-Narhun villages is R3 9-6 per beegah, or R5-12 per acre.

VI.—It follows that the rates in the Narhun estate are somewhat lower than in neighbouring villages, the owners of which, it is notorious, have been enhancing their rents in recent years.

Conclusions suggested by these facts.

6. The conclusions which suggest themselves to me from the facts disclosed in these reports, and from other facts connected with other estates in North Behar, of which the Board is cognizant, are :—

1st.—That provision should be made in the Rent Bill for reducing rents where they are clearly excessive.

2nd.—That provision should be made for the effectual prevention in future of arbitrary enhancement, and that such provision should not, in order to be effectual, depend on the ryot taking the initiative in court.

First suggestion.

That in now fixing fair and equitable rates any former period which the court may deem equitable may be taken for the purpose of comparison, and not alone the period when rates were last fixed.

As the Rent Bill stands, no provision is made for the reduction of excessive rents, except in the almost unheard-of cases in which the value of produce or productive power of the land has decreased since the rates were last fixed: ordinarily the rates when last fixed are presumed to be fair and equitable. Now it is obvious that if the rates when last fixed were rack-rent rates, as they are in many parts of North Behar, a Bill which makes no provision for the reduction of these rack-rent rates, but which does, on the contrary, make provision for their enhancement every ten years, is in reality a Bill *pro tanto* for the perpetuation of rack-rents. Take the instance of village Jaezpotee. The present proprietor of this village, Baboo Nundan Lal, has inherited it from his adoptive father, Baboo Brij Behari Lal, who was in possession when the permanent settlement of the mehal was made in 1247 F.S. (1840 A.D.) The area then under cultivation was 106 beeghas, the then gross rental, which was taken as the basis of settlement, being Rs. 151, and the average all-round rate being Rs. 1-7 per beegha. The Government revenue was fixed on the basis of half assets: and, as the settlement records which I have examined show, the very moderate amount thus fixed was objected to by the present proprietor's father on the ground that the rental of Rs. 151, taken as the amount of assets, was more than the ryots really paid. The objection was, however, overruled, and the settlement was accepted in 1247 F.S. (1840 A.D.)

Area under cultivation in 1847, 106 beeghas.
Area now under cultivation shown in the jummabundi, 102 beeghas.
Rental in 1247 F.S., Rs. 151.
Present rental, Rs. 905.

(*a*) After the lapse of 43 years what do we find in this village? We find that the area under cultivation has decreased by four beeghas, while the rental is now almost exactly six times the rental of 1247 F.S. (1840 A.D.) In other words, the average rates all round have been enhanced by 500 per cent. in 43 years, the rise in prices during the same period being at most 73 per cent. There is reason to believe that the state of things existing in Baboo Nundan Lal's property is not very materially different from what exists in other properties in the Durbhunga, Mozufferpore, and other North Gangetic districts of Behar.

The road cess papers show that the rental of Durbhunga generally, when the road cess papers were filed, was 7·2 times the Government revenue, of Mozufferpore 5·8 times, of Sarun 4·5, and of Chumparun 5·2 times the Government revenue. When it is remembered that the road cess papers probably understated the true rental, and ignored in many cases karchas and abwabs, it will be seen to what an enormous extent gross rental in these districts have increased since the permanent settlement. This enormous increase is, I think, mainly due to arbitrary enhancement in rent-rates, and not to extension of cultivation, for we are told that "Behar (at the time of the permanent settlement) was one of the most fertile, highly cultivated, and populous provinces of Hindustan in proportion to its extent of plain, arable land (*Supplement III, Historical and Comparative Analysis of the Finances of Bengal, by James Grant, 5th report, page 501, Madras edition.*) If the net income of zamindars was represented by one-tenth of Government revenue at the time of the permanent settlement, the road cess papers would show that, while the surplus now realised by a zamindar of Burdwan over his Government revenue is only five times, and that of a Dinagepore zemindar only twice the net income enjoyed by his predecessor at the time of the permanent settlement, the surplus realised by a zamindar of Durbhunga from his ryots is now thirty-eight times the surplus over Government revenue which was realized by his predecessor.

*Mr. Tobin's and Baboo Parbutty Churn Roy's reports.

See report on village Tubka Khas appended hereto, and references there quoted.

(*b*) When we find that the rents paid by occupancy ryots in Moorshedabad and Shahabad have not been changed for 40 years; that the rents in the Government estates of Khoorda, Majnamoota, and Jellamoota also have not been changed for 40 years; and that now, after 40 years' respite from enchancement, the ryots of these latter estates are asked for an enhancement in rates of only 50 per cent.; when we further find that the rates paid by occupancy ryots in the North-Western Provinces have also remained practically unaltered for 40 years; when we know that the Madras Government has not raised the assessments on its ryots to anything like the amount which would be justified by a rise in prices; when, in fine, we find this is the state of things in other provinces, and then, contrasting it with parts of North Behar, find that here the rents of occupancy and non-occupancy ryots alike have been raised by from 100 to 500 per cent. within the last 45 years, while prices have only risen by 73 per cent. during the same period, it is not unreasonable to conclude that some provision should be made for reducing excessive rents in Behar, and for giving the people rest from further harassment for a reasonably long period.

(*c*) I would therefore suggest that some such provision as the following be inserted in section 25 of the Bill, as one of the grounds for the reduction of rent, namely, that rent may be reduced:—

(4) "On the ground that the rent now bears a higher ratio to the value of the gross produce than the rent at any former period, which the court may think it equitable to take for the purpose of comparison, bore to the value of the gross produce at such former period."

The effect of such a provision in fixing rates in the case of Jaezpotee would be that the court might, taking the rates of 1247 F.S. (1840 A.D.) for the purpose of comparison, now fix rates by allowing only an enhancement proportionate to the rise in prices since that time, instead of taking the rates last fixed as its starting point, as it is bound to do under the present Bill. Some such provision as I have suggested would enable the courts to do practical justice, while the Bill, as it stands, will only perpetuate present excessive rents and facilitate the enhancement of them.

7. On the second point, namely, the effectual prevention of arbitrary enhancements in future, I would suggest that to the limitations on enhancements, provided in section 23 of the Bill, the following be added:—

Second suggestion.
That rates of occupancy ryots shall be enhanced only—
By an order of the court or under a written and registered agreement.

That pending the completion of a cadastral survey the rates paid by occupancy ryots be now ascertained by making it compulsory on zamindars to file the jummabundis of one year in the Collector's office, and that the rates paid by the occupancy ryots when thus ascertained shall not be enhanced, except (*a*) by an order of a court, (*b*) or by a written agreement registered under the Registration Act.

(*a*) Mr. Worsley proposed that this provision, which was taken from the Oudh Rent Act, should be extended to Behar, and the proposal was approved by the Behar Rent Committee. Though the proposal was considered of special importance by the Behar Committee, it was passed over without notice by the Bengal Rent Commission. I venture to think that it is the only limitation which is likely to have the least practical effect in preventing arbitrary enhancements in Behar. The limitations provided in the Bill of the Commission, namely, that (*a*) an enhanced rent shall in no case exceed 25 per cent. of the value of the gross produce, (*b*) that the new rent shall not be more than double the old rent, and so on, would have some effect in stopping arbitrary enhancements, if the ryot were a free agent, and were able to assert his rights in court. But if the ryot were thus capable of asserting his legal rights in court, is it possible that he would have submitted to the enhancements to which he has been subjected? Now, in order that the restrictions on enhancements proposed by the Bengal Commission may have any effect in preventing arbitrary enhancement, the ryot must take the initiative and assert his rights in Court; and as there is no more reason to suppose he will do this in the future than he has in the past, I am of opinion that these restrictions in enhancement will, for many years to come, have little or no practical effect in Behar in preventing arbitrary enhancements, which, being imposed at the will of the zamindar or tikkadar, are entered in the village papers by his mere order and without the ryot's consent. Zamindars and tikkadars would find arbitrary enhancements to be a different thing if they were bound to obtain a decree of court or to gather the ryots together at a Sub-Registrar's office and obtain their *bonâ fide* consent to future enhancements. The way in which enhancements are brought about at present is too well known to require description here. The assent of the village headmen and patwari is first procured by bribes and special concessions to them. The main body of the ryots, finding that their leaders have not resisted, ask: "Who are we that we should resist?" What is everybody's business is nobody's business, and so the enhancement is passively accepted. If, on the other hand, the ryots had to go to a public office and give their formal and individual assent to an enhancement, it would be found that they would refuse such express and formal assent, and arbitrary enhancements would thus be stopped. The principle of this proposal has been already accepted by the Government of India in legislating for Oudh. It was unanimously approved by the Behar Rent Committee: it is, I think, necessary in order to stop arbitrary enhancements in Behar. The only objections which I can conceive to it are that its adoption might be supposed to tend to prevent justifiable enhancements by mutual and friendly agreement, and that, inasmuch as the ryots are awaking to a knowledge of their rights, it may be supposed they will be able in future to protect themselves from arbitrary enhancements without such restrictions. It is not easy to see how the obligation of registering their agreements can prevent parties from entering into *bonâ fide* and amicable arrangements in the matter of fixing rents more than it does in agreements on other matters; and as for the supposed awaking of the ryots to a knowledge of their rights, I must say I fear there is not much evidence of the fact in this tract. Having made careful enquiries on the subject, it seems to me that those abuses on the one side and the same lethargy and helplessness on the other, which were commented on some five or six years since, still exist.

Third suggestion.
That the Board of Revenue be empowered to declare that the tables of rates in exceptional cases shall hold for thirty years instead of ten.

8. A third suggestion which I would offer for the restriction of arbitrary enchancements in Behar is that the Collector or Board of Revenue should be empowered to declare that tables of rates should be binding for such period not exceeding 30 years as may to the court appear equitable, instead of having such tables binding for only ten years (section 111 of the Bill). It is obviously inexpedient, and it would probably in many cases be unjust to the present proprietors, to reduce rents now to the figure at which they would stand, if enhancements had been made during the last fifty years, only on the ground and to the extent allowed by the law; but I think it is still more inexpedient, and it would be still more unjust, to perpetuate the present rates where they are excessive. In such cases I would therefore make a moderate reduction at present, and stop further enhancements for thirty years.

o

9. Statement No. IV attached to this report shows that of a total number of 3,075 ryots in 23 villages, in which enquiries have been made, 2,646 have been in possession for twelve years or more, and 429 are now settlers or non-occupancy ryots. In other words, about 86 per cent. are occupancy, and 14 per cent. are non-occupancy ryots. These figures are founded on a comparison of the jummabundis, where they could be procured, and in other cases on the statements of the patwaris and jeth ryots. The distinction between ryots of twelve years' standing and those of less lengthened possession is not, however, in fact, understood by the ryots at all, either here or in any other part of the country to which my enquiries have extended. There is a general idea prevailing among the ryots that those of them who are of very ancient standing, or whose ancestors brought the village under cultivation, have a right to hold at privileged rates; but as for the mere right to possession, there is no distinction between a ryot of two years and a ryot of twelve years' standing. In the course of my enquiries, among some hundreds of thousands of ryots, I think I might truly say that I have not met ten ryots who understood the "magic of twelve years' possession." Every ryot believes himself entitled to hold possession of his ryoti as contradistinguished from the proprietor's *nij jote* or *khamar*, as long as he pays at the rates of rent current in his village; or where there are no village rates, as long as he pays at the rate originally agreed upon, together with such enhancements as are imposed from time to time in the village generally. I believe that this is not only the idea prevalent among the ryots, but it is also the idea prevalent among native zamindars also, with the exception of the few who have had an English education, or who have imbibed their ideas in our law courts. In confirmation of this view I may mention that at an interview between Mr. Reynolds and one of the most wealthy zamindars of Gya, at which I was present, the zamindar, while denouncing the proposal to confer occupancy rights generally, was asked, "if he ever ejected a tenant who was willing to pay his rent." His reply was: "Why should I do such an unjust act; I am not a person of that kind."

Number of occupancy and non-occupancy ryots.

10. There are very few sub-tenants. These few consist merely of farm-labourers, who are allowed by their employers to cultivate a beegah or so of their employer's land, either on the *battaia* system, or at the rates paid by the principal tenants themselves. The system of sub-letting ryot's land to indigo factories on what are called *kartouli* pattas, is, I am informed by the Sub-Registrar of Dalsingserai, being extended; but the cases of this kind which came under my notice were cases in which there was a dispute between the ryots and zamindar in villages held *khas*, and in villages held under lease they were cases in which it was alleged that the Dalsingserai factory wished to retain possession of *zerat* lands after the expiration of its lease, on the ground that such lands were sublet to it by the ryots.

Sub-tenants.

11. This year's crop of rice, the produce of specimen fields of which was given in my report of the 18th December last, may, as far as I can learn, be taken as an average crop.

Average produce of *dhan lands*.

12. As I have not been able to have the produce of any *bheet* lands weighed in my presence, I cannot speak with any degree of certainty as to the average outturn of such lands. I have received estimates from patwaris, jeth ryots, and others, which are scarcely worth reproducing. The most trustworthy estimate which I have received is one from Mr. Crowdy, the manager of the Dowlatpore factory, who has had many years' experience of pergunnah Bhoosaree, and who has generally placed at my disposal all the information and papers he could. His estimate of the outturn and value of the average produce of the various kinds of bheet lands, calculated on the staple crops—barley, makai, murwa, and khodo—is given below :—

Amount and value of produce in bheet lands.

	Average produce of—		Rate at which ordinarily sold.	Value.	What Mr. Crowdy considers a fair rent for such land.	What Mr Crowdy thinks to be on an average the existing rent.
		Mds.	Mds. Srs.	R a. p.	R a.	
Bheet *aoul*, known as gauhera, soombee, mal, &c.	Rubbee in barley— Bhadoi in makai— Barley Makai	 12 20	 1 10 1 20	22 14 11	5 0	From R 5 to R 8.
Bheet duim, known as pachusar, balguchar, &c., &c.	Barley for rubbee Murwa for bhadoi	8 14	1 10 1 10	17 9 7	4 0	" " 4 to " 6.
Bheet suim, known as usar	Rubbee in barley— Bhadoi in khodo— Barley Khodo	 4 10	 1 10 1 30	8 14 7	2 8	" " 1-8 to " 4.

13. I have nothing to add to what I have already stated on this subject. In order, however, to illustrate more clearly the difficulties already described, I append a rate-map of village "Tubka Mughribee." The village is sub-divided into blocks according to quality of soil, the boundaries of the lands comprised in each quality being shown by lines of different colour. A glance at the map will show the enormous variety of rates prevailing in each block for lands of the same quality.

Difficulty in fixing soil class rates.

Notes on Tubka Khas village No. 6 of Map II.

Government Revenue.—This mouzah formed part of a Nankar mehal, which was resumed and brought under settlement in 1242 F.S. (1835 A.D.) In the course of the settlement proceedings, the jummabundis of the year 1242 to 1247 F. S. (1835 to 1840 A. D.) were filed in the Collector's office. A comparison of these jummabundis with the jummabundis of the present time makes it possible to come to some conclusion as to the extent to which the rates and gross rentals of this and neighbouring villages have been enhanced during the past 50 years.

This Nankar mehal included an 8-anna share of—

Villages . . . { (1) Tubka Khas.
(2) Tubka Mughribee.
(3) Surowlee.

The Government revenue fixed in perpetuity in 1247 F.S. (1840 A.D.) is Rs. 607 sicca, the mofussil rental of the whole mehal then being Rs. 1,320-15-11. The present mofussil rental is Rs. 4,125-6-8, that is to say, six and three-fourth times the Government revenue and three times the average rental of the years 1242 to 1247 F.S. (1835 to 1840 A.D.). The Government revenue in 1242 F.S. (1835 A.D.) was, it is to be remembered, fixed on the basis of half assests.

Abstract of Jummabundi.—The following statement gives an abstract of the present jummabundi of the minor's share in mouzah Tukba Khas and of the jummadundis of the year 1242 F.S. (1835 A.D.)

Abstract of Jummabundi for the Year 1242 F. S. (1835 A. D.)				Abstract of Jummabundi for the year 1289 F.S. (1882 A.D.)					Remarks.

REMARKS.

1242 F.S. (1835 A.D.)

B. K. D. 424 13 9 — R a. p. 459 12 10½

* The average rate per beegha, Rs. 1-1-3.

1289 F.S. (1882 A.D.)

B. K. D. 623 5 4 — R a. p. 1,936 8 4

The average rate per beegha, Rs. 3-1-9.

From these abstracts it will be seen that, while the area under cultivation has increased by only 47 per cent. in this village within the last 50 years, the gross rental has increased by 321 per cent.; further, that while the average rate per beegha for the whole area under cultivation was in 1242 F.S. (1835 A.D.) Rs. 1-1-3, the average rate for the area now under cultivation is Rs. 3-1-9, or little less than three times the rate of 1242 F.S. (1835 A.D.) It is true that the highest rate in 1242 F.S. (1835 A.D.) was Rs. 6, while now the highest rate is only Rs. 6-7-4½, but the six-rupee rate in 1242 F. S. (1835 A. D.) was nominal, being the ground-rent of a shop. The average rates all round for cultivated land have been nearly trebled in the last 50 years; but not only have the rates all round been thus trebled, but the land for which these trebled rates are now being paid is inferior to that for which the lower rates were paid in 1242 F. S. (1835 A.D.); for 69 beeghas 21 kottahs of the best land near the village site have been taken from the ryots and converted into indigo zerat during the past 25 years, while the ryots' cultivation has been extended over the outlying poorer lands.

2. *Past history of the village.*—The jeth ryots say that Mahtab Singh was tikkadar in the time of Ram Narain Singh, who was the present minor's grandfather. He took half an anna karcha on the old rates. He was succeeded by Bechuklal Misser, tikkadar, who incorporated with the rent the half anna taken as karcha by his predecessor, and then realised an anna in the rupee as karcha on his own account. Bechuklal's lease having been renewed, he

similarly again incorporated previous karcha with the rent, and levied an anna per rupee as karcha in addition. On the expiration of Bechuk Misser's lease, the village was leased to the Dalsingserai factory in 1270 F.S. (1863 A.D.) The first lease to the factory was for seven years. This lease was renewed for a further period of seven years, and was again renewed for a term of nine years, which term will not expire before 1292 F.S. (1885 A.D.)

The factory enhanced the rates by one and a half annas in the rupee during the currency of its first lease in 1275 F.S. (1868 A.D), and again enhanced the rents by half an anna in the rupee last year. This so-called enhancement consisted in simply ordering the patwari to enter the amount as a demand in the village papers against each ryot.

3. *Explanation of increase in number of rates.*—The increase in the amount of the rates is explained in the preceding paragraph. The patwari explains the increase in the number of rates as follows:—As the rates, he says, had become confused in consequence of the numerous enhancements and karchas, the factory manager ordered him in 1285 F.S. (1878 A.D.) to take each ryot's gross rental, inclusive of karchas, and divide it by the number of beeghas of land he held, thus establishing a separate average rate for each ryot. The patwari did so; and the result is that there are 97 separate rates where there were only 29 in 1247 F.S. (1840 A.D.) These 97 rates are, it will be seen, neither village nor customary nor soil-class rates. They are in fact "personal" rates, made out by striking a separate average for each separate ryot's holding.

4. *Facilities for irrigation.*—This mouzah is irrigated from the rivers Mutyee and Kamraen; it is situated within a few miles of the Tirhoot State Railway.

6. *Karchas and abwabs.*—As stated above, half an anna per rupee karcha was imposed last year. The patwari has this year been ordered to incorporate this sum with the rent.

Hisabana intended for pay of the patwari is realized at one pie per rupee.

Special crop rates.—Special rates are not charged for tabacco or other special crops.

7. *Classes of soil.*—The jeth ryots and patwari say there are only two classes of soil and five qualities:—

I.—*Bheet aoul* or gauhera, *i.e.*, manured land near the village sites; *bheet duim*, pachusar, in which there is a large admixture of sand; *bheet suim*, usur up-land (in which there is a mixture of reh).

II.—Dhanhar or matiyar aoul } clayey loam on which rice is grown.
Dhanhar or matiyar duim }

The outturn of two fields of dhan cut by me in this village was respectively 12 maunds and 10¾ maunds of dhan per beegha. This is represented to be a twelve-anna crop. Last year the jeth ryot, Abalak Thakur, had what he calls a sixteen-anna crop, which yielded 15 maunds per beegha.

There are no special rates for groves and thatching grass.

No rent is charged for bastoo lands, that is to say, for the sites of ryots' houses.

8. *Occupancy ryots.*—The jummabundis of 12 years are not forthcoming, from which it might be ascertained how many of the present ryots have held for 12 years The patwar and jeth ryots say there are no new settlers, that all the ryots are hereditary and resident. There is not land enough for old ryots; why, they ask, should new ryots come?

There are, it is said for the same reason, no sub-tenants in this village. Some few ryots made over a beegha or so for cultivation to their farm labourers at the rates paid by themselves, so as to induce the former to continue in their service; but otherwise land is not sublet by occupancy ryots for profit.

9. *Determination of fair and equitable rates.*—It is generally alleged by the cultivators that the productive power of the land here, as elsewhere, has decreased and is decreasing. Such assertions are, however, founded on vague impressions of what the present generation have heard from their fathers, and in the case of their fathers, from the common tendency to praise the past at the expense of the present. The extension of cultivation to inferior lands has doubtless made the average gross produce per beegha of the whole village area less than it was in former times; but there is nothing to show that the lands which were actually under cultivation in those days produced more then than they do now. On the other hand, there have been no improvements in the system of agriculture, nor have there been any increased facilities for irrigation, owing to which it might be concluded that the average productive power of the land has increased. No account need therefore be taken of increase or decrease of the productive power of the land in now determining fair and equitable rates. I shall accordingly only consider what increase or decrease, if any, should be made in the present rates on the ground of increase or decrease in the value of the produce since the rates were last fixed or at any subsequent or former time. Fortunately the materials exist for instituting a comparison of the present rates at present prices in this and neighbouring villages, with the rates and prices of the period 1242 to 1247 F.S. (1835 to 1840 A.D.) These materials are to be found in the settlement records of the taluka which was brought under permanent settlement in 1247 F. S. (1840 A.D.)

In the settlement papers of 1247 F.S. (1840 A.D.) the ameen gives a statement of the prices prevailing in this neighbourhood at that time, which statement was accepted by the Settlement Deputy Collector as correct. The following is a comparative statement of the

increase in prices and increase in rent-rates during the period 1247 to 1289 F.S. (1840 to 1882 A.D.) :—

	Price in 1247 F.S. (1840 A.D.)	Price in 1289 F.S. (1882 A.D.)	Percentage of increase on prices since 1247.	REMARKS.
	Seers of 80 S.W per rupee.	Seers of 80 S. W. per rupee.		
Unhusked rice (dhan)	90	50*	80	I take the ameen's prices of 1247 F S (1840 A.D.) for the purpose of comparison, they being the only prices available; but there is reason to doubt their accuracy. Prices in the neighbouring districts have only risen by 50 to 60 per cent in the last 40 years, while, according to the ameen's lists, they have risen here by 73 per cent In my calculations of rates the zamindar gets all the benefit of any inaccuracies there may be in the ameen's prices
Indian-corn	80	45	77	
Barley	70	40	75	
Millet	80	50	60	
Tobacco	Not given			
		Average increase.	73 per cent.	

* Paddy does not sell at the same rate per rupee as its equivalent in rice, as the purchaser suffers from the loss of weight in drying, carriage, storage, &c

Average rate per beegha in 1247 F S (1840 A D)	Average rate in 1289 (1882 A.D.), including abwabs.	Increase in rent-rates.	Increase in prices.
R a. p.	R a. p.		
1 1 3	3 1 9	188 per cent.	73·

It thus appears that while the increase in prices for staple crops has been only 73 per cent. in 42 years over the prices of 1247 F.S. (1840 A D.), the increase in rent-rates has been 188 per cent. over and above the rates of 1247 F.S. (1840 A.D.); and this, be it remembered, though the ameen's prices for 1247 F.S. (1840 A.D.) are accepted as correct. In fact, however, the ameen did, in all probability, understate the prices of 1247 F.S. (1840 A.D.), in order to have the zamindars' jumma fixed at a low figure. As the increase in rates is only justified by increase in prices, and inasmuch as the increase in prices since 1247 F.S. would not be as much as even 73 per cent. if the ameen understated the prices of 1247, it follows that in the proportion that prices ruling in 1247 F.S. (1840 A.D.) were really higher than those given by the ameen, so much the less reason is there for the enhancements which have since taken place. But it is to be further remembered that the ryots pay these enhanced rates for land which is inferior to that which was under cultivation in 1247 F.S. (1840 A.D), because, as already noted, the best lands have been taken up for indigo, while the ryots' cultivation has been extended to the outlying inferior lands.

Tested, then, by comparison with the rates and prices prevailing in 1247 F.S. (1840 A.D.) it follows that the present rates are excessive. The rent-rates have not only kept pace with, but they have far outrun the increase in prices during the last 45 years—a state of things which probably exists in no other part of India.

Behar peculiar in that rise in rents has outrun rise in prices.

10. In Bengal it is a subject of complaint on the part of zamindars that they have been able to obtain little, if any, of that increase in rentals to which increase in prices would legally entitle them.

In the Cawnpore district of the North-Western Provinces, the price of wheat rose by 42·7, of bijhra by 34·2, of juar by 43·6, and bajra by 47·7 during the 30 years' period of the last settlement. Yet rent-rates had scarcely risen at all in the North-Western Provinces during the same period—"rent-rates" (*see* Mr. Colvin's settlement memorandum of 1872, paragraph 18, page 741) "not being immediately acted on by prices, but limited by custom and largely controlled by law." (Settlement Report of the Cawnpore district, 1878, page 60, paragraphs 39 and 43.)

In the Azimgurh district the Settlement Officer reported in 1881 as follows :—

"The fixity of cultivating tenure which our system of land revenue and record, falling in with the general feeling of the community, has brought about, has prevented any general rise of rent in land upon which a right of occupancy had previously accrued."

In the Muthra district, the price of wheat has risen by 55 per cent., of barley by 65, of gram by 45, and of bijhar by 52 per cent. since the mutiny, yet the rise in the competition rents paid by non-occupancy ryots had only risen by 25 to 30 per cent. "since the revision of the records of that district—a period of 28 years." (Settlement Report of the Muthra district, 1879, page 89)

The Settlement Officer of the Agra district, writing in 1880, says—"The measures adopted at the last settlement with regard to the rents of occupancy tenants have altogether prevented their rising in any proportion to any increase in the value of the land to whatever extent that may have taken place."

The competition rates paid by non-occupancy ryots have risen by 32 per cent. in the Agra district during the last 35 or 40 years, while prices have risen by 50 per cent. in the same period. (Settlement Report of Agra district, 1880, paragraphs 98, 99, and 124.)

Speaking generally of the North-Western Provinces, Mr. Stack, in his memorandum on current land revenue settlement, 1880, says—"Throughout the greater part of the provinces,

prices have risen by 40 to 50 per cent. during the currency of the last settlement" [in the last 45 years]; "but it has been everywhere found that the rise of rents has not kept pace with rise of prices."

It follows, then, that though prices have risen by 40 to 50 per cent. during the last 45 years in the North-Western Provinces, yet the rent-rates paid by occupancy ryots have scarcely increased at all, and those paid by non-occupancy ryots have only risen by 25 to 30 per cent., while in this village the rates paid by occupancy and non-occupancy ryots alike have been increased all round by 188 per cent., and they have, moreover, far outrun the rise in prices. If, then, the rates for this village were now to be fixed by comparison with the rates of 1247 F.S. (1840 A.D.), taking into consideration the rise in prices since that time, the new average all-round rate would stand as follows:—

	R	a.	p.
Rate of 1247 F.S. (1840 A.D.)	1	1	3
Add 73* per cent. for increase in prices since that time, such increase not having been effected by the agency of either ryot or landlord (see section 23 of the Bill)	0	12	6
New all-round rate	1	13	9
Present all-round rate	3	1	9

If the rates and prices of 1247 F.S. (1840 A.D.) could be taken as the standard of comparison, the present rates would have to be reduced by 40 per cent. all round in order to arrive at fair and equitable rates.

The rates of 1247 F.S. (1840 A.D.) cannot, however, be taken under the present or proposed law as the basis of comparison, for it is only the prices prevailing when the rates were last fixed, or at any subsequent time that can be taken for comparison in considering the rise of prices. The rates in this village were last fixed in 1275 F.S. (1868 A.D.)

The following is a comparative statement of the then ruling prices with present prices:—

	1868-70.	1880-82.	REMARKS.
	Srs.	Srs.	
Common rice	24	25¼	The data on which these figures are based are given in detail on the notes on Dalsingserai annexed.
Indian-corn	35 7/12	47 1/12	
Wheat	21 5/6	29⅓	

The above figures show that prices now are somewhat lower than when the rates were last fixed in 1275 F.S., yet an enhancement of half an anna per rupee all round was demanded last year by the factory manager, and is now, the patwari says, shown in the jummabundi.

(11.) To sum up the preceding remarks, it appears that the rent-rates of this village had been enhanced during the 20 years prior to 1868 A.D., out of all proportion to increase of prices, rent-rates having been nearly trebled, while prices increased by only 73 per cent., *secondly*, that though there has been no increase of prices since 1868, but rather the reverse, yet the Dalsingserai factory manager is* now demanding a further enhancement of half an anna in the rupee; *thirdly*, that owing, in a slight degree, to extension of cultivation but chiefly to the arbitrary enhancement of rates, the gross rental has been more than quadrupled during the last 45 years; further that if rates were now fixed on the basis of comparison with the rates and prices of the year 1247 F.S. (1840 A.D.), (on which rates and prices the permanent Government revenue of this mehal was fixed), existing rates would have to be reduced by 40 per cent. in order to make them fair and equitable. It also appears that there is no justification for the enhancement of half an anna in the rupee demanded last year and now being enforced.

* I wrote to the factory manager, asking on what ground this enhancement is being made. I quote in full his reply (received since this was written). It shows a curious misconception of the grounds on which an enhancement may be made:—

"The enhancement you mention is temporary, and you are misinformed, inasmuch as you have been told that I had given orders that it should be incorporated with the rent. No orders have been passed on the subject in regard to the current season. The enhancement was established by my predecessor for one year *to meet loss from a deficiency of bhowlee crops*, with the intention of keeping the jummabundis uniform; and as the ryots were informed of the cause, they voluntarily paid the enhancement, on the understanding that they should receive credit for it in such a year when the bhowlee was above the average."

That is to say, that because lands A, B, and C yielded less than was expected, the lands of C, D, and E must be assessed so as to make up the difference.

Notes on Tubka Mughribee.

(1) *Government revenue.*—This mouzah forms part of the Naukar mehal, of which the Government revenue is given under Tubka Khas.

(2) *Details of area.*—The details of the present rates and of the areas at each rate are given below. The rates prevailing in 1242 F.S. (1835 A.D) are not specified in the settlement papers of 1242 to 1247 F.S. (1835 to 1840 A.D.), but they were probably the same as in the

* NOTE.—I have in calculating enhanced rates given the full benefit of increase in prices, according to the rule of proportion, to the zamindar. The meaning of section 3(*a*) of the Bengal Commissioners' Bill giving the benefit of only half the increment to the zamindar is not clear. If it means only half the *proportion* of increment, then it would introduce a very great change in the enhancement law, and if it means half the lump increment, the limitation provided in clause (*b*) which adheres to the rule of proportion, would render clause (*a*) inoperative, except where the rent was more than 50 per cent. of the gross produce.

neighbouring village, Tubka Khas, which would give an average rate all round of Rs. 1-1-3. The present average all-round rate is Rs. 1-14-9 :—

ABSTRACT OF JUMMABUNDI FOR THE YEAR 1289 F.S. (1882 A.D.)

(3) *Past history.*—The mouzah was leased to Bekram Lal from 1250 to 1256 F.S. (1843 to 1849 A.D) The rates prevailing in this period are not known. From 1257 to 1274 F.S. (1850 to 1867 A.D.), it was leased to Mahtab Sing. He raised the rates by 4 annas per beegha in 1257 F.S. (1850 A.D.)

From 1275 to 1283 F.S. (1868 to 1876 A.D.), the village was leased to the Dalsingserai factory. This lease was renewed for a further period of 9 years, which will expire in 1292 F.S. (1885 A.D.)

The factory raised the rates by one and a quarter annas in the rupee in 1275 F.S. (1868 A.D.) In 1284 F.S. (1877 A.D.), part of the village was again given in lease to the Dalsingserai factory, and the rest was leased to Tirguman Misser and Medini Thakur, who are themselves ryots.

The factory has, during the currency of its last lease, demanded an enhancement of half an anna in the rupee, and entered this demand in the jummabundi.

(4) *Irrigation and facilities.*—The village is irrigated from the Mytee, and is only a few miles from the Tirhoot State Railway.

(5) *Classes of soil.*—There are two classes of soil and five qualities :—

I—(1) Bheet aoul, or gauhera.
(2) Bheet duim, or pachusar.
(3) Bheet suim, or usar.
II—(4) Dhanhar aoul.
(5) Dhanhar duim.

(6) *Number of occupancy and non-occupancy ryots.*—The putwari says there are no new ryots. All are occupancy ryots. There is no distinction in rates paid by occupancy and non-occupancy ryots as such. The jummabundi for the past 12 years are not forthcoming. I cannot therefore test the truth of the statement that there are no non-occupancy ryots. The distinction between occupancy and non-occupancy ryots is not in fact at all understood here. Ryots of high caste, whose ancestors have been resident for generations, have sometimes managed to hold at favourable rates, as compared with others; but a ryot once allowed to settle in the village is understood to have a right to hold as long as he pays the rent originally agreed upon, together with such enhancements as may be subsequently made in the village generally.

(7) *Average produce.*—Three specimen fields of *dhan* were cut by me, yielding 7½, 4½, and 4 maunds per beegha. This year's crop is represented to be an 8-anna crop in the up-lands and 12-anna in the low-lands.

(8) *Determination of fair and equitable rates.*—The present average all-round rate, ascertained by dividing present gross rental by area now under cultivation, is Rs. 1-14-9. The average all-round rate in 1247 F.S. (1843 A.D.) for this and the neighbouring village of Tubka Khas was Rs. 1-1-3, which rate is similarly ascertained by dividing the gross rental by the area then under cultivation. It appears therefore that the rates all round have been enhanced by 80 per cent. since 1247 F.S. (1840 A.D.), while the increase in prices during the same period was 73 per cent. If, then, fair rates were now to be fixed by the standard of comparison with the rates and prices of 1247 F.S. (1840 A.D.), existing rates would have to be reduced. The enhancement of half an anna in the rupee, which the ticcadar demanded last year, would in any case have to be struck off, as not being justified by any increase in average prices since 1275 F.S. (1868 A.D.), when the rates were last fixed.

Notes on Mahomedpore Sunkura, Village No. 9 of Map II.

(1) The Narhun minor is proprietor of 8 annas of this mouzah, which forms part of taluk Kishenarainpore, and was permanently settled in 1210 F.S. (1803 A.D.) The Government revenue of the Narhun share is Rs. 25, as shown in the settlement papers: the present rental is Rs. 2,889-3-1½, or one hundred and fifteen times the Government revenue.

(2) *Abstract of jummabundi.*—The following statement shows the present rates, and the areas held at each rate. The areas held at the several rates are not given in the old settlement papers, but the rates prevailing in 1248 F.S. (1841 A.D.) are given in the settlement papers of a neighbouring taluka, and are shown below, with the rates and areas of 1275 and 1289 F.S. (1868 and 1882 A.D.):—

Abstract of Jummabundi for 1248 F.S. (1841 A.D.)		Abstract of Jummabundi for 1278 F.S. (1868 A.D.)				Abstract of Jummabundi for 1289 F.S. (1882 A.D.)			Remarks.

								R a. p.	
The average on area taken from Tubka Khas. Rs. 1-1-3.							Jumma	2,435 15 0	
							Average on cultivated area	3 12 0	

From this statement it will be seen that, while the highest rate at present is Rs. 5, the highest rate in 1248 F.S. (1841 A.D.) was only Rs. 2-14. Further, that, excluding Tola Jagurnathpore, the gross rental was Rs. 1,648 in 1275 F.S. (1868 A.D.), while with the same area under cultivation in 1289 F.S. (1882 A.D.) it is Rs. 2,435; in other words, the gross rental has been enhanced by 50 per cent. within the past 15 years. The fact that the Government revenue bears such an insignificant ratio to the present rental further shows either that the rental must have been enormously enhanced since the settlement of 1210 F.S. (1803 A.D.), or that there was some irregularity in fixing the Government revenue.

(3) *Past history.*—This village was leased to Dalsingserai factory for three years, 1267 to 1269 F.S. (1860 to 1862 A.D.), at Rs. 850. The jeth ryots say that the rates then were from Rs. 2-8 to 8 annas.

From 1270 F.S. to 1276 F.S. (1863 to 1869 A.D.) it was leased to Behari Raout at a jumma of Rs. 1,151. During this period the ticcadar raised the jeth ryots' rates by 8 annas per beegha in 1275 F.S. (1868 A.D.), and the ryots' rates by 14 annas.

From 1277 to 1285 F.S. (1870 to 1878 A.D.) the lease to Behari Raout was renewed for nine years at a jumma of Rs. 1,600. During the currency of this lease, the ticcadar again raised

the jeth ryots' rate 8 annas, and the ryots' rates 12 annas per beegha. In 1285 F.S. (1878 A.D.) finding he could not realize rent at the above rates, Behari Raout reduced them by 2 annas and 3 pies per beegha. From 1286 to 1292 F.S. (1879 to 1885 A.D.), the village was again leased to Behari Raout at Rs. 1,900. He has this year relinquished the lease, being apparently unable to realize his enhanced rents. His relinquishment has been accepted. The present jumma, inclusive of Tola Jagarnathpore, is Rs. 2,889. It thus appears that the reserved rental payable by the ticcadar to the proprietor has been more than doubled in the course of 20 years, further, excluding Tola Jagarnathpore, for which the materials for comparison are not available, it appears, as already noted, that the mofussil jumma of the remaining portion of this mouzah was Rs. 1,648 in 1275 F.S. (1868 A.D.), while in 1279 F.S. (1872 A.D.), it was raised to Rs. 2,600, and was reduced in 1285 F.S. (1878 A.D.) to Rs. 2,435; *in other words, an increase of 50 per cent. was made in the gross rental in the course of the past 15 years, the cultivated area remaining the same.*

(4) *Irrigation and facilities of communication.*—The mouzah is irrigated from the river Jumooaree, and is situated a few miles from the Tirhoot State Railway.

(5) *Karchas.*—The only karcha levied is kiyali at half an anna a rupee. It is realized from all ryots other than Bhabuns, who are exempted.

(6) *Occupancy ryots.*—A comparison of the jummabundis of 1275 F.S. and 1289 F.S. (1868 and 1882 A.D.) shows that, of a total number of 188 ryots, 178 are *kadimee* resident occupancy ryots, 10 are *noabad* non-occupancy ryots. The latter settled in the village within the last 10 years.

(7) *Average outturn.*—The patwari says this year's crop was a full sixteen-anna one.

Determination of fair and equitable rates.—The area under cultivation now is exactly the same as it was in 1275 F.S. (1868 A.D.), *i.e.*, 15 years ago. The average rates and gross rentals have been enhanced by 55 per cent. by the native ticcadar Behari Raout in this period; while, as I have shown in my notes on Dalsingserai, there was no increase in average prices in the same interval. In now fixing fair rates, all enhancements made subsequent to 1275 F.S. would have to be ignored as being excessive and arbitrary. Even the rates of 1275 F.S. (1868 A.D.), if compared with those of 1248 F.S. (1841 A.D.), would be found to be excessive.

Soil-class rates.—There are two classes and five qualities of soil, namely :—

(1) Bheet aoul or gauhera.
Bheet duim or balguchar.
Bheet suim or usur.

(2) Dhanhar aoul.
Dhanhar duim.

Subject, of course, to the remarks which I made in a former report, as to the difficulty and inexpediency of fixing soil-class rates in this tract, I should, were I called upon to fix soil-class rates for this village, fix them as follows :—

	Maximum.		Average.		Minimum.	
	R	a.	R	a.	R	a.
Bheet aoul	5	0	4	4	3	8
Bheet duim	3	8	3	4	3	0
Bheet suim	3	0	2	0	1	0
Dhanhar aoul	3	8	2	12	...	
Dhanhar duim	3	0	2	8	2	0

These rates would, I believe, be accepted by the ryots, and taking into consideration the past history of the village, they are certainly anything but low. This is an example of a village held in lease by a native ticcadar, and it shows, as already stated, that though rents in villages leased to the Dalsingserai Indigo Factory have been enhanced out of proportion to any increase in prices, the rents in villages leased to native ticcadars have been enhanced still more. I have ascertained from the settlement papers that the average all-round rate of neighbouring villages was Rs. 1-1-3 in 1247 F.S. (1840 A.D.) If rates were now to be fixed by comparison with the rates and prices of that time, the average all-round rate would stand thus :—

	R	a.	p.
Rate of 1247 F.S. (1840 A.D.)	1	1	3
Add 73 per cent. for increase in prices	0	12	6
TOTAL	1	13	9
All-round rate on same land at present	3	12	6

The present rental and average rates all round would therefore have to be reduced by 50 per cent. in order to make them fair and equitable, as compared with the rates of 1247 F.S. (1840 A.D.)

Notes on Dalsingserai, Village No. 12 of Map II.

The Narhun minor is proprietor of eight annas of this village, the other eight annas being held by Baboo Pirnarayan Singh and others, who are known as the Ramghur Baboos. The two eight-anna shares are held separately, and have separate towji numbers.

(1) *Government revenue.*—The Government revenue of the Narhun eight-anna share is Rs. 51, while the present gross rental, as shown in the jummabundi of 1289 F. S. (1882 A.D.),

inclusive of bazar fees and other miscellaneous items, is Rs. 966, or nineteen times the Government revenue. Excluding such miscellaneous items, the rental of the land alone is Rs. 676. This, however, includes the house-rents of shops in the bazar. The rental proper for cultivated land is Rs. 485, or nearly ten times the Government revenue.

(2.) The total area of the Narhun share is 148 beeghas, of which (1) 106 beeghas 5 kottahs 10 dhurs are cultivated rent-paying, (2) 41 beeghas 14 kottahs 10 dhurs are non-cultivated and non-rent-paying.

The annexed statement gives an abstract of the jummabundis of 1274 and 1289 F.S. (1867 and 1882 A.D.) :—

(3) *Post history of the village.*—The jeth ryots and patwarees and a mohurir of the Narhun estate, who is in my camp, say that the present rates were fixed in 1285 F.S (1878 A.D.) The village was leased to one Gourdial Sing from 1264 to 1270 F.S. (1857 to 1863 A. D.) It was next leased to the Dal-ingserai factory* from 1271 to 1284 F.S. (1864 to 1877 A. D.) From 1285 F.S. (1878 A.D.) it was leased to Behari Raout, and not to the factory. Certain ryots, it is said, agreed in 1285 F.S. (1878 A.D.) to pay enhanced rates of rent on condition that the native ticcadar would settle with them the indigo zerats lately held by the factory. The ticcadar had a measurement of the village and a re-assessment of each field made in that year. The ryots, it is said by the patwaree and mohurir, agreed to the new assessment and signed the new parchas.

The new rates were not made out by an enhancement of so much on the rupee or so much per beegha on the old rates. The patwaree who made the assessment simply assessed each field at the rate he thought fit and in this way more than doubled the previous gross rental. The ryots say they never agreed to any enhancement; they refused to pay at the new enhanced rates, and were accordingly sued for arrears of rent in 1288 F.S. (1881 A. D.), at the enhanced rates which were being demanded. The suits were all dismissed, and decrees were given only at the rates acknowledged by the ryots. The latter say that many of them did not get possession of any portion of the indigo zerat land, yet their rates were enhanced. The following ryots are mentioned as examples:—

1. Chulai Ja, in 1284 F.S. (1877 A.D.), held 9 kottahs 4½ dhurs at Rs. 2-8 per beegha rent, Rs. 1-2. According to new assessment his rental is Rs. 2-4.
2. Jitlal Ja, 10 kottahs 9½ dhurs; former rent Rs. 1-12 to Rs. 3-2 per beegha; new assessment at Rs. 5-2 per beegha; rental Rs. 4.

Both these are occupancy ryots, and none of the zerat lands was settled with them. The jummabundis corroborate these statements. This new assessment and the jummabundi founded on it must be, I think, entirely set aside as both illegal and inequitable. The ryots say they are willing to pay an enhancement of 4 annas a beegha on the rates which prevailed before 1285 F.S. (1878 A.D.) for the lands then held; and for the zerats they are willing to pay at Rs. 6. per beegha.

(4) *Previous enhancements.*—Setting aside the rates fixed by the patwaree in 1285 F.S. (1878 A.D.), the year in which the rates were last fixed is 1274 F.S. (1867 A.D.). In that

* NOTE.—Behari Raout was the late proprietor's cook and a man of straw. Thicka leases were nominally given to him whenever an enhancement was demanded, so that the proprietor might escape personal responsibility for any illegalities which might be practised.

year the factory manager called the ryots together, and asked them to pay half an anna in the rupee by way of commission to the tehsildar who then collected rents. This half-anna in the rupee is shown in the jummabundi of 1275 F.S. (1868 A.D.) separately from the *assal* jumma, and is entered as "*beshi.*"

It is to all intents and purposes an enhancement of rent, though the ryots say it is nothing of the kind. It was, they say, an illegal *abwab.*

There is no evidence to show what rates prevailed before 1274 F.S. (1867 A.D.) The ryots allege that the rates given in the jummabundi of that year, less by the half-anna *beshi* then added, had come down from the most ancient times. I believe this statement to be untrue. It is made under the impression that the right to hold at fixed rates will be established by false allegations of the existing rates having remained unaltered for a long period. Similar statements were made in regard to Tubka and other villages, and are shown by the settlement papers of 1242 F.S. to 1248 F.S. (1835 to 1841 A.D.) to be quite untrue. It was at first stated by the jeth ryots and patwarees, from similar motives, in regard to these latter villages also that the present rates had come down unchanged from time immemorial; but when the old jummabundis were produced and examined, it was at once admitted that these statements were false, and the true history of the enhancement was then given.

(5) *Classes of soil.*—The jeth ryots say there are only two classes and four qualities of soil in the village, namely :—

Bheet aoul—Which includes classes I to VI, as shown in the jummabundi of 1289 F.S. (1882 A.D.)

Bheet duim—Which includes the present classes VI to XII.

Bheet suim—All the rest of the *bheet dhankar.*

1. *Bheet aoul*—Includes the late indigo zerats and the manured land near the village site.

   Bheet duim—Is up-land, in which there is a larger mixture of sand called bhullawahs or *balguchur.*

   Bheet suim—Up-land, in which there is a mixture of *reh,* locally called *usar.*

2. *Dhanhar*—Is the clayey loam known as matiyar.

(6) *Irrigation.*—Dalsingserai is partly irrigated from the Bolan river. The up-lands are not irrigated.

(7) *Facilities for communication and proximity to markets.*—There is a large bazar in the village. The Tirhoot State Railway passes through it.

(8) *Occupancy and non-occupancy ryots.*—There were 38 ryots in this village at the end of 1289 F.S. (1882 A.D.) Of these, 28 are hereditary ryots, whose fathers and forefathers lived in this village. Owing to the system of exchanging indigo for ryoti lands, it is impossible to say whether all or any of these have cultivated the same identical fields for 12 years successively. Seven have been old residents of this mouzah, but they cultivated in the nizamut and not the Narhun *pottee* till 1285 F.S. (1878 A.D.), when they began to cultivate in the Narhun share. There are old residents of the Narhun *pottee,* but only took to cultivation of land in 1285 F.S. (1878 A.D.)

(9) *Determination of fair and equitable rates.*—I have not been able to procure lists from the local bazar chowdhry or from the factory manager at Dalsingserai, from which the prices prevailing before 1868 A.D. could be ascertained, though I have no doubt such lists exist. I am therefore obliged to fall back on the price current lists received from the Collectorate, which only go back to 1868 A.D., and give only the prices prevailing at Tajpore, the head-quarters of the sub-division. For the purposes, however, of instituting a comparison between the present value of the produce and the value when the rates were last fixed in 1868 A.D., the lists of prices ruling at Tajpore will be sufficient. Prices may ordinarily be a seer or two more or less in Dalsingserai than in Tajpore, but prices now in Dalsingserai probably bear the same proportion to prices in 1868 at Dalsingserai, as prices now in Tajpore do to prices in 1868 A.D. in Tajpore.

The following statements show the average prices prevailing in Tajpore during the three years 1868, 1869, and 1870, as compared with the prices prevailing during the past three years—1880, 1881 and 1882 :—

Statement of prices in 1868, 1869, 1870.

III.—Comparative statement of average prices for the periods 1868, 1869 and 1870, and 1880, 1881 and 1882.

	1868, 1869 and 1870,	1880, 1881 and 1882.
Common rice	$21\frac{5}{6}$	$21\frac{8}{9}$
Indian-corn	$35\frac{5}{8}$	$44\frac{1}{6}$
Wheat	$19\frac{11}{18}$	$19\frac{4}{9}$
Pulses, barley, and millet	Information for comparison not available.	

It will be observed that there is an abnormal year in each of these periods: the year 1869 in the first period, when prices were unusually high, owing probably to famine in Central India and scarcity in the North-Western Provinces in that year; the year 1880 in the second period, when prices were abnormally high owing to a local failure of crops.

Leaving these two years out of consideration, the comparative statement would stand thus—

	Average price. 1868 to 1870.	Average price. 1881 to 1882.
Common rice	24 seers.	$25\frac{1}{3}$ seers.
Indian-corn	$35\frac{7}{18}$ "	$47\frac{1}{12}$ "
Wheat	$21\frac{5}{6}$ "	$20\frac{1}{3}$ "

From these statements it will be seen that, whether the abnormal years are included or excluded from the calculation, average prices now, so far as there has been any change at all, are rather lower than they were fifteen years ago. There is therefore no sort of justification for any enhancement of the rates fixed in 1274 F.S. (1867 A.D.)

The legal, fair, and equitable rates for this village would therefore now be Rs. 6 per beegha for the indigo zerat land lately settled with the ryots, that is to say, the rate actually obtained by competition, and for the rest of the village the rates shown in the jummabundi of 1874 A.D.

Striking out mere nominal rates which applied to only a few cottahs of land, the legal, fair, and equitable rates will stand thus:—

1. 27 beeghas 6 kottahs 4 dhurs at Rs. 6 (indigo zerat.)
2. 15 beeghas 9 dhurs at Rs. 3-4.
3. 22 beeghas 18 kottahs 18 dhurs at Rs. 2-12.
4. 8 beeghas 2 kottahs 8 dhurs at Rs. 2-8.
5. 41 beeghas 10 kottahs 5½ dhurs at Rs. 2.

If I were to fix rates according to classes of soil for this village, I should fix them thus:—

	Maximum.	Average.	Minimum.
	Rs.	Rs.	Rs.
I.—Bheet aoul	8	6	4
Bheet duim	4	3-4	2-8
Bheet suim	2-8	2	1-4
II.—Dhanhar	3	2-8	2

The only reasons I can assign for fixing these rates are—

(1) that they would probably leave the gross rental at the sum shown on other grounds to be fair and equitable in the legal sense;

(2) that they would be accepted by the ryot

I do not, however, say that these rates are fair and equitable according to principles of justice and equity, for I think that the rates of 1274 F.S. (1867 A.D.), on which the above rates are founded, are at least three to four times the rates which prevailed in 1210 F.S. (1803 A.D.), when the permanent settlement of this village was made; and I do not think prices have risen to anything like three or four times the prices prevailing in 1210 F.S. (1803 A.D.) If the prices prevailing in 1210 F.S. (1803 A.D.) could be ascertained and compared with the present prices, and rents were now fixed by that standard, they would have to be very much reduced. Since writing the above, I have received and examined the settlement records of 1247 F.S. of neighbouring villages. They show that a reduction of 40 per cent. in existing rates would have to be made in order to make the present rates fair and equitable according to the standard of rates and prices of 1247 F.S. (1840 A.D.)

Notes on Kooksa, Village No. 13 of Map II.

This village is entirely the property of the Narhun minor. It is situated about two miles south-east of Dalsingserai, and contains 258 local beeghas of 3,600 square yards.

(1) *Government revenue and present rental.*—The Government revenue, which was fixed in 1803, is R 62-8, and the present rental, exclusive of karchas, is R 927-15-1, and including karchas, R 1,158-10-3½, or nearly nineteen times the Government revenue.

ABSTRACT OF JUMMABUNDI.

The following statement shows the details of the present jummabundi and of the jummabundi of 1274 F.S. (1864 A.D.), i.e., *the year before the present rates were fixed.*

(2) *Past history.*—This village was given by the Narhun Baboos to one Sridist Narain of Chainpore, by way of gift during his lifetime. When he died without heirs, the village was resumed and leased in 1265 F.S. (1858 A.D.) to Behari Raout. Behari Raout immediately proceeded to enhance the rates by two annas in the rupee. His lease expired in 1274 F.S. (1867 A.D.) It was renewed in 1275 F.S. (1868 A.D.), when he again raised the rates by four annas in the rupee.

It thus appears that from 1265 to 1275 F.S. (1858 to 1868 A.D.), or within a period of eleven years, the rents of this village have been enhanced by 37½ per cent.—an enhance-

ment which is out of all proportion to the increase in value during that period of produce or productive powers of the land. The ryots did not resist the enhancements by appealing to the civil courts. There is no evidence to show what were the rates prevailing before 1265 F.S. (1858 A.D.)

(3) *Karchas and sairats.*—The following are the karchas realized in this village :—

I.—*Gaumia.*—Half an anna in the rupee, intended to pay salary of patwari, village amla.

II.—*Butta.*—One anna per rupee, being for difference between Company's and country rupee.

III.—*Kiyali.*—Realized from *beparis* or traders who come from outside to purchase grain in the village. It is levied at the rate of 1½ pies in the rupee. The beparis for this cess take 2½ seers per maund from the ryots. This cess was abolished in Durbhunga under the orders of the Court of Wards—*see* Board's No. 611A, dated the 1st September 1876, to the Commissioner of Patna, and their other orders on abolition of cesses in the Durbhunga raj.

IV.—*Katiari*—This is a cess of from 10 annas to 4 annas, realized from *bunneahs*, *jullahas* (weavers), *dunniahs* (cotton spinners), and *mallahs* (fishermen). It is realised from persons of these castes solely because they are of these particular castes, and whether they follow their several professions or are merely cultivators. This cess was abolished in the Durbhunga raj under the orders referred to above, which might with advantage, I think, be applied to this estate also.

V.—*Kotwali.*—On tobacco, at R 1-4 per beegha, over and above the rent. Only realized on tobacco actually grown. I have found this cess only in this and one other village.

Classes of soil.—The jeth ryots say there are only five real distinctions of soil :—

I.—Bheet aoul, gauhera, *i. e.*, manured upland near the village sites.
Bheet duim, balguchar, *i.e.*, bheet, some distance from the village, not manured.
Bheet suim—usur.

II.—Dhanhar or matiyar.
Dhanhar { aoul. / duim.

(5) *Occupancy and non-occupancy ryots.*—A comparison of the jummabundis for 13 years shows the total number of ryots in this village at the end of 1289 F.S. (1882 A.D.) was 54, all of whom are old resident ryots.

(6) *Determination of fair and equitable rates.*—The rates were last fixed in 1275 F.S. (1868 A.D.) The law presumes the rates then fixed to be fair. I have shown in my notes on village Dalsingserai that there is no legal ground for altering the rates then fixed. The present rates would therefore be fair and equitable in the legal acceptation of these terms. Some of the karchas and abwabs are illegal, and should be struck off. If I were asked to fix rates according to quality of soil, I should, having regard to the present rates and to the arbitrary enhancements of the past, fix them as follows :—

	Maximum.		Average.		Minimum.	
	Rs.	A.	Rs.	A.	Rs.	A.
I.—1. Bheet aoul	5	0	4	8	4	0
2. Bheet duim	4	0	3	8	3	0
3. Bheet suim	3	0	2	8	2	0
II.—4. Dhanhar aoul	4	0	3	8	3	0
5. Dhanhar duim	3	0	2	8	2	0

These rates would still be considerably higher than those which prevailed before the last enhancement. If the fair rates were now to be fixed by comparison with the rates prevailing in neighbouring mouzahs in 1247 F.S. (1840 A.D.), they would stand thus :—

	Rs.	A.	P.
Average rate of 1247 F.S. (1840 A.D.) (in neighbouring mouzah) Tubka Kishenpore	1	9	0
Add 73 per cent. for rise in prices	1	2	3
New all-round rate	2	11	3
Present all-round rate	5	5	3

The present rates would therefore have to be reduced all round by 49 per cent. in order to make them fair and equitable, as compared with rates and prices of 1247 F.S. (1840 A.D.)

Notes on Village Tubka Kishenpore.

This mouzah forms part of taluka Kishore Narianpore Nair, which was permanently settled in 1210 F.S. (1803 A.D.) The Government revenue is Rs. 550-0-6.

(1.) The following statement gives details of area and present rates, and of the rates prevailing in 1247 F.S. (1840 A.D.) taken from the settlement papers :—

					42	1 10 0	0 8 8	
					43	3 10 0	0 8 0	

(2.) *Past history.*—Bikram Lal was ticcadar from 1250 to 1256 F.S. (1843 to 1849 A.D.) He enhanced the rates, but the ryots say they do not remember by how much.

From 1257 to 1274 F.S. (1850 to 1867 A.D.), Mahtab Singh was ticcadar. He raised the rates by one anna in the rupee during his first lease, and again by one anna in the rupee during his second lease.

From 1275 to 1284 F.S. (1868 to 1877 A.D.) the village was leased to the Dalsingserai factory, which raised the rates by one and a half annas in the rupee in 1876 F.S. (1869 A.D.)

From 1285 to 1292 F.S. (1878 to 1885 A.D.), the lease to the factory was renewed. During this period the rates have been enhanced in the year 1289 F.S. (1882 A.D.) by half an anna in the rupee; and the same process of striking average "personal" rates was gone through, as has been described in other villages leased to the factory.

(3.) *Irrigation and facilities for irrigation.*—The mouzah is irrigated from the river Mytee and is within a few miles of the Tirhoot State Railway.

(4.) *Occupancy and non-occupancy ryots.*—The manager of the Dalsingserai factory, to which this village is in farm, says he cannot produce the jummabundis of the past twelve years, as they are filed in court. It is therefore impossible to ascertain the number of occupancy as compared with non-occupancy ryots. The jeth ryots say there are no non-occupancy ryots. There are 71 ryots and one or two sub-tenants. The sub-tenants are merely servants of the higher caste cultivating ryots, to whom the latter have let a beegha or so of land each, as an inducement for them to remain in the village and work as farm labourers. Lands thus sublet are said to be sublet at the rates paid by the subletting tenants themselves.

(5). *Determination of fair rates.*—The present average all-round rate is Rs. 3-5-11. The average all-round rate in 1247 F.S. (1840 A.D.) was Rs. 1-9. There has therefore been an increase in rates of more than 110 per cent. during the past 42 years, while the increase in prices during the same period is only 73 per cent.

If rates were now fixed by the standard of comparison with rates and prices of 1247 F.S. (1840 A.D.), the new all round rate would stand thus :—

	Rs. A. P.
Rates of 1247 F.S. (1840 A.D.)	1 9 0
Add 73 per cent.	1 2 3
New rate	2 11 3
Present average all-round rate	3 5 11

A reduction of 19 per cent. all-round would therefore have to be made in the present rates, in order to arrive at rates which would be fair and equitable, as compared with the year 1247 F.S. (1840 A.D.)

As, however, the ratés were last fixed in 1276 F.S. (1869 A.D.), the rates of that year would be the fair and equitable rate in the leasa of the present law and Bill. There, in the sense of the present law and Bill, is no justifiction for the demand of an enhancement of half anna per rupee made last year.

Notes on Raghopore.

THIS mouzah is part of talooka Kishore Narainpore.

(1). The annexed statement gives an abstract of the present jummabundi and of part of the jummabundi of 1242 F.S. (1835 A.D.), which was taken as a standard of comparison in fixing the rates of neighbouring villages under the then settlement :—

Jumma . Rs. 397-7-6					

(2). *Past history.*—The village was leased to Mahtab Sing from 1257 to 1247 F.S. (1850 A.D.). He raised the former rates by one anna in the rupee.

From 1275 to 1284 F.S. (1868 to 1877 A.D.) the mouzah was leased to the Dalsingsera Factory, which demanded an enhancement of one and a half annas per rupee in that period.

The jeth ryot says the ryots refused to pay this enhanced rate. The factory manager sued Chutter Chowdhry for rent at the enhanced rate which he was demanding. The suit was dismissed, and rent was decreed only at the former rate admitted, namely, Rs. 2-10, Rs. 2, Re. 1, and Re. 0-10-0.

The village was again leased for nine years to the factory, from 1284 to 1293 F.S. (1877 to 1886 A.D.) During this period the factory has demanded an enhancement of half an anna in the rupee.

(3). *Determination of fair rates.*—In this village the enhancement of rates is not excessive with reference to increase of prices; but there is no justification for the demand of half an anna in the rupee made in 1289 F.S. (1882 A.D.) It will be observed that the ryots of this village resisted enhancements in the civil courts, hence it is that the present rates are low compared with the rates of 1247 F S. (1840 A.D.) I would not, however, interfere with present rates, for they are low compared with those of 1247 F.S.

Notes on Gongowlee.

The total rent-paying area, exclusive of some 35 beeghas held under mokurraree lease by the Dowlutpore Factory is Rs. 568-17-14, the total mofussil rental, exclusive of karchas, being Rs. 1,377, and, inclusive of karchas and abwabs, Rs. 1,621. The Government revenue is Rs. 357.

(1.) The following statement gives an abstract of the jummabundis of 1289 F.S. (1882 A. D.), and shows the rates prevailing in 1248 F.S. (1841 A. D.), as ascertained from the settlement papers :—

Average rate per beegha of 1289 F. S. . . .			3 3 6						

(2.) *Past history.*—This village was leased to Bhagwanpore Factory for 28 years, from 1234 to 1261 F.S. (1827 to 1854 A.D.) The rates were not altered during this period.

From 1262 to 1270 F.S. (1855 to 1863 A.D.) it was leased to Ram Sing, ticcadar. He raised the rates by three and a half annas per beegha.

From 1271 to 1284 F.S. (1864 to 1877 A.D.) it was leased to the Dowlatpore Factory. The rates were not changed in this period.

From 1285 F.S. (1878 A.D.) it was leased to Behari Raout, who sold his interest to the manager of the Dowlatpore Factory. The Collector, on the part of the Court of Wards, objected to the sale, on the ground that a ticcadar is not empowered to transfer his interest by sale. The ryots alleged that Behari Raout had settled the zerat lands with them before selling his interest to the factory, and they also were opposed to the sale. Friction consequently arose between them and the factory. The factory was, however, declared by the civil courts entitled to possession of the zerat lands.

(3.) *Occupancy and non-occupancy ryots.*—There are 90 ryots in the village, of whom the patwaree and jeth ryots say that only three are non-occupancy ryots. The others are all old resident ryots, but their lands are changed under the system of indigo cultivation from time to time.

(4.) *Sub-ryots.*—About ten beeghas have been sublet to six sub-ryots, who are mere farm-labourers. The land is sublet at the rates paid by the ryots themselves.

(5.) *Karchas and abwabs.*—A list of the karchas and abwabs is given in the abstract of jummabundi above. The following are peculiar :—

Khapra.—A cess levied at Rs. 1-4 per beegha on tobacco actually grown.

Terakapaut.—Said to have been originally levied for expenses of constructing a *bund.* The *bund* has long since been destroyed, but the abwab is retained.

Sadiat.—Marriage expenses, but retained, though there are no marriage expenses.

(6.) *Determination of fair and equitable rates.*—There has been comparatively little increase in the rates of this village during the last forty years—a circumstance which is due partly to the fact that is was so long under lease to the Bhagwanpore Factory and partly to the fact that the jeth ryots, who are Bhabuns, resisted enhancements in court.

M. FINUCANE.

Endorsement by Officiating Under Secretary to Government, Bengal,—No. $\frac{754}{257}$L.R., dated 3rd March 1883.

Copy, with copies of the enclosures and the plans in original, submitted to the Government of India in the Department of Revenue and Agriculture, for information, in continuation of my endorsement No. $\frac{753}{256}$L.R. of this date.

The return of the original plans is requested.

C. S. BAYLEY.

No. 122A, dated Calcutta, the 19th February 1883.

From—H. J. S. COTTON, ESQ., Secretary to the Board of Revenue, L. P.,

To—The SECRETARY to the GOVERNMENT OF BENGAL, Revenue Department.

I am directed to submit the accompanying copy of a report No. 114, dated 6th February 1883 (and maps), from Baboo Parbati Churn Roy, on the result of his enquiries for the preparation of tables of rent rates.

HON'BLE H. L. DAMPIER, C.I.E.

2. In the first instance the tract assigned to this officer was defined as the Nizamut lands, and he commenced his enquiries on villages belonging to the Nizamut estate in the Gopinathpore pergunnah in the district of Moorshedabad. As, however, it was ascertained that the Nizamut lands are scattered over several districts, the tract over which his enquiries were to be made was more accurately defined. He was directed to limit his enquiries to an area of about 25 square miles, which should comprise lands belonging to private zemindars as well as Nizamut lands.

The substantive results of his investigation as bearing upon the present object is as follows—

3. With rare exceptions and those applying only to very small areas, or to small fractional shares in joint estates, the landlords have no jummabundis showing rates, by which the existing rents are determined. They have only annual jumma-wasil-baki papers which show the demands, collections, and balances in respect of each ryot.

"The scale of prevailing rates." *Vide* section I, clause 3 of the Instructions for the guidance of the rate officers.

No classification of land is recognized in the existing rent arrangements. The only possible means of finding the average incidence of the present rents on the area under enquiry would be by a measurement of the land included in each holding, and then striking the average incidence on each beegah of the total amount of rent payable for the holding.

Clause 8 of the Instructions.

4. In paragraph 16 of his report No. 36,* dated 8th January 1883, Baboo Parbati Churn Roy describes his attempt to carry out this operation in the village of Kandi Gopinathpore. The result as applied to the holdings of ten ryots of that village is as below :—

* Submitted to Government with Board's No. 79A, dated 1st February 1883.

NAME OF RYOT.	Area of holding.			Total Rent of holding.			Rent per beegah.		
	Bs.	K.	D.	Rs.	A.	P.	Rs.	A.	P.
A	18	$12\frac{3}{4}$	0	37	1	0	2	0	0
B	1	$15\frac{3}{4}$	0	5	8	0	2	14	0
C	16	18	0	14	0	0	2	9	0
D	18	7	0	42	14	0	2	5	0
E	38	11	0	65	7	0	1	11	0
F	15	5	0	34	12	0	2	4	6
G	14	4	0	26	3	0	1	13	6
H	6	18	0	36	9	0	5	3	0
I	1	$11\frac{1}{2}$	0	2	12	0	1	11	6
J	4	10	0	10	8	0	2	5	4
TOTAL OF HOLDINGS	......			......			24	12	10

The general result is an average incidence of rent at the rate of Rs. 2-8 on each beegah, but the average incidence per beegah struck on the rent of each holding, taken separately, varies from a maximum of Rs. 5-3 to a minimum of Re. 1-11. If the holding which averages Rs. 5-3 be thrown out of the calculation as exceptional, the general average would be Rs. 2-2-10 per beegah; but even this would press with undue severity on the two holdings which now pay at the average rate of Re. 1-11 only. Rejecting these two again from the calculation, the average incidence on the remaining seven holdings would be about Rs. 2-5. This as a general rate would do no great violence to the remaining seven holdings, but it is clear that a rate which can only be derived by excluding three holdings out of ten from the calculation of the average cannot be taken to be a working "general rate" for the purpose of a table of rates.

It is beyond the scope of the present enquiry to make the extensive measurements which would be necessary to ascertain the average incidence of rent on lands in the other villages.

5. There is no reason to doubt that Gopinathpore is a typical village, and the conclusion may be accepted that in the absence of jummabundis and similar information, there is no possibility of educing from existing rents such an average rate as can properly be adopted as a fair general rate.

Similarly, without such measurements, which would make it possible to institute a comparison between area and rents, it is impossible to say whether existing rents are fair or not; but in his last report Baboo Parbati Churn Roy expresses the belief that owing to these rents being founded on assessments made so long ago, they now sit very unequally on the ryots. The lands of some of the ryots which have improved by fluvial action are now under-assessed, while the majority of the ryots cannot pay their nominal rents in consequence of the reduction in the profits of the land owing to the decline of the silk industry.

6. The general information contained in paragraphs 8, 9 and 10 of Baboo Parbati Churn Roy's present report regarding the decline of that industry, the depression which it has produced on the general condition of the ryots of this part of the country without directly affecting the zemindars' rents, and the effect it has had on the adjustment of rents, points to the necessity of providing by legislation for facilities for claiming reductions of rent in consequence of altered circumstances of the ryots.

II. "The scale of rates which, according to the judgment of the rate officer, following the rules hereinafter to be stated and formed on a mature consideration of all the circumstances would be fair and equitable for the tract," *vide* section II, clause 3 of the Instructions.

7. In order to frame the scale of rates which would be fair and equitable for any particular tract, the ascertainment of the general existing rates is the first essential; but the attempt to ascertain these rates in the present case has failed and left no foundation on which the fabric of a fair and equitable table of rates can be constructed. Old canoongoe papers are forthcoming, from which the rate prevailing some 50 years ago can be ascertained. A laborious enquiry might bring out a comparison of doubtful trustworthiness between average prices of produce at the time when the rates of the canoongoe papers prevailed and those which now exist; but before this could be of any value for the purposes of framing a "table of rates" under the provisions of the Rent Bill, it would be necessary to determine whether the prevailing rates of rent at which the ryots pay are at higher rates than those shown in the canoongoe papers. If this is not the case, except in the very improbable alternative of the zemindars being able to prove variation of the rate of rent since the permanent settlement and before the preparation of the canoongoe papers, the 20 years' presumption would bar enhancement, and the table of rates could recognize nothing higher than the general rate of existing rents.

Clause 12 of Instructions.

8. If the prevailing rents were shown to be at higher rates than those of the canoongoe papers, the presumption of right to hold at fixed rents would not arise; but before the enhanced rates obtained by raising the canoongoe rates in the same proportion as prices of produce have risen, could be adopted as fair and equitable rates for a table on the principles of the Rent Bill and the Instructions which were approved by Government, it would be necessary to make sure that they did not transgress the limitation imposed, *viz.*, that they have not the effect of more than doubling the existing general rate. The datum required for the imposition of this limit also is wanting.

III. "The preparation of an estimate of the gross produce of the land and of the average prices at which it is locally sold by the ryots to pay thier rents." Section III of clause 3 of the Instructions.

9. With a view to prepare an estimate of the average produce and its money value, Baboo Parbati Churn Roy first ascertained by experiment the actual outturn of produce per beegah of a certain number of fields in a village, and then applied the average as the average outturn per beegah of these fields. Accepting this result as the average yield for the present year and the vague statements of the ryots (no other information being available) which he found to be approximately correct for the past four years, he calculated the average annual outturn for five years. The average price of a maund of rice was ascertained from the account books of certain grain dealers of Kandi Gopinathpore bazar, where the ryots of the three villages of Kandi Gopinathpore, Raiabati, and Thira sell their rice. In calculating the average money value of the gross produce per beegah, Baboo Parbati Churn Roy has adopted the proportion of rice to paddy as given at page 290 of the first volume of the Statistical Reporter, and this proportion has been found to be very nearly the same as that obtained by him from experiments subsequently made, the result of which was reported to Government in my No. 79A, dated 1st February 1883.

10. The following results were obtained by this method of calculation :—

Gopinathpore.

"Estimated average outturn per beegah . . { 5 maunds 17 seers of paddy, yielding 3 maunds 34 seers of rice.

Raiabati.

"Estimated average outturn per beegah . . { 3 maunds 29 seers of paddy, yielding 2 maunds 26 seers of rice.

Thira.

"Estimated average outturn per beegah . . { 5 maunds 10 seers of paddy, yielding 3 maunds 29 seers of rice.

"The average price of a maund of rice being Re. 1-8-11, the money value of the average gross produce in the three villages will be as follows :—

Gopinathpore.

	Rs.	A.	P.
"Rice, 3 maunds, 34 seers, at Re. 1-8-11 per maund	5	15	11
"Straw	1	8	0
Total money value	7	7	11

Raiabati.

	Rs.	A.	P.
"Rice, 2 maunds, 26 seers, at Re. 1-8-11 per maund	4	2	0
"Straw	1	0	0
Total money value	5	2	0

Thira.

	Rs.	A.	P.
"Rice, 3 maunds, 29 seers, at Re. 1-8-11 per maund	5	12	8
"Straw	1	8	0
Total money value	7	4	8"

11. Mr. Dampier cannot, however, think that any averages founded on such limited enquiries as these would form a safe basis for general conclusions. Further experiments cannot be made at present, as no rice crop is on the ground. And further enquiries for the purpose of drawing conclusions seem to be unnecessary as the result is required for the object of framing tables of rates, which object, it has been shown, cannot be attained for other reasons. Baboo Parbati Churn Roy's special enquiries may therefore be considered at an end, and the Board have directed him to return to his general duties.

No. 114, dated Camp Kandi *viâ* Berhampore, the 6th February 1883.

From—BABOO PARBATI CHURN ROY, on Special Duty,

To—The Secretary to the Board of Revenue, Lower Provinces.

I have the honor to submit the following report of the progress of operations conducted by me during the fortnight ending with Saturday, the 3rd February 1883.

2. Agreeably to the orders contained in your letter No. 109A, dated the 29th January 1883, I have confined my enquiries to the tract of 25 square miles marked out round Kandi Gopinathpore in the one inch map submitted with my letter No. 86, dated the 24th ultimo.

Enquiries confined to the tract of 25 square miles round Kandi Gopinathpore.

The villages contained within this tract are shewn in the accompanying trace prepared on the scale of 4" = 1 mile.

3. In my letter No. 109, dated the 2nd instant, I have brought to the notice of the Board that the circumstances of the other estates comprised within the selected area were similar to those of Gopinathpore, and that there was no evidence to prove that the rents of those estates had varied since the permanent settlement. Of the 74 villages included within the selected tract, 13 belong to pergunnah Gopinathpore. The proprietors of 54 out of the remaining 61 villages, on being called upon to produce the jummabundi and other papers whence the present and former rates of the lands in their possession could be ascertained, have filed petitions to the effect that they had no jummabundis or other rate papers, and that all that they possessed were jumma-wasil-bakis. These jumma-wasil-bakis are similar to those filed by the Nawab of Moorshedabad, a copy from a page of which was submitted by way of a specimen for the inspection of the Board with my letter No. 36, dated the 8th January 1883. These jumma-wasils are quite useless for the purposes of the present enquiry, as they do not shew rates of rents nor areas of holdings. It does not also appear from the jumma-wasil-bakis that the rents have ever varied since the permanent settlement. For seven villages jummabundis have been filed on behalf of the proprietors, but it will appear from the account given below regarding each of these seven villages that the jummabundis do not shew any variation in rents, and that they are therefore quite as useless as the jumma-wasil-bakis.

Character of the jumma-wasil and jummabundi papers of the villages brought under enquiry.

Thurgaon Kashba.—The jummabundi paper that has been filed by one of the proprietors of this village is dated 1245. It shews that in 1245 the rates for bastu were Rs. 5 and Rs. 3 a beegah, and that the other rates varied from Rs. 2-8 to 8 annas. It is said that there has been no variation in the rates since 1245, but as there is no evidence that there existed other

rates at any time previous to 1245, the jummabundi of this village is no more useful than the jumma-wasil-baki papers of the villages which have no jummabundis.

Gupinathpore Ar.—The *patnidar* of this village has filed jummabundis prepared by him in 1285 after he had taken patni. These papers do not shew the rates actually paid by the ryots, but what the patnidar after measurement considered were fair and equitable rates, for it appears from memoranda recorded in the body of the jummabundis that the amounts actually paid by the ryots were much less than what were assessed according to the rates entered in the jummabundis. These papers are therefore no guide as regards existing rates, and there is no evidence to shew what rates prevailed before.

Jadub Singbatee.—This village belongs to pergunnah Gopinathpore and to pergunnah Dhawa. There are many petty proprietors in the latter pergunnah, two of whom filed jummabundis. The papers of one of the proprietors named Kristo Lall Ghose are dated 1269, 1273, and 1277 B.S. They shew slight variation in rents, which amount every year to about Rs. 30. The average rate shewn by the jummabundis of 1269 and 1273 is Re. 1-5, while that shewn by the jummabundi of 1277 is Re. 1-8-6. The proprietor states that the actual realizations are greater. The other proprietors' papers are dated 1193, 1198, and 1252 B. S. He too is a small shareholder, the total annual rental of his share being about Rs. 25, and though his rates are a little higher than those of the first named proprietor and shew slight variations, the area covered by his jummabundis is too small. His rates cannot, therefore, be used for purposes of comparison as regards the lands of adjoining mehals.

Amooa Ar.—The proprietor of this mehal has filed a jummabundi paper dated 1244. In his petition he states that he has no other paper regarding the mehal than the one filed by him. Amooa Ar is a very small village, as will appear from the map.

Jashoharee.—This village belongs partly to pergunnah Gopinathpore and partly to another pergunnah, Mahlundi. One small shareholder of the latter pergunnah has filed the jummabundis of his share for 1269, 1273, and 1277. These papers shew some slight variations in rents. The average rates for the above three years are 10 annas, 10½ annas, and 11 annas respectively. But the proprietor, Kristo Lall Ghose, who is the same person who has filed the jummabundis for *Jadab Singbatee* noticed above, says that the actual realizations are greater than the rents entered in the *ashal jummabundis* filed by him. The average rate per beegah for pergunnah Gopinathpore in this village has been ascertained from rents and areas to be Re. 1.

Baloor.—The proprietors of this village have filed a jummabundi dated 1244 B.S. They state in their petition that they have no other jummabundis whereby it could be ascertained whether there have been any variations in the rents either before or after 1244.

Chand Singbatee.—The same Kristo Lall Ghose, whose jummabundis of Jadab Singbatee and Jashoharee have been referred to above, has also filed jummabundis for this village for 1269, 1273, and 1277. These papers shew that in 1269 and 1273 the rents were Rs. 62 for 62 beegahs, but that in 1277 they were 68 for 66¾ beegahs, more lands having been brought under cultivation this year. The average rent per beegah is therefore Re. 1, but, as in the case of Jadab Singbatee and Jashoharee, the actual realizations are said to be 1½ times the rents entered in the jummabundis for those that are not actual cultivators, 1¾ times for mondals, and 2 times for actual cultivators. The rates for bastu, udbastu, mulberry, and sali, as entered in the jummabundis, are Rs. 5, Rs. 2-8, Rs. 2, and Re. 1-8 respectively. These agree with the rates for the same classes of lands given in the canoongoe papers for this village, with the exception of the rate for mulberry, which is entered in the canoongoe papers at Rs. 2-8 instead of Rs. 2 entered in the jummabundi. It therefore seems that, at least in this village, the canoongoe rates are the rates still prevailing, or are the rates recognized by the landlord and tenant.

Beel Dabeshwar.—The proprietor of this village has filed no jummabundis or other papers whereby the rates of rents could be ascertained. He has filed some kabuliyats taken from ryots in 1238. The kabuliyats give the total area and the rent of each holding, from which the average rate per beegah seems to be about Re. 1-4. These kabuliats are, no doubt, evidence as regards the ryot who executed them, and they may be of value when the question of enhancement in the case of those particular ryots has to be decided; but they can have no possible value in the decision of the general question of the determination of rent-rates applicable to a comparatively large tract of country. Moreover, the circumstances of this village, which, as its name imports, once formed the bed of a *beel*, are altogether different from those of an ordinary village, and the rates current in this village must not be taken into consideration while preparing rent-rates for villages differently circumstanced.

Bamun Dasbatee.—The proprietor of this village has filed jummabundis for 1219, 1222, and 1223 B.S. These jummabundis shew no variation in rates. All these papers are upwards of 65 years old, and as none have been filed shewing the rates at present prevailing, it is not possible to say whether there have been any variations in the rents or not since these jummabundis were prepared.

Canoongoe rates appear to remain unchanged; but actual realization seem to be greater on the whole.

4. From what I have learnt from the zemindars and others, as well as from the circumstances described in the preceding paragraph, it appears that as a rule the canoongoe rates remain unchanged. There exist in the Collectorate canoongoe rate papers for all the villages excepting only a few. These rates have been obtained from the Collector of the district, and have been shewn under each village in the trace submitted herewith. There has not been, as far as I have been able to ascertain from enquiry, any enhancement of rates

above the canoongoe ones. But if the statement of Kristo Lall Ghose, noticed above, in connection with the jummabundis of *Jadzb Singbatee, Jashoharee*, and *Chald Singbatee*, is correct, *i. e.*, if the practice of taking 1½, 1¾, and 2 times of the *ashal* rents based on the canoongoe rates is general, then the condition of the ryots of the tract under enquiry cannot be very satisfactory. I applied to the Collector of Moorshedabad for information regarding the circumstances under which the canoongoe rates were prepared. But as yet I have not been favoured with a reply. I have, however, been informed by a clerk whom I sent with the letter to the Collector that the circumstances could not yet be traced.

The present state of confusion.

5. But whatever the circumstances may have been under which the canoongoe rate papers were prepared, the fact that there does not exist even for a single village in a tract of country containing 74 villages any *chitta* or *jummabundi papers* cannot but be disadvantageous to both the landlord and the tenant. Baboo Nurrendro Narayen Roy, zemindar of 8-anna share of pergunnah Futtehsing, in reply to my letter to him asking for jummabundis, writes as follows:—

"With reference to your letter No. 61 of the 19th instant, I have the honor to submit the papers as per accompanying list. Only two jummabundis of the two mouzahs, *i. e.*, Naba Durga and Banuri, have been found in the sherista. As for the other papers of the several mouzahs, as are written on the the list, I am able to supply you with only jumma-wasil-bakis. They will do to serve you if you can kindly undertake to measure the lands inserted therein and compare them with the jummas of each of them. I hope you will be able to ascertain something of the rates of rent now in vogue."

Now it will be seen from the above that what the zemindar means by "rates of rents in vogue" is not the average rent per beegah determined from total area and rental. He evidently refers to some rates such as the canoongoe rates, though he does not expressly say so for fear lest he should be a loser by accepting them. Neither does he state what the rates in vogue are according to his knowledge or belief, but leaves them to be determined after measurement and enquiry. This shews the state of confusion at present prevailing.

Evils of the present state of things.

6. But the evils of the present state of things under which the extent of a ryot's holding, not to speak of the different classes of lands comprised in the holding, cannot be determined from any papers in the zemindar's sherista must be more serious than they at first sight appear to be. So long as things get on smoothly there can be no harm to the zemindar or the ryot; but no sooner a difference arises between the two than the position of both becomes difficult. For instance, when a zemindar sells the *jote* of a ryot in execution of a decree for arrears of rent, the purchaser, whether the landlord himself or some other person, knows only the *jumma* of the *jote*, and has to find out the different plots comprised in the holding from enquiry, unaided by any documentary evidence; and it not unfrequently happens that when a ryot holds more than one *jote*, which he often does, the purchaser of one of the *jotes* seizes more lands than he is entitled to, or the ryot tries to retain a portion of this jote along with his other jotes. Similar difficulties arise in cases of enhancement or rejectment. In this manner litigation goes on, and he who succeeds in securing the largest number of witnesses on his side wins in the end. The man who is supposed to be acquainted with the different plots of land belonging to the holding of each ryot in a village is called the *halshana*, and it is on his mercy more than on anything else that the zemindar as well as the ryots have to depend. As regards the ryot, the non-existence of any record of the lands comprised in each holding is productive of further difficulties and troubles when the division of a holding takes place, either through transfer or inheritance.

Vast changes produced in the character of the soil since the permanent settlement through the actions of the More and Dwarka hill-streams.

7. It may at first be imagined that notwithstanding all the evils attending the non-existence of jummabundis, the position of the ryot must on the whole be good, as under the law the zemindar is prevented from making further enhancement in rents from want of evidence proving variation since the permanent settlement. But from a careful study of the condition of the ryots, I cannot but think that the present rents do not, at least in the case of the ryots of some of the villages, press very hard. This part of the country is subject to annual inundations through the actions of the rivers More and Dwarka, both of which are hill-streams. The floods of the More in former times used to cause so much damage to crops that the zemindars of pergunnah Futtehsing, most of whose villages are situated on the banks of this river, were allowed at the time of the permanent settlement abatement in the revenue in order to enable them to raise embankments for the protection of the low lands. But since that settlement, and even during the last 40 or 50 years, vast changes have taken place in the character of the country. High lands which were once valued on account of their comparative security from floods, have grown too high and risen above the ordinary flood level, while low lands, which formerly suffered from inundations, have gained by gradual alluvial deposits and in many cases risen high enough, so as not to suffer from the effects of destructive floods. In consequence of these changes rich lands have grown poor, and poor lands have grown rich. Moreover, as in more recent times, 30 or 40 years ago, there has been a diversion in the course of the More by which the main channel has taken a more southerly course, the deterioration in the productive powers of the high lands in the tract under enquiry may be said to be of a permanentnature.

8. But the principal circumstance which enabled the ryots of the upland villages to bear the high rates of rents in former times was the very prosperous condition of the silk industry. This industry has greatly declined of late, and though ryots still continue to grow mulberry and rear silkworms, they do not find it to be a profitable business. "The silk industry, once so flourishing," says a writer on 'The Silk Industry in Moorshedabad' in the Statistical Reporter for 1876, "has however, been for years in a declining state, and its decline has been so much accelerated within the last two or three years (which makes it ten years from 1883) by causes which have affected the whole of the Bengal silk trade, that its extinction at no very distant date may well be apprehended. * * * To those who are dependent on the industry for their livelihood," * * * "its decline and probable extinction mean impoverishment and ruin." * * * "Many individual owners of filatures, principally natives, are compelled to close their filatures; rearers of silkworms, exposed to the numerous accidents of rearing, are abandoning their occupation, or carrying it on without profit; and growers of mulberry are rapidly withdrawing their lands from the cultivation of that plant, leaving it in the hands of rearers who are bound to provide food for their worms. The effects on the other classes interested are obvious. Many spinners are thrown out of employ; weavers must content themselves with the bare means of subsistence instead of the affluence of former days; and *zemindars must relinquish the high rental of the abandoned mulberry lands, or receive no rental at all on such lands* for some years, as they cannot generally be used at once for the cultivation of other crops."

Decline in silk industry.

All that is said above regarding the effect that depression has produced on the condition of all concerned in silk industry applies to the people of this part of the country, with the exception *that while all others have suffered, the zemindars have not.* There being no chittas and jummabundis, but only jumma-wasil-bakis, the ryots must pay the high rents for the mulberry and rice lands, or let go the whole *jumma* and be turned out of their paternal holdings.

9. As may be readily imagined from the above, the general condition of the ryots of this part of the country, especially of those villages in which the mulberry was in former years grown extensively, is not at all good. In the course of my enquiry, I have come to know that in two out of the three villages, the rice of which was experimented upon, the ryots were largely in arrears. In *Kandi Gopinathpore* and *Raiabati* the zemindar has obtained many rent decrees against the ryots, some of whose holdings have also been sold. But as there were none to bid for them, the holdings have reverted to the zemindar, who has not yet found ryots to whom he could again let them out. Seeing the course of such sales the zemindar has very prudently taken from some of the judgment-debtors bonds for the amounts of the rent decrees, and as regards the others he has kept the decrees pending unexecuted waiting for better seasons. But though after a good rice harvest the zemindar may succeed in realizing his rents, the permanent decline of the silk industry will prevent there being any material improvement in the condition of the ryots.

General condition of the ryots in the tract under enquiry.

In paragraph 16 of my report No. 36, dated the 8th ultimo, has been given the average rents per beegah as Rs. 2-8 for one of the villages, Kandi Gopinathpore. The averages for the other two villages experimented upon are Re. 1-13-6 for Raiabati and Re. 1-9-6 for Thira. The average values of the gross produce for the above three villages being Rs. 7-7-11 for Gopinathpore, Rs. 5-2 for Raiabati, and Rs. 7-4-8 for Thira (*vide* paragraph 13 of report No. 36, dated the 8th January 1883), the ratio of rent to gross produce is found as follows:—

	Rs.	A.	P.
Gopinathpore—			
Average rate	2	8	0
Average money value of average gross produce	7	7	11
Ratio of rent to gross produce, one-third	...		
Raiabati—			
Average rate	1	13	6
Average money value of average gross produce	5	2	0
Ratio of rent to gross produce, nearly three-eighths	...		
Thira—			
Average rate	1	9	6
Average money value of average gross produce	7	4	6
Ratio of rent to gross produce, nearly one-fifth	...		

It will appear from the above that the ryots of Raiabati suffer most from the pressure of high rents, and that this is the fact is proved by more holdings having been sold for rent decrees in this village than in any other. As might be expected, the ryots of Thira are comparatively better off. They are also in better accounts with the zemindar.

But it is not only the ryots of Gopinathpore and Raiabati that suffer from rack-renting: the ryots of most of the villages in the neighbourhood would seem also to suffer from the same cause. During the past two years, for which figures have been obtained from the Kandi sub-divisional office, while there were 286 and 226 notices of relinquishment, there were only six and one notices respectively of enhancement. The tract of country round Kandi Gopinathpore brought under the present enquiry is one of the most westerly parts of the Moorshedabad district. Speaking of the difference between the east and the west, the Collector, in

his administration report for 1872-73, extracted as page 265 of Mr. MacDonnell's Famine Report, says:—

"I have before remarked on the difference between the east and the west as regards surface, soil, crops, and inhabitants. I would here add that I believe the generality of the inhabitants of the east are in better circumstances than those of the west. The cause is not difficult to find. Singularly situated as the soil of the west—generally clay with small nodules of limestone—is for the cultivation of paddy, its cultivators are exposed to this disadvantage, that should there be a failure of their corps from absence of seaonable rain, or any other cause, they cannot expect to make up for their losses to any appreciable extent by means of some other crop. The *amun* rice is in fact their mainstay; though of course good crops of mulberry and sugarcane also add to their prosperity. In the east of the district, on the other hand, the cultivators do not depend on a single crop. If there be a failure of the *aus* rice, they can still hope much from their cold-weather crops; and it seldom happens that there are failures of crops at both seasons of the year."

As a natural consequence of the above, this part of the country has suffered more or less during famines. Though the intensity of the famine of 1873-74 was not very severe, that of 1865-66 was decidedly so.

It will be seen from the extract from the Collector's administration report quoted above that "the *amun* rice is in fact the mainstay of the people, though, of course, good crops of mulberry and sugarcane also add to their prosperity." I have in a foregoing paragraph described the present declining state of the mulberry crop. As regards the sugarcane, its cultivation here is of a very unimportant nature, and I have been told by the sub-divisional officer of Kandi that no sugar or *goor* is manufactured here for exportation, the *goor* manufactured being consumed locally. This is also what I have come to learn after enquiry. It appears from the analysis of the chitta of the typical village, Gopinathpore, that the area of sugarcane fields in this village is only 16 beegahs, while that of mulberry is 206 beegahs. The sugarcane cultivation has therefore no perceptible effect on the condition of the ryots of the selected tract.

Mulberry played an important part in the adjustment of present rents.

10. That mulberry played an important part in the adjustment of the present rents is evident from the fact that in Kandi Gopinathpore, which may be accepted as a typical upland village, 206 beegahs out of a total area of 2,000 beegahs has been entered under mulberry at the late measurements. Besides the above, 80 beegahs, now measured as *denga rubbi khanda*, seem to have been in former times also cultivated with mulberry, for the canoongoe papers shew no rate for *denga rubbi khanda* in this village. These lands seem lately to have been cultivated with rubbi crops in consequence of the decline of the silk industry. Now the canoongoe paper shows that the rates for mulberry were Rs. 8, Rs. 7, Rs. 6, and Rs. 5 per beegah, which gives an average rate of Rs. 6-8 a beegah. The rental on 286 beegahs of mulberry at Rs. 6-8 beegah, would therefore be Rs. 1,857. The total rental of the village according to the jumma-wasil-bakis filed by the zemindar is Rs. 3,128, so that the rents for mulberry form three-fifths of the entire rental of the village. Even if the 80 beegahs now measured as *denga rubbee* were excluded from the mulberry area, the rental of the remaining 206 beegahs would exceed Rs. 1,200. Such being the case, the present depressed state of the silk industry must affect the condition of the ryot very materially, and measures should be taken to grant him some relief in consequence of decrease in the value of mulberry.

The rule of proportion based on increase or decrease in productive powers, or value of produce, requires modification, and the benefit of 20 years' presumption allowed to ryots requires to be withdrawn.

11. The question ultimately becomes, how can a revision in the rents be made on the ground of increase or decrease in productive powers or value of produce when there are no means of comparing the present state of things with any preceding state, and when, again, the 20 years' presumption gives the ryot a right to hold on the present rents as fair and equitable? But, if the rent question is to be at all approached with a view to a satisfactory solution, the present law, which lays down an unworkable rule of proportion, based on increase or decrease in productive powers or value of produce, should be modified, and the benefit of the 20 years' presumption now allowed to the ryot should also be withdrawn. The present settlement, and not the permanent settlement, of which no information is available, should be made the basis of future adjustments. It is true that this settlement will be of a somewhat arbitrary character; but if it is judiciously conducted after thorough enquiries and measurements, there is no reason to fear that it will prove disadvantageous to either the landlord or the tenant. It will appear from paragraph 7 of this report that while in some upland villages the zemindar may be a loser by the proposed adjustment, in the low land villages he will be a gainer, and on the whole there will not be any material decrease in rents, but the only effect will be to distribute the burden more fairly and equitably among the ryots of the different villages belonging to an estate.

The preparation of ryotwaree jummabundis after cadastral surveys the only possible solution of the rent question for the tract under enquiry.

12. From all that has been stated above, it will be evident that the only true solution of the rent question for this part of the country is the preparation of ryotwaree jummabundis after cadastral surveys. But how, it may be asked, is this ryotwaree jummabundi to be prepared, seeing that there is no means of determining the rates of rents on which the present rentals were fixed? I admit that from want of former measurement papers there will be some difficulty in first making the

classification, and then adjusting rents to classes. But the few jummabundis noticed in paragraph 3 of this report will be so many guide books. More such jummabundis will be forthcoming if the tract to be operated upon be larger than the present one. The village patwaris and mondals will be of service in comparing these jummabundis on the spot. The broad principle that underlies the system of classification followed in these places is the highness or lowness of a field, and the facility it enjoys for purposes of irrigation. Those rice lands which first receive the rain-water drained from the village or which are irrigated by natural flow from a tank on an outlet being made, are always classed high, lands irrigated from water artificially raised are classed lower, while those lands which are not within reach of any irrigating tank or other reservoir of water, and have to depend entirely on the rains, are classed lowest. Though rice is the main staple produce of this part of the country, still as a large proportion of the rents is derived from mulberry, the mulberry lands ought also to be separately classed. When the lands of a village have been measured and classified, the rents at present paid should be distributed among the different classes according to their productive powers. In this manner the present rates for different classes of land will be obtained. The next question will be to determine whether these rates deserve to be enhanced or reduced. In the determination of what should be fair and equitable rates for mulberry, the accounts and other papers of silk manufacturers and of English silk factories will be useful. But no hard-and-fast rules of proportion will answer. Keeping the maximum in view, the rents will be increased or decreased according as circumstances may require; but no violent changes will be made on any account.

Costs of cultivation greater than what are ordinarily supposed to be. Zemindars should be allowed a share of net profits.

13. It has been said on behalf of zemindars that the proposal to fix the maximum at one-fourth the gross value of produce is not fair to them, but that they are entitled to a larger share. It at first sight looks that a much larger share of profit is reserved for the ryot when only a fourth part of the gross produce is declared as the zemindar's share. My recent experience of the costs of rice cutting and husking, not to speak of the other costs of cultivation, leads me to believe that there is no reason to fear that a very large share of net profit will fall to the lot of the ryot under the present proposal. The expenses of cultivation are much greater than what are ordinarily supposed to be, and it is the net profit from which, in my opinion, the zemindar's share should be determined.

Transfer of occupancy rights; prevailing custom in the selected tract.

14. Another circumstance brought to light in the course of the present enquiry also deserves mention in this report. It is often alleged on behalf of the zemindar that the proposal to make occupancy rights transferable is an innovation. But without going to discuss what the custom in other places is, I beg to state that the custom of buying and selling *jotes* is here very general, and that the zemindars themselves also put such *jotes* for sale at execution of rent decrees. Baboo Bepin Behary Mookerjea, Moonsiff of Kandi, to whose kind assistance I am greatly indebted for several things in connection with the present enquiry, tells me that it is seldom that the zemindars object in court to the transfer of jotes by ryots. I have in paragraph 6 of this report spoken of ryots having more than one *jote* in their possession. The jumma-wasil papers of Gopinathpore shew that this custom of buying and selling *jotes* has been very general in the pergunnah. But though custom is thus in favour of the ryot, a legal enactment declaring its validity will, no doubt, be productive of very great advantage, as it will prevent the litigation that occasionally crops up at present. The fear that is generally entertained, that the effect of making the right of occupancy transferable will be that all such jotes would gradually pass into the hands of the money-lenders, is, so far at least as this part of the country is concerned, quite unfounded. On the other hand, I find as a fact that all old jotes which have changed hands are still in the possession of cultivating ryots.

Tracing of the map of Kandi Gopinathpore submitted for inspection.

15. In order to enable the Board to form an idea of how the different descriptions of lands are situated in the villages of the selected tract, I have made a trace from the map of the typical village of Gopinathpore, prepared under the Nizamut Deputy Collector, which I beg to submit herewith. It will appear from this map that there are numerous tanks in the village. This seems from maps received from the Surveyor-General's office, which are also herewith submitted, to be the peculiarity of the villages of this part of the country. The tanks are mostly used for the purpose of irrigating the mulberry fields. They seem to belong to the ryots, though from the long lapse of time since they were excavated it is not possible to say to whom they belong. The area covered by tanks in this village is 194 beegahs, which is about one-tenth of the total area.

It will appear from the map that while the different descriptions of lands around the village sites are intermixed and are not well adapted for measurement in blocks according to character of soil, there are considerable blocks of rice fields of the same class, which could conveniently be measured according to the system proposed by me for the classification of land. But on the whole I am inclined to believe that my scheme is better adapted to the Eastern Bengal districts than to this part of the country.

Orders regarding further employment solicited.

16. In conclusion I beg to request that, as I have no more enquires to make, orders regarding my further employment may be issued without delay.

Endorsement by Officiating Under-Secretary to Government, Bengal,—(No. $\frac{151}{251}$ *L.R., dated 3rd March, 1883).*

Copy, with copies of the enclosures, submitted to the Government of India, in the Department of Revenue and Agriculture, for information, with reference to my endorsement No. $\frac{3804}{1068}$ L.R., dated the 11th December, 1882.

C. S. BAYLEY.

No. 79A., dated 1st February, 1883.

From—Secretary to Board of Revenue, Lower Provinces,

To—Secretary to Government, Bengal.

No. 36, dated 8th January, 1883, from Babu Parbati Churn Roy.
„ 59, dated 21st January, 1883, from H. M. Tobin, Esq.
„ 61, dated 20th-22nd January, 1883, from D. J. Macpherson, Esq.
Extract, paragraphs 6 and 7, from Babu Parbati Churn Roy's letter No. 86, dated 24th January 1883.

In reply to your demi-official letter of 30th January 1883, intimating that the Lieutenant-Governor is desirous of being informed of the progress made by the Rate officers in Murshidabad, Hooghly and Jeypur, and in continuation of the Board's letter No. 23A., dated 8th January 1883, I am directed to submit herewith copies of the reports noted in the margin, showing the progress made by Babu Parbati Churn Roy and Messrs. Tobin and Macpherson in the tracts assigned to them.

2. The reports from Hooghly are still of a desultory character, but it is probable that the report for the present fortnight may furnish a fuller summary of what has been done by Mr. Carstairs.

H. J. S. COTTON.

No. 36, dated Camp Kandi viâ Berhampore, the 8th January 1883.

From—Babu Parbati Churn Roy, on Special Duty,

To—The Secretary to the Board of Revenue, Lower Provinces.

I have the honor to submit the following progress report of the work done by me during the fortnight ending with Saturday, the 30th December 1882.

2. *Pergunnah Gopinathpore does not form one compact block.*—It will appear from the one-inch maps (sheets Nos. 8 and 10 of Moorshedabad, and No. 5 of Beerbhoom), submitted herewith, that the lands of pergunnah Gopinathpore do not form one compact block, but are scattered over different parts of the district. I have been able to make experiments only in blocks Nos. I and II in sheet No. 10. The Board are aware that when I commenced the experiments, I had no maps to guide me in the selection of the area; but I now find that the tract of country in which I have conducted experiments forms the most important and the largest compact part of pergunnah Gopinathpore. In this area experiments have been made in two villages, namely, Kandi Gopinathpore including Raiabati and Thira (in the map written Kheera). The former represents the condition of a village close to the river with ordinarily high and low lands, and the latter that of one somewhat remote from the river, in which the low lands are of a beely character. Detailed accounts of the experiment made in these villages will be found in paragraphs 6 and 7 of this report. An experiment was also made on the rice of a field in a fourth village called Dengapara; but as I could not remain present at this experiment from its beginning to end, and as there was no time for making further experiments in this village (the rice having since been all cut), I have omitted to take this experiment into account.

3. *No jummabundis exist of Pergunnah Gopinathpore.*—In my last report, as well as in previous letters, I informed the Board that I had not received any jummabundis, and I have to state the same thing also in the present report. It will appear from the accompanying copy of a letter No. 152, dated the 19th December 1882, from the Nabab of Moorshedabad, that he has "not got the jummabundi papers of pergunnah Gopinathpore, as no jummabundi has ever been made of that mehal by the Nizamat." On my further application the Nabab has sent the jumma-waseel-baki or collection papers. A specimen copy of a page of one of these papers is submitted herewith for the inspection of the Board. It will be seen from this specimen that the jumma-waseel shews only the rent payable by each ryot, without any specification of the quantity of land held by him.

4. *No information available regarding rates or classification.*—Under paragraph 5 of the instructions, the first process for the rate officer is declared to be "to obtain the jummabundis of each village or estate for the purpose of ascertaining rent rates payable by occupancy and non-occupancy ryots for each separate class of soil now recognized in each village or estate comprised in the selected area." The principal reason why the estates of private zemindars were not selected for the purpose of the present enquiry, was stated to be that "there would be delay in the production of jummabundis, and further delay in testing their accuracy." The advantage of selecting the Nizamat lands appeared to the Board to be "that though the necessary information as to existing rents could readily be procured, the lands had been under ordinary zemindary management." Now, whatever might be the case as regards the other Nizamat lands, no information regarding existing rents which could help the present enquiry is, as has been stated above, available in pergunnah Gopinathpore, which is mentioned

in the "memorandum on the preparation of a Table of Rates," as especially fitted for the present enquiry as the most compact portion of the Nizamat lands.

5. *Proposal to make experiments in several villages simultaneously abandoned.*—I need hardly state that the want of jummabundis has surrounded the enquiry with difficulties from its commencement. "Having procured the existing jummabundis, the rate officer is to proceed to classify the lands. He is then to take the best land in the tract under enquiry, and ascertain its actual gross produce." He is to go through the same process regarding the lands of other classes. The rate officer is in fact to be guided in his selection of the classes and qualities of lands to be experimented upon by the jummabundis. But not having the jummabundis, I was not able, previous to beginning the experiments, to find out the manner in which the lands of Gopinathpore pergunnah had been classified. I therefore selected for experiments fields situated in different parts of the village Kandi Gopinathpore, at which I first commenced to work. These fields were all classed as Anal in the chitta of the late measurements, though, according to the villagers, they belonged to different classes. As regards the other villages, it seemed to me that the best plan to form a correct idea of the productive powers of the different classes of lands in the different parts of pergunnah Gopinathpore was to conduct experiments in several villages. But as, in consequence of the short time within which it was possible to make experiments, I could not personally conduct all of them, I thought that, as I had not under me any officer of the grade of sub-deputy or canoongoe, the only way in which I could carry on simultaneously experiments at more places than one was by making a greater use of my clerks and mohurirs than was contemplated in the instructions. But as this plan did not recommend itself to the Board, it was abandoned, and no additional establishment kept for the purpose of making experiments, which were, with the exception of a few that had been made at the commencement, all conducted in my presence.

6. *Experiments in villages Gopinathpore and Raiabati.—Plan I.*—The village in which the experiments have been of an exhaustive character is Kandi Gopinathpore. I beg to submit herewith a plan (No. 1) showing the fields, on the rice of which experiments were made in Gopinathpore and the adjoining village called Raiabati. While the crops of fields Nos. 1, 2, 6, 7, and 10 were experimented upon, I could not, for want of a tent to live in, remain present at each experiment from its beginning to end, though I personally supervised the work several hours every day. But during the experiments on the rice of fields Nos. 3, 4, 5, 8, 9, 11, 12, 13, 14, 15, 16, 17, and 18, I lived where I worked, having procured at this time two tents, in one of which I lived and in the other held office. The field marked (W) is the piece of ground on which the rice was stacked, threshed, winnowed, and weighed. On the adjoining fields 1 and 2, the rice of which had been previously cut, stood my tents. The threshing, winnowing, and weighing were done under my own eyes, while the cutting was done within my cognizance, *i.e.*, within easy distance of my tents and under my constant supervision. I always visited the fields while the rice was being cut, and a trustworthy amlah remained guard from beginning to end. All the rice after being cut was tied together in separate bundles, and these bundles were once counted on the field and again on the threshing ground. Thus every possible precaution was taken to prevent fraud. When all the rice of a field was threshed out and the chaff winnowed away, the paddy was weighed (not measured) with seers weighing 80 tolahs each.

7. *Experiments in Village Thira.—Plan II.*—On the completion of the experiments in Gopinathpore, I removed my tents to Thira (written Kheera in the survey map). When I arrived at this village, I found that the rice in the uplands had been cut and that those that remained uncut were in the low *beely* lands which formed the greater part of the area of the village. All the care and vigilence exercised at Gopinathpore were also exercised at Thira, where all the operations took place under my very eyes. Here too I lived where I worked, as will appear from Plan II, herewith enclosed, shewing the fields, on the rice of which experiments were made. On the plot of ground marked W, the rice was threshed and weighed, and here also stood my tents.

8. *Measurements of fields experimented upon how conducted.*—The fields shewn in Plans I and II were measured and plotted either by me or in my presence, and under my supervision, by a clerk who knows surveying. In order to secure more correct areas than could be obtained by adopting the scale (16"=1 mile) ordinarily used in settlements, measurements have been plotted on double that scale, *i.e.*, on the scale 32"=1 mile.

9. *Actual average outturn per bigha of fields experimented upon.*—The actual outturn of rice, together with the area of each field, will be found in the statement given on the margin of each plan where the outturn per bigha has also been given. It is not easy to strike an actual average outturn per bigha regarding the fields (Nos. 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 15, 16, 17, and 18) experimented upon in village Gopinathpore. All these fields, according to the chitta of the last measurement, belong to the first class; but this is denied by the ryots. As regards the character of the soil, I have not perceived much difference between one plot and another. But proximity to, or remoteness from, a tank is a material thing that decides in these places the quality of the land. My experience of the eastern districts of Bengal did not lead me to imagine that rice fields were irrigated. But here ryots do not, as a rule, fail to take advantage of the proximity of a tank in irrigating their fields, especially in years of deficient rainfall. But in arriving at an accurate idea regarding the productive powers of the soil, the accidental advantage derived from proximity to tanks should not be taken into account. Following the above principle, I shall not bring under calculation the outturn of rice of

fields Nos. 1, 2, 4, 5, 17, and 18, which were to a more or less extent irrigated with tank water. Fields Nos. 3, 6, 7, 8, 9, 10, 15, and 16 are the proper representatives of the class, the difference of their outturns being due to the different times of sowing and the different degrees of care and labour subsequently devoted to their cultivation. Field No. 16 is the instance of how a *bataidar* is apt to neglect the field he cultivates of another person on the condition of paying him by way of rent half the produce. The ryot to whom this field belongs is a Brahmin, and the actual cultivator (the bataidar called in these places bhagidar) did not think of cultivating it until he had finished his own fields, by which time the sowing season was over.

The actual average outturn per bigha of the fields experimented upon in Gopinathpore is therefore found in the following manner:—

Number of field in the plan.	Annual outturn per bigha. Mds.	Srs.
3	4	25¾
6	5	23¾
7	5	15
8	5	18½
9	3	37½
10	4	11
15	1	13½
16	5	25
Total outturn for eight bighas in eight fields	36	10
Average outturn per bigha in the village	4	21

Fields Nos. 11, 12, 13, and 14, in Plan I, belong to the adjoining village Raiabati. The average actual outturn for these fields is found in the same manner to be 3 maunds 4½ seers per bigha.

The fields of Thira (Plan II) belong all to the same class, and the average actual outturn for them is found to be 7 maunds 21 seers.

10. *No statistics of any previous enquiry available for estimating average outturn per bigha.*—The actual average outturn per bigha for the fields experimented upon in the three villages being found in the above manner, the next point for enquiry is the *estimated* average quantity of produce and of the price obtained for it by the ryot for a number of years. This is to be "ascertained by enquiry, and tested by such statistics as are available of the result of similar experiments, and by the conclusion arrived at by similar enquiries." For the purpose of section 23 (*b*) of the Bill the Board have ordered that "five years would be a reasonable period on which the average might be calculated." I have, accordingly, tried to estimate the average quantity of produce and the value thereof for the last five years. But, though I have obtained very accurate information regarding the price of rice for the last five years, I have not been able to get any information regarding the average quantity of produce for any previous year. No enquiries regarding produce were made at this place at any previous time, and so no data are available which might help the present enquiry. I have therefore been obliged to accept the guesses of the ryots as correct. These guesses may, on the whole, be not very far from the truth.

11. *Average outturn per bigha estimated from the statements of ryots, checked by rainfall register of Kandi Charitable Dispensary.*—I have been able to a certain extent to test the accuracy of the statements of the ryots regarding the yield of previous years with the aid of the rainfall register, for which I am indebted to the kindness of Babu Chundra Kumar Gupta, Assistant Surgeon of the Charitable Dispensary at Kandi. The following statement shews the monthly rainfall at Kandi during eight years, counting backwards from 1882:—

Statement shewing the monthly rainfall at Kandi Gopinathpore in the years 1875 to 1882.

Year.	January.	February.	March.	April.	May.	June.	July.	August	September.	October.	November.	December.	Total.
1882	...	...	0·01	0·35	5·50	11 55	5·12	7·37	9·24	7·41	...	...	46·55
1881	...	..	1·38	...	6·69	7·00	11·17	10·87	6 21	4·17	...	...	47·49
1880	...	5·64	0·89	2·14	5·22	7·43	6·02	11·62	10·49	4·81	...	...	54·26
1879	...	1·71		...	1·94	14·18	22·01	9·57	12 88	4·69	...	...	66·98
1878	0·37	0·50	0·17	4·78	5 97	5·79	6 88	16·34	18·37	1·21	3·83	...	63 71
1877	2·06	1·35	0 67	2·54	2·64	7 66	15·99	15 67	7·06	4·70		...	60·36
1876	...	...	0·52	1·30	2·92	6·88	17·76	13 03	6 47	3·35	...	..	52·28
1875	...	...	...	...	5 83	17·50	8 19	11·06	9·65	0·77	..	...	53·00*

* The register for the first four months of this year not forthcoming.

It will appear from the above statement that only 46·55 inches of rain fell in Kandi from 1st January to 31st October 1882. The normal quantity of rainfall for the district of Moorshedabad is 53 inches (*vide* page 266 of Mr. MacDonnell's report on the famine of 1873-74). There was thus a deficiency of 6·45 inches in the rainfall of the past year to make up the total normal quantity. The rains were also not seasonably distributed, the falls during the months of July and August, when the cultivators wanted them most for transplanting the young plants, were very small, being 5·12 and 7·37 inches respectively. In consequence of the above circumstance, the outturn of rice in the up-lands of this part of the district has been less than the average quantity (about eight annas less), while that in the low lands has been somewhat

more than the average. The ryots of Gopinathpore state that this was also the state of things in the two preceding years, 1881 and 1880. But the ryots of the more favourably circumstanced village, Thira, deny that the crops in 1881 and 1880 were so good as in 1882, though they admit that, on the whole, those were not bad years. Now, here again the rainfall register is of much use. This register shews that the total fall in 1881 was almost the same as in 1882. It was only 47·49 inches. But as the quantities for May, July, and August exceeded in 1881 the quantities for the corresponding months of 1882, the outturn for 1881 seems to have been as good as, if not better, than that which has been found from experiment in 1882. The rainfall for 1880 was 54·26, just the quantity considered normal for Moorshedabad; though the falls in each of the months of May, June, and July in 1878 hardly exceeded five inches. Under the circumstances of the case it may not be very far from the truth if the outturns for high lands be put down for 1878 and 1879 as having been $1\frac{1}{2}$ times those for 1880, 1881, and 1882.

But if the difficulties in estimating the average outturn per bigha of ordinarily high land for 1878 and 1879 are great, those for estimating the outturn of low *beely* lands are still greater. The cultivation of low lands is attended with more risks than that of high lands. The floods, when too high or too long prolonged, do greater damage to the crops of low lands than the droughts of an equally excessive character do to high lands. Though all the lands of Thira are not low, and the low lands do not exactly form the bed of a *beel*, they are low enough to be damaged to a great extent by any excessive rise of water. It is admitted that the outturn in 1881 in the *beely* lands of Thira was as good as it was in 1882; but it is said that in 1880 the outturn was somewhat less, and that in 1879 and 1878 it was still less, not even half of what it is in ordinary years. Taking the above circumstances into consideration, the average outturn for Thira for these years may safely be estimated for 1880 at $\frac{3}{4}$, and for 1879 and 1878 at $\frac{6}{16}$ths of what it has been in 1882.

Now, calculating the average outturn for the past five years for the three villages, the crops of which have been experimented upon, the following results are obtained:—

Gopinathpore, called also Kandi Gopinathpore—

	Mds.	Srs.
Actual yield per bigha in 1882, found from experiments	4	21
Estimated yield per bigha for 1881, same as in 1882	4	21
Ditto for 1880, same as in 1882	4	21
Ditto for 1879, $1\frac{1}{2}$ times the yield for 1882	6	31
Ditto for 1878, ditto ditto	6	31
Total estimated outturn of five years for one bigha	=27	5

The estimated average annual outturn per bigha for the last five years is therefore $\frac{27 \text{ Mds. } 5 \text{ Srs.}}{5}$ = 5 maunds 17 seers.

In the same manner the average annual outturn per bigha in Raiabati is also found:—

	Mds.	Srs.
Actual yeild in 1882	3	$4\frac{1}{2}$
Estimated yield in 1881	3	$4\frac{1}{2}$
Ditto in 1880	3	$4\frac{1}{2}$
Ditto in 1879, $1\frac{1}{2}$ of 1882	4	26
Ditto in 1878, $1\frac{1}{2}$ of 1882	4	26
Total estimated outturn of five years for one bigha	=18	25

Estimated average annual outturn for one bigha = $\frac{18 \text{ Mds. } 25 \text{ Srs.}}{5}$ = 3 maunds 29 seers.

Thira.

	Mds.	Srs.
Actual outturn per bigha in 1882	7	21
Estimated ditto in 1881	7	21
Ditto ditto in 1880, $\frac{3}{4}$ of 1882	7	26
Ditto ditto in 1879, $\frac{6}{16}$ of 1882	2	33
Ditto ditto in 1878	2	33
Total estimated outturn of five years for one bigha	26	14

Estimated average outturn per bigha for the last five years = $\frac{26 \text{ Mds. } 14 \text{ Srs.}}{5}$ = 5 maunds 10 seers.

12. *Average price of a maund of rice in the bazar of Kandi Gopinathpore for the last five years.*—The average annual gross produce per bigha being determined as above, the average money value of that produce has to be now determined. I am glad that in prosecuting this part of the enquiry, I have been fortunate enough to get very correct information from the khatas or account books of certain grain-dealers of Kandi Gopinathpore bazar. As the ryots of Gopinathpore, Raiabati, and Thira, in which experiments have been made, sell their rice at this bazar, which, as will appear from sheet No. 10, is close to their homes, the buying prices entered in the accounts of the shop-keepers may be taken as those at which the ryots sold

their rice in the months of December, January, February, and March, for which enquiries have been made. The analysis of the accounts of the shop-keepers gives the following results:—

			R. a. p.
Average price of a maund of common rice in the months of Poush, Magh, Falgoon, and half of Choitra of 1285 (B S.) corresponding to December of 1877, and January, February and March of 1878			2 6 6
Ditto	ditto	of 1878-79	1 9 3
Ditto	ditto	of 1879-80	1 3 0
Ditto	ditto	of 1880-81	1 3 8
Ditto	ditto	of 1881-82	1 6 2
		Total of five years	7 12 7

Average price of a maund of rice during the past five years = Rs. $\frac{7\text{-}12\text{-}7}{5}$ = Re. 1-8-11.

13. *Average money value of gross produce per bigha.*—With the aid of the estimated average yield per bigha given in the preceding paragraph 11, and the average price of rice per maund, for the past five years, given in paragraph 12, the average money value of gross produce can be found if the proportion of husked rice obtained from a maund of unhusked rice or paddy as known. I have not yet been able to make any experiments at husking; but for the purpose of the present calculation, it may be sufficient if the ratio (28½ seers of rice to a maund of paddy), given at page 290 of the Statistical Reporter, be taken as also applying to the rice lately experimented upon.

This gives the following results for the three villages:—

Gopinathpore—
Estimated average outturn per bigha . . . . . . =5 maunds 17 seers of paddy=3 maunds 34 seers of rice.

Raiabati—
Estimated average outturn per bigha . . . . . . =3 maunds 29 seers of paddy=2 maunds 26 seers of rice.

Thira—
Estimated average outturn per bigha . . . . . . =5 maunds 10 seers of paddy=3 maunds 29 seers of rice.

The average price of a maund of rice being Re. 1-8-11, the money value of the average gross produce in the three villages will be as follows:—

		R a. p.
Gopinathpore—	Rice 3 maunds 34 seers, at Re. 1-8-11 per maund	5 15 11
	Straw	1 8 0
	Total money value	7 7 11
Raiabati—	Rice 2 maunds 26 seers, at Re. 1-8-11 per maund	4 2 0
	Straw	1 0 0
	Total money value	5 2 0
Thira—	Rice 3 maunds 29 seers, at Re. 1-8-11 per maund	5 12 8
	Straw	1 8 0
	Total money value	7 4 8

14. *Enquiries made regarding existing and previous rates.*—In paragraph 5 of your letter No. 1119A., dated the 15th December 1882, I am directed to proceed under paragraph 8 of the instructions in determining the average incidence on the bigha. This paragraph runs as follow:—

"Where the jummabundis or other papers of the estate do not specify the rates paid for each class of land, the rate officer will ascertain by local enquiry whether any such classification is recognised in the rent arrangements between the zemindar and his ryots, and if so, will record them. Otherwise he will only record such facts as that rents are settled without reference to such classification, the average incidence on the bigha being at such a rate."

I have agreeably to the above, previous to recording that the rents were settled without reference to classification, made local enquiries as to whether "any classification is recognised in the rent arrangements between the zemindar and his ryots." But the zemindar, the Nabab, has no information to give regarding rates, having made no jummabundis of the mehal. Gopinathpore was, I am informed, purchased by a relative of the Nabab Nazim, at a sale for arrears of revenue, about 40 years ago. During these 40 years there has admittedly been no change in the rents, which continue as they were previous to the purchase. No information as to how the present rents were fixed can be obtained from the zemindar. Some of the ryots, however, seem to *know from tradition* the rates of the different classes of lands held by them. But few will tell what those rates are, and as the statement of one does not agree with that of another, and there is no means of testing the accuracy of such statements, it is altogether hopeless to get at any correct information regarding the rates of rents on which the present rents were fixed.

Having come to know that there were in the Moorshedabad Collectorate certain rate papers of Gopinathpore and other adjoining estates, prepared by canoongoes under the old system, I applied to the Collector of the district for copies of those papers regarding pergunnah Gopinathpore, and the Collector has been kind enough to furnish me with them. It appears from these papers that there once existed in ancient time rates for different classes of land for all the villages of pergunnah Gopinathpore. It does not appear from the copies when the originals were prepared, or under what circumstances they were prepared; but there can be no doubt that as they were prepared under the old canoongoe system, they must be upwards of 50 years old. The rates given by the canoongoes were, as will be seen from below, too many, and in some cases rather too exorbitant, even considering that the productive powers of some of the lands were, 50 years or 100 years ago, much greater than what they are now.

The following are the rates given by the canoongoe papers of the villages operated upon:—

Kandi Gopinathpore.

	First class.	Second class.	Third class.	Fourth class.
	R a. p.	*R a. p.*	*R a. p.*	*R a. p.*
Shali haimuntie dhan	4 0 0	3 0 0	2 0 0	1 8 0
Mustard, &c.	1 8 0	1 0 0	......	......
Sugarcane	4 0 0	3 0 0	2 0 0	1 8 0
Mulberry	8 0 0	7 0 0	6 0 0	5 0 0
Bastoo	10 0 0	8 0 0	6 0 0	5 0 0
Udbastoo (garden)	5 0 0	3 0 0	2 8 0	......

Raiabati.

	First class.	Second class.	Third class.	Fourth class.
Dhan	2 0 0	1 8 0	......	......
Sugarcane	2 0 0	...	......	......
Mulberry	3 0 0	2 8 0	......	......
Bastoo	5 0 0	...	......	......
Udbastoo	2 8 0	.....	......	......

Thira.

	First class.	Second class.	Third class.	Fourth class.
Dhan	1 4 0	1 0 0	0 12 0	0 8 0
Sugarcane	2 0 0	1 8 0	......	......
Mulberry	3 8 0	2 8 0	......	......
Bastoo	4 0 0	3 8 0	......	......
Udbastoo	2 0 0	1 8 0	1 0 0	......

In the face of the above classifications of rates, on the basis of which the present rents may have been fixed at a time which cannot now be traced, but which nevertheless is very ancient, it will not be fair to proceed on the system of average rates, which at best must work unequally on ryots holding lands of different classes in different proportions, though it is impossible now to determine the classes of lands for which the rates were fixed.

15. *The principle of averages followed by Mr. Reily in the settlement of the Chanchal estate does not apply in the present case.*—As far as I am able to understand, the case of Gopinathpore is similar to that of the Chanchal estate in Maldah. But the method adopted by Mr. Reily in the settlement of that estate will not apply in the present case. In Chanchal, Mr. Reily first made "a rough calculation of the average rate per bigha hitherto paid for lands in a village" from the area under cultivation by each tenant. In doing this, he did not find much difficulty; but, "the real difficulty arose," he says, "in portioning off the different plots under the three respective classes, the ryots naturally objecting to have any of their lands included in the higher classes." Mr. Reily met this difficulty in each individual case when objections were raised, by instituting a sort of informal punchayet, &c." (*vide* paragraph 11 of Mr. Reily's report No. 268, dated the 15th October 1882). Now, it will be seen that the real merit of Mr. Reily's settlements lay not in adjusting *rates of rents* to *classes* of lands, but in arranging in each individual case, the classes of lands which a holding should comprise, in order to suit the rates of rents fixed by him. It is not that the lands were first classified according to their productive powers and the rates then fixed for each class, but the rates were first fixed and the classes arranged so as to suit the case of each individual ryot. Moreover, while Mr. Reily had not to accurately determine the rates previously paid in making what was in fact a new settlement, concluded in a somewhat arbitrary manner, the accurate determination of prevailing rates is indispensable in starting with the enquiry as to how far an increase or decrease in the present rates would be fair and equitable.

16. *Average rate per bigha determined from total rent and area.*—Following the instructions of the Board, I have tried to find in one of the villages, Gopinathpore, the average incidence on the bigha from rents and areas of holding; and I beg to give below the results

obtained according to this method in the case of a few of the ryots of Gopinathpore, whose rents, as entered in the jumma-waseel, have been verified after personal enquiry:—

Name of ryot.	Area of holding.			Total rent of holding.			Rent per bigha.		
	R	a.	p.	R	a.	p.	R	a.	p
A	18	12¼	0	37	1	0	2	0	0
B	1	15¾	0	5	8	0	2	14	0
C	16	18	0	44	0	0	2	9	0
D	18	7	0	42	14	0	2	5	0
E	38	11	0	65	7	0	1	11	0
F	15	5	0	34	12	0	2	4	6
G	14	4	0	26	3	0	1	13	6
H	6	18	0	36	9	0	5	3	0
I	1	11½	0	2	12	0	1	11	6
J	4	10	0	10	8	0	2	5	4
Total of ten holdings							24	12	10

The average rate obtained from the above is Rs. 2-8 a bigha, which may be accepted as representing the state of things in village Gopinathpore. But as there is often very great difference between the average rate of one ryot and of another, it may not be fair to accept Rs. 2-8 as the basis.

17. *Jummabundis of adjoining estates not yet referred to.*—I have not yet been able to refer to the jummabundis of the adjoining pergunnahs Futtehsing, Mahlundi, and Radhabullabpore. Some of the putwaries of Mahlundi, on whom I called for the jummabundi papers of the villages, the rents of which were collected by them, said that they had no jummabundis; that all the papers were with the zemindars themselves. If the Board should think that the jummabundis of the above-mentioned pergunnahs should be referred to in the course of the present enquiry, I beg to request that I may be authorized, under section 31 of Regulation XII of 1817, to call for those papers from the zemindars.

18. *Instruction solicited.*—In conclusion, I beg to state that, as under the circumstances described above, it is not possible to determine the rates on which the present rents were fixed, nor also the time when they were fixed, I do not know how to proceed further in the preparation of the table of fair and equitable rates which is the ultimate object of the present enquiry. Should the Board order me to proceed upon the principle of average incidence per bigha, I would request them to be good enough to instruct me as to the period to be embraced in the enquiry regarding increase or decrease in productive powers and value of produce, seeing that it cannot be traced when the present rents were fixed.

No. 59, dated Dumri, the 21st January 1883, *Viâ* Doomraon.

From—H. M. Tobin, Esq., c.s., on Special Duty, Shahabad,

To—The Secretary to the Board of Revenue, Lower Provinces.

In submitting my third fortnightly report I regret the delay that has arisen in despatching it; as I have already informed you demi-officially, this was owing to illness.

2. Since the submission of my last report, I have had the opportunity of consulting Mr. Nolan, the Collector of Shahabad, on the whole subject, and I beg to enclose a copy of a letter that I have subsequently received from him.

3. My last report referred to the southern portion of the tract assigned to me; and with reference thereto I drew the following conclusions:—

(*a*) That it is impossible to frame fair and equitable tables of rents, according to the rules framed and issued by the Board for any considerable portion of the tract.

(*b*) That in those villages where the existing rates are numerous, they are in many instances not in proportion to the real value of the land.

(*c*) That in those villages where there is uniformity of rates, the same rate has been applied to different soils indiscriminately without regard to their relative value; and consequently existing rates form no sound basis for the formation of a fair and equitable scale, as proposed by the rules.

(*d*) I point out that where the rates were uniform, there would be no difficulty in applying the laws of enhancement proposed in the Bill to the existing rents, and so constructing a table of rates of rent which could be demanded for the great portion of the village lands by the zemindars; but that such a table would not be the table of fair and equitable rates contemplated by the rules.

4. I now have to report on the difficulties in the way of forming fair and equitable tables of rates in the northern tract.

Before doing so I will ask your permission to correct a misconception which has arisen somewhat naturally from my last report, and which finds utterance in the 7th paragraph of your letter No. 23A to the Government of Bengal. I did not overlook the circumstance that the legal presumption arising by occupation at unchanged rates for more than 20 years has had the effect of turning each holding into one held at rates which are no longer liable to alteration. But I regret that I did not then bring more prominently to notice the circumstance of the large proportion of lands which the ryots are entitled to hold at fixed rates.

I have pointed out in my letter No. 45 that the occupancy ryots and those with the right to hold at fixed rates hold at one and the same rate. New ryots have been admitted to lands at the old prevailing rate, and though the rate has not been changed for more than 20 years, many of the existing ryots are new comers. Such ryots therefore could not be treated as holding at fixed rates.

It is at the same time much to be regretted that a tract was selected in which such a large proportion of the ryots (probably over 50 per cent.) are entitled to hold at fixed rates.

5. The northern tract is simpler to deal with than the southern, inasmuch as the rents in each village are less numerous, and every village has one or more prevailing rates of rent.

6. In almost all the northern villages the rates have not been altered for forty years. In fact there has been still less change here than in the southern tract.

7. In most of the villages the same difficulty, as is referred to in clause *c* of paragraph 3 of this letter, is met with, *viz.*, that the same rate prevails for several or all classes and qualities of land, and therefore existing rates form no sound basis on which to construct rate tables which are to be fair and equitable under the rules.

8. The lands in several of the villages have been affected by recent river action, and lands which were properly assessed at different rates years ago, as being of different qualities and classes, have now greatly altered in character.

I annex a list of the villages in the northern tract with the rates prevailing in each. In drawing up this table I have omitted any very small quantities of land held at rates other than the prevailing ones with the exception of dakmils; in no cases do such lands form more than a small proportion of the whole cultivated area, and in almost all cases it will be found that they are held under special circumstances, or that they could in a detailed settlement of the jamabandi fall under one of the prevailing rates.

9. To show how unreliable existing rates are in most cases for the purpose of forming a fair and equitable rate table even in a single village, I will give a few examples.

In Dohlia the men of one "tola" cultivate at Rs. 7-8 and Rs. 7-12 per bigha the same land that the men of another "tola" till at Rs. 3-12 and Rs. 5 per bigha. In Sirkhigdi Rajeh, forming part of Nag Singhanpura, the "deara" and "upermar" lands are both held at Re. 1-13. The former yields about 15 maunds per acre; the latter about 7½ maunds per acre. In Rani Singunpoora, tal land, yielding about 14 maunds per acre, and "buldhus" (high) land, yielding about 11 maunds per acre, both pay at the rate of Rs. 3-6-3 per bigha.

In Chakandi, forming part of Rampur Ukhori, in tal (low) lands the prevailing rates are Rs. 2-8 and Rs. 4; in some cases the lands held at these different rates give the same outturn, and in some cases the land at Rs. 2-8 gives a greater outturn than the other.

It is needless to multiply illustrations. The same state of things exists with regard to the majority of the lands in each village.

10. The rates, as the Collector has pointed out, are the ancient custom of the village, and now depend on custom and nothing else; though it is clear that in some villages (*e.g.*, Dea Man, Rampore Ukhari, Dumri, Khara tane, Nagurpura) some attempt was originally made to adjust the rents to the value of the soils.

In some of the uplands, where river action has not been so much felt, the variations of rates thus adopted according to the value of the soil still hold good, but the lands in which this is the case form a very small proportion of the whole.

11. I am satisfied, then, that it is impossible to form in this tract even for single villages fair and equitable tables as contemplated by the rules: still more impossible would it be to form them for larger areas. A glance at the map which I send herewith, on which the prevailing rates for both low lands (tal and deara) and high lands ("upermar") are given, or the perusal of table A annexed, will demonstrate this clearly.

There is no variation in the outturn from tal and deara lands corresponding to the variations in the rent, and the same remark holds good for the greater part of the "upermar" lands also.

12. I have therefore come to the conclusion that a table of fair and equitable rates, such as is contemplated by the rules, is an impossibility in the northern as well as in the southern tract.

Unless, therefore, I receive orders to the contrary, I shall not continue to attempt to prepare such a table.

13. While being of the above opinion I still think that the idea of the table of rates as originally intended by the Rent Commissioners (if I understand it rightly) might with some modification be applied with advantage to many villages in a tract like this, where there are uniform rates.

Existing rates were taken by the Commissioners as a basis, and the rules of enhancement and abatement proposed by their Bill were supposed to be applied thereto. Such a procedure could readily, and in conformity with existing law, be applied to most of the villages here.

14. The advantage of such a procedure is obvious: the rates for nearly the whole of a village (excepting these lands not now held at the prevailing rates) would be settled together, and the rate would be authoritative and hold good for ten years.

The Collector in his letter referred to above has stated (paragraph 6) that for such villages he would declare existing rates increased in proportion to the rise in the value of staple crops to be fair and equitable.

This is almost the same as I now propose to do, except where there is clear evidence of increase or decrease in the productive powers of the soil.

15. Where rates have been settled more recently, the new rates would be fixed on the same principles, but in the case of lands in which the existing rate has been settled during the last ten years, I would, following the principles of the Commissioner's draft Bill, leave the existing rate alone.

One point that would be unsatisfactory in this procedure is that the lands falling under each new rate could generally only be designated as "those hitherto paying such and such rates."

16. I await the orders of the Board as to whether they wish such a table to be drawn up for each village where it is possible.

17. In conclusion, I would refer to one or two other points of interest. The crops most grown in the northern tract of my area is peas, and it would be a staple. I have had some difficulty in obtaining accurate figures as to the prices of peas in past years. The price is not given in the weekly price current submitted to Government. In the case of other grains I have found the Gazette figures the safest to adopt for prices, as I find them on the whole far more accurate than those price currents which I have been able to compile from other sources.

18. With reference to Mr. Nolan's remarks about the good qualities of the Bhojpore ryots, I agree with him in what he says of their manliness, independence, and prosperity. I must, however, demur to what he says as to their industry and good cultivation. They have in past years held more land than they could cultivate properly; they generally select the crop that requires least cultivation, *viz.*, peas, although it commands a very low price and does not yield a greater outturn than other crops. In those lands where Brahmin, Rajputs, and Bhunhaes have been superseded by more industrious castes, I notice a marked difference in the care with which the land is cultivated. I will, however, refer to this matter when submitting my final report.

19. I shall now proceed to complete my enquiries for four villages which I have taken up in addition to those in my original list as approved by the Board, in your No. 1079A, dated 5th December 1882. I am also proceeding to complete and despatch the reports required on the subject of staple crops and special crops, and to complete my enquiries into the increase of prices during the last forty years which has necessitated careful search.

20. Meanwhile I await orders on the points raised in the earlier portion of this report.

21. The return of the maps is requested.

H. M. TOBIN.

No. 17 CWT, dated Camp Betoute, the 15th-17th January 1883.

From—B. Nolan, Esq., Officiating Collector of Shahabad,

To—H. M. Tobin, Esq., on Special Duty, Bhojpore.

I do myself the honour to offer some observations on the subject of your enquiry as to the preparation of tables of rent rates in the selected tract of Bhojpore pergunnah, as to which we have had much communications while in camp together.

2. I agree with you in considering that there is not in this area as a whole, or in any group of villages within it, any thing which can be called a "prevailing rate" of rent within the meaning of Act X of 1859. The rent rates have been fixed by villages, not by larger areas, apparently at different times, and without reference to any common standard. The inequalities originally existing have been increased by time, which has altered the circumstances, while the rent has, for the most part, remained the same in the important matter of moisture in particular, according to their power of retaining, and their position for receiving which in clean soils are often classified. There has been a complete change, the Ganges and Kao rivers having shifted their courses, and the canal embankments having altered the whole drainage of the country, and raised the level of the sub-soil water. Moreover, the industry of the ryots has created farm, buildings, wells, gardens, and orchards, with other improvements, raising in various

degrees the value of the land. Such connection as at first existed between the rent rate and the intrinsic value of the soil has thus been altogether destroyed. The sole standard of the existing assessment is the custom of the village.

3. Such being the case, I believe that there can be no justification for any attempt to enhance the existing rents to the standard of any prevailing rate other than that of the village. There *is* no prevailing rate for any larger area. It would of course be possible to take the average of existing rates, and to enhance the more favoured holdings up to that. This would create a new average rate, up to which, after a period, the lower rents could be again raised, and this process repeated until all the land was subjected to the highest rate now paid anywhere. But I can see nothing fair or equitable in such a process. It would be an encroachment on the rights of property, subjecting the ryots to liability to enhancement on grounds which are not now valid, and were not valid when they purchased or acquired their holdings. And few would consider the augmenting of the Rajah's income a sufficiently pressing object to justify such an interference with the vested interests of almost all the other inhabitants of this area.

4. On the other hand, it appears that occupancy ryots are liable to enhancement in proportion to the rise in prices since their rent rate was last fixed or ascertained. You have not completed your enquiry as to the extent of this increase in prices, or that as to the length of time during which existing rates have prevailed. But it would appear from the papers collected by you, as far as they have been examined, that the existing rates have not in most villages been changed for some 37 years. When this is the case, the landlord, under the rule of proportion, seems entitled to an enhancement in the rates of the rise in average prices during that period. Thus if the price of stable crops has risen 30 per cent., the fair and equitable rent would be, under the proposed as under the existing law, 30 per cent., above the existing rent.

5. This differs from the rate suggested in paragraph 20 of your letter No. 4, dated 1st January, to the address of the Board. You say that if prices have risen 30 per cent. and 10 per cent. has been added to the productive power of the soil by irrigation, making an aggregate increase of 40 per cent., then the enhancement of rent should be half that, or 20 per cent. I believe that the landlord is entitled, under the rule of proportion, to an enhancement on the ground of the increase of prices proportionate to that increase, and not merely to half of such proportion as assumed by you. Such is the present law, which is in this respect re-enacted in the Bill. The rule laid down in the Bill that the ryot shall receive half the benefit of such unearned increment is not thereby violated, as in fact he receives more. If he paid Rs. 10 for a holding 37 years ago, which then produced wheat valued at Rs. 100, and prices having since increased 30 per cent., he is now called on to pay Rs. 13, the crop fetching Rs. 130; he will retain Rs. 117* of the unearned increment, the landlord receiving only Rs. 3. As to the addition of 10 per cent. on account of canal irrigation, I think it should not be allowed. The rent of an occupancy ryot cannot be raised on account of any improvement effected at his expense, and irrigation is such an improvement, as he alone pays the water rates, which are levied to cover the cost of the canals. This is the rule approved by the Board of Revenue for the Government estates of Nasigunge in this district.

*Year.	Value of crops.	Rent.	Value of ryot's share of crops.
	Rs.	Rs.	Rs.
1850	100	10	90
	130	13	117

6. There are some villages in which, I believe, the rates have already been raised, in porportion to the increase in prices, or somewhat more. In these I would declare existing rates fair and equitable; for the others the existing rate, increased in proportion to the rise in the value of staple crops.

7. With regard to the definition of staple crops, the only difficulty in the selected area, where there is little sugarcane, regards the high lands near villages, on which potatoes, opium, and other valuable crops are grown. On other lands, rice, wheat, barley, and peas, with some other crops in particular villages, are clearly staples. The question is whether a special rate should be fixed for the land generally called *deh*, where the best crops are cultivated. I think that this should not be done, and that opium and potatoes should not be considered as staples. The land on which they grow is no better than other land, and the great outturn is simply the reward of great labours, including incessant irrigation from wells on opium lands, and the use of manure for potatoes. The ryot sinks the wells indispensable for opium, and keeps the cattle, &c., which yield the manure for potatoes, while the labour is all his. He is therefore entitled to the increase in the value of the land caused by its vicinity to the wells and cattle sheds.

8. In paragraph 19 of your letter referred to, I notice the observation that "probably owing to former mismanagement in the Raj, the rate of rent paid by occupancy ryots in the tract is very low." I am satisfied that the occupancy ryots sublet their lands at from twice to ten times the "guzashta rate." I have to observe that the term "*guzashta*," which literally means only *old*, is here used in all civil and revenue courts to denote a permanent and transferable tenure at a quit-rent, which can never be raised. It is no wonder that such a tenure can be sublet at a great profit.

9. The peculiarity of the selected tract is that it is cultivated by ryots, of whom a considerable proportion have these *guzashta* rights, while nearly all have occupancy rights, and that the same leniency of the landlord which permitted such privileges to grow up and continue has prevented him from generally enhancing rents on other lands. It is not, therefore,

a good example of the general condition of the district, and I objected to its selection for these enquiries, on the ground that it was not typical, and that there was no prevailing rate. But if in these respects it affords less information than could be wished, its condition is worthy of the attention of the framers of the Bill on other grounds. It is the object of some of the framers of the present Bill to secure for the ryots of Bengal as a body rights of occupancy at moderate rents, which, they contend, would insure surperior cultivation through the improvements to be expected from those who enjoy security of title, a certain prosperity in ordinary times, with the credit necessary to enable cultivators to tide over periods of famine without becoming a burden on the taxes, and which would also, it is urged, tend to give to the tenants the independence and manliness of character generally found among peasant proprietors. On the other hand, there are many who believe that low rents and security end in sloth, the sale of the land to speculators, and in the end to sub-letting at a rack rent. It would be most important to ascertain whether in the selected tract the conditions which it is proposed to create elsewhere have led to the results anticipated by the one school or the other.

10. I think that there can be no doubt to such a question. Sub-letting is not unknown in Bhojpore, and some of the cultivators are in debt; but these are exceptional cases. The general rule is that the ryots cultivate their own lands with their own small capital, and where they sell their holdings it is to others of their own class. Their industry is marked, and has resulted in the clearing of the jungle with which much of the land was covered 50 years ago, and the creation of a cultivated area as well planted with fruit-trees, as well irrigated from wells, and as well fenced as any I have seen in India. No one can encamp for a day in the tract without being struck with its exceptional prosperity, which contrasts strongly with the backward state of three parts of the district in which rents are high and occupancy rights unknown. The credit of the cultivators is so good that, as you informed me, they generally borrow at the rate of 12 per cent., that is, on as good terms as their landlord. There would, therefore, be no anxiety whatever as to their surviving without assistance a period of ordinary famine. As to their character, the objection I generally hear to it is that it is *too* manly and independent. The Bhojpore wrestlers have a name throughout the country, and every man carries the large Bhojpore *latti*, which he can use with great skill. They are equally ready to defend themselves in law courts with which the complication of rights inseparable from any system where the majority possess interest in land has rendered them familiar. I have always found them open, communicative, ready to deal or to serve, and their honesty is proved by the low rate of interest demanded from them; but they have another side of their character for any one who attempts to oppress them.

11. I think that these facts should be brought to the notice of Government as having a certain bearing on the general policy of the Bill. In the area to which your enquiries are confined, it would, I submit, appear that rights of occupancy at easy rents have been followed by comparative industry and prosperity, and with their usual effects in the moral character of those who enjoy them.

12. With regard to your remark that the low rents may be due to mismanagement, I may say that it has been the misfortune of the Indian ryots that so many have considered the raising of rents a proof of business ability. In this instance the ryots have not, as in most estates, been transferred from one purchaser at an auction sale to another, until they fell into the hands of some speculator in land who could enhance the old rents to excess. They remain under the Doomraon family, who have owned the land for centuries. That such a family, wealthy even with existing rents, should have allowed them to remain at a rate consistent with the happiness and prosperity of the dependents, I consider a proof of excellent management, and presume it was under such an impression that Government conferred titles on the late Maharajah and the present manager. I think the Rajah must be better off surrounded by contented and loyal peasantry than he would be if his family increased their income at the expense of alienating the feelings of their tenantry, as others have done. I do not say this as imputing an opposite view to you, but because I think it of real importance that in any public correspondence conduct which contributes to the happiness of the country should be recognised as such. The opinion of the older families as to whether they should respect their own good traditions in this respect, may be represented as wavering under the influence of the example of the new auction purchasers, and an impression that Government regarded their leniency as weakness and mismanagement would have a bad effect.

No. 61, Jaypur, Punchabibi, the 20th—22nd of January 1883.

From—D. J. MACPHERSON, ESQ., C. S., Assistant Collector, on Special Duty,

To—The Secretary to the Board of Revenue, Lower Provinces.

I have the honour to submit, for the consideration and orders of the Board of Revenue, a report on the practicability of framing tables of uniform rates of rent in the Jaypur Government estates in the manner contemplated by Government. My remarks are based on such facts as I have ascertained up to the time of writing; but all the information I have been able to gather leads me to the conclusion that it is not at present practicable to frame for this tract of country tables of rates based upon recognised distinctions in the quality of soils.

General Principles applicable to this Tract of Country.

2. The object aimed at is "to adjust rent rates to classes of soils," and the summary nature of the enquiry contemplated by Government, precluding, as it does, "actual investigation and experiment on the fields themselves," necessitates our taking existing rates of rent as the basis for operation, these being "usually governed by two great principles—(1) quality of soil, and (2) production of special crops." In the Jaypur Government estates, however, we have not this basis to serve as a starting-point. There are here no rates of rent at all; and I think I shall be able to show that, even if fair and equitable rates based on soil classifications were framed, it would be impossible, in the peculiar circumstances of this tract of country, to apply them in practice. Rents are here determined by the operation of the principle of competition, in which the cultivators and not the proprietors of the land are masters of the position. And so long as this relation subsists between these two classes, the determination of the rents to be paid can hardly come within the purview of the Rent Bill. The provisions of that Bill relating to rates of rent were, I take it, framed with a view to meeting an entirely different state of things. "As to competition," the Commissioners remark in paragraph 45 of their report, "while population is sparse and land is plenty, when the supply of cultivators is limited and the demand for them is active, the ryots have the best of the position, and can secure favourable terms. As population increases, the tables are gradually turned, and where cultivation of the soil is the only means of subsistence, the ultimate effect of unrestricted competition must be that the landlords can dictate their own terms to the ryots who must either accept them or starve." And the conclusion the Commissioners therefore come to is that "Government could not consistently, with the proper discharge of its functions, leave the settlement of what we shall now call the rents payable by the ryots to the uncontrolled influence of competition." It will not be difficult to determine when the time has come for applying the principles of the Rent Law to the determination of fair and equitable rates of rent in this tract of country. That time can hardly have come so long as the ryots show that they can practically dictate their own terms.

Recognised Classification of soils.

3. In the Jaypur estates and the neighbourhood there is a recognised classification of soils, excluding *bastu* or homestead land into two main classes, upland and lowland, the latter being also called rice-land; and each of these are sub-divided into three or at most four qualities. These sub-divisions into qualities are, however, understood only by the headmen and principal ryots—the mass of the peasantry sub-divide each of the two main classes simply into good (*bhala*), middling (*madhyam*), and bad (*manda*) soil. Sandy soil is always *manda*; but what they call middling soil one year, they may designate good soil the next, if it has been well ploughed and manured. So far as it is possible to discover traces of rates of rent based upon soil classification, no distinction has been made between the productive capacity of upland and of lowland. The outturn on the former varies with the degree to which it has been ploughed and manured; and it may therefore be said that there has been no attempt here to fix rates of rent (where such may be discovered) with reference to any other crop than rice. This is the preponderating crop in the tract. *Aman dhan* alone is ordinarily grown upon lowland, that is, on about 45 per cent. of the cultivated area, while *aus dhan* is grown upon 14 per cent. With reference to rice land, it may be observed that in villages liable to inundation the best land occupies a middle level and position between two sorts of land, each sort being sub-divided into second, third, and fourth qualities, the higher sorts are not liable to inundation, and their degrees of fertility vary with the readiness with which water collects upon them at the time most suitable for the rice crop. The lower sorts, on the other hand, are distinguished by their liability to such inundation as is sufficient to destroy the crop which is so liable to destruction that the ryots do not consider it worth their while to plough the land well; the water, moreover, usually rises so suddenly that the land is suited only for *dhan* sown broadcast. On the higher sorts the *dhan* is always transplanted. On the lower sorts the crop comes to maturity only in years in which the deficiency of rain is so great as to give but a poor outturn on the higher land, and in such years they produce better crops than the very best land, and that too in inverse proportion to the quality of the soil. On an average of years, however, the outturn of the lower sorts is equivalent to that of the higher sorts; and for practical purposes, therefore, only four qualities of rice land are recognised. It should be observed that land of a particular quality in one village is not necessarily identical in productive capacity with land described as being of the corresponding quality in another. In such village the best land after *bastu* is spoken of as being of the first quality, and forms the standard by which the remaining qualities that may be found in the village are determined.

Rates of Rent.

4. I come now to the consideration of the question of rates of rent. In 1865, Mr. Payter, the farmer of the Government estates, fixed rates of rent in each village, presumably based upon soil classification. This, however, he is understood to have done only in the case of holdings which were cultivated by ryots who had for some time been settled upon them. These rates may fairly enough have indicated the difference between the various qualities of soil found in a particular village; but there was no correspondence between them and those fixed in a neighbouring village in which the soil may have been substantially the same. In each village the

rates were really determined by what the ryots were willing to agree to, and generally it would appear that they varied according to the quality of culturable waste land in each village. Mr. Payter appears to have induced the settled ryots to agree to rates on the understanding that he would remit, as an act of grace on his part, about 10 per cent. on the rental. The sum so remitted was called '*hazat*,' and it was understood, I believe, that it might be collected in unusually good years; but, as a matter of fact, I am informed that Mr. Payter never actually collected anything on this account. It may be observed that other zemindars hereabouts have adopted the same arrangement, but generally with a view to ensure punctuality in the payment of rents through the risk the ryots would run of being sued for arrears at the full rates to which they had agreed, on the understanding that the *hazat* was not to be levied. Mr. Payter then was able to come to an agreement with the older ryots in 1865 as to the rates at which they should pay rent for the different sorts of land in their holding. In the cases, however, of holdings taken up shortly before that date, and of land subsequently taken into cultivation, it was impossible to apply these rates. In such cases a separate bargain was come to with each person who took up land, an average rate per bigha being generally agreed upon for the whole, irrespectively of the various qualities of soil which it might comprise. The whole holding taken up in this way at one time would be described in the *jamabandi* as belonging to that class of soil which, in the case of older holdings, paid a rate corresponding to the average agreed upon. Between 1865 and 1878 the cultivated area in these estates was found to have increased by 37 per cent., so that it may be taken for granted that over a very large portion the rates of rent paid in the latter year were no criterion whatever of the quality of the soil. During this period the rates of rent paid in the older holdings also must have lost almost entirely whatever connection they may have once had with soil classification. Owing to the abundance of fallow and waste land in this part of the country, which the ryots always bargain to get on favourable terms, they seldom occupy the same holding for more than 6 or 7 years in succession. I shall afterwards give figures showing the extent to which these relinquishments have taken place since the last settlement of 1878. Meanwhile, it will suffice to remark that, owing to this custom, rights of occupancy are almost entirely unknown in this particular tract of country, and that relinquished land can hardly ever be re-let at the same rates as the former occupants paid. Any evidence, therefore, which rates of rent may have afforded of the quality of the soil in 1865 must have been lost trace of before proceedings were adopted to effect the settlement of 1878, which was contemporaneous with the assumption by Government of the direct management of these estates. The same remarks are understood to be applicable to the estates of neighbouring zemindars. In them, as in the Government estates, there could really be said to be no *rates* of rent at all. And when the zemindars were called upon by the Settlement Deputy Collector to furnish him with the rates in adjacent villages, I am informed that they merely stated what, according to the existing rental, would fairly represent rates.

Effect of the settlement of 1878 on Rates of Rent.

5. At the settlement of the Jaypur estates in 1878, rates of rent themselves entirely vanished. Each ryot settled separately for a lump sum for his whole holding, stipulating at the same time that there was to be no subsequent re-measurement during the period of settlement, which was fixed for 15 years, and does not therefore expire until March 1893. The Deputy Collector commenced proceedings in 1874, and measured and classified all the plots in each holding. In classifying individual plots, he relied mainly on the farmer's records; but in many cases, as can readily be understood from what has been said above, he found that land was entered as being of a lower quality than it really seemed to him to be. This he corrected to the best of his judgment, without taking any steps to ascertain the productive capabilities of the lands whose classification he changed. Adopting the rates fixed in 1865, he found that these alterations produced an increase on the rental collected by the farmer of Rs. 3,624, or 10·5 per cent. He also found that the area under cultivation was 37 per cent. greater than it was when the farmer made his last settlement in 1865. This increase was represented by an addition of Rs. 9,787, or 28·5 per cent. to the rental. The farmer's rental was Rs. 34,253-9-6, of which he left unlevied on account of *hazat* Rs. 3,108-1-9, and the rental ultimately fixed by the Deputy Collector at the farmer's rates amounted to Rs. 47,665. Although the ryots found that the rates fixed so far back as in 1865 were not to be changed, they nevertheless objected to the proposed settlement. They declined to agree to any rates whatever, and disputed the correctness of the Deputy Collector's classification. They admitted, however, that their cultivation had increased perhaps to the extent disclosed by the measurements, and in view of this they were willing to pay some increase on their former rental. Each agreed to pay a lump sum for his whole holding on condition that no re-measurement or revision should take place for 15 years; and on this basis, and this alone, the settlement was finally concluded by Mr. Veasey, the then Covenanted Deputy Collector of Bogra, and by the manager of the khas mehals, and sanctioned by the Board and by Government. The rent ultimately agreed to was Rs. 39,199, but this included Rs. 100 for *hât* dues, and Rs. 251 for fisheries, so that the rental for cultivated land was really Rs. 38,848,—an increase of about 25 per cent. on the rental (excluding *hazat*) the farmer used actually to collect. Under the circumstances which led to a settlement, in which the ryots practically dictated their own terms, this increase in rental may be considered as entirely due to the increase of 37 per cent. in the area under

cultivation. Naturally the addition to the rental would not be proportional to the increase in the cultivation, as the latter area would yield a lower average rate of rent than the previous area under crops.

Reasons for abandoning any attempt to apply rates of rent at the Settlement of 1878.

6. Although the rental at which the settlement was concluded was 17 per cent. below that fixed by the Deputy Collector at the rates of 1865, it is doubtful whether, under the circumstances, any better result could have been obtained than was effected by the compromise which was agreed to. The position was summed up by the Commissioner in his letter No. 212Rct. of the 10th March 1879, to the Board of Revenue, and I cannot do better than quote a portion of his remarks, as they are in entire accordance with all the information I have been able to ascertain. In that letter the Commissioner invited special attention to the fact "that, owing to there being more land than ryots in the part of the district in which the Jaypur estates are situated, and to zemindars competing to a certain extent for ryots, the latter are almost masters of the situation; and if we do not come to an agreement with them as to enhancement, it is probable that we may not only get none at all, but in the course of a year or two, by attempting to enhance the rents in a perfectly legal manner, and to a most reasonable extent, cause desertion of the ryots for neighbouring estates, the owners of which are more willing to meet the ryots half way, and thus actually reduce our rent-roll, which would be a very unsatisfactory result, at the expenditure of a considerable sum of money in measurement operations. There is another point, too, to which special attention is necessary, namely, that owing to this strong position of the ryots they do not now really pay rent at any *rates* at all. The estates have been, until lately, let in farm, and it has been the custom to make a deduction of about 10 per cent. from the amount nominally payable by the ryots on account of what was called *hazal*, which was only paid in extraordinarily good seasons, and very rarely in full even then. Again, the ryots have held, with the farmer's full knowledge, more land than they paid rent for. Not only will the rates, if it is attempted to apply any, be found different in neighbouring villages in the estates, but in adjoining holdings in the same village, and in fact for some years past, it would appear that within certain limits the amounts paid have really varied in a great measure according to the strength of the ryot's character and influence ever others."

History of the Jaypur Government estates.

7. Whether owing to their general unhealthiness, as is usually supposed, or to some other reason, the population of these mehals, and with it the area under cultivation, appear to have always been comparatively small and to have been subject to considerable fluctuations. The estates became the property of Government a little less than half a century ago, simply because their proprietors were unable to meet their engagements. They are seven in number, and were purchased by Government at sales for arrears of revenue on the following dates:—

1. Lot Chhawalpara . . . . March 1836.
2. Kishamat Saguna . . . . November 1835.
3. Hudda Puranapail . . . . February 1835.
4. Hudda Baguri . . . . December 1831.
5 Hudda Balighata . . . . August 1828.
6 Devkhanda . . . . 19th April 1837.
7. Dharanji . . . . 5th April 1837.

In 1837 and 1838 these estates were let in farm to Mr. Payter, with the exception of Dharanji, for which another farmer agreed in 1839 to pay a *jama* of Rs. 609-9 with a yearly increase of Rs. 10. As he failed, however, to meet his engagements, the farm of that estate was taken from him in 1841 and given to Mr. Payter at a reduced *jama* of Rs. 431-11-2½. It is instructive to note how the *jama* of these estates fluctuated with different farming leases. I have been unable to obtain this information with respect to Kishamat Saguna and Devkhanda; but the following table will shew the farming *jama* for the rest at different periods, of which I have obtained a record:—

NAME OF ESTATE.	Former Government revenue.	1838.	1841.	1847.	1854.	1863.	1869.	1873.	1874.	1878. Settlement Deputy Collector's *rental*.	1878. Ultimate (present) *rental*
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs
Chhawalpara . .	10,245	7,800	7,800	9,031	......	......	......	9,122	15,284	31,507	25,609
Kishamat Saguna .	......	......	......	......	......	..	......	1,948	......	7,517	5,239
Puranapail . .	......	2,200	2,200	2,300	2,200	2,222	2,222	2,222	2,419	3,485	3,529
Baguri . . .	......	1,000	1,000	1,000	1,000	1,010	1,010	1,010	1,268	2,141	1,681
Balighata . . .	......	1,800	1,800	1,800	1,800	1,018	1,018	1,018	1,018	1,654	1,187
Dharanji . . .	680	609	431	431	561	561	583	567	583	1,130	871
Devkhanda . . .	......	......	......	......	......	......	......	605	......	1,653	803

The fluctuations in the jamas of lot Chhawalpara, Balighata, and Dharanji are particularly instructive in indicating what changes in the area under cultivation must have taken place. Mr. Payter did much for the improvement of the estates by introducing Bunas and others from Chutia Nagpur. The indigenous population are averse to hard labour of every kind, but these Bunas are said to be capital hands at clearing jungle lands, which they got

from Mr. Payter on specially favourable terms, often with the addition of advances by way of supplying them with some capital. Still as much as 37 per cent. of the total area of the mehals is at present uncultivated, and of this only one-fourth is unculturable. The following table shews the cultivated and uncultivated area in each estate:—

NAME OF ESTATE.	Cultivated area in acres.	Uncultivated area in acres.	Total area in acres.	Present Government rental.
				Rs.
Lot Chhawalpara	12,285	6,011	18,296	25,909
Kishamat Saguna	4,838	2,935	7,773	5,229
Hudda Puranapail	1,580	588	2,168	3,529
Hudda Baguri	643	705	1,348	1,681
Hudda Balighata	498	735	1,233	1,187
Dharanji	431	151	582	871
Lot Devkhanda	557	888	1,445	898
TOTAL	20,838	12,013	32,845 [=51 sq. miles.]	39,199

In Kishamat Saguna, Government only possesses a joint share with other proprietors and this varies in different villages. In the total rental is included Rs. 100 for *hâts*, and Rs. 251 for fisheries. At the last census the population of the mehals was returned as 19,694, or the average of 386 to the square mile. I do not know whether the necessary adjustments were made in the draft schedules from which these figures have been taken: judging from the state of the country, I should hardly have thought that the population was as much as nearly 400 to the square mile. Taking five as the ordinary size of a family, we get as the average size of each holding 5¼ acres or 11 local bighas. The number of tenants on the estates is, however, 5,115, which reduces the average size of a holding to a little over 4 acres or 8¾ local bighas. A local bigha is equivalent to $\frac{1}{1}\frac{8}{8}$, or a little over half of an acre.

Reasons why no adjustment between Rent rates and Soil classification can be preserved in this tract of Country.

8. In view of the figures given above, it is not to be wondered at that there is competition rather on the part of zemindars for ryots than on the part of ryots for land, and that the latter frequently relinquish their holdings in the hope of securing better terms elsewhere. For the useful Bunas specially there is considerable competition on the part of neighbouring zemindars, and the promise of being allowed to hold any land they clear rent-free for, say, ten years, is generally sufficient to induce them to take up new land. I am informed that the promise on which they are induced to clear land in other zemindaries is occasionally broken, and in that case they readily migrate elsewhere, leaving the land they have cleared to be occupied by ryots who are willing to pay the zemindar a fair rent for it. But the indigenous population are quite as migratory in their habits, and they have but little affection for their homesteads, for it is the general custom to relinquish the whole holding at a time. They almost invariably succeed in obtaining good land on more favourable terms than their old holding. I observe from Mr. H. R. Reily's report No. 268 of the 15th October last, a copy of which has been forwarded to me by the Board, that in the Chanchal estates in Maldah also "land was too plentiful and the zemindars were only to anxious to entice away the tenants of their neighbours, to permit the screw being applied too severely;" but their tendency to relinquish their *jotes* and become *paikasht* tenants on neighbouring estates was restrained somewhat by the advantage their landlord was able to take of their affection for their homestead lands to raise arbitrarily the rates for these. In the western portion of the Bogra district the ryots do not appear to have any such affection for their homesteads as the Chanchal ryots have, and they frequently move from one village or estate to another. The following figures will shew what changes of this nature have occurred in the Jaypur estates during the three years that have elapsed since the last settlement was concluded:—

YEAR.	LAND RELINQUISHED OR ABANDONED.		RELINQUISHED LAND RE-LET TO				CLEARED AND UNCLEARED WASTE LAND TAKEN UP BY			
			Resident ryots.		Paikasht ryots.		Resident ryots.		Paikasht ryots.	
	Number of ryots.	Area in local bighas.	Number of ryots.	Area.	Number of ryots.	Area.	Number of ryots.	Area.	Number of ryots.	Area.
1879-80	170	1,353	95	452	44	328	175	477	74	306
1880-81	129	835	73	422	6	45	176	401	30	59
1881-82	190	1,301	120	663	21	69	160	450	46	242
TOTAL	489	3,489	288	1,537	71	442	511	1,328	150	607

These figures are very instructive. They show that nearly 10 per cent. of the holdings have been vacated during these three years, and that no less than 1,320 local bigahs, or 622 acres of land, which was cultivated three years ago, have gone out of cultivation. The excess 615 bigahs of new land taken up over and above the quantity of land which has gone out of cultivation has, however, prevented the total rental from being reduced in the interval by more than Rs. 48; but the results vary considerably in different villages and from year to year. Under such circumstances, it is pretty clear why the ryots are "masters of the situation," and can practically dictate their own terms.

Diversity of rates in the Jaypur Estates.

9. That rents have hitherto been determined in this part of the country by competition, may be gathered from the great diversity observable in the rates of rent for different villages which were ascertained by the Settlement Deputy Collector. As has been already explained in paragraph 4 of this report, there were really no rates of rent at all based on soil classification; but the Deputy Collector ascertained what were understood to represent rates of rent in each village in the Government estates and in the vicinity, although the full rates were seldom actually levied. These rates disclose far greater diversity between village and village than could possibly be due to difference in soil and situation, and can only be explained on the understanding that they have been determined solely by competition. I subjoin a list of the rates found by the Settlement Deputy Collector in the Government villages, and those adjacent to them in two tracts of country—one the northern, and the other the south-eastern portion of the mehals. I have selected these tracts because in them villages belonging to other proprietors are found adjacent to the Government villages. The south-eastern portion is the best populated and cultivated tract in the mehals, and pays the highest rates of rent. The villages belonging to Government are underlined in the two tables, and the rates for them are those fixed by the farmer in 1865, and were considered by the Deputy Collector to be fair and equitable, although he gives no information from which his reasons for coming to this conclusion can be gathered:—

Chanda	2 4 0	2 0 0	1 10 0	1 8 0	1 4 0

The rates are the same for low land as for upland. In the case of some of the villages of private proprietors in the second tracts, the rates appear very high compared with those in the Government villages. These, however, the ryots pay willingly enough, as they have generally extended their holdings considerably beyond the quantity of land for which they pay rent: and if the rates pressed upon them in the least, I am informed that they would have no hesitation in relinquishing their holdings.

Calculation of what may be assumed to represent existing Rates of Rent.

10. The diversity disclosed by these rates is due to the varying demand for land in each village, and the comparative strength of the ryot's position. The effect of the last settlement in 1878, on the basis of terms dictated by the ryots, was to intensify this diversity. Although at that settlement rates were entirely swept away in Government villages, I have been able to calculate for each village on the basis of the farmers' rates fixed in 1865 and accepted by the Deputy Collector what we may assume to represent the rates now actually paid. The settlement records show the quantity and quality of cultivated land in each holding, and its gross rental as the rates accepted by the Deputy Collector. We may take for granted that the ratio between these rates was admitted by the ryots to be fair; and although they disputed the correctness of his classification of their lands, we may assume that what he gives as the quantity of the land of each quality in the village is a pretty near approximation to the truth—at any rate, it is as near an approximation as we can get. On these assumptions, I have been able to calculate for each village in the mehals what effect the difference between the gross rental ultimately agreed to by the ryots and that fixed by the Deputy Collector has made upon the rates accepted by him. This has been a laborious process, and my establishment has found great difficulty in obtaining the necessary *data* in the case of the 53 villages in estate Kishamat Saguna, as, besides holding a varying *izmali* share in each of these villages, the Government is full proprietor of numerous specific and ill-defined areas of land in them. But for these difficulties, I should have been able to submit this report on a much earlier date. In view, however, of the basis from which the present enquiries have to start, I deemed it necessary to make this attempt to get at existing rates of rent. I subjoin a table showing the *maxima* and *minima* rates of rent ascertained in this way, excluding, however, the abnormal case of the large village of Pahunanda, in which there is so much waste land that the cultivated area pays a uniform rate of only 1 anna 1 pie per standard bigha:—

Description of Land.	Rates per local bigah.		Rates per standard bigha.		Rates per acre.	
	Minima.	Maxima.	Minima	Maxima.	Minima.	Maxima.
	Rs. A. P.	Rs. A. P	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.
Bastu	0 11 0	2 11 8	0 7 1⅛	2 1 7	1 7 1	6 5 7
First quality	0 5 1½	2 6 2½	0 3 0	1 13 4	0 10 9½	5 8 9
Second ditto	0 4 0	2 0 9	0 2 5⅛	1 9 2	0 8 5	4 12 1
Third ditto	0 3 2⅜	1 13 0	0 2 2½	1 4 3	0 6 9⅕	3 13 3⅓
Fourth ditto	0 2 1¾	1 8 2	0 1 5⅜	1 0 11	5 4 5¼	3 2 7⅓

The highest rates are found in the village of Srirampur and Chanda, in the south-eastern and best populated portion of the mehals, the uncultivated culturable land in the former amounting to only 4·3 per cent. of the area, and the latter to only 3·7 per cent. That even these, the maxima rates, do not press upon the cultivators, is shown by the circumstance that the gross rental which they voluntarily agreed to pay is in Srirampur 36 per cent. and in Chanda 19 per cent. above what the Deputy Collector fixed it at. The average rates fixed by him for the Government villages enumerated in the second table given in last paragraph are only Rs. 2-0-7, Re. 1-10-7, Re. 1-5-7, Re. 1-0-0, and Re. 0-12-7 per local bigah for the different qualities of soil; and the rents *ultimately* agreed to for the same villages give an average of only Re. 1-12-1, Re. 1-9-1, Re. 1-4-5, Re. 0-15-7, and Re. 0-11-1 per local bigah. These latter rates may be taken, therefore, as the prevailing rates in the most highly assessed portion of the mehals; they are equivalent to Re. 1-5-7¾, Re. 1-3-3¾, Re. 0-15-8¾ Re. 0-12-0, and Re. 0-8-6¾ per standard bigah respectively, or Rs. 4-1-4, Rs. 3-10-7, Rs. 2-15-7, Rs. 2-4-4, and Re. 1-9-11 per acre. Taking in a similar manner 21 Government villages in the north central portion of the mehals, in which the rates appear on the whole to be the lowest, I find that the average rates ultimately agreed to were:—

	Per local bigah.	Per standard bigah.	Per acre.
	Rs. A. P.	Rs. A P.	Rs. A. P.
Bastu	1 4 10	0 12 3	2 5 1
First quality	0 13 3	0 8 2	1 8 8½
Second ditto	0 10 8	0 6 6⅓	1 3 9
Third ditto	0 8 10	0 5 5	1 0 4½
Fourth ditto	0 6 3	0 3 10	0 11 7

The mean of these two averages for the areas of highest and lowest assessment gives the fairest average for the whole mehals, although the rates for the two lowest qualities strike me as being rather higher than the real average. An arithmetical mean between the maxima and minima rates would be entirely misleading, as the great majority have rates tending rather towards the minima than towards the maxima. The mean rates for the whole estates are thus found to be :—

Description of Land.	Rates per local bigah.	Rates per standard bigah.	Rates per acre.
	Rs. A. P.	Rs. A. P.	Rs. A. P.
Bastu	1 8 5½	1 0 11⅓	3 3 2⅓
First quality	1 3 2	0 13 9	2 9 7¾
Second ditto	0 15 6⅓	0 11 1⅓	2 1 8
Third ditto	0 12 2⅓	0 8 8⅓	1 10 4¼
Fourth ditto	0 8 8	0 6 2⅓	1 2 9

This gives an average rate per local bigah of one rupee, which is just about the result which the total rental of the estates gives after deducting *lakhiraj* and *istimurare jotes*.

Average value of the gross produce.

11. I now proceed to calculate what proportion these rates bear to the gross value of the produce. As has been already remarked, rice is the preponderating crop in these estates, *aman dhan* being grown on 45 and *aus dhan* on 14 per cent. of the cultivated area, and as no distinction appears to be made in this part of the country between upland and lowland for the purposes of assessment, we may fairly refer rates of rent, such as they are, to the productive capability of rice land alone. Unfortunately, owing to a failure of the rice crop this year in the western portion of the Bogra district, I have been unable to test, by experimental enquiries, the average outturn of rice on each quality of soil. It is estimated that, owing to want of rain, *aman dhan* has this year been grown only on about 25 per cent. of the area usually grown with that crop; and where it has been possible to produce a crop, the outturn must be very much less than it would be in ordinary years on the same land, except on lands where the crop is usually destroyed by inundation. How much less it probably is, it is extremely difficult to estimate; there is no criterion by which we can arrive at a conclusion, and it will be less in some villages than in others. On the other hand, where there is what has been described in paragraph 3, as the lower sort of rice land on which the crop is usually destroyed by inundations, the outturn has been better than on the very best land, and that too in inverse proportion to the quality of the soil. In most of the villages in the mehals there is some land of this kind, and in the southern portion there is hardly a village in which rice has this year been grown except on this lower sort of land. In all but one or two villages in the whole estates it was impossible to find a crop on more than two qualities of soil, and in two out of the four villages where I found rice on three qualities, I had for the purposes of experiment to cut two out of three specimens of the third quality out of one and the same plot. The result of the few experiments I was able to make was that in villages with *khiyar* (clayey) soil, the outturn of clean rice averaged 4 maunds 11 seers and 12 chittacks, and on *pali* (alluvia) soils of the higher sort 9 maunds and 35 seers per acre. These results show a very poor harvest, even although the experiments were made in villages with the best crop, for the best information I can obtain leads me to conclude that the average outturn of clean rice in ordinarily good years is at least 15 maunds. Judging as best as I can, I should say that the outturn this year on lower third quality land is somewhat less than that on first quality land in an ordinarily good year; that on lower second quality land somewhere between this and on higher second quality land; and that on first quality and higher second quality land about half and three-eighths of an ordinarily good outturn. But there is no certainty about this, and the estimate would not be the same for all villages. The year is an exceptional one, and the general impression seems to be that it is not much better than the famine year 1874. Even if the Rent Bill were already law, I do not think it would be possible to frame rates of rent in a year like this, or at any rate to test what proportion existing rents in each village bore to the average value of the gross produce. After having been over all the *dhan* villages in the mehals, I have been obliged to give up the attempt to ascertain, by actual experiment, the outturn of rice on the various qualities of soil, and to obtain some idea of the average produce. I have been compelled to rely on what information I have been able to gather from the most intelligent residents on the Government estates and in the neighbourhood. It is, however, very difficult to get reliable information on these points hereabouts, as almost all the *aman dhan* is usually required for local consumption, and few people have any occasion therefore to be acquainted with the bigah produce of their fields. Taking the estimate, however, in which

most of those who were able to give me any agreed, I find the average produce of *aman dhan* in ordinarily good years to be :—

QUALITY OF LAND.	OUTTURN OF PADDY.			OUTTURN OF CLEAN RICE.		
	Per local bigah.	Per standard bigah.	Per acre.	Per local bigah.	Per standard bigah.	Per acre.
	Mds. S. C.	Mds. S. C.	Mds. S. C.	Mds. S. C.	Mds. S. C.	Mds. S. C.
First quality	15 0 0	10 19 6	31 28 10	10 20 0	7 13 9	22 8 2
Second ditto	11 10 0	7 34 8½	23 31 9	7 35 0	5 20 3	16 26 2
Third ditto	7 20 0	5 9 11	15 34 6	5 10 0	3 26 12	11 4 1
Fourth ditto	6 0 0	4 7 12	12 27 8	4 8 0	2 37 7	8 35 4
Average .	9 37 6	6 37 13	21 0 8	6 38 4	4 34 8	14 28 6¼

The average outturn of 14¾ maunds of clean rice per acre is probably somewhat under the mark, as in ordinarily good years more rice land of the first and second qualities taken together is cultivated than of the third and fourth. I have taken the outturn of clean rice as $\frac{7}{10}$ths that of paddy, as this appears to be the proportion established for *amun dhan* by the experiments reported in the *Statistical Reporter*, volume I, page 290. The general result is about the same as that taken by Mr. MacDonnell as a fair average outturn from an acre of single-crop rice land in an ordinarily good year in the adjoining district of Rungpore, namely, 15 maunds (*vide* "Report on the food-grain supply of Bengal and Behar," page 233). This we may take as the average outturn. I find that the price of rice varies considerably at the different local hâts. The average price for the last five years during the months in which the ryots ordinarily sell their rice is Re. 1-9 per standard maund, and this, I understand, is a fair average general price. For three years following the famine the price was unusually high; but last year and the year before the price was very low, only Re. 1-1-6 and Re 0-15-3 per maund respectively. Notwithstanding the facilities for export afforded by the railway, prices have declined during the last five years. That they have not been increasing is not wonderful, considering how little of the *aman dhan* grown in these mehals is available for export. Taking the daily consumption at ¾ths of a seer per head of the population as a rather liberal allowance, I estimate the quantity of rice required for local consumption at 1,34,700 maunds per annum. The area in *aman dhan* is about 9,400 acres, so that the annual outturn will be about 1,41,000 maunds, of which about 9,400 would be required for seed and will not have been husked. What is required for seed and for local consumption would absorb the outturn of *aman dhan*, but a portion of the local consumption of rice is supplied by *aus dhan*, and no doubt some *aman dhan* is exported.

Percentage which the supposed existing rates of rent bear to the value of the gross produce.

12. On the whole, we may take Rs. 1-9 as fair average price of rice, and at this price the following table shows what preceentage of the gross value of the produce are :—(1) the maxima rates discoverable anywhere in the mehals; (2) the average rates in the tract most highly assessed ; (3) the average rates in the tract where the assessment is lightest, and (4) the maxima rates. These rates have already been given in paragraph 10 :—

DESCRIPTION OF LAND.	Average outturn of clean rice per local beegah.	Value of produce.	PERCENTAGE OF GROSS VALUE OF PRODUCE OF—			
			Maxima rates.	Average higher rates.	Average lower rates.	Minima rates.
	Md. s. c.	Rs. a. p.				
First quality	10 20 0	16 6 6	14 5	10 3	5 1	1 9
Second "	7 35 0	12 5 0	16 6	10 9	5 4	2 0
Third "	5 10 0	8 3 3	22 1	12 2	6 5	2 3
Fourth "	4 8 0	6 9 0	23 0	12 0	5 9	2 0
Average .	6 38 4	10 14 0	19 0	11 3	5 7	2 0

At the unusually low price of 15 annas 3 pies per maund, the percentage of rates to the gross value of the produce was for the various qualities of soil in the area of highest assessment 15·7, 17, 19·4 and 17·3 and in that of lowest assessment 8·3, 8·9, 11, and 9·7. The rates, therefore, are moderate, and it must be borne in mind that virtually it is the ryots themselves who fixed them.

Material condition of the peasantry.

13. As might be expected, the ryots in this part of the Bogra district, and particularly in the Government estates, are substantially well off. They appear to be a contented lot, and

they can afford to be very independent. A comparison of the average income and expenditure of an ordinary cultivator will furnish another test of the moderateness of the assessment for this purpose. I shall take the usual case of a family consisting of the cultivator, his wife and three children, the latter all under the age at which they would be able to assist their father in the labour of the fields, and so enable him to extend his cultivation in proportion to the subsistance required for his family. On a very liberal estimate the daily consumption of rice of such a family would be—

	Seers.
For the two adults	1¾
For the three children	1¾
Extra	½
TOTAL	4

The annual consumption of rice would therefere be 36½ maunds. The cultivator would be able, unassisted, to till 11 local beeghas of land, on which he would probably grow *aman* and of 1½ *annas dhan* The outturn in clean rice would be about 35 maunds of *aman* and 10 of *aus*. About three maunds would be set aside for seed and for provision for wastage, so that there would be surplus of about 5½ maunds after providing for subsistence, and it must be remembered that a liberal allowance has been made for that on one beegha of his holding the cultivator would grow *kesari* and *masuri*, but only sufficient for his own consumption. Half a beegha he would devote to the cultivation of chillis, potatoes, &c., with the sale-proceeds of which, after providing what he needs for his own consumption, he would be able to pay for all the salt, oil, fish, and other articles of food he might require. The whole of the produce of the rest of his land he can therefore afford to sell. This will usually be two beeghas of mustard (sharisha), half a beegha of jute, and half a beegha of sugarcane. The net value of the produce of these crops, after deducting all expenses for their cultivation and bringing them to market, would be—

	R	a.	p.
Mustard	10	0	0
Jute	6	0	0
Gur	12	8	0
TOTAL	28	8	0

Adding to this Rs. 7-10 as the value of the 5½ maunds of rice he has over for sale, he will have over Rs. 36 with which to meet all his other expenses. His rent at the average rate in these mehals will be Rs. 11 and his chowkidari tax Rs. 1. He own and his wife's clothing may cost him Rs. 6 and his children's Rs. 2. All his other necessary expenses, such as the cost of purchasing agricultural implements and domestic utensils, and of getting his house repaired, will not amount to more than Rs. 6. Most ryots have two or three cows, from which they breed their own plough-cattle. There is no expense involved in maintaining any number of cattle the ryot may care to keep; good pasturage is abundant, and the *dhan* stubble is also used as food. What labour is required, except for the preparation of *gur* (and this has been already taken into account), has not to be paid for, as the villagers help each other in turns. At the outside, therefore, the cultivator's annual expenses cannot exceed Rs. 26, and to meet this he has an income of at least Rs. 36, leaving him with a surplus of Rs. 10. The estimate of expenditure is purposely a liberal one, and as most ryots have some one in their family who can keep them to cultivate a considerably larger holding than that which I have assumed, we may conclude that a ryot is generally a good deal better off than this estimate would make him out to be.

Impracticability of applying Rates of Rent in the present condition of the Country.

14. In every view of the circumstances, therefore, it seems to me that competition cannot yet have forced up rents in the Jaypur estates to the point at which it would be possible to apply the principles of the Rent Bill in order to secure their being fair to the ryots. To revise them in favour of the landlord, so as to make them fair and equitable to both parties, may be abstractly possible in accordance with the principles of the Rent Bill, but the application of the rates in practice would be difficult, and any adjustment which it may have been possible to effect between rent rates and soil classification would soon be disturbed by the interest zemindars would have in endeavouring to meet their ryots half way. Uniformity in rates would soon disappear according to the quantity of uncultivated land available, and the strength of the ryots' position. Even if the present settlement were about to expire, I do not think that since rents were last fixed in 1878, there has been any increase in the productive powers of the soil or in the value of its produce which would justify any general enhancement of rates. As to the first ground of enhancement specified in section 22 of the Bill, I can only remark that no such thing as a prevailing rate is discoverable, and the second ground of enhancement does not properly affect *rates* at all.

Further enquiries.

15. The remarks which I have made apply to the whole area of the Jaypur Government estates. I have been directed, however, in the Board's letter No. 47A, dated the

11th instant, to limit my enquiry, so far as these estates are concerned, to the northern portion, and with the permission of the proprietors to extend my enquiries to a number of villages belonging to some neighbouring estates in this part of the district. So far as I am aware, these other villages are in precisely the same condition as the Jaypur estates, and in view of the remarks I have made, the Board may perhaps think it unnecessary for me to analyse their jamabandis in the somewhat elaborate manner in which I have had those of the khas mehals analysed. What are called the rates may perhaps be easily enough ascertained. Those for contiguous villages are contained in the proceedings of the Settlement Deputy Collector, and I have already remarked that, where these rates may appear somewhat high in comparison with our rates, the ryots are willing enough to pay them, because, by consenting to do so, they are probably able to extend their cultivation as they please without being subjected to frequent re-measurements The Board may perhaps be disposed to deem it unnecessary for me to subject the jamabandis to more than a somewhat cursory examination, unless I may happen to discover a state of things substantially different from that prevailing in the Government estates. Should the Board be of opinion that I might profitably proceed to ascertain by experiments on the different crops as they become ripe for gathering, what is the average outturn on the various classes of soil in each village, I should be obliged by being favoured with instructions for prosecuting such enquiries. Without instructions for my guidance, of a more or less precise nature, I must be apt to be myself in that "maze of isolated facts" which the Government of Bengal anticipates as the probable results of desultory enquiries conducted in the absence of some such definite basis as existing rates of rent to serve as evidence of soil classification. The instructions issued for the conduct of settlement operations in the North-West Provinces, which I have not seen, might perhaps be useful to me in such enquiries. I presume, however, that the only object which would be furthered by making these investigations would be to discover what practical difficulties might be in the way of ascertaining how far uniform rates of rent might be framed for a considerable area *in the absence of existing rates based on soil classification.* Such enquiries would possess only an experimental character, even if they were to lead to the framing of uniform rates of rent. The time has not, in any opinion, come at which it would be practicable to apply these rates in this undeveloped tract of country. With reference to Baboo Parbutty Charan Roy's scheme for determining rent rates, I may here observe that I do not think it could be practicably applied in this part of the country. Its character is too diversified to enable us to predicate any such uniformity in the quality of the soil of a particular area, as appears to be indispensable to the successful application of his system.

Summary.

16. I may close this report, which has extended to a greater length than I had hoped it would, by summing up the results of my enquiries so far as they have already gone.

I.

There is in the Jaypur Government estates and in the neighbourhood, recognised classification of the soil into two main classes—upland and lowland; and each of these is sub-divided into at most four qualities; but neither for assessment nor for any other purposes is any distinction drawn between the natural productive capabilities of the two main classes. This classification is not, however, understood by the mass of the peasantry, who speak of their lands simply as good, bad, and indifferent, and that too without distinguishing between their natural fertility and the increase in their productive powers conferred upon them through their own agency. Similarity of nomenclature does not import identity of quality in the soil of different villages, as the best land in each village after homestead land, whatever its real capabilities, is designated "first class," and the other qualities are referred to as a standard.

II.

In 1865 Mr. Payter, who farmed the Jaypur Government estates, drew up rates of rent for the different classes of soil in the holdings of such ryots as were already settled down in each village. These rates differed from village to village, not according to any real difference in the quality of the soil, but according to the abundance of waste land available for cultivation, and the strength of the position the ryots were able to take up. The custom, moreover, prevailed then and still prevails hereabouts, by which ryots relinquish their holdings generally every fourth or fifth year in the expectation, almost invariably realized, of being able to secure better terms elsewhere, and such lands could seldom be re-let at the old terms, and often went out of cultivation altogether. Besides this disturbing influence, a great quantity of new land has been taken into cultivation since that date, and let out at no rates whatever beyond an arithmetical average, which ignored the qualities each separate lot might comprise. Any connection, therefore, which may have once subsisted between rent-rates and soil classification has long ago disappeared in these mehals, and the same may probably be said of all surrounding estates. Any readjustments, moreover, of the rates to the classes of soil would, in the present undeveloped state of these estates, be again similarly overridden by the operation of what is really the principle of competition, as the law does not profess to interfere with any contract arrangements which may be prompted by a zamindar's desire to promote his own interests by accepting terms practically dictated by, and therefore necessarily fair to, his ryots.

III.

At the settlement of 1878, when the Government brought the Jaypur estates under direct management, rates of rent themselves vanished, and each ryot virtually dictated his own terms, and settled for a lump sum for his whole holding, which was not to be subject to revision for 15 years. On this basis, and this alone, the existing settlement was concluded.

IV.

Owing to the abundance of new land available for cultivation, and to there being competition rather on the part of zamindars for ryots than on that of ryots for land, the latter are still masters of the situation, and can for some time yet secure favourable terms from the proprietors of land. Under such circumstances, any attempt which might be made at present to stereotype rates of rent based on soil classification would probably fail. Rents may therefore be left in the meantime to be governed by the principle of competition, and when the proper time comes, there will not be wanting indications by which the executive officers of Government can ascertain whether it would be both desirable and practicable to bring them within the enhancement clauses of the Rent Law in the interest alike of the zamindar and of the ryot.

V.

Even if it were at present desirable in these and other estates in the western portion of the Bogra district to frame rates of rent based on soil classification which would be fair alike to the zamindar and to the ryot, the only satisfactory means of doing so, in the absence of existing rates, would be actual investigation and experiment on the fields themselves—a method precluded by the summary nature of the enquiry contemplated by Government.

Extract from a letter from BABOO PARBATI CHURN ROY, *on special duty, to the Secretary to the Board of Revenue, Lower Provinces, No. 86, dated the 24th January 1883.*

PARA 6.—The following tables, A and B, show the results of the experiments made at husking. In table A is given the result of the experiments made for obtaining the atap rice, and in table B that for obtaining the ushna from the paddy. Two experiments were made for obtaining the atap rice, and four for obtaining the ushna. All the experiments were made in my presence, and in a most careful manner. The husking was done before my very door, and the weighing and measuring were done invariably in my presence. The atap rice is obtained by husking the paddy simply dried in the sun, while the ushna is obtained from paddy that is first steeped in water and heated over a fireplace. It is then dried in the sun before being husked.

The atap is not the rice in ordinary use among the people. As a rule it is used only by the widows of the higher castes. It is considered to be much purer than the ushna, and is hence also used in the worship of the Hindu gods and goddesses. The cleansing of the paddy to obtain this sort of rice takes up more time than that to obtain the ushna. The proportion of atap rice obtained per maund is 27 seers 9 chittacks, which is about a seer less than that obtained, 28 seers 6 chittacks, of the ushna.

It will be seen that, while the quantity of husks or chaff obtained in either way is nearly the same, the quantity of fine dusts from the inner coating is greater in the case of atap than in that of ushna. The reason of it is that in undergoing the process of cleansing, the atap rice is beaten more than the ushna, and hence it gives out more dust from its inner coating than the ushna. These fine dusts, called *koorah*, are eaten by the cattle with relish.

Equal *weights* of atap and ushna are to one another in *bulk* as 39 is to 40.

A comparison of the results of the experiments made by me with those recorded at page 290 of the Statistical Reporter, show that, on the whole, the results of both the experiments are the same. The small difference of about ½ seer between the average of the two sets of experiments might be owing to the different sorts of rice experimented upon. The experiments made by me have been with the ordinary rice, which is rather coarse, while those made by Mr. Larymore seem to have been generally with the finer species. Mr. Larymore also does not state whether he obtained the atap or the ushna rice: very probably he obtained only the latter.

In bulk, it will be observed, the atap rice bears to the paddy a larger ratio than the ushna does. This is what was expected in consequence of the paddy being steeped in water and heated in making the ushna rice, which has the effect of increasing the bulk of the husk much more than that of the rice.

PARA. 7.—I have called for jummabundis and other papers from the zamindars of the estates included in the selected area. As yet no papers have been filed. It is said that most of the zamindars' in this part of the country have no jummabundis, and that all that they have is the jummawasil of the kind filed by the Nabab regarding Gopinathpore. But I cannot pass any opinion on the nature of the papers they possess until I see them. The zamindars are not likely to produce papers easily, as they fear lest the fact of their not being in possession of jummabundis might go against them in future.

No. 1827-648 L. R., dated 13th July 1883.

From—C. W. BOLTON, Esq., Under-Secretary to Government, Bengal,

To—Secretary to Government of India, Legislative Department.

I AM directed to submit, for the information of His Excellency the Governor General in Council, the accompanying copies of the reports received up to date from some of the Judicial and Revenue officers in Bengal, containing expressions of their views on the provisions of the Bengal Tenancy Bill, and to state that a general report on the subject by this Government will follow in due course.

* 1. From the Commissioner of Bhagalpur, No. 1097R., dated the 20th June 1883, with enclosures.
2. From the Officiating Registrar of the High Court, Calcutta, No. 1835, dated the 27th idem, with enclosures.

No. 1097R, dated Bhagulpore, the 20th June 1883.

From—G. N. BARLOW, Esq., C.S.I., Commr. of the Bhagulpore Divn. and Sonthal Pergunnahs.

To—The Secretary to the Board of Revenue, Lower Provinces.

IN reply to your No. 351A, dated 29th March last, I have the honour to submit the report called for upon the Bengal Tenancy Bill. It is in the shape of minutes of the proceedings or a meeting of the Collectors of the Regulation Districts of this Division and myself, togethef with separate notes by the Collectors of Bhagulpore and Maldah.

Minutes of the Preceedings of a Meeting held at Bhagulpore on 11th " and 12th" June 1883, to consider the Bengal Tenancy Bill, 1883.

PRESENT :

G. N. BARLOW, Esq., C.S.I., *Commissioner of Bhagulpore, President.*
W. H. D'OYLY, Esq., *Collector of Bhagulpore.*
C. F. WORSLEY, Esq., *Collector of Monghyr.*
A. WEEKES, Esq., *Collector of Purneah.*
R. PORCH, Esq., *Collector of Maldah.*

CHAPTER I.

The definitions and rules contained in this chapter were carefully considered, and it was unanimously agreed that no alteration in them was required.

CHAPTER II.

Section 5.—It appeared that the effect of this section, as it stands at present, would be to convert into "khamar" all waste lands which, for twelve continuous years before the commencement of this Act, "might have been held by the proprietor in his own possession, and that such a result would be in direct opposition to the general principles and intention of the Bill. It was therefore unanimously agreed to recommend the substitution of the word 'cultivated' for the word 'held' in clause 1, and the addition of the words 'whether with his own stock, or by his servants, or by hired labour.'" The meeting was fully aware that the effect of this amendment, if adopted, would be to make all waste lands "ryoti," but was of

to deal with numerous applications, and that, whether applications be many or few, the officers, *i.e.*, common peons, deputed by the court to make distraint, cannot be trusted to act honestly.

CHAPTER XIV.

It was unanimously agreed that in suits for arrears of rent, which involve no questions of right or title, and in which the only point for determination is the payment or non-payment of the rent, the procedure of the civil court in regard to the recording of evidence, &c., ought to be made as summary as is the procedure of Magistrates in summary criminal trials.

The meeting having no further proposals to make, was dissolved on the evening of 12th instant.

1. (Sd.) G. N. BARLOW.
2. (Sd.) W. HASTING D'OYLY.
3. (Sd.) C. F. WORSLEY.
4. (Sd.) A. WEEKES.
5. (Sd.) R. PORCH.

The 13th June 1883.

Memorandum of a few points on which I dissented from the opinions of the majority of the Bhaugulpore Divisional Committee, which met to consider the provisions of the Bengal Tenancy Bill, on 11th and 12th June 1883.

CHAPTER I.

Section 3 (5).—According to the wording of this clause, a ryot would no longer be deemed to be a ryot, should he use or sublet his land for any purpose other than one of agriculture, horticulture, or pasture. If, therefore, a ryot should, with the zemindar's consent, use his land, or sublet it for the purpose of brick-making, for the manufacture of saltpetre, or pottery, for extraction of kunker, or for any other purpose than those named in the clause in question, would he cease to be deemed a ryot? Would the relations between him and the person under whom he held the land cease to be the relations between tenant and landlord? If he cease to be a ryot, he loses his right of occupancy. Section 230 certainly allows the recovery of anything payable or deliverable in respect of any rights of pasturage, forest rights, rights over fisheries, and the like, but would this cover the rent of land used for all purposes other than those of agriculture, horticulture, or pasture?

CHAPTER III.

Section 18.—While agreeing with the rest of the Committee that clause 1 (*b*) should be struck out, I think clause 1 (*a*) should be retained, with only this modification that the word "locality" should be substituted for the word "district."

CHAPTER V.

Section 46.—I think an exception should be made in favor of settled ryots whose holdings may be cut away by diluvion. In many parts of the country it is the custom to re-instate ryots whose holdings have been cut away by a river, so soon as re-formation *in situ* occur. The Committee seemed to be of opinion, when I raised this question, that as such ryots could retain their rights by continuing to pay rents till their lands should re-form, no further protection was necessary. In this view I differ. It is manifestly absurd to compare zemindars with ryots. A zemindar whose estate has been cut away by a river can generally afford to go on paying the Government revenue till a re-formation *in situ* occur; but how many ryots could afford to continue paying rents for lands not in existence?

CHAPTER VI.

Sections 76, 77, 78.—Some exception should, I think, be made in respect of recently reclaimed lands. For example, after the passing of this Bill into law, a zemindar A wishes to get from his ryot B a *fair* rent for his holding. B has held this land as a ryot for, say, four or five years, at first rent-free, latterly on payment of a nominal rent of two annas per bigah; a concession granted to compensate B for the cost of clearance, &c. Should this Bill pass into law, the zemindar A can enhance the rent; but under the terms of section 76 the enhanced rent cannot be more than at a rate of four annas a bigah, *i.e.*, double of the rent previously paid; and by the terms of section 78 this rate of four annas per bigah cannot be raised for ten years, when it can be raised to eight annas per bigah, and after another ten years it can be raised to one rupee per bigah, and so on. Thus, supposing the land in, say, 1884 A. D. is equal to lands for which three rupees per bigah is paid as rent, the landlord will have to wait for 50* years before he can legally recover a fair rent!!! These remarks apply also to the provisions of section 59 (2).

PARA. 7.—I have called for jummabundis and other papers from the zamindars of the estates included in the selected area. As yet no papers have been filed. It is said that most of the zamindars in this part of the country have no jummabundis, and that all that they have is the jummawasil of the kind filed by the Nabab regarding Gopinathpore. But I cannot pass any opinion on the nature of the papers they possess until I see them. The zamindars are not likely to produce papers easily, as they fear lest the fact of their not being in possession of jummabundis might go against them in future.

No. 1827-648 L. R., dated 13th July 1883.

From—C. W. BOLTON, Esq., Under-Secretary to Government, Bengal,

To—Secretary to Government of India, Legislative Department.

I AM directed to submit, for the information of His Excellency the Governor General in Council, the accompanying copies of the reports* received up to date from some of the Judicial and Revenue officers in Bengal, containing expressions of their views on the provisions of the Bengal Tenancy Bill, and to state that a general report on the subject by this Government will follow in due course.

* 1. From the Commissioner of Bhagalpur, No. 1097R., dated the 20th June 1883, with enclosures.
2. From the Officiating Registrar of the High Court, Calcutta, No. 1835, dated the 27th idem, with enclosures.

No. 1097R, dated Bhagulpore, the 20th June 1883.

From—G. N. BARLOW, Esq., C.S.I., Commr. of the Bhagulpore Divn. and Sonthal Pergunnahs.

To—The Secretary to the Board of Revenue, Lower Provinces.

IN reply to your No. 351A, dated 29th March last, I have the honour to submit the report called for upon the Bengal Tenancy Bill. It is in the shape of minutes of the proceedings or a meeting of the Collectors of the Regulation Districts of this Division and myself, together with separate notes by the Collectors of Bhagulpore and Maldah.

Minutes of the Proceedings of a Meeting held at Bhagulpore on 11th " and 12th " June 1883, to consider the Bengal Tenancy Bill, 1883.

PRESENT:

G. N. BARLOW, Esq., C.S.I., *Commissioner of Bhagulpore, President.*
W. H. D'OYLY, Esq., *Collector of Bhagulpore.*
C. F. WORSLEY, Esq., *Collector of Monghyr.*
A. WEEKES, Esq., *Collector of Purneah.*
R. PORCH, Esq., *Collector of Maldah.*

CHAPTER I.

The definitions and rules contained in this chapter were carefully considered, and it was unanimously agreed that no alteration in them was required.

CHAPTER II.

Section 5.—It appeared that the effect of this section, as it stands at present, would be to convert into "khamar" all waste lands which, for twelve continuous years before the commencement of this Act, "might have been held by the proprietor in his own possession, and that such a result would be in direct opposition to the general principles and intention of the Bill. It was therefore unanimously agreed to recommend the substitution of the word 'cultivated' for the word 'held' in clause 1, and the addition of the words 'whether with his own stock, or by his servants, or by hired labour.'" The meeting was fully aware that the effect of this amendment, if adopted, would be to make all waste lands "ryoti," but was of

to deal with numerous applications, and that, whether applications be many or few, the officers, *i.e.*, common peons, deputed by the court to make distraint, cannot be trusted to act honestly.

CHAPTER XIV.

It was unanimously agreed that in suits for arrears of rent, which involve no questions of right or title, and in which the only point for determination is the payment or non-payment of the rent, the procedure of the civil court in regard to the recording of evidence, &c., ought to be made as summary as is the procedure of Magistrates in summary criminal trials.

The meeting having no further proposals to make, was dissolved on the evening of 12th instant.

1. (Sd.) G. N. BARLOW.
2. (Sd.) W. HASTING D'OYLY.
3. (Sd.) C. F. WORSLEY.
4. (Sd.) A. WEEKES.
5. (Sd.) R. PORCH.

The 13th June 1883.

Memorandum of a few points on which I dissented from the opinions of the majority of the Bhaugulpore Divisional Committee, which met to consider the provisions of the Bengal Tenancy Bill, on 11th and 12th June 1883.

CHAPTER I.

Section 3 (5).—According to the wording of this clause, a ryot would no longer be deemed to be a ryot, should he use or sublet his land for any purpose other than one of agriculture, horticulture, or pasture. If, therefore, a ryot should, with the zemindar's consent, use his land, or sublet it for the purpose of brick-making, for the manufacture of saltpetre, or pottery, for extraction of kunker, or for any other purpose than those named in the clause in question, would he cease to be deemed a ryot? Would the relations between him and the person under whom he held the land cease to be the relations between tenant and landlord? If he cease to be a ryot, he loses his right of occupancy. Section 230 certainly allows the recovery of anything payable or deliverable in respect of any rights of pasturage, forest rights, rights over fisheries, and the like, but would this cover the rent of land used for all purposes other than those of agriculture, horticulture, or pasture?

CHAPTER III.

Section 18.—While agreeing with the rest of the Committee that clause 1 (*b*) should be struck out, I think clause 1 (*a*) should be retained, with only this modification that the word "locality" should be substituted for the word "district."

CHAPTER V.

Section 46.—I think an exception should be made in favor of settled ryots whose holdings may be cut away by diluvion. In many parts of the country it is the custom to re-instate ryots whose holdings have been cut away by a river, so soon as re-formation *in situ* occur. The Committee seemed to be of opinion, when I raised this question, that as such ryots could retain their rights by continuing to pay rents till their lands should re-form, no further protection was necessary. In this view I differ. It is manifestly absurd to compare zemindars with ryots. A zemindar whose estate has been cut away by a river can generally afford to go on paying the Government revenue till a re-formation *in situ* occur; but how many ryots could afford to continue paying rents for lands not in existence?

CHAPTER VI.

Sections 76, 77, 78.—Some exception should, I think, be made in respect of recently reclaimed lands. For example, after the passing of this Bill into law, a zemindar A wishes to get from his ryot B a *fair* rent for his holding. B has held this land as a ryot for, say, four or five years, at first rent-free, latterly on payment of a nominal rent of two annas per bigah; a concession granted to compensate B for the cost of clearance, &c. Should this Bill pass into law, the zemindar A can enhance the rent; but under the terms of section 76 the enhanced rent cannot be more than at a rate of four annas a bigah, *i.e.*, double of the rent previously paid; and by the terms of section 78 this rate of four annas per bigah cannot be raised for ten years, when it can be raised to eight annas per bigah, and after another ten years it can be raised to one rupee per bigah, and so on. Thus, supposing the land in, say, 1884 A. D. is equal to lands for which three rupees per bigah is paid as rent, the landlord will have to wait for 50* years before he can legally recover a fair rent!!! These remarks apply also to the provisions of section 59 (2).

* Year.	Rent. Rs.	As.
1884	0	4
1894	0	8
1904	1	0
1914	2	0
1924	3	0

CHAPTER VII.

Section 82.—I certainly think that the *zemindar* should *also* have the power to sue for the commutation of rents paid in kind into a money rent. When I was Collector of Shahabad, Mr. Walter Thompson of Beheea, who was justly considered to be a very fair and, indeed, a model landlord, told me that he had always found that "*bhowli*" lands were worse cultivated than those for which a money rent was payable. The cultivator of *bhowli* lands is not under the *necessity* of doing his best to secure an yield that would pay a money rent of, say, Rs. 3, Rs. 4, or Rs. 5, a bigah, and leave him something over. He is sure of half the produce, and will not be liable for any rent beyond the other half of the produce. It may be argued that every ryot will try and make as much out of his land as he can, but those who have really looked into the matter, who have made close enquiries, will find, as I have done, that very many of the ryots will not take the trouble to get all they can out of the land. There are good cultivators and bad cultivators, and the latter predominate, and among them generally are to be found those who pay rents in kind. I will give as an instance one out of *very many* cases of the kind which come under my observation in this district. I was making enquiries as to rates of rent, yield of produce, &c. I found very unequal yields even in lands of the same quality, the same soil, the same level, with equal advantages. In one particular field I found a very fine crop of rice, which in the next the crop was a *remarkably* poor one. Both fields belonged to one and the same ryot. The soil was the same in both, the facilities for irrigation were equal, and neither had an advantage which the other lacked. I questioned the ryot, and found that he had some 30 bigahs of land. Of these six or ten bigahs at the most were well cultivated, and were returning a good yield, the rest were comparatively poor. He told me that he could not bestow the same care and attention *on all*, so he did all he knew with as much of the land as he could, the produce would pay the rent of the whole 30 bigahs, and he could take what God gave him out of the remaining 20 bigahs; he simply sowed them broadcast and trusted to the rainfall. He had lands for which he paid a money rent, as well as lands for which he paid rent in kind, *the latter were not the best cultivated.* Why should the zemindar, I ask, be prohibited from getting a fair money rent if he wishes. Why should an idle ryot be allowed to hold lands on the payment-in-kind system, when he does not attempt to get the best return he can out of them. For my part, I should be very glad if large ryoti holdings could be reduced; if occupancy rights could be restricted to the actual cultivators.

CHAPTER VIII.

Section 85 (2).—I am very much afraid that it will be found in time that the effect of this section will be that *in some* villages all or a great portion of the bastu lands will belong to persons other than the cultivators. Then where is a zemindar to find house-lands for his ryots?

Section 95.—To this the remarks apply, which I have made under sections 76,77,78, Chapter VI.

CHAPTER IX.

Section 125 (2) —This is admirable so far as it goes, but it will not protect the zemindar's claim if the tenant's right be sold for less than the amount of rent owing, as might be the case, if the tenant owes three years' rents. I think the transferee should be made liable for any legally recoverable arrears not covered by the purchase-money, for he will have obtained the holding at less than three years' purchase, and it is a known fact that properties at public sale have fetched far below their proper value. The land should be the security for the rent, and when it is sold, it should be sold with the incumbrance of any rent due thereon. The right of pre-emption in such a case would not be sufficient; the zemindar would have to buy the right, and even granting that he might recover the price from a new tenant by way of salami or nuzzur, still he would have to give up the arrear rents as a bad debt. All that this proposal would effect would be the prevention of a sale of an occupancy right at less than three years' purchase.

CHAPTER XIII.

I think that the resolution of the Committee has not been quite correctly worded, as I understand we did not agree that it was *desirable* that this chapter should be eliminated, but that *in its present form* it would give no real advantages to landlords, and that, therefore, it would be *preferable* to eliminate it, *rather than keep it in its present form.* I myself think that the zemindars should have power to distrain *through the courts*, but I think that where a zemindar wishes to distrain the crops of *several ryots in one village*, he might be allowed to sue them collectively.

To have to put in many separate petitions, to examine the *same* witness in *each* case would make the procedure cumbrous and very expensive, both to the zemindar and also to the royts. It has been openly asserted that one of the objects of the present legislation is to afford facilities to the landlord for the settlement and recovery of his rent, whereas there can be but little doubt that the recovery of rent has been made more difficult than it previously was. I do not advocate the retention of the provisions of the present law of distraint, but I think that the provisions proposed in the Bill should be made more workable and less calculated to make recovery expensive both to landlord and tenant.

W. H. D'OYLY

BHAGULPORE,
The 17th June 1883.

Note on right of occupancy, Chapter V, section 50—Right of occupancy made transferable.

I approve of the principle of transferability of the occupancy right, and therefore have agreed to it in the report, but would like to see this incident gradually developed by extension under the order of the local Government, because in some parts of Bengal, when enacted, it will at once lean to a very general loss of these rights of occupancy holdings by the present generation of ryots, whose holdings will be at once bought up by the money-lending classes, and will pass into their lands, the ryots becoming rack-rented pauper-cottiers, or landless labourers. I would, therefore, like to see this extension of this incident of the right of occupancy holding made permissive, and depending on the discretion of the local Government to extend this to any village, estate, pergunnah, thana, or other division of the country to which it may be found proper, with regard to the solvency, independence, and enlightenment of the ryots, *viz.*, to extend these provisions by notice in the *Calcutta Gazette*, until which time the rights under section 50 (*f*), and the provisions regarding transferability and private sale and gift should remain in abeyance and inoperative, namely, 50 (*f*) and sections 51 and 54, and in lieu of the above, the following should be enacted as the extent of transferability to be at once recognised everywhere as operative until by notice in the *Calcutta Gazette*, the fuller provisions as to transferability, sections 50, 51, and 54, may be extended where found proper.

Section 50 (f).—"His interest in the land is transferable by sale on account of its own arrears, and not otherwise, except with the consent of the landlord. He shall have the option of forcing a sale of such interest if the landlord refuses to consent to a private sale falling into arrears, and thereby allowing the occupancy ryot, by the sale for arrears, to recover all money spent in improvements of the same, and the landlord to have a lien on the purchase-money for recovery of any arrears due on the same, or such sale not to take place until all arrears due on the occupancy holding are paid, or otherwise secured to the landlord. *It should also be enacted* that, when transferability of the occupancy holding by private sale is extended, the landlord should be, under severe penalties, prohibited from compelling the occupancy ryot to share the purchase-money with him. In Eastern Bengal I have known the landlord compel an outgoing occupancy ryot to pay him from half to two-thirds of the purchase-money paid for the occupancy holding. The transferability by the private sale, &c., might probably now, with safety as to the ryots' interest, be extended to the Chittagong and Dacca and Presidency Divisions, and to all Court of Wards' estates and properties under the direct management of Government, and afterwards to various parts of other divisions. At the next revision of the law the permissive section might be dispensed with.

Note on Chapter VI of the rent payable by occupancy ryots: (A) of money rents generally.

In order to prevent any interference with the custom of giving lands rent-free for a time, and with progressive rents to recoup outlay for bringing waste lands or newly formed lands into cultivation, or of creating other speculative holdings of new land or diyara land, I would add as follows to section 58:—

Exception.—Nothing in this Act shall release an occupancy ryot from liability to pay the enhancements under an engagement to pay a progressive rent for lands that are being newly brought under cultivation, provided that the rent for any year should not exceed the fixed legal maximum rent, *viz.*, one-fith of the estimated average annual value of the gross produce of the land in staple crops, calculated at the price at which ryots sell at the usual time of realizing their staple crops in money.

Regarding Chapter VI, Part B.

I am aware of the difficulties attending this scheme as to preparing a table of rates, and perceive that in case of suits for enhancement of rent, such tables of rates could not be relied on ordinarily, as conclusive of the fairness of the rate of enhancement claimed, and that careful local enquiry would still be necessary to enable a proper judicial decision to be arrived at in an enhancement case, still I should like to see a trial given to these provisions. Where there are large estates under the Court of Wards, and large khas mehals under Government and well managed private zemindars, very useful local table of rates of rents might be prepared for the information of the public, and for the general guidance of those concerned in regulating and fairly adjusting rates of rent, and in land management and for general agricultural purposes, which would be found to facilitate the objects and the working of this Act. For these reasons I would give them a trial, and would not now strike them out of the draft Bill.

Regarding Chapter X (b), Sections 133 to 138—Measurement.

I should like to see an addition to this effect—

Exception.—Nothing in this Act shall interfere (1) with the customary periodical measurements of hâl hâsila, utbandi and diyara and other lands, the settlement of the rents of which depends upon the measurement of the lands so cultivated, or (2) with the ryots' right to obtain measurement of his holding for reduction of rent whenever necessary from diminution of holding, from diluvion or otherwise.

MALDAH,
The 18th June 1883.

R. PORCH,
Collector.

No. 1835, dated Calcutta, the 27th June, 1883.

From—C. A. Wilkins, Esq., Offg. Regr. of the High Court of Judicature at Fort William in Bengal,

To—The Secretary to the Government of Bengal, Revenue Department.

I am directed to acknowledge the receipt of Mr. Bayley's letter No. 975—374L.R., dated the 19th of March last, forwarding, for an expression of the Court's opinion, as well as the views of the chief judicial officers under the control of the High Court, a copy of the Bengal Tenancy Bill, 1883, together with Statement of Objects and Reasons.

J. F. Stevens, Esq., District Judge, Saran.
W. F. Meres, Esq., District Judge, Midnapore.
J. F. Bradbury, Esq., District Judge, Backergunge.
A. C Brett, Esq., District Judge, Tirhoot.
C. B. Garrett, Esq., Officiating District Judge, 24-Pergunnahs.
R. Towers, Esq., District Judge, Tipperah.
Baboo Brojendro Coomar Seal, District Judge, Bankoora.
Baboo Mohendronath Bose, Small Cause Court Judge, Sealdah.
Baboo Amrita Lal Chatterjee, Subordinate Judge, Nuddea.
Baboo Mohendronath Mitter, Judge, Small Cause Court, Moorshedabad.
Baboo Bhugwan Chunder Chukerbutty, Subordinate Judge, Khulna.
Moulvi Syed Muzzum Hossen, Judge, Small Cause Court, Magoorah, Jhenidah, and Narail.
Baboo Nuffer Chunder Bhatta, First Subordinate Judge, 24-Pergunnahs.

2. In reply, I am to forward, for the information of His Honor the Lieutenant-Governor, the accompanying reports which have been received from some of the District Judges and Subordinate Judges who were asked for their views on the Bill. The reports still due will be forwarded when received.

3. I am to add that none of the Judges of the High Court have as yet sent their opinions on the Bill to the Government of India.

No. 209, dated Chapra, the 14th May, 1883.

From—J. F. Stevens, Esq., Officiating District Judge, Saran,

To—The Registrar of the High Court of Judicature at Fort William in Bengal.

In accordance with the directions of the Court in letter No. 1157B, dated the 23rd ultimo, I have the honor to submit the following report, after consulting Baboo Kally Prosono Mookerjee, First Subordinate Judge, Baboo Amrito Lal Pal, Second Subordinate Judge, and Baboo Krishna Chunder Das, Munsif in charge of rent suits.

2. I regret that the shortness of the time allowed me for my reply has rendered it impossible for me to devote to the subject the time and the amount of consideration which I could have wished.

3. It is obvious that in general the Bengal Tenancy Bill, 1883, has been framed with a view rather to the interest of the raiyats than to that of the landlords. It is doubtless true that to a considerable extent the interest of the rayats and that of the landlords are really in the long run not so completely separate as is frequently assumed; but while I recognise this principle, and I am not disposed to agree with my subordinates in condemning all limitation to the enormous arbitrary powers which the landlords at present can and do exercise, especially in certain parts of the province of Behar, I am inclined to think that in some particulars the Bill goes further in that direction than is either necessary or desirable.

4. I proceed to notice the provisions of the Bill in order.

CHAPTER I.

5. I think that an attempt should be made to define the terms "tenure" and "under-tenure." In Chapter III of the Bill, we find important provisions on the subject of tenures, but when we turn to the definition in order to ascertain what a tenure is, we only find that it "includes an under-tenure (which term is left altogether undefined), and the interest of every tenant of the class referred to in section 14." There is no definition of the term "under-tenure." The word "tenant" also does not appear to be satisfactorily defined.

CHAPTER II.

6. I strongly approve of the provisions for ascertaining and registering *khamar* land. I think that it is fair, in the peculiar circumstances with which we have to deal, to presume all land to be *raiyati* until the contrary is proved. I am decidedly in favour of limiting the power of the landlord to convert *raiyati* land into *khamar*; but I venture to think that the Bill goes too far in absolutely preventing the increase of the stock of *khamar* in future. I do not, for example, see why a landlord should be prevented from acquiring as *khamar* uncultivated land which he brings under cultivation by his servants or by hired labourers. It might be provided that no *raiyati* land now under cultivation should hereafter be converted to *khamar*; but that is the furthest that I would go. In any case of increase of *khamar*, I would provide that in any district, or part of a district, in which a survey and register of *khamar* land has been made, or ordered to be made, in accordance with the provisions of section 7, the landlord should be bound to register any land which might thereafter become *khamar*.

CHAPTER III.

7. All the provisions of this chapter seem to me just. I am not quite clear, however, as to the working of section 27 (3) and section 34, looking to the definition of the word "landlord" as "a person or *a number of persons*," &c. Is each individual, who goes to make up the

"landlord," in case the "landlord" consists of "a number of persons," to certify the copy under section 84 under his hand? It does not appear that the authority of a *naib* or *gumashta* under section 229 would extend to doing this.

CHAPTER IV.

8. Does not appear to call for special notice.

CHAPTER V.

9. *Sections 45 and 47.*—The provisions of these sections are undoubtedly very favourable to the raiyat. In as far as they are unfavourable to the landlord, he has principally himself to blame, for they have been necessitated by the devices which he has employed in order to make it as difficult as possible for the raiyat to acquire a right of occupancy, and to prove his right when he has got it.

10. *Section 46.*—Seems to me to be fair to both parties.

11. *Section 48.*—This is an entirely new provision of law. I should imagine that it will probably remain almost a dead letter; but there seems no harm in making it possible to create a right of occupancy by contract, if any proprietor or permanent tenure-holder chooses to do so.

12. *Section 49.*—Does not appear to me fair to the landlord. Its retention in the Bill would not improbably have the effect (which doubtless was not intended by the framers) of causing the landlords to take measures to render it practically inoperative by ejecting tenants from *khamar* land, or by at once entering into engagements with them for fixed periods in anticipation of the accrual of the rights of occupancy that would otherwise be acquired under its provisions.

13. *Sections 51 to 55 inclusive.*—Which relate to the landlord's right of pre-emption, appear to me to be equitable. The term "estimated value" in sections 51 and 54 is, however, not perfectly clear. By whom is the value to be estimated, and how far are the parties, or either of them, to be bound by the estimate?

14. *Section 56.*—Appears to me exceedingly hard upon the landlord. Its object is stated to be to prevent the landlord from buying up occupancy rights on a great scale, and locating ordinary raiyats on the land. I think that a less objectionable method of securing the same object would be to prohibit the purchase by the landlord of occupancy rights, except in the cases provided for by sections 51 to 55 It is scarcely likely that his purchases under those sections would be very considerable. At present, as the Second Subordinate Judge observes, as the Bill stands, all that a landlord is to get practically by his purchase is the power of keeping out a tenant to whom he objects, and this seems scarcely a fair and sufficient return for his outlay. If he is allowed to buy the occupancy right at all, he is fairly entitled to obtain, by his purchase, the full advantages that would be obtained by any other purchaser.

15. The provisions which render it impossible for a tenant to contract himself out of his occupancy right, as between the landlord and himself, are strongly objected to by Baboo Amrita Lal Pal; but they appear to me necessary, considering the relations which prevail generally in Bengal between landlord and tenant. The Subordinate Judge suggests that such contracts should be disallowed, only on proof of undue influence; but on the one hand, practically, a raiyat would seldom, if ever, be able to prove undue influence where it had really been exercised, while on the other hand he might frequently raise the plea in respect of perfectly fair transactions, if he afterwards repented of his bargain.

CHAPTER VI.

16. Has my general approval. It seems to me, however, that their should be some attempt to define the term "staple crops" which occurs in several places in the course of the chapter, as a good deal may turn on its precise meaning. If a general definition of the term is not practicable, there should be some means by which it should be authoritatively and publicly declared what are "staple crops," for the purposes of the Act, in different divisions or districts. The table of rates would be of great utility: it will be for the Revenue authorities to ascertain how far its preparation will be possible. The price-lists to be prepared by the Collector under the provisions ot section 83 will be very useful, if care is taken to secure accuracy, or very mischievous otherwise.

CHAPTER VII.

17. *Section 86.*—I doubt the justice of giving compensation in the case of the ejectment of a raiyat, through his own fault, from *bastu* land.

CHAPTER VIII.

18. I should like to see it definitely stated what are the rights of an ordinary raiyat as to the use of the land. As regards the occupancy raiyat, it is provided in section 50 that he may use the land in any manner which does not render it unfit for the purposes of the tenancy. Is it intended to be implied, from the absence of such an express provision in the case of the ordinary raiyat, that his right to the use of the land is more restricted? This is a question of considerable importance in the indigo districts of Behar. An attempt is being made to get rid, as far as possible, of the old *thikadari* system, and to encourage raiyats to

grow indigo independently entirely on their own account, as they would any other crop, in order to sell it to the factories. This system deprives the landlord of the advantage which he had over a factory, under the *thikadari* system, of being able to screw up the rent of the village leased to an amount far above what the rent-roll of the village would justify, because the factory would, if it lost the *thika*, have no means of growing or obtaining sufficient indigo plant for manufacture. It is accordingly naturally to be expected that certain landlords should not look very favourably upon it, and should endeavour to put difficulties in the way of its extension. I take it that the occupancy raiyat can undoubtedly, under the provisions of section 50, grow indigo if he pleases in spite of the landlord. Can the ordinary raiyat do so too?

19. *Section* 90.—It appears to me that the ordinary raiyat under the Bill acquires something very like a right of occupancy. Is a landlord never to let to an ordinary raiyat for a fixed term; and if he is to have that power, is not the raiyat to be liable to ejectment in execution of a decree for ejectment, passed on the ground that the term of the lease has expired? There is no provision apparently for such a case in section 90. Again, it seems to me only equitable that the landlord should have the power of ejecting an ordinary raiyat, after due notice, on paying compensation for improvements.

20. *Section 93.*—The idea of payment of compensation for disturbance is, so far as I am aware, altogether new to the country, and I do not think that the landlord should be burdened with such a condition.

CHAPTER IX.

21. I approve of the provisions of this chapter generally.

22. *Sections 100 to 102.*—The provisions contained in these sections should have a most beneficial effect. The difficulty and uncertainty now attending the trial of rent-suits in Behar, owing to the frequently utter worthlessness of the oral evidence and the prevalence of forgery on both sides, make the duty of deciding them most irksome and most painful to a conscientious judicial officer. The production of forged receipts is as common as that of false accounts, if not more so. I think, however, that it is very important that there should be some security provided against the substitution of forged receipts and counterparts. As long as either may be written on a scrap of loose paper, it will be open to the landlord to impugne the genuineness of the receipt, and to the tenant to impugne that of the counterpart. I think that the use of printed or lithographed cheque-books should be made compulsory, and that, in addition to the particulars specified in section 100, each receipt and counterpart should be required to be serially numbered. A similar provision would be useful in respect of the statement of account prescribed by section 101. It would be still better if it could be provided that only cheque-books supplied by Government should be used. Such books might be kept on sale at the district and sub-divisional revenue offices, as forms of application for copies are. At any rate, I am afraid that if receipts and accounts, and their counterparts, are to be written on loose scraps of common paper, we shall be very much where we are now.

23. *Sections 103 to 107.*—I suppose from section 106 that the "Officer" mentioned in section 103 is to be a Revenue Officer. If so, the word "Revenue" might with advantage be used in section 103. I am doubtful how far it is practicable or expedient for the officer receiving applications for deposit to exercise a discretion as to the receipt of the deposit. Where many such applications for deposit are made at a time, it seems to me that it would practically be impossible for him to come to a satisfactory decision on the matter at the time. I think that it would be better to receive all deposits tendered. Probably this is practically what it would come to in any case. I have no doubt that the present practice of requiring a declaration on solemn affirmation of previous tender is quite useless, and that the declaration has come to be a mere matter of form, if, indeed, it was ever anything else.

24. *Section 111* (2).—It has been held, in connection with the corresponding provision of Act X of 1859, that the period of grace may be extended at the discretion of either the Court of first instance or the Appellate Court. This question should be definitely settled.

25. *Section 118.*—It appears to me that the provisions of this section, if practically possible (which I doubt), are hard on the landlords, some of whom will have to send very long distances. If the papers are to be lodged in Government offices, I do not see why sub-divisional offices should not receive them as well as the office of the Collector of the district.

26. *Section 125* (2).—These provisions are very fair. The difficulty is, how the landlord is to know when the tenant's right, title and interest is brought to sale. Ought not a notice to be served upon him? There is the same difficulty as to section 52: I omitted to notice it in its place.

CHAPTER X.

27. I approve of all the provisions of this chapter.

CHAPTERS XI & XII.

28. Appear to me to be very useful.

CHAPTER XIII.

29. I could not recommend the retention of the provisions of the present law as to distraint. Those of the Bill do not appear to me open to the same objections. But I should think

it a question whether the landlords would not as soon see the right of distraint abolished altogether, as restricted to the extent proposed. As regards section 179 (1), the mention of the Board of Revenue appears to be a mistake. As the administration of the law relating to distraint is to be in the hands of the Civil Courts, the Board of Revenue does not seem to be the proper authority to make rules.

CHAPTER XIV.

30. *Section 188.*—Is considered by the Second Subordinate Judge and the Rent Suit Munsif as leaving it open to doubt whether a suit for rent, amounting to less than Rs, 1,000, due on account of land valued at more than Rs. 1,000, should not be instituted in the Court of a Subordinate Judge. I do not see the same difficulty myself, as in section 188 it is only a question of the *local limits* within which the cause of action shall be deemed to have arisen, and not of the court which is to have jurisdiction. I mention the point, however, in case it should be thought well to make any alteration to prevent misunderstanding.

31. *Sections 191 to 198.*—I think that the simplification of procedure in the simpler classes of suits is a great improvement. At the same time I do not think that it could be safely made more summary. I feel some doubt as to the expediency of the limit of Rs. 50 in section 198(*b*), and should be more inclined to adopt that of Rs. 10 originally proposed by the Rent Commission.

32. The provisions of the remaining sections of Chapter XIV appear to me to be equitable.

33. I have no particular remarks to make with respect to the remaining chapters of the Bill.

34. The First Subordinate Judge and the Rent Suit Munsif suggest that provision ought to be made for the case of suits where there are several co-sharers as the "landlord" and there is no common manager. I think that it would be well that this question should be dealt with, and that it should be settled under what conditions separate suits may be brought by the different co-sharers, if at all.

35. The First Subordinate Judge is of opinion that provision ought to be made for the forfeiture of tenancy by a tenant's disclaiming the landlord's title. I am of the same opinion. The tenant is amply protected by the Bill, and if he chooses to conspire with another person against his landlord's title, I think he ought to suffer for it. This remark should, perhaps, rather have come under the sections relating to ejectment, but the matter was overlooked by me at the time.

36 The Rent Suit Munsif calls attention to the hardship to which ignorant raiyats are subjected in consequence of *batwara* proceedings, the practical result of which is frequently to enhance their rents where their holdings come within the shares of more than one landlord. Though there is no professed enhancement, each sharer demands something more than his proper proportion of the rent previously paid, and as these demands are separately made, an ignorant raiyat is not in a position to contest them. It is only when he has paid them all that he finds that the aggregate exceeds the amount that he used to pay before the *batwara*. The Rent Suit Munsif suggests that the law should require the ameen employed on the *batwara* proceedings to prepare a list showing the *jamas* payable by the raiyats under the new arrangement. The evil is certainly a serious one, and the remedy suggested by the Munsif seems to me worthy of consideration.

Dated Midnapore, the 26th May, 1883.

From—W. F. MEERS, Esq , Judge of Midnapore,

To—The Registrar of the High Court, Calcutta.

I have the honour to submit the following notes upon the draft Bengal Tenancy Bill, 1883.

Section 3. "Raiyat."—It is to be regretted that the border line between a raiyat and a tenure-holder has not been drawn in the Bill. The definition as it stands in paragraph 5 would include the case of a person who takes a grant of waste land, and who, after clearing and embanking where necessary, sublets it to tenants. For instance, here in Midnapore there is along the coast a larg· tract of land formerly occupied by Government for the manufacture of salt. At that time the land was waste and mainly covered with jungle. On the abolition of the salt manufacture, the land was surrendered to the zamindars in whose estates it lay. It has since been let by the zamindars in large or small blocks to mere speculators, sometimes for a term, sometimes without any agreement as to fixity of rental or period of tenure. The lessee sometimes, but not always, clears a larger or smaller portion, or perhaps throws up an embankment, and induces cultivators to take up small blocks and bring them under cultivation.

These small cultivators are fairly entitled to acquire occupancy rights against the speculator, but they cannot do so if he is classed as a raiyat.

The same state of things occurs in the jungle mehals of the north-west of this district. There the land is poor in quality and largely covered with sâl timber or small brushwood. The zamindar has granted a putni of a large tract of this country to an European firm. The putnidars, with a view to get the land settled up, have given vaguely worded leases, nominally of the better lands of a village only, often only of a few bigahs, but not settling with more than one tenant in each village area, unless the area is unusually large. There seems to have been a tacit understanding that the tenant, if he could, might bring the whole village under cultivation. A general rise of prices with increased pressure of population on the land has made it easy for these tenants to find cultivators ready to undertake the labour and risk of clearing and bringing under cultivation most of the land in the lessee's village boundary; and the putnidars on

re-measurement have repeatedly found the lessee in occupation of ten times the area mentioned in the lease.

From what I know of the districts of Balasore and Backergunge, I believe similar instances could be found there. As far as I know, whenever cultivation is spreading and inferior soils are being brought under tilth, some such system as this prevails. It is of great importance that the courts should not be left to decide the relative status of the contractor and the cultivator in cases of this sort. Generally it is not difficult for the contractor to decide for himself whether he shall prove that he is a tenure-holder or a raiyat. The basis on which he may enhance, or on which he may be enhanced, depends upon his own status with reference to the putnidar on the one hand, and to the tenant on the other. A good opportunity now presents itself of assisting courts in this difficulty; and even though it may not be best to define a raiyat, the Legislature, rather than the courts, should undertake this duty. The definition should be drawn so as to include the case of a man who takes up land for cultivation by himself, or by his family or servants, and it should exclude the case of a man who takes land merely to sub-let as a speculation. A maximum limit of a raiyat's holding is, therefore, necessary, and I may say that after 18 years' service in the Lower Provinces, I have never met with an instance of a genuine cultivating tenant who held 50 bighahs of arable land.

Section 3, clause 19. "Signed."—The definition is reproduced from the C. C. P. What does the last paragraph mean? The words are—"It also includes stamped with the name of the person referred to"—"referred to" where? In the first clause of the definition, *i.e.*, the marksman, or to the person whose name is engraved on the seal?

Section 26.—Why should ejectment of a permanent tenure-holder be limited to the case of breach of a written contract only, carrying that penalty? There may be no written agreements that the ejectment should be the penalty of denial of the landlord's titles, but this is the fitting and well-recognised consequence of such an attitude in the tenant. The same remarks apply to section 50, clause *d*.

Section 27.—The provision that the landlord shall give the tenure-holder seeking registration a statement in writing of the reasons, for his refusal to register will, I fear, in practice be found inoperative.

Section 32.—If the court's order is to have the force of a decree, and the court on the pleadings finds it necessary to try the claimant's title to the tenure of which he desires registration, what will be the effect, as between the parties, of the court's decision on the petitioner's title? Is there any pecuniary limit as regards jurisdiction? The section seems to contemplate local jurisdiction merely, irrespective of the value of the property involved.

Section 34.—Provision should be made to allow of the delegation of duty of signing certified extracts of the zamindar's register. In practice it will be found difficult for a female zamindar to "certify under her hand" the extract. If the zamindar neglects or refuses to furnish the copy, or to accept a tendered fee, by whom is the fine awardable under sub-section 35, clause 2, to be inflicted? Would it not be well to provide that the claimant may serve his notice of application through the civil court or the Collector on depositing the proper fee? I think it likely that parties will find it difficult, if not impossible, to move the zamindar to compliance, without official assistance, in applying for the certified extract.

Section 35.—To the last words of this section should be added "and the taking of copies under section 34." Speaking generally of the provisions of chapter 3D, I think there will be practical difficulties in making use of them. Except in very small estates, the zamindar never comes in personal contract with his tenants. Parties desirous of registration will find themselves, as now, obliged to deal with local agents whose interest it is to make as much as possible out of every change of ownership. Under-tenures commonly undergo division by sale and inheritance without reference to the zamindar. As long as the proprietors can agree amongst themselves, the rent continues to be paid under the old recorded proprietor's name. It is doubtful if zamindars, who can look to the tenure if the rent falls into arrear, will trouble to search for the actual tenure-holders under section 33, where the main result of the action in this direction will be to put fees into their agent's pockets. I can call to mind but one case of a tenure-holder seeking to enforce registration under section 6, Regulation VIII of 1879.

I regret that it has not been found possible to declare a rebutable presumption in favour of all ryots, being settled ryots, in respect of the land actually in their occupation at the time of the passing of the Act. It is hardly questioned that the vast majority of the cultivators have acquired occupancy rights under the existing 12 years' rule: why should the weaker party be put to the trouble of proving that he possess rights, the existence of which is hardly doubted? Why must he prove that he has occupied land in a village or estate for 12 continuous years? If any time is insisted on, why twelve years? why not a lesser number, as five or three? In practice it is difficult for ignorant people to prove facts which occurred twelve years ago. Although the use of receipts for rent is more common than formerly, still in many places in the interior they are hardly known, or not insisted on. I believe that there are new ryots in possession of genuine receipts for twelve years, all claims of rent having nevertheless been fully discharged.

Section 50.—May an occupancy ryot at his discretion fell timber of over twelve years' age standing on his holding?

Section 51.—What is the meaning of "*estimated value*" at 10 per cent., below which a landlord may purchase, in the case of an occupancy ryot selling without having first given the landlord notice of sale?

I think it questionable whether this rule, requiring notice to the landlord before a sale of a jote, will be of much service to the landlord. As a rule, they are not given to the purchase of occupancy rights. They sometimes ask permission to bid at sales for these rights in execution of decrees for rent, but they do this mainly for the purpose of bidding against the defaulter's relations, so as to prevent them from buying in far below the real value. This and the remaining sections of this chapter will, I fear, give trouble and delay to the ryot vendor, and will hamper dealings in land, which by section 50, clause *f*, are declared free.

CHAPTER VIB.

At first sight the proposals of this chapter are attractive, but after much consideration I have arrived at the conclusion that they are dangerous, and that in them lies what is likely to more than counterbalance the benefits conferred on the peasantry of the lower provinces by the rest of the Bill. The consequences of an error by the officer who prepares the table, in over-estimating the normal produce of its average money value, or in fixing too high a minimum, will be nothing short of the ruin of the tenantry of the tract dealt with. As the draft stands, I doubt if the local Government, after directing at the time of publication the period for which a local area table is to remain in force, could cancel the table, if it desired to do so, on the ground that it was framed on erroneous data, or that it was otherwise inequitable. The difficulty of collecting really accurate data for the table of rates will be found to be very great. A notable instance in point has recently come under my own notice in this district. A very large property, known as the Majnamootha Estate, extending over several pergunnahs, has been lately re-settled by Government owing to the default of the proprietors. The settlement officer was specially selected as a man of considerable revenue experience; he was assisted by a special staff and was engaged for nearly three years on the work. While the settlement was in progress, it was found necessary to pass a local Act throwing the onus of disproving the settlement officer's rates on the tenants, who were dissatisfied with the assessment of the settlement officer.

If the table of rates has been published, and it is unfairly hard upon the tenants, the error will probably not appear until the mischief is done. The persistence with which ryots cling to their jotes is remarked by all who have had to deal with them. As a rule they hold on until both capital and credit are exhausted.

If this sub-chapter is to be retained, would it not be well to draw the settlement officer's attention prominently to the following, amongst other, considerations?

The incidence of the population on the soil, the rate at which this pressure is increasing—as to which see the last two census reports—the rate at which inferior soils are being brought under cultivation, therewith the consequential effects of diminishing the area of pasturage, first upon the cattle, draught and milch, upon which is sunk a large part of the agriculturist's capital, and secondly upon the population, and particularly upon the young, in diminishing supplies of milk and butter available to a people mainly subsisting upon a farinaceous dietary. Ought he not also to be reminded that the vast bulk of the land is capable of producing but one crop in the year; and that in a purely agricultural community the cultivator, as a condition of his existence, must have not only fair interest on his capital employed on his land, and fair wage for his own labour, but also enough to carry on from one harvest to the next?

CHAPTER IXC.

The provisions for giving receipts and accounts would be excellent if they applied only to large zamindaries of Government estates. But it seems to me hopeless to expect that the rules of this sub-chapter would be adhered to by petty tenure-holders or ryots who sublet, whatever the penalty might be for the breach of them. There are very few zamindaries which are not sublet in farm or in putni. These again are mostly sublet, and so on, until the person who actually gets in the ryot's rent is often little higher than a ryot or petty farmer himself. These are the persons to whom the rules would be applicable. I think it would be enough to provide that the receipt should shew date of payment, amount, payer, payee, the holding for which, and the year for which, the payment was made; and I would suggest that as an incentive to honest dealing, it should be at the discretion of the court to deduct double the amount of any payment which the tenant proved he had made, and for which credit had not been given in the plaint.

CHAPTER IXD.

The proposed rules for the deposit of rent are satisfactory improvements upon the existing ones.

CHAPTER IXE.

It would be well to state more plainly that the court is not bound to award 12 per cent. interest in all cases of arrears. The meaning of the words "liable to" seem plain enough, but I know that this is one of thr commonest errors made by young native officers, and with serious results to the unfortunate defendants.

CHAPTER IXF.

I fear the procedure laid down in this sub-chapter is too slow. What happens is that the landlord delays in attending at the division, perhaps from mere indolence, perhaps

in the hope that the man who raised the crop may consent to an unequal division, rather than run the risk of bad weather and the consequent loss of all. The Act requires the party aggrieved to come to the Collector, who appoints a Commissioner: the Commissioner proceeds to the spot, and, with the assistance of assessors, makes a valuation: the Commissioner then reports to the Collector, the Collector hears objections, and may order a fresh enquiry. At every stage there must be some, and may be considerable, delay. The costs will also be of necessity relatively heavy. I would suggest that on application to the Collector by either party who complains that he is hampered in getting his share, a notice should be served by registered letter on the opposite party, directing him to attend and assist in the division within a time to be mentioned in the notice, at the expiration of which the party at whose instance the notice was served should be at liberty to remove the crop, and that it should be presumed that the amount of crop and its value mentioned in the application for the notice was correct.

CHAPTER XIII.

The right of distraint might now well be abolished. The proceedure laid down is too elaborate to be honestly followed. My own experience is that landlords are getting shy of making use of this right, unless they happen to be very powerful people, and have some object in view, as well as the getting in of the rent. The right is open to very great abuses. Under the present arrangement for the accelerated trial of rent suits, plaintiffs have very little cause for complaint as to delay. Thus in my head-quarters court a man may get an *ex parte* decree for arrears in about a month from the filing of his plaint, and in about 47 days from filing the plaint if the defendant contests the claim unsuccessfully. The plaintiff may verbally apply for execution as soon as his claim is decreed. This seems reasonably expeditious. I doubt if he would get in his money any faster under the distraint procedure. However, whether the chapter remains or not is not of great moment, as section 167 is calculated to make landlords hesitate about the use of the right.

I regret that I have not found time to consider the drafting of the Bill. Pressure of business has prevented me from giving as much time as I wished to this interesting measure.

No. 251, dated Burisal, the 2nd June 1883.

From—J. F. BRADBURY, ESQ., Offg. District Judge of Backergunge,

To—The Registrar of the High Court of Judicature at Fort William in Bengal.

YOUR No. 1157D. of the 23rd April 1883.

I have the honour to subjoin my comments on the draft of the Bengal Tenancy Act, and to observe, *imprimis*, that the interpretation clauses are defective, in that they do not include a definition of a tenure. Clause 3 of section 3 defines it to include an under-tenure, and the interest of every tenant of the class referred to in section 14. The term "under-tenure" is misleading. Every tenure is holden of somebody, and under the person of whom it is holden. It may be rent or revenue-free, but in every case it is held of the original grantor or creator thereof, or his successors. The use of the term serves no object, and it may well be eschewed, and the word tenure exclusively employed in its stead. What, however, is a tenure? Does it denote an interest in land permanent, transferable and heritable, or is it intended to include all interest inferior to those of the proprietors of an estate? Apparently the former; for a distinction is made between a tenure-holder and a tenant.

2. The Statement of Objects and Reasons explains why a complete definition of a tenure (or under-tenure) has not been attempted, but the opportunity should be taken to remove certain doubts which have arisen under the present law. 7 W.R., 15, decides that the sub-letting of his land by a ryot does not alter the nature of a holding in its inception *ryoti*, nor necessitate its registration: and this principle it is proposed to enact by the explanation of clause 5 of section 3 of the Bill and section 50 (*c*).

The converse of this proposition has not, however, been enacted. Suppose the holder of a tenure, otherwise transferable, permanent and heritable, say one designated a *halawah*, to which in his district ordinarily, and in the absence of express stipulation to the contrary, are attached the incidents of permanence, heritability and transferability: suppose, I say, the holder of such a tenure cultivates the soil thereof himself, is he to be deemed a ryot or a tenure-holder? The revenue athorities in their proceedings under Act VIII (B.C.) of 1879 (sections 20 and 121 of the Bill) have, in this district treated such a tenant as a ryot, but from this interpretation of the law I dissent. The question can, and should be authoritatively settled now, and its decision not left to inferences from sub-section 6 of section 21. My opinion is that once a tenure-holder always a tenure-holder, and that, if the tenure be, from its nature, by custom, or by agreement with the original lessor permanent, transferable, and heritable, it is immaterial whether the holder thereof sublets or himself cultivates the whole or a part of the soil thereof.

3. The definition of an "arrear" is likewise defective, for frequently the rent is not payable in instalments, but in a lump at the end of the year.

4. In clause (*e*), section 4, the word "out" is superfluous.

5. *Section* 6—Is not happily worded. How and why is land which is admittedly not *khamar* but which is comprehended in a permanent, heritable, and transferable tenure within an estate, and cultivated by the holder of such tenure, to be deemed *ryoti* land of such estate?

The framers of the section seem to have ignored estates not consisting exclusively of *khamar* and *ryoti* land. Section 13 is obnoxious to the same criticism.

6. What is intended by "terminable" in section 19: "determinable by notice," or "for a term?"

7. Is the application of section 20 to be confined to districts in no part of which land has been permanently settled, or is it to govern settlements of all land not permanently settled in whatever district situate? The language of the section is susceptible of the latter interpretation only, but the marginal note favours the former.

What is the express recognition contemplated by section 20? Must such recognition be recorded? How can the non-recognition of a right affect such right? Suppose the revenue authorities have in all previous settlement proceedings recorded the existence of a tenure, and at no date enhanced the rent thereof, are they at liberty to enhance the rent thereof whenever so minded, and by what restriction is the enhancement to be limited?

Again, who is an authority empowered by the Government to make definitively settlements? The Commissioners and the Board of Revenue confirm settlements, but make none. The Collector and his subordinates make them, but not definitively, for their orders are not final, nor, I believe, of any effect till confirmed.

Another question which some appeals recently heard by me suggest is this: sections 20 and 121 are designed to replace Act VIII (B.C.) of 1879, which the Bill proposes to repeal, but no portion of the Bill empowers the revenue authorities to enhance the rents of a tenant of an estate which is private property, but which is periodically settled by them, and the rents and profits of which they realise by reason of the recusancy of the proprietors who refuse to accept the terms of settlement offered by the Revenue authorities, and are content with the allowance denominated *malikhana*.

Sections 20 *and* 121—Do not provide for such a case.

8. *Section* 21.—What is "beneficial" rent? The term is novel in Indian law, and requires explanation.

9. *Sections* 25, 27, 29, 30, 31, 209.—What is a "permanent" tenure? One that is transferable at will and heritable? And is every right of occupancy and every tenure to which section 14 applies to be deemed a permanent tenure?

10. The order under section 32, having the force of a decree, will, I presume, be appealable; but how is it to be enforced? Under section 260, C. P. C.? But if the landlord continues recusant, and will not register in spite of the attachment of his person, or his property, or both, what is to be the remedy of the transferor or transferee? The simplest course will be to enact that the order shall have the force of a decree in a suit, and shall operate as the registration of the transfer or transmission of the tenure.

11. What will be the effect of non-compliance with the rules framed under section 35? Will any informality vitiate the registration, and is the transferor or transferee or successor to suffer therefor? Is the fine with which a breach is punishable to be recovered by a prosecution before a Magistrate?

12. Schedules 2 and 3 should be incorporated in chapter IV, and not relegated to an appendix.

13. "Whether before or after the commencement of this Act," in sections 45 and 46, should be amplified so as to express whether wholly before or after, or partially before and partially after such commencement.

Is a person to be deemed, for the purposes of section 45, to have held as a ryot *ryoti* land held as a ryot by a person whose heir he is, though such land may have, by devise or otherwise, passed to another?

14. *Section* 50.—Will a raiyat with a right of occupancy be entitled to fell or grow timber in the absence of express stipulation to the contrary.

15. To what Civil Court must the application under sections 51, 54, and 55 be made? Will a Small Cause Court have jurisdiction to ascertain the price, and will the order under those sections be appealable or not?

16. How are the notices prescribed by the chapters III and V and other portions of the Bill to be served; and where an application or some other act is required to be made or done by the person on whom notice is served within a fixed period, what course is to be pursued if he seeks to make or do it after the expiry of such period, pleading that the notice was never received by him? Real cases of non-receipt of the notice are sure to occur in practice, and the plea of non-receipt of the notice will assuredly be falsely put forward in many other cases. Some procedure for dealing with them should be prescribed, otherwise the prescription of a notice may be dispensed with.

17. Again, in sections 51 and 54 the application must be made by the landlord within one month of the filing of the notice in the revenue office; but if the notice is not served within the month, through oversight, designedly, or from other cause, what then?

18. Again, if after the ascertainment of the price to be paid under sections 51, 54 and 55, the person in possession refuses to convey the occupancy right to the landlord, must the latter institute a regular suit for the conveyance, or will the court, upon ascertaining the price, have power to direct the execution of a conveyance forthwith, and give effect to such direction under section 260 or section 261?

The latter procedure will reduce litigation; and if orders under sections 51, 54, and 55 are appealable, will be unexceptionable in every respect.

19. *Section* 64.—" About the time at which those rates were fixed." These words are somewhat obscure. They mean, I suppose, " about the time at which were fixed the rates in force at the date of the preparation of the table."

20. *Section* 85.—If, as is often the case, the homestead is a part of a non-occupancy holding, will the tenant have different interests in diffeaent portions of such holding ?

21. *Section* 86.—I presume the tenant may be permitted to remove the materials of his buildings, and in such a case he will be entitled to recover as compensation only such amount as may recoup him for the trouble and expense of re-erecting the same on another site.

22. *Section* 87.—How is the enhancement allowed by the section to be effected—by suit after notice, or by suit following on a notice, or otherwise ?

23. The language of clause (*a*) of section 90 requires modification, for I presume that the mere falling into arrears will not justify ejectment at the will of the landlord, but he must sue therefor.

24 What civil court is intended by section 91 ?

25. Must section 92 be strictly construed: in other words, will a landlord be bound to sue for ejectment, or may he sue to recover arrears at the enhanced rate, as at present ?

26. *Section* 97.—Is such a thing as rent payable at the end of the year to cease ? In the absence of any agreement or custom, surely the most convenient rule is that the rent should be payable at the close of the year for which it is demandable, as now; and I suggest that the parties be left by section 98 to settle the number and dates of the instalments, with the restriction that in no case shall the former exceed four. The object—and a very desirable one it is—of protecting the ryot from frequent demands for fractions of his rent will be amply secured by the restriction without the interference of the Board of Revenue or any third party

27. *Section* 102.—I presume the fines exigible under the Act are designed to be recoverable in the criminal courts.

28. A revenue officer is clearly intended by sect'on 103 (*vide* section 106), and this should be expressed.

29. *Section* 104.—How is the revenue officer to satisfy himself that the applicant is entitled under section 103 to make the deposit judicially, that is, after taking evidence or otherwise? Will not the mere application be ordinarily sufficient to justify the receipt of the deposit, the tenant making it being responsible for any illegality or irregularity ?

30. *Section* 111.—What is a non-transferable holding? That of an ordinary ryot is, I believe meant, but suppose such a ryot holds under a lease susceptible of assignment, will section 111 apply ?

31. *Section* 122, *clause* 2.—How and where prescribed? What will be sufficient notice? How is it to be published, and how proved?

32. *Section* 125.—If the landlord holds no decree, and the amount in arrear is disputed, or there is collusion between the landlord and the tenant, will the court have authority to refer the landlord to a suit in lieu of enforcing the charge to the detriment of another creditor ?

33. *Section* 133.—Will one of several co-landlords be entitled to measure independently of the others, or against their wishes ?

34. *Section 135.*—Will the order under section 135 be appealable ?

35. *Section 140*—Is obnoxious to the same animadversion as section 111.

36. *Section 141, clause* (*b*).—How and by whom prescribed, and how is such publication to be proved ?

37. *Section 144.*—What will be effectual service, and will the order under section 144 be appealable or not ?

38. *Section 148.*—Will the order under section 148 be appealable ?

39. *Section 157.*—How and by whom prescribed, and how is much publication to be proved ?

40. *Section 166.*—" In addition to any other remedy to which he is entitled by law." May the landlord sue and distrain simultaneously for the same arrears ?

In any case I conceive one of a co-proprietary cannot distrain for rent due to the whole of the co-proprietors jointly, and that should be clearly expressed.

41. *Section 168.*—Will the order under section 168 (2) be appealable ?

42. *Section 191.*—Why are Courts, when disposing of suits of the nature described in section 191, to be debarred from ordering facts to be proved by affidavit? The provisions of sections 194 to 197 are now freely used, especially for the proof of service of process in suits heard *exparte*. Their application to such suits facilitates the rapid disposal of rent suits, and I fail to see what object is secured by enacting that affidavits are not to be used in the vast majority of suits under the Rent Law. Such enactment will merely prolong their duration.

43. *Section 195*—Is, I think, most objectionable. The law requires issues to be framed in every suit, but in practice issues are rarely recorded in rent suits, and when an appeal is preferred, it is only by reference to the written statement that the Appellate Court can usually ascertain what precise pleas the defendant took in the Court below. The judgment in the majority of rent suits does not state the issues, but disposes of the case summarily. The object of abolishing the right to present a written statement is to save time, but the presentation of a written statement occasions no loss of time whatever, and such a statement is frequently of the utmost value.

The present procedure in rent suits is as summary as it can be, while a record of evidence is indispensable, and section 196 is superfluous. Nothing more than a memorandum is now recorded, but even a memorandum takes time; and it is only by dispensing with a record of the evidence, and as a necessary corollary prohibiting appeals, that the trial of rent suits can be accelerated. Let the parties present what written statements they please. The mere reduction to writing of the pleas cannot delay. Why, therefore, prohibit it, except by leave of the Court?

44. *Section 199.*—If the defendant admits that a part only of the rent claimed is due, and that not to the plaintiff, but to a rival claimant, will section 199 apply? If not, section 199 will be a dead letter, as the defendant by pleading that the sum is one pice or one pie less than the plaintiff claims will be able to avoid the obligation of making the deposit.

45. *Section 203.*—"Before the date of his ejectment." Do these words denote the date of the actual ejectment in execution of a decree for ejectment, the date of the decree for ejectment, or the date of the institution of the suit for ejectment? Not the first, apparently, though that is the natural construction of the words, for it would conflict with the context of section 203 itself, and likewise with sections 204 and 206. Which of the others is the correct interpretation?

46. *Section 204.*—Will the rent payable under section 204 be assessable and recoverable in the course of the proceedings taken to execute the decree for ejectment, or will a separate suit be necessary? If the former, will the assessment and the order to pay the same be appealable? *N. B.*—Section 205.

47. *Section 208 (b).*—Will the tenure so recognized by the settlement authorities be inviolable and unavoidable merely during the term of the temporary settlement, or will it so continue always, even when the temporary is converted into a permanent settlement?

48. *Section 208 (c).*—What are permanent buildings? Masonry structures alone, or will a building with mat or wicker walls, and a thatched roof, solid, well constructed, and of large dimensions fall within the category. I know it is difficult to define permanence; but at least it may be expressed that the phrase permanent buildings is not to be confined to those of masonary alone.

49. *Section 212.*—The officer who holds sales is the nazir, and the nazir never issues or makes a sale notification, or proclamation. That is invariably the work of the Court ordering the sale. Does section 212 intend any change in this respect? I trow not; but its language is not happy.

50. *Section 214.*—What proof of service will suffice? Much will turn on the service of notice, as the purchaser will be bound to avoid within a year from the date of his obtaining knowledge of the incumbrance set up, and the incumbrance will be annulled from the date of service only. Service by post is least likely to be disputed, and most likely to be real.

51. *Section 216 (c).*—Is any, and if any what, notice to be given to the tenant of the claim under section 216 (c), and when must the claim be made? As soon as the sale is confirmed, I imagine; but within what interval of such confirmation?

52. *Section 217* (3).—On what grounds can a plaintiff demand to have a sale set aside?

53. *Section 224 and Schedule IV, Part* III.—Where the judgment-debtor has by fraud or force prevented the execution of the decree, what will the limitation be? The Bill is silent on the point, and Act XV of 1877 does not supply the defect.

54. It is apparently the intention of the framers of the Bill that, with the exceptions enacted, all suits, appeals, and other judicial proceedings under the Bengal Tenancy Act shall be governed by Act XIV of 1882, but this should be expressly enacted to obviate misunderstanding. Similarly, the application of the Indian Limitation Act XV of 1877 to such suits, appeals, and proceedings should, not be left open to argument. Section 225 expressly excludes the operations of section 7, 8, 9 in certain cases, and section 224 likewise supersedes Act XV of 1877 in certain particulars. Are we to infer from this that in all other cases and particulars Act XV of 1877 will apply? Hitherto, this doctrine has never been laid down so broadly, though various provisions of Act XV of 1877 have been applied to suits, &c., under Act VIII (B. C.) of 1869. I suggest therefore that the new Bill distinctly enact the extent of the application of Acts XV of 1877 and XIV of 1882 to suits, appeals, and other proceedings under it.

55. Does section 222 govern such orders as those contemplated by sections 97, 98, 99, &c.?

56. The Court will observe that I have abstained from discussing the policy of the Bill and the amendments proposed of the present law. The main provisions of the Bill have been settled, and I conceive that it now only remains to so frame the Bill as to leave as little room as possible for discussion of the intention of the Legislature. I must, of course, have overlooked many points open to argument, which will strike others; but I trust that some of my comments have revealed defects in the language of the Bill, the correction of which may hereafter prevent litigation, and will certainly facilitate the interpretation of the measure by those who have to administer it.

No. 352, dated Mozufferpore, the 14th May 1883.

From—A. C. BRETT, Esq., District Judge of Tirhoot, Mozufferpore.

To—The Registrar of the High Court of Judicature at Fort William in Bengal.

In reply to your No. 1157E, dated 23rd ultimo, I have the honour to submit the following remarks.

The basis of the longstanding controversy, of which we have the outcome in the Tenancy Bill now before the Viceregal Council, is, in my opinion, the loose employment of such words as "owner," "proprietor," "malik," and the like, and the importation into India of ideas from feudal England. No single class of men can claim the same absolute ownership or proprietorship in land that a man has in (say) a plate or a box of matches. A piece of land is a portion of the crust of the globe we inhabit, and it produces the unearned increment which is the support of life. Ownership in it is therefore necessarily liable to be subject to limitation to co-ownership in fact. To apply this principle practicably, it is necessary to take workable portions of the crust of the globe, *e. g.*, a village. This practical application I believe to have been at the bottom of the distinction between *khudkasht* and *paikasht* ryots. The former were co-owners.

Occupancy right.—The fundamental idea connected by the word *khudkasht* was permanence. The test in old days of permanence was residence. The framers of Act X of 1859 kept to the fundamental idea, and varied the test in conformity with the altered conditions of the time to a holding for 12 years. I am glad to see that the period of 12 years is to be retained, and that it is not intended to travel as far as those enthusiastic gentlemen who proposed to act on the assumption that the legislators of 1859 did not understand the perpetual settlement. I cordially approve of that provision which lays down that a ryot who has held any land for 12 years (not necessarily the same land) in a village or estate should have the right of occupancy. I see that some who admit this principle wish to limit it to definite quantities of land, but I think this is inconsistent with the larger principle of co-ownership. When once a ryot has acquired the status of permanence, he is a co-owner in the village, and has the right to occupy whatever he holds.

Ordinary ryots.—As regards the "ordinary ryot" I disagree with the Bill. It is quite true that under the present law, if an ordinary ryot has received notice of enhancement and elects to stay, he cannot be compelled to pay more than a reasonable rent. This is, however, nothing but the Judicial statement of an equitable principle. The reasonable rent which he can be compelled to pay is for the time he actually stays. But he can be ejected. To tell a zemindar that he cannot evict without paying ten times the increment of rent demanded, is to tell him he cannot evict at all. The ordinary ryot should be left to make his own terms. We are supposed to be interpreting the permanent settlement, not altering it, and as I read it, the *paikasht* ryot (whose successor is the ordinary ryot) was not protected in any way.

Transferability of occupancy rights.—I have always held that these should be transferable, but with restrictions. I think a zemindar has a right to be protected from the incoming of an objectionable tenant. The proposed law strives to protect him by giving him the right of pre-emption, but it saddles this with the provision that the next tenant, whether a settled ryot or not, shall have a right of occupancy immediately. Unless therefore the zemindar is in a position to cultivate the land by his own ploughs, through his own servants (which is not often the case), the only way he can secure himself from an objectionable tenant is to throw away his money; and the operation may be repeated *ad infinitum*. I would allow of transfer in only two cases—(1) Voluntary transfer by the ryot (2) Compulsory sale by the landlord in execution of a decree for rent. As a remedy against the introduction of an objectionable tenant, I would give the zemindar a right of *veto* as to the transferee, subject to a summary appeal to the Collector or the Judge, who should finally decide whether the objection was reasonable or not. Pre-emption might remain as an alternative. Foreclosure and compulsory sale, otherwise than by the landlord, I would prohibit. There is no doubt that at least in Bengal occupancy rights have been transferred, and there is an inevitable tendency to attach the power of transfer to any valuable right. But at the same time the Indian ryot is not yet a fit man to be allowed to walk alone. The present Bill recognizes this in the restrictions it places on his right to contract. There is always the fear least he should fall, bound hand and foot, into the power of the money-lender, a useful man in his way, and one always ready to help a ryot through difficulties as long as the ryot has a holding, but who would swallow him up bodily if he lost this. I would protect the ryot's holding as if it were a plough or any other agricultural implement. It is said that no harm has come where transfers have taken place, but we have not seen the effect of proclaiming the absolute legality and unrestricted power of transfer.

Procedure for recovery of rent.—I entirely agree that there is no royal road to the discovery of facts, but I think that an incentive should be held out to all zemindars to keep really trustworthy accounts, by telling them that any zemindar who can satisfy (say) the District Judge that his accounts prove themselves will be allowed a summary decree. Details might be easily settled. A zemindar should keep his accounts in solidly bound books, with pages numbered, bearing a certificate signed and sealed by (say) a Registrar, and his receipts should be in counterfoil form, &c. On the matter of receipts, I am glad to see the proposed provisions. No one who has seen the loose jummabundi papers, and scraps of receipts which come up to be "duly attested," can help wishing for a reform. The only way to effect one is to show zemindars that it would be worth their while to be more business-like.

Enhancement of rent.—I consider that the proposed provisions on this subject constitute the most hopeful feature of the Bill. The task of framing records of rights, tables of rates, &c., is no doubt a formidable one, but in the resolute facing of this difficulty lies the only chance of success for a Rent law in this country, however equitable may be its spirit, and however scientific may be its drafting.

G 1

No. 486, dated Alipore, the 18th May 1883.

From—C. B. Garrett, Esq., Officiating District Judge, 24-Pergunnahs,

To—The Registrar of the High Court of Judicature at Fort William in Bengal.

In reply to your letter No. 1157F, dated 23rd ultimo, I have the honour to submit a report upon the Bengal Tenancy Bill, 1883.

I do not propose to enter into any general discussion as to the relations of landlord and tenants in this country, or to consider the necessity for introducing so drastic a measure as the present one. I simply propose to deal with the Bill as one that, with more or less modification, will certainly be passed next year, and to criticise the principal points in which the Bill seems to me advantageous or objectionable.

Section 21, sub-section 4.—This sub-section appears to press unfairly on the landlord. Surely in no conceivable case could it be fair that the whole net profits of a tenure, of which even the whole was unreclaimed when the tenure was created, should be perpetually enjoyed by the tenant. Surely the landlord, who owned the land before it was reclaimed, is entitled to something for the use of what I may call the raw material on which the tenant has operated his reclamation. For the words "whether it exceeds 30 per cent. thereof or not," I would substitute the words "not exceeding 70 per cent. thereof."

Sub-section 5.—The same objection, I think, applies to this sub-section. A tenure-holder who has made improvements is entitled, first, to the same amount of profit as if he had not made improvements, *i.e.*, not less than 10 per cent. and not more than 30 per cent. Then to a fair profit on his outlay by a fair profit on the outlay, I mean not merely the market rate of interest on the capital laid out only, but a profit which takes into consideration the increase of wealth won from the soil by the application of capital.

Thus, for instance, if by the application of £100 the produce of any quantity of land is raised from, say, £30 to £60, I consider a fair profit for that improvement to be not merely 5 per cent. or 10 per cent. on the £100, but a fair share of the increment, say roughly three-fourths. But the landlord is surely entitled to something for the "raw material" he supplies.

In this section, after the words "any share," I would therefore add "not exceeding 75 per cent. and not less than 10 per cent. of the balance mentioned in sub-section 3."

Section 24, cp. section 78.—I think this a most excellent rule; it deprives zemindars of the power of harassing their under-tenants by incessant litigation.

Section 49.—I think that this section is open to very serious objection. I am aware that it is founded on certain rulings which, although they may have correctly interpreted the law, have always appeared to me objectionable. The present section will affirm and consolidate these rulings. It will be a great disadvantage to the landlords, especially to small landlords in the Behar districts. I have known in these districts many small proprietors whose sole wealth was their *khamar*. I have always understood *khamar* land to be land which was admitted to be the peculium of the zemindar, and which he had every right to dispose of to the very best advantage that the state of the market allowed him to do. I do not think that we need be apprehensive that he will now-a-days be able to do more than this.

I quite accept it as a thing politically desirable (if economically unjust) that landlords should not be allowed further to increase their *khamar* lands, but I think that established *khamar* should not be interfered with, and that the tenants of *khamar* lands should not be permitted through the carelessness or ignorance of their landlords to acquire a right in this valuable peculium to the detriment of the landlord.

Section 50.—Does this mean simply that he may sublet a portion of his land, remaining liable to the landlord for the rent assessed on the whole, or he may at his option apportion his liability to his landlord? If the latter, I think it is a provision obviously unfair to the landlord

Section 56, Statement of Objects and Reasons, page 116.—After some fluctuation of opinion, I believe that this is a highly desirable provision. At first I was inclined to regard it as injurious to the ryot and likely to diminish the value of his occupancy right. I may say that, so far as the incoming tenants were isolated strangers, immigrants, or persons previously entirely unconnected with the land, I think that no great harm would accrue from their being assessed at the highest rate of rent which the landlord could obtain. Again, I do not believe it would be possible even for a very great zemindar to eject large bodies of his old ryots and supply their places with immigrants, or, what would amount to the same, to deport a whole body of cultivators from one village to another village within his estates. But I think it would be quite possible for him to take advantage of the needs or misfortunes of his tenants, and thus buy up their occupancy rights. Without some absolute restriction like the present, no legislative ingenuity would be sufficient to prevent his resettling the old tenants *swanami* or *benami* on the old lands at arbitrary rents. This is in fact often done now on small scale, and if done on large one would be a great political evil; therefore, I accept this as a salutary restriction.

Section 77.—I am inclined to think five years too long a period; it is rather an incentive to indolence and unthrift. Two years would be, I think, quite a sufficient time to allow. In the case of tenure-holders it is rather different. At tenure-holder finding his rent, say, doubled before he had time to increase the rents of his ryots, might be put to great inconvenience. A cultivating ryot, on the other hand, has only to work a little harder.

Section 85.—I accept entirely the principle of section 85, and the reasons given for it at page 121 of the Statement of Objects and Reasons, but I think such a right should be only co-extensive with the necessity. I would therefore so modify paragraph 2, so as to make it plain that although an agriculturist did not lose his right in his *bastu* land simply by ceasing to become a settled ryot, yet he did lose it by ceasing to be an agriculturist at all. A raiyat should not be able to sell all his *arable* lands and entirely abandon the occupation of husbandry, and still retain a permanent heritable and transferable right in his *bastu* in an agricultural village.

Section 93.—I think that this section is distinctly open to objection, as I believe it will make the exercise of the landlord's power to eject an ordinary ryot quite nugatory. I do not believe that, as a matter of fact, such a ryot would ever make any improvements for the cost of which he could not recoup himself within a year or two at the outside, but the existence of the section would enable him to raise all sorts of claims which must naturally be investigated, and which although, I believe, they would usually be unfounded, would still enable the ryot to harass the landlord and protract the litigation until the time for letting the holding would be passed, and the landlord would either be compelled to allow the old ryot to remain in possession, or would have the tenure thrown in his hands for a year without a tenant. I would make an exception in the case of the ryot having built ryot's ordinary dwelling-house, which any royot should, I think, be entitled to make, and for which, if ejected, he should be entitled to compensation. I think also that, although a tenant is fairly entitled to some small compensation for disturbance, ten times the increased rent would be excessive. I suggest three times the increased rent as a fairer rate.

Section 97.—I would go further than this section, and would make the rent payable in any local area on such dates and in such instalments as the Board of Revenue may appoint, saving only written contracts. It is a very common device for zemindars to harass their tenants to demand payment of rent in monthly kists, and in such cases I have always found it very difficult to ascertain what dates were customary, or in absence of any writing what dates had been agreed to by the parties.

Section 103, Clause c.—I feel very doubtful whether it is advisable to introduce a section like this into a Rent Act. I am inclined to think it will be very difficult to ascertain whether the ryot's doubts are *bonâ fide*, and as suitors in this country are always on the look-out for opportunities for tentative litigation, I fear that whenever there is disputes going on between different persons claiming lands as landlords that the ryots will be induced by one or other of the claimants to make deposits solely with the object of getting, if possible, a decision which will force the opposite side to go into Court as a plaintiff. If it were thought necessary to give the ryot this protection, I think it would be better to allow him to make such a deposit, simply stating the names of the claimants who should then be called on to interplead one another, and this deposit should have the effect of dismissing the ryot from the suit and protecting him against any further liability up to the amount of the sum deposited. In such a case zemindars could have little temptation to practice with ryots to make tentative deposits

Section 128, Clause 2—I do not think that an ordinary ryot should be allowed to make improvements against the wishes of the zemindar except to the extent of building a house. An ordinary ryot has, it appears to me, no right in the land except what the landlord chooses to grant, and in the case of the very small area in the settled districts of the Lower Provinces, wherein occupancy rights have not been acquired, I think the landlords ought to be able to select their tenants and limit their rights. Presumably such tenants will be strangers and not settled ryots of the zemindari (whose status is entitled to every respect), and I do not see they have any particular claim to consideration. If an ordinary ryot having a little capital is permitted to make improvements against the wishes of his zemindar, he might easily, as soon as he has entered on the land, make such improvements as would make it impossible for the landlord to eject him. At the same time I do not think landlords should be encouraged to refuse such sanction merely from caprice. If an ordinary ryot desired to make improvements against the will of the landlord, I think that he should be allowed to serve a notice on his landlord, and that, if the landlord refused him consent, it should operate at the option of the ryot as a permission to abandon the holding at once. In the case of this class of tenants only, I would save any written engagements by the tenant at the time of entry not to make improvements against the will of the landlord.

Section 141.—I should prefer to see the presumption reversed. It is seldom that it is to the interest of a landlord that a tenure should merge. I think the presumption should be that the tenure does not merge unless the contrary is shewn.

CHAPTER XIII.

I confess I should have been glad to see the power of distraint entirely abolished. I am convinced, however, it that would be unjust to the landlords to do so at present. My experience is that it is a power very greatly abused. At the same time I admit, when Collector and Manager of Wards' estates under Act XL of 1858, having had experience of villages, from which I could never realize my rents except by distraint. This was of course before Act VIII of 1869 (B. C.) came into force.

Section 202.—This section does not provide for cases in which the breach or damage cannot be compensated by a money payment. I would add after the words "breach" always provided it can be compensated by a payment in money.

The above are, I think, the only sections in the Act which strike me as objectionable or calculated to press unfairly on the landlord. The new Bill no doubt effects a considerable change in the relations of landlord and tenant, but in my opinion that change will be a beneficial one, and a change which, without unduly curtailing the rights of the landlord, will tend to raise and strengthen those whose interests it is the duty and the truest policy of our Government to cherish—the mass of the common people.

No. 571, dated Commillah, the 12th May 1883.

From—R. Towers, Esq., District Judge of Tipperah,

To—The Registrar of the High Court of Judicature at Fort William in Bengal.

In reply to your letter No. 1157J, dated 23rd ultimo, I have the honour to submit the following remarks on the new Rent Bill.

2. The measure is no doubt an extremely able one, and shews a thorough grasp of all the vexed questions arising between the conflicting parties whose interests will be affected by it. It is clear, however, that it is conceived more in the interest of the tenant than of the landlord, and while the latter gains very little from it, the tenant on the other hand acquires substantial advantages at the landlord's expense, which in many cases exceed the tenants' demands, which are entirely novel in their character, and which appear to be derived rather from a consideration of what has been found expedient in foreign countries than from Indian law or custom.

3. Amongst these I would class (1) the easy terms on which occupancy rights are conferred; (2) the confiscation of the landlord's rights to deal as he chooses with land that has once been *ryoti* when it reverts to his private possession; (3) the almost entire abolition of the right of private contract between parties; (4) compensation for disturbance; (5) the power given to ryots to make improvements against the landlord's wish. I do not wish to be understood as meaning that many of these innovations (within proper limits) may not be justified, but they are one-sided in their character, and the other side is not compensated by any corresponding advantages. I admit the difficulty of conceding to the zemindar his main demand, greater facility in realization of his dues, but I am not prepared to say that it could not be satisfied to a certain extent. There is, however, hardly any attempt made to do so in the Bill.

4. The next general observation which occurs to me is that litigation will be enormously fostered by the Bill. The parties are driven into Court or before the Revenue authorities at every step; even where a ryot agrees to the addition of a few annas to his *jumma*, he cannot register his contract unless with the approval of a public officer. Transfer of occupancy rights will be almost entirely effected through the Courts: so will registration of transferable tenures. Preparation of tables of rates and produce, and records of rights (extremely desirable objects, no doubt), will require a large and expensive staff of officers, and the decision of claims for compensation, for disturbance and improvements will add largely to the business of the Courts. These are not all the provisions of the Bill which will increase litigation, and Government will have to make up its mind to a large addition to the number of Munsiffs and Subordinate Judges to deal with the new work that will be thus thrown on these already overburdened officers.

5. Then not a few of the provisions of the Bill seem unsuited to practical working. Among these I would instance the procedure regulating the transfer of occupancy rights, sections 51-5; the rules for the preparation of tables of rates, sections 62 *et seq*; those directing apportionment of expenses, section 72; rules for enhancement, sections 73-6, which seem very intricate. Those requiring delivery of a statement of account, section 101, chapter XI, which renders nearly all the labour and expense of the proceedings before the Revenue Officer liable to go for nothing, if either party chooses to resort to the Civil Court.

6. That there are many admissible provisions in it, I do not for a moment mean to deny. I have not in my remarks in detail referred to these, but when I pass them over, I mean it to be generally understood that I approve or do not object to them. Among others I would particularly mention sections 98, 100, 122, 125, 142, 148, 150, chapter XIII generally, 199, 200, 203 (*a*), 204, 205-7.

7. I now come to the details of the Bill.

CHAPTER II.

I think the expression "private" land is too vague and will give rise to difficulty. There is a good deal of land even in the eastern districts, which the proprietors let out for yearly cultivation, sometimes to one tenant, sometimes to another, in which no right of occupancy is ever claimed by the cultivator. Will this be considered *khamar*? I think it will be a hardship on the landlord if it is held to be *ryoti* within the meaning of the Bill. The survey and register under section 7 will, I believe, be a work of enormous difficulty. Every plot will be disputed, and there will be in effect a civil suit contested in every stage before the Survey Officer, the Commissioner, the Board, and Government.

It seems to me to be more expedient to allow each case to be settled by the Courts on its own merits in case of dispute, than to cause widespread discord by sending a roving commission about the country to agitate questions on which the parties concerned are themselves

quiescent. I believe there is no injustice felt in this part of the country, at all events, on this subject (whatever may be the case in Behar).

CHAPTER V.

The two chief points open to criticism in this chapter seem to be (1) the definition of occupancy rights in sections 45 and 47; (2) the provision in section 56 that any ryot taking land from a landlord, of which the latter has himself acquired the occupancy right, shall have a right of occupancy in it.

With regard to the first of these, the extreme care has been put that under the Bill a ryot who has held two *cottahs* of land in village A for 12 years, may acquire rights of occupancy in 200 bigahs in villages B, C, and D, though he may have had possession of the same land for only three or four months. The necessity of the provision has been maintained, on the ground that otherwise the landlord, by shifting the ryot from one plot to another, might prevent the acquirement of the right in any one plot. There may be parts of the country where this is done, but I do not believe in the existence of the practice in Bengal. It may be difficult to give a difinition of occupancy rights which would satisfy everybody, but I think the proposed one must be modified. If the landlord could shew that it was at the ryot's own request that he allowed him to change his land, I think possession of the land subsequently acquired ought not to count in continuation of the former holding. If the holding is made up of lands taken at different periods, only in those held for 12 years should the right be deemedto accrue. The burden of shewing the different periods and the area taken up at reach might be placed on the landlord, as matters peculiarly within his knowledge. If he keeps proper *jumma-wasil-baki* papers, he should have no difficulty in proving the particulars. The payment of rent is not made a condition to the retention of occupancy rights, which is a material departure from section 6, Act VII of 1869 (B.C). It was held in Narayan Roy *versus* Upiul Misser, 11 C. L. R. 417, that payment of rent is not necessary to the *acquirement* of such rights, but the Bill goes further still. The provisions against contract in sections 45 and 47 may be justifiable in some parts of the country. As a rule, I believe the ryots in the eastern districts are well able to take care of themselves in this respect, and they have the great safeguard of the Registration Land Act (III of 1877) in their favour. There need be little fear of ryots being entrapped into signing *kabulyats*, so long as the registration of *kabulyats** is compulsory. Should there not be an addition to section 50(*d*), allowing a decree for ejectment on the ground of forfeiture, *i.e.*, when the ryot repudiates his landlord's title and sets up an adverse one? *Vide* Article 12, clause 8 of Mr. Field's Digest.

* I Know that *kabulyats* for one year are not compulsorily registerable, but they ought to be made so. The omission has been a fruitful cause of fraud.

I have received some strong representations as to the delay which will be caused to the landlord by his not being allowed to eject an occupancy ryot for arrears of rent, his remedy under the Bill being the sale of the holding. This is one of the points where the zemindars asking for bread (*i.e*, greater facility of realization) have been given a stone. But I think the arguments in favour of transferability are unanswerable, and it follows that sale of the holding and not ejectment is the proper remedy; even at present it has been held that if a ryot has a transferable interest in his *jote*, he cannot be ejected for non-payment of rent. *Vide* Kristendra Roy Chowdhry *versus* Aina Bewa, 10 C. L. R. 399.

Then with regard to section 56, except in cases of ejectment, section 50 (*d*), and lapse, section 50 (*g*), the only way in which the landlord can acquire the right is by purchase (the two exceptions will evidently be of very rare occurrence). But if he is compelled to treat any person to whom he subsequently lets the land as an occupancy ryot, what consideration has he had for his purchase money? It is said that he may keep the land in his own hands, and cultivate it by labourers or hired servants. But in many cases it might be extremely inconvenient for him to do so. It would require an amount of capital which he frequently would not possess, and even if he did, his tastes and habits might not lie in the direction of practical farming.

In my opinion there is an economic mistake, as well as a serious injustice, in the provisions of this section. I see no reason why land thus acquired should not be considered as the "private" land of the proprietor, the danger stated in the "Objects and Reasons," paragraph 42, seems only imaginary; the new ryots would come in with their eyes open, and even ordinary ryots are substantially protected by the Bill.

CHAPTER VI.

Sections 58-61.—Here again, I think, there is too much interference with private contract, and I think section 61, at all events, is not defensible. Why should a settled ryot, who wishes to take on more land than that in respect of which he has acquired his *status*, be allowed to hold any further land he may take from the zemindar on privileged terms? Of course the section is the natural outcome of the hard-and-fast distinction of all land into *ryoti* and *khamar*, but, as I have already said, it seems to me unjust that a landlord should not be permitted to turn *ryoti* into *khamar* if he has obtained the *ryoti* right to it by legitimate means. The preparation of a table of rates will be practically impossible in most places, the rates varying so much even in comparatively restricted areas.

Section 78.—The period of 10 years laid down in this seems too short. Any change ought, I think, to be absolutely prohibited for at least 20 years.

Section 79.—There ought to be a ground added to this section allowing the ryot to claim a reduction on the converse of the ground stated in section 74 (1), *viz.*, that the rent paid by him is above the prevailing rate payable by ryots of the same class for similar lands in the vicinity.

CHAPTER VII.

Under section 88 it is not clear but that an absconding ryot, *i. e.* one who has abandoned his cultivation in the village and gone elsewhere, may not still for an indefinite period retain his right to the hut which he has erected on his holding, and which has ceased to be of any use to himself or to any one else when he has abandoned it. Right to the *bastu* ought not to survive rights to the cultivable land when the latter is abandoned.

Section 90.—Ejectment for forfeiture should be allowed; *vide* note to section 50 (*d*).

CHAPTER VIII.

The provisions of this chapter are entirely novel, and most of them seem to me to furnish very reasonable ground of complaint to the landlord. The limit to the amount of rent demandable under section 89 (read with section 119) seems very low, and I question whether the law should fix any limit.

Section 90 (*b*)—Pre-supposes that there will be a written contract, which in most instances will not be the case; and compensation for disturbance imposes a penalty on the landlord for exercising an admitted right. With regard to compensation for improvements, there will, as a rule, be no improvements in Bengal, except the ryot's hut or homestead, which, though dignified with the name of an "improvement" in section 126, is a very questionable one from the landlord's point of view. It is not as if the ryot built a substantial farmhouse and out-houses as in Europe, which would be of use to an incoming tenant; it will consist only of a list of thatch and fencing and a *bhita* which the next comer will probably prefer not to take over at all, but to raise a new one for himself. Still the owner is entitled to something for it, and this provision is therefore, I think, equitable enough. If the principle of compensation for disturbance be retained, I think it should only be allowed where the Court considers the enhanced rent demanded to be grossly unreasonable.

Section 91.—It has been suggested, I think very reasonably, that it should be declared that failure to prove service of the notice should not cause the suit to be dismissed. The service or non-service might be taken into consideration in determining the question of costs, or the time from which the enhancement should commence.

CHAPTER IX.

Section 96.—Alteration of rent on account of excess or diminished area *ascertained by measurement* seems to be left out of the Bill. Sections 18 and 19, Act VIII of 1869, specified them as grounds of enhancement and abatement. I do not know whether their omission from the Bill is intentional. I find no explanation of this in the "Objects and Reasons."

I would omit section 101 as tending to unnecessary trouble and complication. If the ryot gets the receipt specified in section 100, he cannot want anything more. The particulars required by section 101 seem to correspond very much with those contained in the ordinary *jumma-wasil-baki* papers, which the zemindar will probably keep for his own convenience; but if the ryot gets the receipt to which he is entitled by the preceding section, he should not be allowed to harass his landlord by putting him to the expense of an extra establishment for furnishing "extracts of account," and subjecting him to prosecution for neglect to do so. This section will operate as a real hardship on zemindars, with no corresponding advantage to the ryot.

Section 102.—My experience in rent suits has led me to the conclusion that there is nothing more important to the interests of the ryot (and indeed of the landlord too, though he does not always think so) than a proper system of receipts. The form in section 100 seems an admirable one, and the retention of the amount of *jumma* (clause *f*) should be insisted* on. I am sure I am within the mark when I say that three-fourths of the cases I have had to deal with in this district, between landlord and tenant, arise from dispute as to the amount of *jumma* in each case payable. Pottahs and *kabulyats* being unfortunately as yet comparatively rare, there is nothing to decide the point, but unsatisfactory oral evidence and such confirmation thereof as may be found in the zemindar's papers. The introduction of clause *f* will be a great boon to the ryots, and, considering the importance of it, I would make the punishment of the landlord much more severe than that laid down in section 102, which seems to me entirely inadequate. In most cases it will not be worth a ryot's while to put himself to the trouble of prosecuting for such a petty sum as double the few annas for which a receipt has been withheld. We may be sure that the costs he would obtain in the suit, even if he won it, would not reimburse him. The force of these remarks will be more evident if we bear in mind the exceedingly small *jummas* of most of the ryots; six millions out of 10 paying less than 5 a year—*vide* Mr. Justice Cunningham's minute. I would make the withholding a receipt for

* NOTE.—*I* would modify this by adding "in the case of settled ryots." It has been pointed out to me that in some yearly lettings called *utkapara* in this part of the country, corresponding, I believe, with the *utlandi* in Nuddea, the rent depending on the area found on measurement to have been cultivated by the ryot, it is not usual for the landlord to prepare his jummabundi till late in the year. Payments will, however, have been made before that by the ryot, and in receipts given for such, it will not be practicable to enter the amount of the jumma.

any sum a high misdemeanor, punishable with fine extending to (say) Rs. 500, out of which the ryot should be reimbursed full costs of suit besides penalty.

Section 125.—There is no provision in the Bill corresponding to sections 57, 61, 64, and 65 of Act VIII of 1869. It ought to be distinctly laid down whether, in the case of arrears of tenure, the landlord's remedy is to be confined solely to the sale of the tenure, or whether he can also proceed against other property of his debtor, and if so, whether before or after sale of the tenure. In this connection, I would call attention to a recent important ruling of the High Court, I. L. R. VII, Calcutta, 748, which certainly interprets the law differently from the way in which it had been previously understood. The omission of all reference to the subject in the Bill may give cause to much difficulty, and there ought, I think, to be an authoritative exposition of the law on it.

CHAPTER X.

Sections 126-8.—I doubt whether either party will make much use of these sections. I must say that the provisions generally of the Bill hold out but little inducement to the landlord to make improvements (which others will reap all the benefit of), but the principle contained in these sections is undoubtedly novel. They may be beneficial, but they upset existing ideas. Permission to dig a well or excavate a tank has hitherto been held a high prerogative of the landlord. There will no doubt be loud complaints on this point. The principle is objectionable, chiefly, I think, because it confers a right on the ryots which they would never have thought of claiming themselves, and I think reforms in this direction should only be where the people themselves demand them.

Section 129.—I do not know whether the word "predecessor" in clause 1 is designedly in the singular number if it includes the plural, as it may, by section 2, Act I of 1868, I think. Some limit of time within which the improvement must have been made should be laid down.

Section 133, proviso.—In cases of increase or loss to his property by alluvion or deluvion, it might be a hardship to prohibit the landlord from measuring again within 10 years.

CHAPTER XI.

This chapter is intended to apply to *all* classes of ryots. I would, for reasons already given, exclude ordinary ryots from its operation. I think Government should not interfere with the zemindar's power of contracting with them on any such terms as may be mutually agreed on.

I confess I do not quite understand the distinction between rents subject to alteration by order of a Court and rents not subject to such alteration. Will the Revenue Officer have the power of deciding what tenants' rents fall within each class? His decisions in the latter class of cases will have little finality, their correctness being merely presumed until anybody shows the contrary in a civil suit. Litigation will therefore be hardly, if at all, prevented in this class of cases.

In the other class he should either not interfere at all, or his powers should be more extensive. It may be right that he should have a discretion to refer cases to the Civil Court under section 155, but I think the powers of revision given to the latter by section 160 are much too large. The matters referred to in clauses (*a*), (*b*) and (*c*) are surely ones in which the Revenue Officer, who it is to be presumed will visit the spot, measure the ground, &c., will be in a better position to decide than the Civil Court. The period of 10 years in section 160 should be extended to 20. It is of the utmost importance that people should not be harassed by liability to frequent change in these matters.

CHAPTER XIII.

I am not one of those who would recommend the abolition of distraint. It is in many cases, even in Bengal, absolutely necessary to the legimate security of the landlord, who ought to have a first charge on the produce of the land. I have observed in the printed reports of discussions in Council and elsewhere that very little objection has been taken on any side to the provisions of this chapter. Two of them seem absolutely necessary to be maintained.—(1) That the landlord must not himself be allowed to interfere in any way with the distraint (except in applying to the Court for it), wich must be entirely carried out by the Court's officers. (2) The penal provisions of sections 185-6 which are necessary to give effect to the former principle.

In section 167 (2), I think the court-fee should be eight annas only. That specified is too high a tax on the landlord. He has not yet the benefit of a full adjudication of his claim, as he may afterwards have to defend a suit under section 181 (4).

CHAPTER XIV.

The arguments against furnishing zemidars with any summary remedies for the recovery of arrears rent are certainly difficult to be answered. Chapter XIV simplifies the existing procedure a little, and section 199 is no doubt a wholesome provision; but still the fact remains that numbers of ryots withhold their rents with no excuse whatever, and Chapter XIV will not have much effect on them. They simply decline to pay until they are forced, and I have heard it explained how it pays them to do so. The first thing is that they gain time. They know there will be a good deal of delay before the landlord can get his

case ready for Court, and after the plaint is filed, they know there will be a good deal of further delay before they are called on to appear, and still more before the case is decided, especially as the Rent Munsif's files are so heavily blocked (I am of course now speaking of this district only). There then will be the time taken in appeal, and finally the chance of a successful claim by a friendly neighbour to the property attached in execution. The above proceedings may be easily spun out for a year, and frequently longer even in cases where there is absolutely no defence; and I am afraid that even under Chapter XIV the delay will not be much curtailed. The danger of allowing zemindars the summary powers exercised by the Collector in *khas mehals*, &c., under the certificate system, has of course been amply demonstrated. There is one suggestion, however, which I would make bold to offer, *viz.*, that in any suit where the zemindar produced a decree shewing that the *jumma* claimed by him had been awarded by the Court against the defendant within (say) three years of suit, with a declaration on oath that it had since been due and unpaid, and submitted his *jumma-wasil-baki* or similar papers to the Court's inspection as proof thereof, a decree for the amount should forthwith be passed, subject to the condition that execution be at once taken out, the defendant to be heard summarily on any objection made by him. Something like this would, I believe, work well in this district; the only defence would in nine cases out of ten be a plea of payment, which, under the now stringent rules as to accounts and receipts, ought to be settled at once without difficulty. There should be no appeal by the defendant unless he paid the amount decreed into Court.

Section 196.—Evidence should be taken down *verbatim* whether an appeal is allowed. If this section stands, Appellate Court will be placed in a very difficult position, somewhat as they are at present, in appeals in summary trials under the Criminal Procedure, where, on the meagre depositions on the record, it is often impossible to say whether the first Court was right or wrong. Abbreviation of the evidence will be no help, but the contrary, to the Appellate Court. If the section stands, I am sure there will be many remands on this score.

Section 198.—It is probably thought that the limitation of power to appeal is a provision which will operate chiefly in favour of the zemindars. My experience does not lead me to that conclusion. The Court of first instance (by which I, of course, mean the Munsif's principally), according to my experince, favour the ryots as a class more than the zemindars. Restrictions on the power to appeal would, I believe, be felt as a greater hardship, therefore, by the latter than by the former. The provisions in section 198 (*a*) seem unimpeachable. I almost think (*b*) would be better omitted. A Munsif so vested would be under great temptation to become either a "zemindar's man" or a "ryot's man," and the District Judges work would be enormously increased by the last proviso of the section, which would be sure to be worked so as to give him as much trouble as if there was an appeal in every case.

Section 200.—Nor would I allow a landlord to sell his right to the rents to any one but his successor in interest as landlord. Temporary tenure-holders, such as *ijaradars* and *dur-ijaradars* for short terms, often sell to speculators their rights to the rents from the ryots for one, two or three years. This should I think be prohibited. Chapter VIII of the Transfer of Property Act seems to sanction the practice, but does not give adequate protection to the ryot.

CHAPTER XVI.

I would draw attention to the note in Mr. Field's Digest, pp. 56-7. It may be, if *exclusio mims is expressio alterins*, that section 225 may be held to mean that, with the exception of sections 7, 8 and 9 of the Limitaiton Act, the provisions of that Act generally apply to suits, &c., under the Bill. If so, there will be no difficulty, otherwise there ought to be an express declaration to that effect. It seems doubtful, however, whether it would be expedient to extend the provisions of the Limitation Act generally to suits, &c., under the Bill. Some sections of the Act no doubt ought to be so extended, such as section 5, paragraph 1, sections 12, 17, 18, 22 and 25. There are others which are more doubtful, *viz.* section 5, paragraph 2, which is opposed to section 103, Act VIII of 1869 (B.C.), and perhaps section 14.

SCHEDULE III.

There is such a remarkable unanimity amongst all those whom I have consulted on the necessity for the insertion of some provision to protect putnidars from exactions on the part of zemindars (or rather of their servants), that I have thought proper to notice the matter, though I myself thought section 14, clause 1, sufficiently provided for it. I have, however, been assured that the Collector does not consider himself at liberty to receive amounts tendered under that section, but refers the parties to the zemindar's amla, who invariably refuse to receive it, and stop the sale, except on receipt of a gratuity amounting sometimes to so much as 10 per cent. on the deposit

---

No. 450, dated Bankoora, the 16th May 1883.

From—Baboo Brajendra Coomar Seal, District Judge of Bankoora,

To—The Registrar of the High Court of Judicature, Calcutta.

With reference to your No. 1157 J. of the 23rd ultimo, calling for an expression of opinion on the provisions of the Rent Bill, I have the honour to submit as follows.

2. The Bill is in some respects an improvement on the Bill drafted by the Rent Commission; and, generally speaking, I approve its provisions.

3. On going through the Bill, what has suggested itself to me I proceed to note for the consideration of the Court:

CHAPTER I.

4. *Section 3, clause (3), Tenure*—Ryots of the class described in section 14 ought not to be brought under the category of tenure-holders. Paragraph 13 of the Statement of Objects and Reasons explains that it is necessary to call them tenure-holders, simply because it is convenient to do so from the draftsman's point of view; but in course of time the ground on which they have been called tenure-holders would be lost sight of, and they themselves would lose the privileges of a ryot.

5. *Section 3, clause (10)*.—Perhaps it would be better to put it in the following form: "Rent" means whatever is payable in money or deliverable in kind, &c.

6. *Section 3, clause (13)*.—The definition, as contained in the Rent Commission Bill, I consider to be better.

7. Each of the members of a joint-family, consisting of five brothers, may grant a lease with respect to his undivided fifth share in any land. In such a case it would be doubtful whether the *holding* under each of the brothers would come under the definition of the *holding* as given in the Bill. The words "*a parcel of land*" are objectionable.

CHAPTER II.

8. *Section 6*.—The presumption contained in the latter part of this section, if allowed to remain, is likely to create difficulty. Thus A, a ryot, sues to recover possession of land, saying that it is his *ryoti* land; the landlord contends it is *khamar*: A, as plaintiff, ought to start the case. He would be able to prove that it is not *khamar* by producing an extract from the papers relating to the measurement provided for by the Act, as well as the landlord would. Under such circumstances, it would hardly be fair to call upon the defendant in the first instance to disprove the case set forth in the plaint.

9. *Section 7*.—Opportunity may now be taken of making provision for the registry of tenures and the occupancy ryot's holding, on the line of the Land Registration Act (Act VII of 1876). Every sub-divisional office ought to have a register of all tenures within its jurisdiction, and every rural Registrar's office a register of the holdings of all settled ryots, in the same way as the District Collector has in his office a register of all revenue-paying and revenue-free properties.

CHAPTER III.

10. *Sections 16 and 17*.—These sections ought to come under section 15 as Explanation I and Explanation II, respectively. That was the position accorded to them by the Rent Commission.

11. *Section 25*.—It ought to be made clear that the permanent tenure is also *heritable*.

12. *Section 27, sub-section 2, clause (b)*.—The fee provided for by this section seems to be high. It will be sufficient if it is made double of what is laid down in clause (*a*).

13. *Section 27, sub-section (3)*.—Some provision ought to be made when the landlord refuses to give his reasons in writing.

14. *Sections 28 and 32*.—Instead of Revenue Officer, I would prefer Civil Court; at any rate, a wider latitude may be left for the Local Government by substituting the simple word *Officer* for *Revenue Officer*.

15. Throughout the Bill it is provided that a man should first go to the Revenue Court and then to the Civil Court. This procedure will not only be expensive, but also inconvenient. The best course would be at once to go to the court where he will get the final relief. I say inconvenient, because the limits of the sub-divisional jurisdiction are oftentimes more expensive than those of the Munsifs, and therefore the sub-divisional offices are not as easily accessible to the people as the Munsifs are.

16. *Section 29*.—This section will clash with section 312 of the Civil Procedure Code. It will perhaps be better to leave the auction purchaser to follow the course laid down for a private purchaser. That will be reasonable, and it will at the same time secure uniformity of practice.

17. *Section 30*.—There ought to be an application to serve the purpose of a reminder, otherwise mistake is likely to occur in the case of owners of extensive properties like the Maharajah of Durbhunga or the Maharajah of Burdwan. It will be more business-like to make it incumbent on the purchaser to make an application, but without fee.

18 *Section 31*—Instead of jointly *and* severally, it would, I think, be better to say jointly *or* severally. When two persons are jointly *and* severally liable, both of them must be sued, and the decree may be joint and several; but it is doubtful whether the one or the other may be sued separately. My object in proposing *or* for *and* is to leave it open to the landlord to sue both or either. If the phrase "jointly *and* severally" would not stand in the way of a suit being brought against either the one or against the other, or against both, I have no objection to allow the section to stand as it is.

19. *Section 44*.—By custom, having the force of law, the phrase "*having the force of law*" has been used either as expletive or as definitive. If it has been used as an expletive, it is liable to be mistaken for a definitive phrase. If it has been used as definitive, it will create

difficulty in practice. I think it is better to omit the phrase, leaving simply the word "custom"—custom, to be valid in law, has its well-known incidents.

20. *Section 45, Notwithstanding any contract to the contrary.*—At one time I was of opinion that laws ought not to interfere with contracts, but I now think that without such a provision the object of the law is liable to be defeated. I therefore approve the section as it is.

21. *Section 46.*—One year seems to be too short a period. In anology to the limitation in cases of prescription, I would make it two years. Then "*ceasing to hold ryoti land as a ryot*" ought to be explained or illustrated, otherwise difficulties will arise in practice. When the ryot does not cultivate, but continues to pay rent, will he be considered to have ceased to hold as ryot?

22. The period of one year, or whatever the term may be, must be *continuous*. It is therefore desirable to add the word *continuous* before "period."

23. The Bill protects two classes of ryots, *viz.*, (1) ryots who have held lands in a village for a period of twelve years, though it may not be the same land, and (2) ryots to whom occupancy right has been granted by deed; but it gives no protection to a class of ryots who are, as a matter of fact, looked upon as superior in rank to many coming under the first class, *e.g.*, a tenant who has for twelve years held different lands of the same village as a *bhag* tenant, he will obtain the rights of an occupancy tenant; but one who has resided in the village for eleven years and cultivated the land of that village for eleven years, and has given ample proof that he intends to live permanently in the village, is not protected. The custom under section 4 would not help him, because, since the passing of Act X of 1859, there has been an interruption of the custom which protected *khudkasht* ryots, and one of the incidents of custom is that it must be uninterrupted. He may no doubt acquire the rights of an occupancy tenant by deed under section 48, but landlords are not likely to favour such grants.

24. I would be satisfied if a section were inserted between section 48 and section 49, to to say that, when a ryot cultivates the land of a village and lives there, and intends to live there permanently, he will also be considered settled tenant, with the right of occupancy, notwithstanding any contract to the contrary.

25. *Section 49.*—*Under a lease for a fixed period.*—A holds *khamar* land without any engagement for five years. After the expiration of the five years, he takes a lease of the land for a fixed period of thirteen years. Here, when the lease has run for seven years, A shall have held the land for a period of twelve years. He would not, under the section as it stands at present, acquire the right of occupancy, because he has held it for a portion of twelve years under a lease for a fixed period. The section ought to be made more clear, so as not to lead to such a conclusion.

26. *Section 50.*—I approve the rights proposed to be given to occupancy tenants. At one time I held that, to keep the ryots at a safe distance from the mahajuns, it would be wiser to make the interest of an occupancy ryot not mortgageable. I give up that idea and accept the incidents as they are laid down in this section. I object only to the proviso to clause (*g*) as being unwise and unstatesmanlike. The words "proprietor of the soil" in the Regulations of 1793 have given rise to a good deal of misconception. This proviso, which virtually makes the landlords represent the Crown in certain respects, is likely to give rise to further misconception in future. The practice, as it obtains at present, is that the Crown does not exercise its right by escheat with respect to *mal* land; that practice may be continued, and it will serve the purpose of the said proviso.

27. *Section 50, sub-section (1).*—Instead of the *Office of the Collector*, I would substitute *Civil Court*, as ultimately he shall under sub-section (3) have to come to the Civil Court. To go from one office to another for a matter like that would cause delay and trouble. The matter ought at once to be settled by the Civil Court.

28. Instead of *one month from the date on which he files the notice* in sub-sections 1 and 3, I would make it 15 days from the date of the service of notice, making it discretionary with the Courts to extend the period on satisfactory grounds.

29. *Sub-section (4).*—*Within six months from the date of sale.*—The period of the limitation ought to be the same as that fixed for cases of pre-emption (Article 10, Schedule II of the Limitation Act), *viz.* one year.

30. *At a price ten per centum below its estimated value.*—This is a very wise provision and I support it. It will serve as a self-adjusting safety-valve.

31. *Section 54, sub-section (1).*—For the office of the Collector I would make Civil Court.

32. *Sub-section (3).*—For *one month from the date on which the notice is filed*, I would make *fifteen days from the date of the service of notice.*

33. *Sub-section (4).*—For 'within six months,' I would propose one year.

34. *Section 55.*—*Claim to purchase from the legatee or any other person, &c.*—Exception ought to be made in cases where the tenant, with a desire that the property should remain in his family, bequeaths it to his widowed sonless daughter, or widowed daughter-in-law, who, though not heiress-at-law, are still the objects of his affection, and whom he looks upon as members of his family.

35. *Section 59, sub-section (1), Chapter VI.*—"*Approved of, and registered by, a Revenue Officer appointed by the Local Government in this behalf.*"—The plan is not likely to work

satisfactorily if the section stands as it is. I would modify it thus: "Approved by the Court in which a suit for the enhancement would lie, and registered under the Registration law after approval."

36. *Sub-section* (2.)—The standard is perhaps low; it may be raised to eight annas, one-fourth of the estimated average annual value of the produce respectively.

37. *Section 61, sub-sections* (1) and (2.)—I would omit both these sections. So much interference is not necessary.

38. *Section 62.*—The greatest care is necessary to prepare the table of rates, and the local area taken must be limited in extent. A table of rate made without due care and circumspection, and for large areas, is likely to do more mischief than good. The preparation of the table of rates ought to be entrusted to the Rent Suit Munsifs. Although provision is made for the preparation of table of rates by Revenue Officers under the superintendence of the superior Revenue authorities, much will depend upon the exertions of the officer doing the original work, and if that is clumsily done, the Appellate authorities will feel great difficulty in altering it without holding another local investigation.

39. Without detracting the least from the merits of the Revenue Officers, it can be confidently asserted that such tables are likely to be better prepared by Munsifs who have been accustomed to try enhancement suits than by officers new to the work. At any rate, for the present, for *Revenue Officer* in section 62, it may be put down simply *officer*.

40. Instead of the assessors being appointed by the Local Government, it will be better to leave it to the landlord and the ryot, each to select one assessor.

41. *Section 74, clause (2)—From causes not merely temporary or casual.*—Temporary or casual causes may produce permanent improvement. The language ought to be clearer.

42. I approve the rules contained in sections 76 and 78.

Section 79, sub-section (1).—Bonâ fide contracts entered into before the passing of this Bill ought to be saved.

43. *Sub-section (1) clauses (a) and (b)—Have decreased from cause beyond the ryot's control and not merely temporary or casual.*"—The words "temporary and casual" have evidently been employed to mean that there has only been a temporary or casual decrease of the productive power; but according to the grammatical construction, the words temporary or casual refer to "cause." From temporary or casual cause there may be permanent decrease in the productive power. The language ought to be made clearer

44. *Section 82, sub-section (2), clause (b).*—Instead of five years I would make it ten. Sometimes high price prevails for years. There will be no difficulty in getting ten years' price-current, as the Bill provides that price-currents should be annually made and published.

CHAPTER VIII.

45. *Sections 91 and 92.*—If a section such as I have proposed in paragraph 24 be added, I have no objection to these sections; otherwise I would strongly oppose the applicability of these sections to the class of ryots mentioned in that paragraph.

46. *Section 93, sub-section (2), clause (b).*—The compensation for disturbance appears to be high: I would reduce it considerably. I would make it one year's rent, *i.e.*, the increased rent.

CHAPTER IX.

47. *Section 96, sub-section (2).*—The principle laid down in sub-section (3), regulating decrease, ought also to regulate the increase.

48. *Sections 97 and 98.*—In the absence of agreement and custom, the tenure holders ought to be made to pay their rent fifteen days and the ryots one month before the Government revenue payable on account of the estate to which the tenure or holding appertains becomes due; and when the tenure or holding forms part of a revenue-free property fifteen days or one month, as the case may be, when the road-cess on account of such property is payable.

49. *Section 100, sub-section (4).*—It will be useful to have the acknowledgment of the recipient on the counterfoil, when that is practicable.

50. *Section 102, sub-section (3).*—I would omit that sub-section, and substitute in its place a rule like this. If the landlord fails to produce with his plaint, in a suit for rent, the counterfoils for the previous three years, the plaint shall be rejected.

51. *Section 103.*—Payment of rent by post office money order ought to have legislative sanction. If a column in the money-order form be added to shew on what account the money-order is being sent, it would admirably suit the convenience of the ryots without causing any inconvenience to the landlord.

52. *Section 106, sub-section (1).*—In clause (c), section 103, is the officer to make any sort of investigation before ordering payment? In such cases the parties ought invariably to be referred to a suit.

53. *Section 108.—Liable to interest at the rate of 12 per cent. per annum.*—Some discretion ought to be left to the Court to meet exceptional cases; for example in years of famine, when the ryot is unable to pay, it would be very hard to decree interest at 12 per cent.

54. *Section 112.*—For Collector I would make Civil Court.

55. *Section 114, sub-section (2).*—First to the Collector and then to the Civil Court would be a tedious process, it ought at once to be disposed of by the Civil Court.

CHAPTER X.

56. *Section 128.*—An ordinary ryot is not likely to make any improvement, but his right to improve, in the same way as a settled ryot would, ought not to be restricted in any way by legislative enactment.

57. *Section 129, sub-section (4).—Unless it is shown that the landlord, &c.,*—I would omit that provision. That is likely to do more mischief than good.

58. *Section 130.—The Local Government may make rules with respect to assessors.*—The Bill itself ought to make provision for the appointment of assessors on the line of the Land Acquisition Act, and it ought not to be left to the Local Government to do.

59. *Section 133.—Except land entered in the general register of revenue-free lands prepared under the Land Registration Act, 1876.*—Landlords ought to have the right of measuring such lands when it is geographically situate within the limits of their estate. Without the measurement of the whole estate the *chita* cannot be complete. The measurement of such lands does no harm to the rent-free holder.

59. *Illustration to Section 133.*—So long as the putni continues, A ought not to have the right of detailed measurement, requiring tenants' attendance.

60. *Section 138.*—The Civil Court ought to decide it on evidence. If any officer under the Collector has special knowledge, he may be examined as an expert.

61. *Section 139, sub-section (1), clause (b).*—"*Unless the holding is let to another person for the agricultural year following the surrender.*"—I would add: *or the landlord brings it under khas cultivation.*

62. *Sub-section (2).*—All such notices would at once be served through the Court.

63. *Section 141, sub-section (1), clause (a).*—This will have the tendency of making *ryoti* land *khamar*. I would omit section 141 altogether, leaving the matter to be governed by the general principles of law.

64. *Section 150.*—Transfer of portion of a holding ought not to be void in law. The old tenant and the transferee may be jointly liable for rent; or if the landlord does not choose to recognize the transfer of a portion, the old tenant's liability may continue.

CHAPTER XIII.

65. I approve the rules contained in this chapter. Ghatwali lands have been declared by the Privy Council not to be liable to sale even for arrears of rent. The provisions of this chapter will be of great use to the receiver of the rent of ghatwali lands.

66. *In section 167, sub-section* (2), the court-fee proposed to be charged ought to be reduced to half.

67. *Section 179.*—The officer holding the sale ought not to be allowed to distribute the sale proceeds; the Court ought to do it.

CHAPTER XIV.

68. *Proviso to Section 198.*—'Substantial error' is a very vague expression. It ought to be explained that a wrong estimate of the evidence is not a substantial error, otherwise District Judges will be moved in almost every case to call for the record. To discourage useless applications, court-fee for applications to call for records ought to be levied, as in petition of appeals.

69. *Section 199, sub-section (3).*—This sub-section may be omitted as unnecessary. When the money is deposited under sub-section (2), it may be looked upon as a deposit under section 103 (c).

70. The provisions of section 202 I consider to be very salutary.

71. *Section 214.*—The notice ought to be served through the Civil Court.

72. *Schedule IV, Article 2, column 3.*—Instead of date of deposit, ought to be date of service of notice, as in section 31 of the present Rent (Act VIII (B.C.) of 1869.)

73. In conclusion, I regret that I was not able to send this report on the 14th instant.

No. 63A, dated Sealdah, the 15th May 1883.

From—BABOO MOHENDRO NATH BOSE, Judge, Court of Small Causes, Sealdah,

To—The Registrar of the High Court, Calcutta.

With reference to your letter No. 1157K, dated the 23rd ultimo, I have the honour to submit the accompanying few hasty remarks on the Bengal Tenancy Bill.

2. The time allowed was short, nor could I deal with the subject as it deserves. I have simply jotted down my opinion on the provisions generally, hoping the same would be acceptable to the Court.

Bengal Tenancy Bill, 1883.

The scheme disclosed in this Bill is, to my apprehension, simply for the protection of the ryot. Its object is to protect him from ejectment and from undue enhancement.

2. With reference to ejectment, it proposes for the separation of ryoti lands from the *khamar* lands by cadastral survey; and provides that the ryoti lands should ever remain as ryoti and could never be turned into *khamar* by the zemindar. Such lands have therefore been made transferable by sale, and if the zemindar be the purchaser, it is provided that he should let these lands again to ryots.

3. The ryots again have been divided into what are called settled and unsettled ryots, but the tendency of the provision, as far as I can see, is to make them all settled ryots, with right of occupancy and power of transfer in course of time.

4. Such is the scheme, and I can only say that it vitiates very much with the law as current, and the traditions and ideas of men on the subject. This is in fact turning the ryots in a body into present proprietors. I do not know how this would work in the country, but in my opinion it bodes no good. The independent peasantry without a local controlling power is likely to abuse this privilege, would prey on each other, and may in an odd hour rise against the Government.

5. Again I see much difficulty in the way of dividing the lands between the ryots and the zemindars. As far as my experience goes, there are several lands which cannot be so divided, such for instance the *shashun*, *vagar*, *debattar*, and *gochurun*, &c., which enter so much in the economy of almost all Bengal villages. These are what may be styled the *commons* of every village, and these ought not to be placed into the *khamar* at the absolute disposal of the zemindar. Again there are waste lands, and lands lying uncultivated which are taken up by ryots at option, and are assessed by the zemindar at the time of harvestry; such as is the case of *atbundi* lands so prevalent in Nuddea and other districts. These lands are neither *khamar* nor ryoti, but became one or the other according to circumstances. Again in Behar the *basget*, the *bagat*, the *tar*, &c., lands do not bear any rent, but are held and enjoyed by the ryots at the option of the zemindar. If these lands are placed in the category of *khamar*, as they no doubt are, incalculable mischief would be done to the ryots. These and several other similar considerations which I need not dilate here, incline me to believe that the contemplated survey would be to a very great extent a failure.

6. Next as regards enhancement, I need not say anything regarding the enhancement of rent of tenure-holders, as these seldom occur and are generally regulated by the contract between the parties. As regards the other class namely the settled ryots, the provisions in the Bill do not appear to be adequate, where there is no ascertainment of the rates by the Revenue authorities; the old formula of proportion is to regulate, and where there has been ascertainment of the rates, the Courts to assess according to a maximum and minimum scale. So that for some time, at least until the Revenue authorities settle and ascertain the rates, the same state of things would continue, and the irritation between the landlords and ryots in no way be abated.

7. The most important feature of the Bill, and whose want was much felt, is the limiting of the enhanced rent to double the former rent, or to a fifth of the gross produce in money value. I think this is fair and just to all parties. But I would have better liked if the share had been a fourth than a fifth. A *chowth* is the customary rate, and the zemindar has always laid claim to such a share in the case of trees grown by the ryots and in the sale of ryoti land.

8. *Section 119* provides for the conversion of the rent in kind into rent in money. Hitherto the landlords enjoyed and the ryots ungrudgingly paid them a half share of the produce of lands which are never permanently taken up by the ryots. The section limits such share to a five annas of the gross produce. Considering that these lands do not yield produce every year, and that the ryots cultivate them more as a speculation than otherwise, I do not see why the zemindar should not have his eight annas as before, when the produce is more the result of accident than exertion of the ryot. There are many swamps and marshy lands that are let away in this manner. Ryots who let out their lands to under ryots in the *vag* form, deserve a greater share of the produce when they themselves have to pay more than three annas to landlord according to the scheme proposed.

9. The Bill ignores private contract in many places. This is to be regretted. The privilege of demand and supply ought to regulate lands as in the case of other property. If the zemindar has the absolute property in any portion of the land comprised in his zemindari, I see no reason why the law should step in to regulate the disposal of such property. Waste lands and such others which belong to no ryot ought to be left at his absolute disposal, when the reclamation of such entails much outlay of capital. If encouragement is not held out to the zemindar in such cases, there will be a cessation of all improvements in the future.

10. In conclusion, I think some power ought to be left to the zemindar in dealing with the ryots, instead of turning them to mere rent collectors. They have ever been an honoured class, and the ryots have ever looked upon them for advice, protection, &c. It is not politic that such a class be reduced into insignificance. Disaffection and disturbance, I fear, will be the necessary result, and the country will not fare the better in the long run.

Dated Krishnagore, the 25th May 1883.

From—BABOO AMRITA LAL CHATTERJEE, Subordinate Judge, Nuddea,

To—The Registrar of the High Court, Appellate Side.

With reference to your letter No. 1157M, dated the 23rd April 1883, I have the honour to make the following remarks on the Bengal Tenancy Bill.

After the discussion which the matter has undergone in the press, in the Council, and in the several Commissions appointed by Government, it is idle now to question the necessity for legislation on the subject.

The Government by introducing the Bill, has clearly admitted such necessity, and the Hon'ble Krishna Das Pal, the representative of the zemindars in the Council, has also admitted it.

The only point of difference between the Government and the zemindar on this question, is that the former holds that there is necessity for a general revision of the law of landlord and tenant, whereas the latter contend that legislation should be confined to the point of giving facilities to the zemindar for the speedy realization of rent, and effective enhancement thereof.

The zemindars loudly complain that the machinery of the Courts is not sufficiently effective to enable them to realize their rents in time to pay the Government revenue, and that the present law for enhancement of rent is practically unworkable.

The ryots unquestionably an ignorant set of people have no organ in the press, nor a representative in the Council, still their complaints are sufficiently loud to reach the authorities.

The complaints embrace the following points—arbitrary evictions, imposition of abwabs and illegal cesses, illegal attempts to increase rents, withholding of proper receipts for rents, and in some places the abuse of the power of distraint.

I think it has been pretty well established that the complaints of both parties are generally speaking not without foundation. Those who have any experience of the mofussil, know that it is almost impossible for the zemindars now to enhance their rents through the machinery of the Courts, and that in consequence they resort to all sorts of illegal means to accomplish their object. The result of all this is that illegal exactions and arbitrary evictions have not at all diminished. It is believed by some, who are competent to form an opinion on the subject, that these have increased in some places.

These oppressions are not unfrequently practised by landlords in cases where they have not the slightest shadow of a right to claim enhancement of rent.

Far be it for me to say that all zemindars are oppressive, or even that all the most oppressive landlords come from the class of zemindars, properly so called.

Besides the zemindars, there is the great body of the talukdars and other tenure-holders, who own interest in land, intermediate between the zemindars and the cultivators.

These intermediate holders are both rent-payers and rent-receivers; they are tenants as well as landlords. It is not unoften the case that the greatest oppressors of the ryots belong to this class of intermediate holders.

When the complaints of both parties, on so many important points, are generally well founded, it is clear that a general revision of the law of landlords and tenant is imperatively necessary.

Whatever opinions may exist as to the details of the Bills now before the Council, the general principle which underlies it seems to me to be sound.

The two main objects of the Bill are (1) to give reasonable security to the tenant in the occupation and enjoyment of his land, and (2) to give reasonable facilities to the landlord for the settlement and recovery of his rents.

From what Rai Krishna Das Pal, Bahadoor ,has said in Council, it is quite clear that even he is prepared to admit that the Bengal ryot is entitled to have what is popularly called the three Fs. secured to him. But what he contends is that the three Fs. have their fullest operation here.

That is a question in which different people may entertain different opinions. But what I am at present concerned with is in shewing that even the representative of the zemindar practically admits that, notwithstanding the provisions of the permanent settlement recognizing the zemindars as the absolute proprietors of the land, the ryots are entitled to have the three Fs. secured to them. The Hon'ble Member does not deny the authority of the Government to legislate for the protection and welfare of the tenants and ryots. When he admits that the permanent settlement regulations constitute the charter of both landlord and tenants, and when chapter I, section 8, Regulation I of 1793, provides that the Governor-General in Council will, whenever he may deem it proper, enact such regulation as he may think necessary for the protection and welfare of the dependent talukdars, ryots, and other cultivators of the soil, the conclusion inevitably follows that the Government is bound to interfere for the protection and welfare of the ryots and dependant talukdars when the circumstances of the case require such interference.

The only question, therefore, that remains to see is, whether the circumstances of the case require such interference.

The result of the several commissions shews that there is necessity for such interference.

It is contended on behalf of the landlord that the principle involved in the Bill is a redistribution of property; but the answer which His Excellency the Viceroy has returned that this Bill is a Bill for the restoration, rather than for the re-distribution, of property, is complete and conclusive.

The Bill involves several questions of a complicated nature. Land questions are always and everywhere complex and difficult of solution. They are more so in a country like India, where the known principles of political economy can hardly have free play; custom, caste, and religious prejudices offering so many obstacles to their having full scope. I cannot, therefore, venture to handle the large economic questions involved in the Bill.

John Stuart Mill in chapters 6 and 7 of the Second Book of his Principles of Political Economy has dwelt on the advantages of having a body of peasant proprietors. But in the permanently-settled provinces of Bengal, peasant proprietors entitled to the enjoyment of the whole rents, profits, and wages cannot exist.

But I submit that that is no sufficient ground for disallowing to the great body of occupancy ryots the advantages which they can enjoy consistently with the spirit of the Permanent Settlement Regulations.

With regard to the question of the right of occupancy, I admit that the rule laid down in the Bill is a fair attempt to settle the complicated question. But I beg leave to submit that the rule is, in my humble opinion, open to some objections, the principal of which are, *first*, that it is not wide enough to reach the cultivators of the soil who hold their lands under occupancy ryots, and *secondly*, that it gives to the settled ryot the same rights with regard to lands which he has held for a year as to those which he has held for upwards of 12 years. I propose to deal with the second objection first.

I submit that it is not fair to allow a settled ryot of a village or estate to acquire all the rights of an occupancy ryot in any ryoti land which he may happen to hold as a ryot in that village or estate, irrespective of the time for which he has been in occupation of it. I am fully alive to the force of the able arguments of Mr. Justice Cunningham against the rule which leaves the right to accrue by a precarious growth through a series of years. But this objection would be obviated if the settled ryot were only protected from ejectment and arbitrary enhancement in respect of such lands. When the proposed right of occupancy carries with it under the Bill the incidents of transferability and sub-letting, this provision seems to me to unduly favour the ryot at the sacrifice of the interests of the landlord and the community.

A settled ryot may thus one year manage to rent a piece of ryoti land for a short term for nothing, and in the next year he may be desirous of selling it to another. The landlord, if he wishes to exercise his right of pre-emption, will have to pay to the ryot the market price of occupancy holdings, although the ryot may have done nothing to merit this reward. Some settled ryots may make it a profession to rent ryoti land for a year or so and then sell it for value. Even if transferability of such land be allowable, sub-letting is clearly objectionable; for sub-letting, practically, means rack-renting.

I would, therefore, beg leave to propose that with regard to these lands the incidents of transferability and sub-letting be not annexed to the right of occupancy, unless the ryot has held the land for more than 12 years.

There can be no reasonable objection, however, to clauses, *A, B, C, D, F* and *G*, applying to a settled ryot in respect of such land.

With regard to the second objection, I beg most respectfully to observe that the discussions during the negociation of the permanent settlement, shew that it was accepted as a general maxim that the immediate cultivator of the soil, duly paying his rents, was not to be dispossessed of the land he occupied.

In the letter to Lord Cornwallis, dated 19th September 1792, the Court of Directors observe:—"Our interposition, where it is necessary, seems also to be consistent with the practice of the Monghul Government, under which it appeared to be a general maxim that the immediate cultivator, duly paying his rents, should not be dispossessed of the land he occupied.

Lord Cornwallis, in his Minute of 3rd February 1790, observed:—"Whoever cultivates the land, the zemindar can receive no more than the established rent, which, in most places, is fully equal to what the cultivator can afford to pay. To permit him to dispossess one cultivator for the sole purpose of giving land to another, would be vesting him with a power to commit a wanton act of oppression from which he would derive no benefit."

The above passages make it clear that the intention of the authors of the permanent settlement was to prohibit the wanton and arbitrary evictions of ryots, or actual cultivators of the soil.

It may not be either proper or advisable to invest all cultivating ryots alike with the statutory right of occupancy; but regard being had to the intention of the authors of the permanent settlement, it may not be improper to restrict, within certain limits, the right of the landlord to evict a cultivator from his land.

In the present circumstances of the country, a large portion of the immediate cultivators of the soil are korfa, or under-ryots; and when the Bill recognizes sub-letting by occupancy ryots, the number of these under-ryots will gradually increase.

Sub-letting by occupancy ryots is practised all over the country and has been recognized by our courts. It is neither expedient, nor possible, therefore, to abolish the practice by a legislative enactment.

In an agricultural country like India, where the great bulk of the population are agricultural tenants, whose sons must, in the present circumstances of the country, necessarily live upon and by agriculture, it is almost impossible to abolish by a legislative enactment the subletting of land by occupancy ryots. The population of the country is increasing under the beneficent rule of the British Government at an enormously rapid rate, but the area of culturable land has almost reached its natural limit.

The excess agricultural population must, therefore, derive their lands from the existing holdings:—there will, therefore, be either sub-division, or sub-leases, of the holdings, and probably both.

Those occupancy ryots who have sub-let their lands and have, therefore, ceased to cultivate them, are clearly in the position of middlemen; the drone of society, and the sub-ryots under them, who are the actual cultivators of the soil, are the really useful members of society; they are, therefore, entitled to favourable consideration at the hands of the legislature.

Much discussions took place among the several members of the Bengal Rent Commission as to what advantages should be given to such cultivators.

In the 22nd meeting of the Commission it was decided by the majority of the members that the sub-ryot under an occupancy ryot "shall be protected against arbitrary ejectment by his landlord so long as he pays" his rent.

Mr. Mackenzie proposed to give the sub-ryot sub-occupancy rights, good against the occupancy ryot, but not against his landlord.

The Bill allows sub-letting by occupancy ryots, but it contains no provision protecting the under-ryot from arbitrary ejectment by the occupancy ryots.

I humbly submit, will it not be proper, therefore, to make some provisions for the protection of these classes of ryots; 1st, because on account of their weakness they are specially entitled to the protection of Government, and also because they come within the words used in the letter of the Court of Directors, and the Minute of Lord Cornwallis, referred to above.

I beg leave to suggest that they be allowed to have some sort of sub-occupancy rights which will protect them from ejectment so long as they duly pay their rents. They should, however, be absolutely prohibited from either transferring or sub-letting their lands. As to enhancement of rent, the same rules should govern them that govern the occupancy ryots; but the rate of rent payable by these sub-occupancy ryot ought not to be equal to the rate payable by occupancy ryots.

The provisions in the Bill, prohibiting the parties from contracting themselves out of the land, seems to be judicious. When one of the parties is so unequal to the other in education, wealth, and general intelligence, there can be, properly speaking, no freedom of contract between them.

Instances are not rare where ryots have been cajoled to give up their valuable rights for nothing.

In dealing with what are called the ordinary ryots, the Bill does not go far enough.

In the Statement of Objects and Reasons it has been stated that after a full consideration of the position, it has been determined that the legislation to be undertaken by the Government shall proceed on the assumption that the occupancy right is to be recognized as appertaining only to such tenants as may be shown to be, in some special sense, settled or permanent.

It proposes, however, to fetter the landlord's right to evict an ordinary ryot, with certain conditions.

The rules laid down in section 90, chapter C of the bill, for the protection of these ryots from arbitrary evictions, appears, however, to be opposed to the notions of the people, and unsuited to the circumstances of the country.

The bill authorizes the landlord to evict an ordinary ryot from his holding, in execution of a decree, if he does not agree to pay the enhanced rent demanded, on condition of the landlord's paying to the ryot, within a certain time, compensation for disturbance, in addition to compensation for improvements.

There can be no question about the fairness of the provisions, giving compensation to the ryot for improvements made by him, but the provision, allowing compensation for disturbance, involves a new principle foreign to the custom of the country, and not yet recognized by our legislature in dealing with the questions between landlord and tenants

If the landlord has a right to evict the ordinary ryot, even when the latter agrees to pay fair rents, the former certainly is not bound in equity to give the ryot any compensation for disturbance.

If, on the other hand, the landlord has no right to evict such ryot, so long as he duly pays fair rents, compensation for disturbance will be no adequate remedy to the ryot for such evictions.

I submit that some rules ought to be formed regulating the enhancement of rent of such ryots, and allowing evictions in such cases only if the ryot fails to pay within a limited time the enhanced rent decreed by the Courts.

In the framing of such rules, the legislature might give the landlord more advantages, and the ordinary ryot, less favorable terms than those given in the case of occupancy ryots.

If, however, the legislature do not think it proper to interfere between such ryots and the landlords, in respect of the enhancement of rent, save as is provided by section 119, I submit that the clause allowing compensation for the disturbance of the ryot, may be left out altogether.

With due deference, I beg to submit that the registration system ought to be extended to occupancy holdings.

The extension of this system to these holdings will, in the long run, tend to diminish litigation by preserving a permanent record in the zamindar's sherista, of the transfer of, and succession to, such holdings.

There may be some difficulty, at the outset, in bringing home to the ryot the details of the system but in time the difficulty will be overcome.

The harm which is likely to arise from the extension of the registration system to such holding, will be infinitely less than that which will probably accrue from the non-extension of that system to, such holding.

Even if the legislature were not to make the provision of chapter IIID expressly applicable to occupancy holdings, the court would in many cases make the transferers liable for rent accruing, due subsequent to the transfer, on the ground of want of knowledge of such transfers.

Thus, the transferring ryots will in many cases suffer a disadvantage, without the transferee enjoying probably, in any case, the privilege of registering the transfer in the landlord's sherista, and thereby making his title secure. The registration fee in such cases should, however, be lowered.

Without full statistics on the point, it is difficult to say in what parts of the country occupancy rights are saleable by custom, and where they are not. But this much I can say, that even in those parts of the country, where the question of the existence, or otherwise, of the usage, is hotly contested in our courts, people do, as a matter of fact, buy and sell such right, in and out of court. Not only are occupancy rights sold in this manner, but even lesser rights. Such terms are thus constantly made the subject of sale. Even zamindars are not un-often found to be the purchaser of such rights.

Lest the sales are invalidated by our courts, the kabalas generally falsely describe the occupancy right as a mourasi jote, and, where a zemindar is the purchaser, he invariably insists on this description, but otherwise his conduct shews that he recognizes the existence of the custom.

The statement published along with the report of the Bengal Rent Commission shews, however, that ryots' holdings are, almost everywhere throughout the country, sold at execution sales. It is only in Pubna, Purneah, Sarun, Balasore and Cuttack that occupancy rights are very seldom sold at such sales. Thus, it is clear that occupancy rights are generally sold in the greater part of the province. It will therefore be only proper for the legislature to recognize the fact and legalize the custom.

The provision in the bill giving the landlord the right of pre-emption, is certainly a judicious one, as it will enable the landlord to avoid an inimical tenant. But the rule contained in section 56, unless modified, is, in my humble opinion, likely to be prejudicial to the landlord.

The landlord will have to pay for the occupancy holding, but a ryot to whom he will let out the land wil get an occupancy right in it for nothing.

I think thalt a ryot in such a case should acquire a right of occupancy, only if he would pay the amount at which the landlord purchased the holdings.

A Patnee under the bill, includes a darpatnee, and other similar under-tenures; the provisions for the summary sale of a patnee of the first degree have not been thought proper to be made applicable to darpatnee, and the rest, I think, however, that the extension of those provisions to all degrees of inferior patnees, will be a boon to the superior patneedars, without producing any appreciable injury to the darpatneedar and the rest. It will facilitate the recovery of arrears of rents due in respect of such tenures.

The zamindars justly complain that the present law for enhancement of rent has become, to a great extent, a dead letter.

The present bill proposes to deal largely with this subject, but I am not without doubts as to the sufficiency of the proposed rules to make legitimate enhancement an easy matter.

The Purgunnahs rates have, in most parts of the country, long ceased to exist. The rates will have to be properly ascertained by competent revenue officers for each village. That is not an easy matter to accomplish, and it is doubtful it it will be accomplished without much trouble, expense and time. For some years at least, the officers dealing with the question of enhancement will have to work without the aid of the tables. In such cases the difficulty will remain as before.

I beg to suggest that so long as tables of rates are not prepared, the question of enhanceability or otherwise be determined by the civil courts as now; but that the question of proper rates be decided by competent revenue officers, after holding a local investigation on the spot.

Inducements ought also to be held out to both landlord and tenants to have recourse largely to the provisions of chapter XI.

Section 125 provides that the rent of a tenure occupancy holding or bastu holding shall be a first charge on the same.

In the 16th meeting of the Bengal Rent Commission, it was unanimously held that a landlord having obtained a decree for arrears of rent due upon any transferable tenure or holding, shall be bound to bring such tenure, &c, to sale in execution, before taking out execution against the person, or other property of the judgment-debtor.

It appears to me that this is a fair and equitable provision.

No reason has been assigned for omitting this provision from the bill.

The present law, as settled by the High Court, is that a decree-holder after having obtained a decree for arrears of rent, may proceed against any property of the judgment-debtor he likes. The High Court has come to this conclusion on a question of construction, but I do not think that the Hon'ble Court maintains that this is an equitable doctrine.

It is necessary that the legislature should define what particular acts of disclaimers should work a forfeiture.

The Hon'ble Krishna Das Pal complained of the tendency of the Bill being to promote and foster litigation, and set class against class.

There will be some ground for making the charge if the record of rights promised by Government be not complete or accurate.

If, however, the record be both complete and accurate, half the litigation between the landlord and tenant will be unnecessary; one cause of the increase of litigation certainly is the uncertainty of the rights of the several parties interested in a particular subject matter. It will, I think, be very uncharitable to suppose that people resort to the courts simply because they love litigation for its own sake. They go to the courts in most cases simply because the rights of the contending parties are not certain.

In whatever degree the record of rights will be complete, accurate, and accessible to the

public, in the same degree litigation will diminish and good feeling will exist between the parties, between whom feelings the very reverse of which now subsist.

I would therefore earnestly solicit the Government to begin at once with the preparation of the record of rights.

The word land requires to be defined.

I do not think there can be any reasonable objection to making chapter IXD applicable to the ground rent of bustee, and shop, and other lands. I know from my own personal experience as a Small Cause Court Judge that tenants of bustee and shop and other lands labor under a very great disadvantage in consequence of the absence of any provision for the deposit of rents payable by them. I therefore beg to suggest that the provisions of this chapter IXD, be made applicable to these classes of tenants also.

Section 139. The following words, I submit, ought to be added after chapter B, "or the landlord himself cultivates the land."

Section 177. No delivery should be made before payment.

Section 181. After the words "if at any time" the following words, "before an order for distraint has been made," should be added.

Dated Calcutta, the 14th May 1883.

From—BABOO MOHENDRO NATH MITTER, Judge, Small Cause Court, Moorshedabad.

To—The Officiating Registrar of the High Court of Judicature at Fort William in Bengal.

I HAVE the honor to acknowledge the receipt of your letter No. 1157O, dated the 23rd April last, and in compliance with the request contained therein, to submit the following observations on the provisions of the Bengal Tenancy Bill, 1883, to the consideration of the Hon'ble Court.

2. The avowed objects of the Bill are to improve the status of the ryots, to afford every facility for the acquisition of the right of occupancy, to simplify the procedure for enhancement of rents, and for the realization of undisputed arrears, and in general to place the relations between landlords and their tenants on a sure and satisfactory footing. In view of these objects, many new provisions have been introduced into the Bill which trench upon the legal, and hitherto undisputed, rights of landlords, and will, I am afraid, prove injurious to the interests of both the parties, cause much trouble and litigation, and in the end disturb their relations more than ever.

3. I will take up the several chapters of the Bill in their order. In chapter I, the terms "tenure-holder" and "ryot" have not been sufficiently defined for the purposes of the Bill, and cases as apprehended in the "Statement of Objects and Reasons," will arise when the difficulty will be to draw the line of distinction between them. Then again, no denomination is given to persons who may own only bastu or homestead land without being settled or ordinary ryots, nor are their rights and liabilities dealt with in the Bill. Thus a large class of persons, such as barbers, blacksmiths, weavers, potters and other artisans, who may not hold land for the purpose of agriculture, horticulture or pasture, are excluded from its operation.

4. In chapter II, provisions are made for ascertaining and fixing the quantity of khamar land in each village, with the object of preventing landlords from increasing it hereafter. The definition of "khamar land," as given in this chapter, seems to be arbitrary, and the provisions made therein are a clear infringement of private rights. A landlord can now increase the quantity of his khamar or nij jote land according to his discretion, as opportunity offers. If a ryot absconds, or surrenders his holding, or is ejected therefrom, the land may be converted into khamar, and there is nothing in the law to prevent the landlord from doing so. It is altogether a matter affecting his own interest, and no good and sufficient ground is shown why he should be restrained in the exercise of his undoubted right.

5. In chapter III, section 17, in case of land held at a fixed rent, from the time of the permanent settlement being amalgamated with other land into one holding, the character of the tenure will generally be lost, and it will be difficult to ascertain whether the rent had varied or not. Again, in section 18, if by "a tenure" is meant a tenure held at a fixed rent from the time of the Permanent Settlement, then its liability to enhancement of rent on the grounds stated in clauses (*a*) and (*b*) will be a matter of great hardship to its holder, who will scarcely be able to stand against a mass of false evidence that will usually be brought by his more powerful adversary to prove a custom or a condition. The expression in clause (*b*) "and that the lands are capable of affording it" is vague.

6. Sections 27 to 35 relating to the registration of transfers of, and successions to, permanent tenures, are decidedly an improvement on the present law. In section 34, provision should be made for the granting of certificates of copies of entries in the register, by the landlords' authorized agent also. I think this registration system might with advantage be extended to occupancy holdings. The proposal of the Rent Commission on this point ought to be adopted, for experience has shewn that the evils attending non-registration of transfers of such holdings are grievously felt by a larger class of people, than the holders of permanent tenures.

CHAPTER IV.

7. Relating to patni tenures, does not call for any notice, as the present law is left substantially unchanged.

CHAPTER V.

8. Is an important chapter in the Bill. The acquisition of a right of occupancy by a settled ryot as defined in section 45, holding any ryoti land, notwithstanding any contract to the contrary, is a startling innovation made in the existing laws and usages of the country. And I do not see any justification for it. The ryots for whose special behoof this innovation is sought to be made, do not wish that the established law on this subject should be unsettled. The landlords, on the other hand, have good reason to protest against this invasion of their rights. In this state of things, where is the necessity for enforcing a law which the people do not want? Why disallow contracts duly made and interfere with the rights of private property? All that is contended for by the ryots is that the right of occupancy is, and should be, a transferable right. And on this point the Bill very properly gives them the relief they require. Transferability, as an important incident of this right, is generally unfavourably looked upon by the landlords, but custom favours it, and they have no right to complain of the provisions of section 50, when a right of pre-emption is reserved to them by the subsequent sections.

9. *Section 56*, which purports to confer at once a right of occupancy on a ryot to whom land purchased under the pre-emption sections by a landlord is let, appears to me to be objectionable. It is said in the "Statement of Objects and Reasons" that this will prevent a landlord from buying up on a great scale the occupancy rights on his estate or tenure, with a view to locating ordinary ryots on the land. But you cannot prevent him from converting the land into khamar or nij jote. If that be so, the provisions of chapter II of the Bill would be null and void, and in course of time the quantity of such land shall increase to the detriment of the tenantry and the agricultural prospects of the country.

CHAPTER VI.

10. Is another important chapter in the Bill. Sections 59 to 61 are open to grave objection. If an occupancy ryot agrees to pay a higher rent than that previously paid by him or by his predecessor, no such restriction as is sought to be laid down in these sections ought to be imposed by law. All that can be reasonably insisted upon, to protect him from the consequences of his ignorance and credulity, is that such agreement shall be in writing, and registered under the Indian Registration Act in force.

11. *Sections 62 to 73*, which deal with the preparation of a table of rates and produce, and suits to enhance rents, when such a table is in force, seem to me to be of questionable efficacy. Considering the variety of the rates of rent usually paid by occupancy ryots in one and the same local area, I am of opinion that the preparation of a general table of rates by a revenue officer with any degree of accuracy will almost be an impossibility. Of the three grounds for enhancement of rents under the present law (section 18, Act VIII, B.C., of 1869), the most difficult to deal with is the second ground, *viz.*, "that the value of the produce or the productive powers of the land have been increased otherwise than by the agency, or at the expense of the ryot." The rule of proportion laid down by the High Court, in "the great rent case," has, it is true, practically become unworkable, owing to the complicated nature of the enquiry it involves, and the want of reliable materials to work upon.* To meet this difficulty a less ambitious table, shewing only the average value of produce, and the average quantity of produce, and cost of production per beegah, in staple crops, of any local area, at the time of the enquiry, as compared to any other time back, which may appear to be fair and equitable, might be prepared with greater accuracy and less trouble and expense, leaving the Civil Courts to determine upon evidence whether or not the increase, if there be any, has been brought about otherwise than by the agency, or at the expense of the *ryot*. The other two grounds for enhancement are clear enough, and do not present much difficulty.

CHAPTER VII.

12. Gives a permanent right in bastu land to a settled *ryot* of a village, notwithstanding any contract to the contrary. This is a new provision quite opposed to the law in force. If a ryot wishes to build his dwelling-house on a particular piece of land, it is his look-out to take a proper lease from, or come to proper terms with, his landlord; and there seems to be no valid reason for setting aside a contract duly made between the parties. In section 86, the provision for compensation does not appear to be just and reasonable; for, if a tenant is liable to ejectment for breach of contract, it would be a hardship to his landlord to pay compensation to him for any dwelling-house and out-offices erected on the land. All that the tenant can fairly ask for is their removal within a stated period

CHAPTER VIII.

13. In *Section 93* the provision for compensation appears to be also unjust and unreasonable.

CHAPTER IX.

14. In *Section 98* a wholesome provision is made, fixing four as the maximum number of instalments in which rents of ryot's holdings are to be paid. This will prevent much harassment and trouble, to which the ryots are subjected. Sections 100 to 102, regarding receipts and accounts to be given to tenants, will also prove beneficial to them as well as to their landlords.

15. *Sections 103 to 107*—Relate to the deposit of rent by a tenant in a public office, clauses (*b*) and (*c*) of section 108 are certainly good additions to the present law; but clause (*a*) will become a source of great annoyance to the landlord. It is better that there should be a tender and refusal, for otherwise tenants will, in the majority of cases, refuse to go to the landlord's cutcherry to pay rents, and the landlords will be put to much trouble and expense in drawing the money deposited. The feelings of the parties, moreover, will be more and more estranged as this clause is more and more resorted to.

CHAPTER X.

16. *Sections 126 to 132*—Which deal with improvements on ryots' holdings, are wholly unnecessary. They will only introduce complications into the relations between landlords and tenants, and cause much harassment and litigation to both the parties. Sections 142 to 148, which provide for the appointment of a manager on behalf of co-owners of an estate or tenure, are, as has been pointed out in the "Statement of Objects and Reasons," an improvement on the present law.

CHAPTER XI.

17. Which treats of the settlement of rents by a Revenue officer, might be made available for the purpose of Government settlements; but the application of it to private estates without the instance of landlords, would be an usurpation of their rights, and lead to much discontent and disaffection. This and the following chapter, which are introduced into the Bill with one and the same object, appear to be quite uncalled for. The landlords, as a rule, will not apply for the enforcement of their provisions, and if they be enforced at the instance of the tenants, or for the settlement of an agrarian dispute, they will resent, offer every obstacle to the proceedings and carry litigation to the bitter end. And the result would be ruinous to both the classes. Facilities for realizing undisputed rents and for enhancing them under the law in force are only sought for by the landlords in Bengal. The tenants, on the other hand, are already sufficiently protected from illegal impositions. They know how to unite and assert their rights. Their occupancy rights are made freely transferable by this Bill, a reasonable limit has been fixed to the number of instalments in which their rents are to be paid, and the receipts and accounts they are to receive from their landlords will supply them with all evidence they might require in defending rent suits. They have nothing more to complain of. The only point for consideration is, how are those facilities required by the landlords to be given? The provisions of the Bill regarding receipts and accounts will as well help them in recovering their rents, and a simpler procedure than that which now obtains will ensure their speedy recovery. As to enhancement of rents, the preparation of a table, such as that indicated in paragraph 11 of this letter, would remove the main difficulty. Why then introduce these chapters and other novel provisions when nobody asks for them, and unsettle the minds of the people and the law of the country?

CHAPTER XIII.

18. Very properly gives a modified power of distraint to the landlords, and ought to be retained. I would, however, suggest that section 172 be so altered as to give at least 7 days' time to a defaulter or the owner of distrained property, where he is not the defaulter, to make the deposit under section 181; and to prevent abuses, provision should also be made for the owner of distrained property, when he is not the defaulter, to institute a suit to contest the legality of the distraint within the specified time without making a deposit, provided he can shew any sufficient cause for not making it.

19. The procedure applicable to suits between landlord and tenant (chapter XIV) has been as much simplified, as it possibly can be, with a due regard to justice. In section 202 the maximum period during which it shall be open to the defendant to pay compensation, or where the damage or breach is declared to be capable of remedy, to remedy the same, should be fixed, and not left to be determined by the court at its discretion. And in section 203, clause (*b*), the words "together with reasonable interest on that value" ought to be omitted, for in a decree for ejectment it does not appear fair and equitable to compel the landlord to pay interest over and above the value of the labour and the capital expended by the tenant in preparing his land.

CHAPTERS XV, XVI, AND XVII

Do not call for any remarks.

No. 82, dated Khulna, the 21st May, 1883.

From—BABOO BHOGOWAN CHANDRA CHAKRAVARTI, Subordinate Judge of Khulna,

To—The Registrar of the High Court of Judicature at Fort William in Bengal.

Agreeably to your order conveyed in your letter No. 1157J, dated the 23rd ultimo, I have the honour to submit the report therein called for.

The question of the relation of landlord and tenant in this country involves in itsel many problems which are of considerable difficulty, and indeed although they engaged patienf attention of the Legislature for many years, the practical solution of some of them is stilt distant. The present Rent Bill is an embodiment of the practical rules of law which attemptl to remove those difficulties. As it is the result of thought and research of many eminent

lawyers and practical men of business, and as it has had due publicity and evoked honest opinion and criticisms from all parts of the country, I think it will not be necessary for me to dwell on the subject in detail. I will confine my remarks on the cardinal points of the Bill.

The provisions of Act X of 1859, subsequently and substantially embodied in Act VIII of 1869 (B.C.), have failed, as experience tells us, to bring about the desired effect on all subjects regarding the relation of landlord and tenant. It is found that law courts can do little or nothing with the cases of enhancement and settlement of rents, and enhancements are introduced by tortuous acts and illegal means, where the landlords are strong and raiyats weak, and on the other hand just demands of rents are successfully resisted where the raiyats are strong and the zemindars weak. Such a state of things must be put down. It is, therefore, necessary that there should be such a legislative measure as would give facilities to the landholders for recovery and enhancement of rent, and afford protection to the poor raiyats.

The distinction between tenure-holders and raiyats has not been clearly drawn. Cases may and often occur in which it will be difficult to ascertain whether a tenant is a tenure-holder or a raiyat.

The definition of tenure in section 3 is too general and vague, and may lead to confusion.

CHAPTER II.

Section 5.—The distinction between *khamar* and *raiyati* land has been properly made, and they should be defined and registered as proposed in the Bill. I do not see any reason why the raiyats occupying *khamar* lands should have better right than those occupying *raiyati* land. In my humble opinion, if the land is defined and registered as *khamar* or private land of the proprietor, the raiyats occupying it should be allowed to acquire right of occupancy without the consent of the proprietor.

CHAPTER III.

Sections 21 *to* 25.—Provided (1) that rent may be enhanced up to the limit of customary rate; (2) where there is no customary rate, it may be enhanced to such limit as shall appear fair and equitable, but the profit of the tenure-holder shall in no case exceed 30 per cent. To prevent these provisions from working hardship, the following limits have been proposed. (*a*) :—Enhanced rate shall not in any case be double of the previous rent. (*b*) The rent shall increase yearly by court's order during any number of years not exceeding five. (*c*) The rent once enhanced shall not be altered for ten years.

These limits, I believe, will seriously tell upon enhancement. The economical condition of the country and the quality of the land may be so changed that the limits (*a*) and (*c*) would not be applicable. Such limits as proposed above would stand greatly in the way of progress. Neither the tenant nor the landholder would be induced to bring on improvement on the land.

Section 59.—Enacts that money rent payable by an occupancy raiyat may be enhanced by contract in writing, approved of and registered by a Revenue Officer, who will be absolutely debarred from registering any contract by which a raiyat engages to pay more than six annas in the rupee, higher than the existing rent or more than one-fifth of the estimated gross produce. This section is supplemented in 61st section by somewhat similar provisions, and its tendency is to hamper free contract as much as possible.

Sections 76, 78.—Provide the same limits as are found in sections 21, 25, and the same remarks that have been made above as applicable to these.

The suits for enhancement of rents of occupancy raiyats have been sub-divided into two classes, *viz* (*b*) of chapter VI for suits to enhance money rents where a table of rates has been prepared, and (*c*) for such suits where a table of rates has not been prepared. (*B*) contains only tentative measures which will have their operation when the tables will be complete. What the results of these tables will be, is a matter still in the womb of futurity, it is well known that there are many parts of the country where recognized rates of rent have no existence, and even if there be so, the soil of the country is so various that it would be difficult, if not impossible, to prepare the table within a reasonable time; perhaps when the table will be prepared the relation of landlord and tenant might be such as would not require the assistance of such a table. As for the sub-division (*c*), the rules of enhancement have been left where they were before. Practically it will be as difficult to enforce these rules, as when the rules under Act X of 1859 were in force.

CHAPTER V.

One of the most important chapters of the Bill. The right of occupancy is the creation of Act X of 1859, and having been recognized since then, it cannot now be ignored. There is already in the country a class of raiyats who enjoy such a right, and it is high time that that right should be defined and protected. The framers of the present Bill, however, not content with recognizing the incidents of the right of occupancy already existing, have attached some others, which are new and hitherto unrecognized. The right of occupancy is acquired by settled raiyats holding *raiyati* land, notwithstanding any contract to the contrary. This is contrary to the principles of the law of contracts, and is too great an interference with the freedom of parties. The reasons assigned for such a measure are that the zamindars as a body are so powerful that they can induce or coerce poor raiyats to enter into wrongful contracts

There may be, no doubt, oppressive zamindars who, by illicit means, might induce the raiyats to enter into illegal contracts. But such instances are rare, and it cannot be said that a practice of getting into illegal contracts obtains, as a rule, throughout the country. If there be a small class of raiyats who might be induced to enter into wrongful contracts, should principles of equity be sacrificed for the protection of that small minority? I humbly think that such a saving clause is not necessary. Besides, if the freedom of contract be repressed altogether, somehow or other it may burst out in another, and probably worse, direction. The following are some of the incidents, of right of occupancy as proposed in the Bill that call for notice:—(*a*) The raiyats may subet; (*b*) his interest is to be transferable and hereditable. The right of sub-letting and transferring without the consent of the landlord, sanctioned by law, is, in my humble opinion, objectionable. It will be readily admitted that if the raiyats who are proverbially improvident and unthrifty be left to mortgage or sell their tenures, they will easily spend large sums of money to celebrate marriages of children, &c., by mortgaging or selling their tenures, and thus contract debts and fall into the hands of unscrupulous money-lenders. It is well known that sub-infeudation is the cause of misery to the raiyat, and if the occupancy raiyat be allowed to sub-let, the pressure will no doubt at last fall on the actual cultivators; transferability shall have the same baneful effects. The powers of transferring and sub-letting recognized by the Bill, will in time bring on a state of things in which the great bulk of actual cultivators would not have the advantage of becoming occupancy raiyats, but under-raiyats, having but little protection from the law. Section 56 confers the right of occupancy on a mere squatter—a provision which requires but little comment. The evils arising from transferring have been sought to be mitigated by giving the powers of pre-emption to landholders, but this power, I submit, will not be a sufficient safeguard against too frequent sales and mortgages. The transferability of such tenure has, no doubt, grown almost into a custom in some of the districts, but its consequences are, I believe, *nil.* The present miserable condition of the Bengal raiyat is a sufficient evidence of the evils of that custom. The ultimate results of this transferring and sub-letting will, I fear, be that a new class of men, quite unmanageable, will be thrust into the lands of the zemindars. The conferring of the right of occupancy on a raiyat who has occupied the land purchased by the landlord by his power of pre-emption is a restriction which militates against pre-emption powers.

CHAPTER VIII.

The principles formulated into law in this chapter are new, and quite foreign to the ideas of the people; if the provisions will be enforced, they would embitter the feelings of the landlord and tenants. If the landlord has the right to eject, his powers should not be clogged by making him pay compensation for enforcing it. If he has not the right no money payment ought to be sufficient to give it to him. If these at all pass into law they should be restricted. If the tenants fall into arrears and make three successive defaults in payment of rents, the landlords should be justified to eject them.

CHAPTER IX.

Instalments in which money rents are payable should be uniform, and should tally with the instalments by which rent or revenue is payable by superior landlords.

Sections 100, 101 *and* 102.—Impose penal damages for refusal or neglect to give receipts (*dakhilas*) and statements of accounts prescribed in them. The principles involved in them, however correct, would practically work hardship on not a small class of petty landowners, most of whom are ignorant men and women, who cannot possibly keep accounts and give receipts in the forms prescribed.

Sections 103 *to* 107.—The provisions for these sections give direct means in the hands of the raiyats to deposit rent without tendering it to landlord, which will give them full acquittance of their payments. Their effect will be to make the tenants refractory.

CHAPTERS XI AND XII.

Contain measures, some of which have a tendency to trench upon the jurisdiction and powers of the civil court. I submit that all questions of a civil nature that will arise before a revenue officer engaged in the settlement of rent should be referred to the civil court for decision.

CHAPTER XIV.

The procedure as laid down in Chapter XIV can hardly be made more simplified, for in rent suits in this country questions of right frequently arise, which cannot be coped by summary procedure.

Section 200—Enacts that applications for execution of decrees for arrears obtained by landlord shall not be made by an assignee of the decree holder; its effect would be to throw obstacles in the way of executing large number of decrees. There may not be unfrequently cases in which widowed females and ignorant men, not conversant with the rules and practices of the Court, and who are in extreme need of money, look upon decrees as moveable properties and sell them. It mitigates, no doubt, one class of evils; but it fosters another.

Sales.—If occupancy right be made transferable by law, I submit that too many sales and mortgages may be checked by imposing the condition upon all sales that take place in execution of decrees for rents, that they should avoid all encumbrances.

Section 224, Limitation.—This section is objectionable, on the ground that it remedies one evil, but creates another. It protects minors against accumulations of rents but exposes them, helpless as they are, to the rapacity of unscrupulous landlords.

Lastly, I beg to suggest that retrospective effect should not be allowed to be given to any new provisions now made.

No. 17, dated Alipore, the 13th June 1883.

From—NUFFER CHUNDRA BHATTA, First Subordinate Judge, 24-Pergunnahs.

To—The Registrar of the High Court, Appellate Side, Calcutta.

I have the honor to forward herewith a few observations on the Rent Bill, prepared hastily, as I had no sufficient time at my disposal.

Bengal Tenancy Bill.

I think the Bill, with its sections 45, 47, 49, and 50 except clauses (*a*), (*b*), (*c*), and (*g*), 56 and 57, will be hard upon the landholders generally, and upon the tenure-holders of limited means specially. The fear of ejectment makes the ryots punctual in payment of rent. A decree for rent, coupled with an order for ejectment, if the arrears are not paid within 15 days, as passed now under the present law, is far more readily obeyed than a bare decree. If 90 per cent. of the ryots have already acquired right of occupancy, the remaining 10 per cent. will obtain it as soon as the Bill is passed. Then the sale of the transferable tenure will have to be almost universally adopted. But sale, with its previous enquiries into claims by third parties, and objections to set it aside on the grounds of irregularity, and so forth, is a very cumbrous and dilatory proceeding. Ryots have seldom valuable moveables, and such as they have are easily removeable from the ken of a decree-holder. The most tangible portions of them, such as draught cattle and implements of husbandry, cannot be seized under the law.

I fear no valid custom of transfer of the occupancy right could yet arise, as Act X was passed only in 1859, and custom, in order to be valid, must be immemorial. Where the landlords have acquiesced in such a custom, transfer of the right, as it at present exists, is not very injurious to them. The right subsists "so long as rent......is paid," and transfer cannot change the nature of the right itself. So that, when transfer takes place, the landlord has yet the option of either bringing the jote to sale or of ejecting the ryot or transferree for arrears. If the right of transfer were conveyed subject to landlord's power of eviction in case of arrears, it would be preferable to the proposed form. It would be better still if the ryots were required to pay a small sum as *selami* before they acquired the right, as a compensation to the landlords, specially when they themselves would have to pay a price to get their own land back if they wished to buy right of occupancy in any case by right of pre-emption. Freedom of contract should not be much curtailed, and particularly the existing contracts should be maintained.

As to enhancement, the maximum standard of one-fifth share of the produce would be too small, and might lead to abatement of rent in many places. One-fourth share, proposed by the British Indian Association, is not unfair to the ryots. There are communities of Burga or Adhibhag ryots in Nuddea, Jessore, Moorshedabad, &c., who pay one-half of the produce to the land-owners. The remaining one-half, therefore, not only pays the wages of labour, interest on capital, &c., but also leaves a profit; or how do those communities manage without any other profession? If, then, the occupancy ryots were to let their lands in Burga, they would yet get one-fourth share as their clear profits, and they and the landlords be equal partners in the profits of land. One-fifth share would be too small to support the so many holders of tenures, under-tenures prevalent in Backergunge, Jessore, Furreedpore and Noakholly.

It were better if some of the small under-tenure-holders were brought out, either by zemindars or by the Government. The idea of a table of rates and produce is good, and may be beneficial in eastern districts. But the rates are now so variable, and the work so gigantic and expensive, that I doubt its feasibility.

I cannot recommend any more expeditious course for recovery of arrears, for a summary procedure like the certificate system of revenue authorities is liable to abuse, even in their hands. But the power of distraint should not be further restrained. A suit for arrears, in which nearly four years' rent may be claimed, with a prayer for attachment of the crops before judgment, would be preferred to the proposed course, requiring a full court fees duty for the value of the arrears, in which current arrears alone could, with difficulty, be recovered, and the order would not have the force of a decree rendering other properties and person of the ryots liable. It would be virtual abolition of the power of distraint, a consciousness of whose existence induces ryots to pay off current arrears.

Another feature of the Bill is that it gives exclusive jurisdiction to the revenue authorities in some of the most important matters. Act X of 1859 gave jurisdiction exclusively to the Revenue Courts in all matters. Act VIII (B.C.) of 1869, on the contrary, transferred the said jurisdiction bodily to the Civil Court; and now it is proposed to divide the jurisdiction, half and half, between the two classes of tribunals. There is no doubt that the class of enquiries to be made over to the revenue authorities can be better conducted by them than the Civil Courts. Yet one difficulty the people feel before the Revenue authorities is that they do not obtain that full scope for discussion of a point as before the Civil Courts. Further,

they labour under the impression that the views of the Revenue authorities sometimes change with the change of Government. It would therefore be better if the decision of those authorities were *primâ facie* and not conclusive evidence of a matter.

CHAPTER I.

Section 4.—Contract should also be saved as customs.

CHAPTER II.

The provisions are good, as the proprietors have no right to extend the area of khamar and nij-jote lands, and thus curtail the area for the growth of occupancy right even under the present law. Section 20 is not in keeping with the spirit of the Bill.

CHAPTER III.

There ought to be a section for forfeiture of a non-transferable tenure, if transferred.

It would be a great boon to the zemindars if all transferable tenures were declared liable to summary sale, like putnis, on an application to the Sub-Divisional Deputy Collectors.

Similarly, it would be a great relief to some of the unfortunate tenure-holders if they had the option of insisting upon the sale of the tenures for arrears in the first instance; for in case the tenure happens to be an unprofitable one, the landlord proceeds against the person and other properties of the tenant, instead of the tenure itself, and ultimately ruins him, as he has not the option of relinquishment, as the ryots have. If he had the option of relinquishing a tenure, it would answer the purpose equally well. I speak this from my experience in Backergunge.

CHAPTER V.

Sections 45, 47, 49. Are quite opposed to the terms of the permanent settlement, as it seems to me. Section 49 will, no doubt, confer right of occupancy on a large number of ryots, namely, all the settled ryots of section 45, in Behar, even if they have held the lands for a year only, but will as surely prevent them from getting one *chittak* of additional land in future, both in Behar and Bengal, without paying a heavy *selami* so long as a non-settled ryot may be had to take it up.

Section 50.—I have already dwelt upon several of its provisions.

Clause (c).—May be injurious to the ryots, as we see from the *zemba* system of Backergunge. Though it is now too late to prevent sub-letting, it ought not to have legislative sanction, except in cases where the ryots are minors, invalids, lunatics, females and the like.

Section 51.—One month's time is too short.

Section 52.—The landlord may not know the impending sale. There ought to be provision for a notice to the landlord in all cases of intended sale in execution of decrees held by third parties, as provided in cases of private sales.

Section 53.—One month's time too short, as there are many absentee landlords, whose local agents must take their permission for the purpose.

Section 54.—One month's time too short.

We see that, in making the right of occupancy transferable, the present privilege of relinquishment, which would be inconsistent with it, has been taken away. But, nevertheless, a large number of ryots, occupant or non-occupant, yearly find it convenient to relinquish their jotes. Henceforth such ryots shall continue liable for rent as long as the landlord hooses, though they may cease to hold the jotes, or find them unprofitable. At all events, enceforth they will have to pay a heavy sum, if they wish to relinquish their lands, as no archaser will be found for such jotes.

CHAPTER VI.

No procedure has been yet laid down as to how the revenue officer is to determine whether the ryot, in any particular instance of lease, acted as a free agent, and whether the stipulated rent exceeds one-fifth of the estimated average annual value of the gross produce of the land in staple crops, calculated at the price at which ryots sell at harvest time; for if there is competition for land, the ryots will agree to the terms offered by the landlord; and if he comes to register the lease at all, in ninety-nine cases out of hundred he will admit all that is stipulated in the lease as correct, if he does not wish to go without the land, as we find in cases of registered bonds at exorbitant rates of interest. If there be, again, a counter-combination among the landlords, in these days of combinations, the matter will be still worse. The provisions cannot, at all events, come into operation until the expensive and laborious tables of rates and produce are prepared.

Section 60.—Here the law contemplates giving the occupancy ryots a right to the accretions to their holdings by alluvion, contrary to the provisions of section 4, Regulation XI of 1825.

Section 63, Clause (c).—To take price current at the harvest time alone would be unjust to the landlords. There should be an average price taken.

Section 66.—No provision against difference of opinion amongst assessors.

Section 70.—The minimum of 10 years and maximum of 30 years are too long periods.

Section 72.—The tables may ultimately be of no use to either the ryots or the proprietors, and yet the expenses are to be borne by both.

Section 74, Clause (2).—So the landlord is to be bound by his contract, though the ryot is not to be so.

Section 78.—Ten years too long a period.

Section 81, Clause (b).—Why so when some crops exhaust the land more than others?

Section 82.—This appears to be contrary to the teaching of the *Statesman* in several of its articles on Deccan Agricultural Relief Act, that the greatest blunder ever committed by the settlement officers was to have fixed the rent in money and not in kind, thus forcing the ryots to sell the produce at a time when the market is glutted with it, namely, just after the harvest time.

Section 83.—The price list would be of great value, indeed.

CHAPTER VII.

These provisions are good and just. They should be extended to all bastu or dwelling-house land in town or village, but the existing contracts should be respected. The provisions are in keeping with the equitable principle of "stand-by."

CHAPTER VIII.

Section 93, Clause 2, Sub-clauses (a) & (b).—Compensation for improvements may be allowable where a ryot is not bound to make them by the terms of his lease, as a ryot is not *per se* under any obligation to make them. But compensation for disturbance cannot be allowed, as disturbance follows from the nature of his tenure, which he accepted with full knowledge thereof, and from his laches.

I may here state that compensation for improvement may be allowed to occupancy ryots if they remain subject to eviction, as now, for non-payment of rent.

CHAPTER IX.

Section 98.—This will seriously affect the existing arrangements, and will be very injurious to the tenure-holders, who are, in many cases, bound by their contracts to pay rent to their lessors by even monthly instalments. If contracts are to be set aside, sections 97 and 98 should be amalgamated into one, and the same rule should be laid down as to instalments, whether payable by a ryot, sub-ryot, or tenure-holder.

Section 103.—The sanction of verification should not be taken away, the ground (*a*) being too broad and indefinite.

Section 109.—If damages are to be allowed in order to induce other ryots to be prompt in paying their rents, they lose much of their effect if they are to be awarded in lieu of interest, which is a simple compensation for the delay, and is not intended, and has not the effect of a punishment. The present law does not make it a substitute for interest, though it has been so interpreted in some old rulings. The counter-provision for awarding damages against the plaintiff (landlord) for vexatious suits in the present law, or section 110 of the Bill, is not a substitute for interest, but is intended purely as a deterrent.

Section 119.—This section seems to do away with the Burga or Adhibhag system. If not, the system should be expressly preserved as merely a labour contract.

CHAPTER XI.

Section 155.—The matter should not be left entirely to the discretion of the revenue officers.

Section 159, Clause 2.—The Local Government is too inaccessible a tribunal.

CHAPTER XII.

Preparation of records of rights is a good idea, and such a record, if properly prepared will confer a real boon on the country.

CHAPTER XIII.

I have already commented upon the proposed curtailment of the power of distraint.

I would leave the provisions of the present law on the subject as they are, and suggest only one improvement, namely, that when a landlord asks for assistance of the Court, there should be a regular enquiry after a short notice to the ryot, restraining him and others, if necessary, from reaping the produce in the meantime. The ryots should also be allowed to object to distraint immediately after they receive a notice from the landlord, or an attempt to distrain is made.

CHAPTER X, HEADING E.

There seems to be an omission as to how the present co-owners of estates and tenures receiving rent jointly are to sue for arrears in case all of them do not agree to sue jointly, often in collusion with ryots. Certain decisions have laid it down that in such cases one co-owner may sue for the whole amount of arrears, making his co-sharers parties as co-plaintiffs. But provisions under this heading seem to lay down that in every such case a manager is to be appointed or a partition to be forced. Now, both these courses are expensive affairs, and it will be in the power of a big co-sharer to force the minor ones to appoint him their manager, or to bear the expenses of a manager appointed by the District Judge, and thus ultimately to part with their shares, most likely in his favour. They may well afford collecting their own share of rent if ryots consent to pay them that share separately. The joint Hindu family system makes co-sharers unavoidable, and it is also well-known what bitter enemies they at times are. The

minor co-sharers are sure to go to the wall if they were not allowed to sue for whole arrears, as at present. The omission on this point is liable to the misinterpretation of a covert attempt to aim a blow at joint-Hindu family system, so fostered by Regulation XI of 1793. The zemindars would fain have a law of primogeniture, but the courts are dead against it.—*See* the celebrated case of Tagore *versus* Tagore.

CHAPTER XV.

Sections 211 & 212.—To avoid delay both kinds of sale should be simultaneously advertised and held one after the other on the same day.

CHAPTER XVI.

Section 225.—I do not see the justice of this provision. Are ryots objects of more care and compassion than minors and lunatics?

NUFFER CHUNDRA BHATTA,
First Subordinate Judge, 24-Pergunnahs.

No. 1876-669L R., dated 18th July, 1883.

From—Officiating Secretary to Government, Bengal,

To—Secretary to Government of India, Legislative Department.

In continuation of my letter No. 1827-648L.R., dated the 13th July 1883, I am directed to submit, for the consideration of His Excellency the Governor General in Council, the accompanying copy* of a report from the Commissioner of the Burdwan Division on the subject of the Bengal Tenancy Bill, 1883.

*No. 339, dated the 22nd June, 1883, with enclosure.

A. P. MacDONNELL.

No. 339, dated Chinsurah, the 22nd June, 1883.

From—John Beames, Esq., Commissioner of the Burdwan Division,

To—The Secretary to the Board of Revenue, Lower Provinces.

In reply to your No. 351A, dated 29th March last, I have the honour to submit my report on the Bengal Tenancy Bill.

2. I have already submitted two lengthy reports on this subject, the first of which commented on the Bill drafted by the Rent Commission in 1880, and the second on the amended Bill put forward by Government in 1881. Under these circumstances it will perhaps hardly be necessary at the present stage of the matter to enter into a detailed examination of each of the provisions of the present Bill, which, as the final outcome of much protracted and careful argument, may, in my opinion, be generally accepted as likely to prove workable and fair to all parties affected by it, though I am still very much in doubt whether any enactment of the kind is really required, except perhaps in Behar.

3. It is not of course to be expected that the Bill, even in its present expurgated state, will escape opposition, nor do I think such opposition altogether unreasonable. It is all very well to say that the framers of the permanent settlement specifically, and in set terms, reserved to themselves and their successors the right to interfere between the zemindar and the ryot, whenever such a step might seem necessary, for the protection of the latter; and that, though no such interference practically did take place during the sixty-six years that intervened between 1793 and 1859, yet that "it is never too late to mend," and that consequently we are going to interfere now. The answer to that argument is that during all those years we have allowed men to buy zemindaries and tenures on the belief, fully justified by our acions, that no interference would take place, and that it is not fair to these persons suddenly to uproot the conditions, on the faith of which they have invested their money. I so far agree with this argument, as to think that, in any changes which may now be made, it is not sufficient to go back to first principles and base our enactment solely on what we understand to be the relation between landlord and tenant, as established by Lord Cornwallis' Regulations; we must go further than this, and take into consideration the present status and vested interests of the proprietary body whom we have called into existence, and whom we have during nearly a century allowed to acquire rights and privileges which are none the less deserving of respect now, because their growth and development were not contemplated by the statesmen of the last century.

4. I mention this point not as a peg on which to hang a long historical discussion, or an examination of the state of revenue law and its effect on the agricultural classes during the last hundred years. All that has been done over and over again, and by far abler pens than mine. But I mention it to shew the spirit in which I approached the discussion of the two previous Bills, and the nature of the test which I feel bound to apply to the present Bill. In other words, the question I ask myself as I examine one section of the Bill after another, is "does this provision deprive either landlord or tenant of any right or any status which he legally holds *at present*, whether in virtue of the terms of the permanent settlement, or in virtue of

any custom which the Government has tacitly allowed to grow up since that time?" We have nothing to do with the historical zemindar of 1793; if he ever existed at all, that is, if there ever was any class of men so situated as we are apt to figure them to ourselves, he exists no longer. We have to deal with the zemindar in the position which he holds in the present day.

5. This is the view which most officers and private gentlemen whom I have, from time to time consulted, take of the matter, and I think it is the only practical reasonable view to take. There is a great deal of sentimental talk about the woes of the ryot; and I venture to think that no one who knows anything of the incidents of my obscure career will suspect me, at any rate, of a tendency to overlook the claims of the ryot, or to side too strongly with the zemindar. But I cannot overlook the fact so ably urged by the Hon'ble Kristo Das Pal, that the Bengal of to-day offers a startling contrast to the Bengal of 1793; and that the wealth and prosperity of the country has marvellously increased—increased beyond all precedent—under the permanent settlement. There is much force in his remark that a great portion of this increase is due to the zemindari body as a whole, and that they have been very active and powerful factors in the development of this prosperity.

6. The ryot suffers from causes over which no Government can have any control; the country is over-peopled; and the intensity of the struggle for existence is due principally to this cause, and not to the capacity or bad management of the zemindars. Every one *will* marry, and *will* have heaps of children; no one *will* emigrate, a vast majority *will* grow nothing but paddy, and the poorest *will* spend in advance the earnings of ten years on a marriage feast or a religious ceremony. It is very doubtful whether any legislative measures will improve the condition of people whose manners, customs, and prejudices are so utterly incompatible with improvements as these.

7. *Section 3, sub-sections 3 and 5.*—The definition of ryot has been purposely left obscure. We are told that certain persons are not ryots, but we are not told who are ryots. It seems to be thought impossible to define a ryot in such a way as to differentiate him from a tenure-holder. It is undoubtedly difficult; but I am afraid, unless it is done, much greater difficulties will arise. The definition in the Rent Commission's Bill, section 3, was not altogether satisfactory, because, for reasons briefly stated in the report, no other test was applied than that of the extent of the holding, and limit was arbitrarily fixed at 100 standard bighas. The present Bill, in sections 14 and 15, also fixes an arbitrary line of demarcation between a tenure-holder and a ryot by making what are at present known as ryots, with right of occupancy at fixed rates of rent, into tenure-holders, so that, if this definition be maintained, we get an exceedingly simple definition of ryots by merely saying that all persons who hold land under a zemindar, except those mentioned in sections 14 and 15, are ryots.

8. This, however, introduces considerable confusion in another way, for it has never, as far as I am aware, been the custom to regard as tenure-holders persons who have a right of occupancy at fixed rates. Such persons are always regarded by themselves and others as ryots, and the adoption of the classification of the present Bill will very much modify our conceptions on this point, and introduce changes which will not be readily understood nor acquiesced in by the classes connected with land.

9. Where so many high authorities have declared themselves unable to define a term, it may seem presumptuous in me to offer any definition. It is therefore with some diffidence that I put forward the suggestion, that the practice, or, so to speak, the tacit understanding on the subject among the people generally, should be taken as the basis of a definition.

10. When a zemindar lets land to a tenure-holder, he considers that he is granting, and the tenure-holder considers that he is obtaining, the right to collect rents from a number of cultivators already actually in occupation of the land so granted. When, however, the zemindar lets land to a ryot, he grants, and the ryot takes, the permission to cultivate the land himself, it not being, at the time of granting the lease, actually occupied by cultivators. The ryot who thus takes land may subsequently, without ceasing to be considered by the zemindar and by himself a ryot, sublet portions, or even the whole of such land, but at the time of taking the potta the land is not in occupation of others.

11. This is, I think, the broad line of demarcation between "talukdar" and "ryot;" and if we use tenure-holder strictly for talukdar, this demarcation will practically hold good everywhere, with very few and unimportant modifications. It is the *intent* with which the land is granted and taken that shews where to draw the line; and the intent is clearly understood in all cases by the parties at the time the transaction occurs.

12. It is no objection to this to say that ryoti land is often let with *korfa* ryots actually on it, because the right of the *korfa* practically ceases with that of the ryot from whom he holds; and if he stays on, he does so by permission of the new ryot, who might, if he choose, consider the land as unoccupied and free of all incumbrances. I think if a definition of ryot, based on the above idea, were introduced into the Act, it would be found to meet most, if not all, cases. It might be formulated thus:—

(1) A tenure-holder is a person who takes land on lease from a proprietor with the intent of collecting the rents from the ryots; and against whom the proprietor has the remedy mentioned in section XV of this Act (sale).

(2) A ryot is a person who takes land from a proprietor, tenure-holder, or under-tenure-holder, with the intent of cultivating it himself or by hired labour, or of sub-letting it, and against whom the proprietor, &c., has the remedy specified in Chapter XIII of this Act (distraint).

13. If the difficulty is great of distinguishing between a ryot and a tenure-holder, it is equally great in distinguishing between a ryot and an under-ryot, and we cannot rest contented with the definition of an under-ryot, given in sub-section (6), that "an under-ryot means a tenant holding land below a ryot," unless we know what a ryot is. What we must know, for purposes of settlement, and what the zemindar also must know for the same purpose, is, who is the person in whose name the jummabundi is to be made. Section 164 of the present Bill, indeed, contemplates that, in compiling a record-of-rights, which is practically what we know as a jummabundi, tenure-holders, occupancy rights, *bastu* ryots, ryots, under-ryots, shall all be jumbled up together. But this will never do: something more definite will be necessary, unless the whole of our present system of settlement procedure is to be reversed, in which case a good deal of Regulation VII of 1822 will have to be repealed. Bengal Act VIII of 1869 is, I see, to be repealed; but Chapter XI of this Bill, as I shall notice further on, makes the same requirements as the Act does on settlement officers, in respect of defining the status of various kinds of tenants, so that I am afraid we shall not be able to get on without some definition of "ryot."

14. The matter would be made clearer by altering the definition of an under-ryot, from one "holding land *below* a ryot" into one "holding land *from* a ryot." As it stands at present, it is doubtful whether the holding of a korfa ryot could be brought within the definition of an "incumbrance" in section 208.

15. If we get rid of the korfa ryot as an incumbrance, then the definition of the ryot, as the actual or presumable cultivator (presumable from the *intent* with which he took the land), would come in, and we should get the actual ryot on our jummabundi, and every one below him, *i.e.*, holding under him, would be omitted, or, if it were desirable to record them, might be put into a subsidiary jummabundi or ikwal.

16. In accordance with this view, howladars, aymadars, mandals, and all persons who obtained grants of waste land for the purpose of bringing them under cultivation and colonizing them would fall into the position of tenure-holders. This would, I presume, cover also the case of the jotedars of Northern Bengal, and to some extent also that of the talukdars of Chittagong. The present under-ryots in such estates would then become, to a great extent, ryots; but on this point I beg to refer to my remarks on section 50, further on.

17. Another point referring to this same definition is the restriction of ryoti land to land held for purposes of agriculture, horticulture, or pasture. This excludes tanks, which all over Eastern Bengal are let as ryoti holding for fishing purposes. It also excludes land let for building bazars. Something must be done about this latter class of land. In the Midnapore bazar cases, the High Court ruled that land let for building purposes unconnected with agriculture (*i.e.*, not *bastu*, as defined in the present Bill) was not governed by the settlement laws, which only applied to agricultural land and homestead land connected therewith. But the subject still, so far as I am aware, remains unsettled, and if it is to be excluded from this Bill, it will require a Bill of its own to settle it. The only mention of it in this Bill is in section 208, clause (*c*), where such tenures are declared not to be incumbrances; but this does not provide for their being leased, or for recovery of arrears, or for ejectment, or enhancement, or, in fact, any of the conditions to which such lands are equally liable with agricultural lands. I reserve further remarks on this point till I come to discuss chapter VII of the Bill.

18. *Sections 14 and 15.*—I have already noticed that these sections turn an occupancy ryot at fixed rates into a tenure-holder. I see that this is said to have been done for the convenience of the draftsman. It is unfortunate that we hear so much of this person now-a-days. It seems to me that it is a matter of no moment at all whether he finds an Act easy or difficult to draft; that is his affair, and should not for an instant occupy the mind of the legislator, whose attention should be directed solely to the justice and utility of the law. The mechanical operation of putting an idea into plain English is beneath consideration. I venture to think that by turning the occupancy ryot at fixed rates into a tenure-holder, we are creating a state of things foreign to the ideas and customs of the people, and likely to give rise to much confusion.

19. *Section 21.*—I am disposed to think that the limit of 30 per cent. is too high, and that it should not be more than 20 per cent. I think, however, that, in a vast majority of cases, there will be no necessity for courts to apply sub-sections (3) and (4), as cases in which the customary rates payable by persons holding similar tenures in the neighbourhood cannot be ascertained must be very rare.

20. *Sections 27 and 28.*—This seems unnecessary. Under section 27 the transferor and transferee, or successor, may apply to the landlord for registration of the transfer. If he refuses, an application must be made to the civil court, which will apparently take evidence and decide the question. There seems very little use in giving the applicant the option of applying to the revenue officer, who can do no more than issue a notice, which, it is said, the landlord is "bound to comply with;" but it is not said how compliance is to be enforced. Why should the applicant not go to the civil court direct on the refusal of the landlord, just as the landlord has to do under section 33. The landlord who refused to register on the request of the applicant will not do so on a mere executive order of a revenue court under section 28, if there is no penalty attached to disobedience. And why is the revenue officer to assist the tenure-holder, while he is not to assist the landlord.

21. Moreover, section 28 does not give the revenue officer any power to enquire whether

there has been a transfer or not, nor is he authorized to listen to any objection the landlord may urge against registering. This section will give a certain amount of additional work to revenue officers without the slightest corresponding advantage to either of the parties.

22. The same remark applies to clause (3) of section 27. There is no use whatever in saying a man "shall do" this or that, or "shall be bound to do" this or that, unless some penalty is prescribed for disobedience. In this case the landlord shall give a statement in writing of the reasons of his refusal; ninety-nine landlords out of a hundred will habitually neglect to comply with this section; and if they do so neglect—what then? They do not suffer, for there is no punishment for neglect. The fines which the Board is authorized to prescribe would not, as section 35 at present stands, cover cases where a landlord neglects to register.

23. I think the increase in the rate of fee from two per cent, if notice is given within six months, to twenty per cent., if given over six months from date of transfer, is excessive. The maximum rate, it is true, ranges from Rs. 100 to Rs. 1,000, and this will mitigate the severity of the fine (for such it is) in some large tenures, but in the smaller tenures, the holders of which are generally poor, a fee of twenty per cent. will be very seriously felt; and as the use of having the transfer registered at all is not very clear to this class of persons, the result will be a pretty general neglect to register at all. The landlord will, in a great majority of instances, remain ignorant of the transaction; or will not care enough about the matter to apply to a court under section 33, and thus much of this portion of the law will remain a dead letter.

24. *Section 30.*—In transfers under this section, it should be provided that the court holding the sale shall give notice to the landlord, who otherwise might remain in ignorance of the transfer. So also in section 35 (1) the Board should be authorized specifically to make rules not only for the matters mentioned in that section, and for procedure to be followed, but for the enforcement of the duties imposed upon landlords by Part D of chapter III.

26. *Sections 36 and 42.*—I do not see the necessity of incorporating the law regarding putni tenures into this Bill. It seems to have been taken as a matter of course by the Rent Commission that this should be done. If this view is to prevail, then, I think, the system should, as suggested by the Rent Commission, be extended to such under-tenure-holders, other than putnidars, as may choose to accept it by a written agreement. The principle that where there is no dispute, the process of recovery should be as summary as possible, is a sound one, and almost indispensably necessary at the present time, when courts are overcrowded with business. The Collector of Midnapore also holds this opinion.

27. I would suggest also that, if the putni law is to be incorporated into the present Bill, the opportunity should be taken advantage of to make a few verbal alterations in that law. I would insert a section making it legal for a Collector to make over the duty of holding sales to a Deputy Collector, with the sanction of the Commissioner. Collectors have so many duties now-a-days that it hampers them very much to be obliged to hold these sales themselves.

28. Doubts also occasionally arise as to the exact meaning of the words in section 14, clause 2, of the putni law. A "talukdar may contest the zemindar's demand of any arrear." May he only contest the fact of the arrear being due, or may he bring forward other objections, such as that the zemindar is not a recorded proprietor, or that he is only one out of a number of proprietors, and therefore cannot apply alone to bring the taluk to sale, and other similar objections?

29. It might also be as well to substitute throughout the putni law the term "recorded proprietor" for the vague "zemindar," wherever it occurs.

30. As the Board are aware, questions have also arisen as to what is to be the actual date of sale, when, as often happens, the Durga Poojah holidays fall on the first day of Aghan. This doubt might be cleared up on the present occasion.

31. *Section 45.*—I think this section goes a great deal too far. It allows a man who has held land anywhere in an *estate*, no matter how often it may have been changed, to become a settled ryot; and a settled ryot acquires a right of occupancy in any land he may happen to hold on the 2nd of March last, so that, in the case of a large zemindary, say the Burdwan estate for instance, a man may come to a village from another village sixty miles off in that estate, take land there, and have rights of occupancy from a few days' possession.

32. Estates in Bengal are often very large and very scattered, and the various portions have nothing in common. Why should a man, who has lived for some years in the south of a district, acquire thereby a right of occupancy in land many miles off in the north, merely because the two places happen to belong to the same estate.

33. There may be some justice in the rule that a ryot who has lived 12 years in a village shall be considered a settled ryot. The village even in Bengal still preserves some sort of solidarity, the estate has none, and it would be certainly very unfair to allow a ryot to acquire a right of occupancy in a plot of land which he has held only for one year, in a village in which he is, to all intents and purposes, an outsider and a stranger simply on the ground that he has held land for twelve years in other disconnected parts of the same estate. Such a concession as this is not looked for by the cultivating class, is opposed to their own views and to the custom of the country, and would operate very hardly on the zemindar.

34. There is of course the counter consideration that unless some latitude is allowed in acquiring the right of occupancy, the zemindar can prevent its accruing by shifting the ryots

fields year by year. But I do not think the legislature meant to authorize the consequences which would result from the wording of this section as it stands. There is not only the difficulty of an estate containing a vast number of villages scattered widely apart, but also that of a large village containing portions of many estates. It is evidently not intended that a ryot who has held land in estate A for twelve years should be considered a settled ryot in estate B, merely because the two estates, or portions of them, are included within one and the same village.

35. Yet the use of the word village would lead to this result, just as the use of estate would lead to that mentioned above. I would suggest that it should be declared that when a ryot has occupied land for twelve years in a village which constitutes one entire estate, such occupancy shall make him a settled ryot of that estate; when the village forms only a part of an estate, such occupancy shall make him a settled ryot of that village only; when a village contains more than one estate, or portions of several estates, twelve years' occupancy should constitute a settled ryot of so much of the village as belongs to the estate in which he has held. Of course this would restrict the area in which the last-named class of ryot could acquire occupancy rights, but this does not matter. The occupancy right is a matter between landlord and tenant; and if the landlord's property is small, the tenant's area of selection must be small also.

36. *Section 50.*—It is contemplated in paragraph 41 of the Statement of Objects and Reasons that the right of sub letting, conferred by clause (*e*) of this section, may in time lead to a state of things in which the bulk of the actual cultivators would be under-ryots; and this state of things is regarded as so far off in the future that it may be safely left to some future Government to deal with it.

37. But the Collector of Midnapore points out very truly that this state of things is actually in existence very largely in that district, and I apprehend that it exists much more extensively than is suspected in all districts, similarly situated to Midnapore, *i.e.*, in all districts which were, down to recent times, the wild uncultivated frontiers of the Mahomedan province of Bengal. It is in these places that we find the jotedars, howladars, mandals and the like referred to in paragraph 16 above. The illustration to section 4 of the Bill recognizes the custom that under-ryots may acquire a right of occupancy, but leaves the conditions under which such a right may be acquired undefined, and the under-ryots consequently unprotected. They hold under, or from, superior tenants, who have been recognized as having the status of occupancy ryots.

38. There are in Midnapore many thousands of these ryots whose forefathers have tilled the land they now occupy for many generations, and I agree with Mr. Wilson in thinking that there is no reason why they should be left unprotected. The Board have before them precisely this question in the case of the ryots of Hooda Bhetia, in which, in appeal from the Collector, I was forced, by what appeared to me to be the present state of the law, reluctantly to rule that the ryots had no status beyond that of mere "korfas."

39. The case is this:—A, some 60 or 70 years ago, got from the zemindar a lease of a tract of jungle. He then induced B, C and D to settle and clear the land for cultivation by giving it to them rent-free for three years. A and his successor have now been recognized as occupancy ryots, but that is no reason why B, C and D should not be protected in the same way as other hereditary cultivators. The defective state of the present law on this subject has certainly been productive of much hardship; for, as the Collector observes, "although these under-ryots are hereditary occupants of the land, they cannot prove the existence of a custom enabling them to acquire an occupancy right, and in fact the courts have more than once decided that, under the law as it stands, they have no such rights."

40. Mr. Wilson would insert a provision to the effect that an under-ryot, who for five years consecutively cultivates the same land, shall acquire the status of an ordinary ryot, unless during any part of that time he has held under a lease for a fixed period. It would, I think, answer the purpose equally well if it were provided that, on a person whom we now call a ryot becoming (as he would under sections 14 and 15) a tenure-holder, the ryot's holding under him should, if they fulfil the above conditions, be held to have acquired a right of occupancy.

41. *Section 56.*—This section has given rise to much discussion. It is urged that, with the great facilities now granted for the acquisition of occupancy rights, it is only fair to the zemindar that he should have a chance now and then of extinguishing such rights. But the object of the Bill is avowedly to take away all such chance. Every possible obstacle is put in the way of a zemindar's preventing the growth of occupancy rights; and such rights will consequently grow inordinately; and not only will they grow, but once established, they must remain for ever, unless the landlord keeps the land in his own hands.

42. Here there is some confusion in the law; section 47 provides that no occupancy right shall accrue on land held by any person as owner: one would suppose that when a landlord exercised the right of pre-emption and bought a ryot's holding, he would thenceforth hold it as owner.

43. Yet the sections on pre-emption and section 56 speak of the ryot selling his "occupancy right," and the landlord purchasing the same. What is this but selling and purchasing the land itself? I do not see why, if the landlord thus purchases the land, it should not be open to him to extinguish the occupancy right. In fact, under section 47, that right would be extinguished by the mere fact that he, the owner, purchases it. But to prevent this conse-

quence, the fine distinction is introduced, that he, the owner, holds it not as owner, but as an occupancy ryot under himself. This, I think, is very hard upon the landlord. Ordinary ryots with no occupancy rights, though by no means sufficiently cared for in chapter VIII of the Bill, are yet placed in such a position that no deterioration of the status of the cultivating class would result from the partial extinction here and there of occupancy rights. Under section 119 no ryot can have his rent raised to more than five annas of the value of the gross produce of his land, and he cannot be ejected without elaborate proceedings. Surely this is protection enough for any ryot, unless it be deliberately intended to make all zemindars mere annuitants, in which case we deprive the highest class in the country of all incitement to take an interest in the welfare of their tenantry; we turn them into drones, and, in a vast number of instances, into paupers. It is all very well to have a substantial peasantry; but I am not one of those who wish to see this end attained by sacrificing the nobility and gentry of the country.

44. With their estates held by ryots, setting at what will be virtually, in many cases, fixed rates, and with land which, when once occupied by a ryot long enough to give him a right of occupancy, carries that right with it to whosoever may hold it hereafter, the zemindars will cease to have any interest in their estates at all. The privilege of pre-emption ceases to be of any value; for why should a zemindar buy up the tenure of a ryot unless it be in order to extinguish the right of occupancy? He will not be led to use his right of pre-emption merely to exclude an obnoxious purchaser, for his interest in the land will be so slight that it will not matter to him who purchases it.

45. Moreover, as pointed out by Mr. Reynolds in his speech in Council, the landlord will by this provision be led to keep the land in his own hands, thus virtually turning it into khamar. The whole section seems to me to involve an erroneous idea. It is not the land that acquires rights, but the man who holds it. If he holds it for a certain term of years, equity and custom demand that he should acquire occupancy rights in it. But one fails to see why the land itself should carry those rights with it when it passes into the hands of a man who has done nothing to earn or merit those rights.

46. *Section 62.*—The preparation of tables of rates will be, in all places, a difficult and, in many places, an impossible task. It has been tried experimentally in several districts, and it appears from the debates in Council that the officers selected for the task do not think it is likely to be generally successful. This is to a certain extent admitted in paragraph 51 of the Statement of Objects. It is there apparently implied that tables of rates will only be prepared in districts where such rates are already recognized and in existence. I think if the idea of having such tables is not abandoned altogether, it should be stated in the Bill that they will only be made in such districts, so as to make it impossible for applications for the compilation of a table of rates to be sent up from districts where the materials for such a table do not exist.

47. *Section 70.*—On the question of finality being given to tables of rates under this section, the Collector of Midnapore writes :—

"I desire to represent the extreme danger involved in irrevocably fixing for a term, even of ten years, a table of rent rates. It is often found necessary in this and other provinces to revise the work of careful experienced settlement officers, with reference to facts gradually brought to light by experience; but the procedure of the Bill would give absolute finality to an order of Government sanctioning a table of rates. In considering this point, it should be borne in mind that the Board and Government would have no independent knowledge of the facts with which they had to deal, but would be wholly, or almost wholly, dependent upon reports submitted to them by the officer who had framed the table of rates, and who could hardly fail to be prejudiced in favour of his own handiwork. Nothing is easier than to deduce logical conclusions from figured statements; but it is far from easy to ascertain (for instance) the true average outturn of a particular class of land.

48. I quite agree with Mr. Wilson; the illustration which he gives fully confirms his remarks. He points out that in the Midnapore settlements Mr. Price came to the conclusion that the price of paddy would probably never fall below one rupee a maund, and certainly never below 12 annas. The Board then went into the same question, and from the police returns of the selling prices at the principal marts from 1872 to 1877, arrived at rates, in most cases, lower than Mr. Price's. The present Collector has gone over the same ground in the same manner from the price lists of 1881 and 1882, the result being two annas, or even more, below the rates arrived at by the Board. Prices may rise again, or they may not; but the above example shows conclusively to my mind that it would be dangerous to fix any table of rates, no matter how carefully prepared, for so long a period as ten years.

49. Seeing then that, before a table of rates can be prepared at all, an enquiry must first be held to ascertain whether the district or area is one in which the materials and conditions for compiling such a table (recognized rates or uniformity in the classes of soil, &c.) exist; that the cost of this enquiry and of the preparation of such a table, if found practicable, will be thrown upon landlords and ryots jointly; that there will still remain many parts of the country where no such tables can be made; that even where made, they will not continue to represent actual facts for more than one or two years together; and that the only object of having such tables at all is to simplify the work of the courts in enhancement cases, I must express my opinion that, to use a common saying, "the game is not worth the candle."

50. As a mere matter of administrative economy, it would be far cheaper to appoint more rent-suit moonsifs, and let them work out the rates as they do at present, than to employ a large number of highly-paid revenue officers (they must be highly paid, because they must be possessed of much ability and experience, and such officers are only found in high grades of the Covenanted and Uncovenanted Services) to prepare tables, which, when prepared, will be of comparatively little value. I think also the people themselves will very much prefer having their cases decided each on its own merits, to having them summarily disposed of by reference to a table of rates.

51. *Section 74.*—Where there are no tables of rates, the courts are to proceed, in enhancement suits, on certain lines which are apparently intended to be a decoction of all the case law on the subject since Act X of 1859. With regard to section 74, clause (3), I may remark *en passant* that I do not quite see how the increase in the average price of produce in any locality, or in any of the usual markets, can be brought about by the sole agency or at the sole expense of any individual ryot. Excluding temporary or casual increases in the selling price of agricultural produce, such as famines or campaigns, the increase is, as far as I can see, invariably due to causes operating on a much too large a scale to be affected by the actions of any individual ryot, or even of all the ryots of a village acting collectively. It is brought about by opening up new roads, railways, or canals, or by the establishment of permanent trade relations with foreign countries, and the like.

52. But passing by this point, I find that in section 75 the principles by which the court is to be guided in enhancing rents are practically the same as those by which it would be guided in a case where there were tables of rates. We have first the limit of one-fifth of the annual value of the gross produce. Subject to this we have some very simple rules for dividing the increase between landlord and tenant. In 92 cases out of a hundred the issue will turn on clause (c), and so we get back again to the old rate of things.—Issur Ghose's case and Act X of 1859. The facts to be ascertained by actually recording evidence are very simple, and I do not think a moonsif would have much more difficulty in deciding a case where there was no table of rates, than one where there was a table, especially as the law allows of going behind the table in certain cases. Here, again, I find an argument against the adoption of the table of rates with all its concomitant inconveniences.

53. As to the one-fifth limit I see no great objection, though I do not think one-fourth would have been too much. I find in Jellamootha the percentage of gross value taken as rent ranges from 19 per cent. to 27·5, the general average being 19·8. In Majnamootha it ranges from 20·3 to 30, the average being 23·5. Many of the pergunnahs in these estates are, however, very fertile, and as the highest average hardly rises to one-fourth, perhaps one-fifth, for the whole of Bengal, is a safe limit to fix. It is always, however, very unsatisfactory to lay down hard and fast lines for so vast a tract of country containing such widely differing kinds of soil and conditions of fertility.

54. As regards section 77, I can only repeat what I said in my report on Mr. Reynolds' Bill, that if it is fair to decree enhancement at all, it should be decreed at once. It is impossible for a court to say that land is progressively improving, and that it will go on improving at the same rate of progress. It also seems somewhat contradictory for a court to declare in the same breath that the land is fairly liable to enhancement, and yet that enhancement would cause hardship to the ryot, and therefore cannot take place all at once. This is another instance of that extreme tenderness towards the ryot, which does not seem to be felt when dealing with the landlord.

55. *Section 79* is another instance of the same tenderness. What is just for the zemindar is just for the ryot; and if enhancement is hedged in and fenced about with all the conditions of section 74, reduction should be similarly hedged in, and it should not be merely left to the court to pass any order if thought fit. This looks very much as if, when the zemindar's pocket is to suffer, it does not matter; but when the ryot's pocket is to suffer, it matters a great deal, and you can't be too careful.

56. *Section 80.*—This is not of much use. Pasture lands are not, as far as I know, leased to individual ryots *as* pasture; I am sorry to say they are often so leased with a view to their being turned into arable; and in this way all the pasture land in the country is being swallowed up by zemindars, and the cattle are deteriorating visibly for want of proper grazing land. I should be glad if Government could see its way to preventing this. Hitherto we have been generally under the impression that a zemindar might, to a very great extent, do what he liked with his land, so long as he paid his revenue punctually; but in the present day we have outlived so many old-fashioned prejudices, that there would be no great shock to our feelings if this one followed the rest. We are going to fix rates of rent by tables of rates; we even contemplate entering on a permanently-settled estate, and settling it over again (all but the revenue, which is to remain unaltered, whatever may be the result of our new settlement); and under these circumstances it would be merely "straining at a gnat and swallowing a camel" if we were to allow our hands to be tied in such a matter as the preservation of pasture land.

57. Even if it be admitted that the framers of the permanent settlement reserved to themselves and their successors the right to interfere for the protection of the ryots, it has always been admitted that the zemindar was to be allowed to make his own arrangements for bringing into cultivation waste land. The difficulty about pasturage has arisen, I believe, from the fact that anciently there was abundant waste land where the ryots grazed their cattle

as they pleased; no specific area was therefore set aside as pasturage or grazing land distinguished from the waste land. In course of time, therefore, the zemindars have brought under cultivation all the land not already under the plough, and pasturage has disappeared under the pretext that it was waste, and was being reclaimed as such. It would, I fear, be impossible to throw back into grazing land any land already brought under the plough and leased to ryots; but in places where this process has not gone so far, it might be enacted that a certain proportion of land in each village should be reserved as pasturage and left free for the cattle of all the ryots to graze on, the conversion of existing pasturage, beyond a certain proportion, into arable being forbidden by law. I do not think this would meet with much opposition.

58. *Section 83.*—This will be a very difficult proceeding, not because there will be any difficulty in finding what are the market prices on any given date, at any given place, but because in the present day communication is so easy and rapid between one part of the country and another, that there cannot, in many places, be said to be any one market price all harvest time. The harvest time may last six weeks; and during that time, especially in places in telegraphic communication with Calcutta, Madras, and other large towns, prices will go up and down twenty times. Long before the price list has been sanctioned by the necessary authority, it will have ceased to be correct. All that can be done is for the Collector to record, day by day during the six weeks of harvest, and for another six weeks afterwards, till the crop is all disposed of, the daily fluctuations in the principal markets. At the close of this period he may tabulate and arrange his figures and strike averages, and the return will then be of some use in future years as a guide to what the prices were in the year to which it refers.

59. *Section 85.*—With reference to the remarks made in paragraph 17 of this report, I observe that in the Statement of Objects, paragraph 70, it is mentioned that all provision regarding land used for building purposes has been purposely omitted from the Bill. I regret much that the weighty remarks on this subject, in paragraphs 108 to 112 of the Rent Commissioners' report, have been passed over with only this cursory notice. I need hardly point out that all the land in the country (except waste land and petty patches of revenue-free land here and there) belongs to, and is included within, the limits of one estate or another. Why should a zemindar have no law to guide him when he wishes to find a village or a town? Why is there to be no provision made for cases where capitalists wish to obtain land for building a great factory? The whole subject of this Bill is, as I have said more than once, looked at too exclusively from the ryot's point of view, and not even the ryots in the widest sense of the word, but from that of the ryot who tills the soil, and him only. The omission of all provisions regarding land used for building purposes is calculated to retard the development of the country and to re-act unfavourably even upon the ryot, for whose welfare we are so solicitous.

60. The "substantial peasant," whom it is so much wished to create, has a far better chance of coming into existence and continuing to live and prosper if he has marts for his produce all round him. What retards the progress of the peasantry as much as anything is the long and weary distance which so often separates him from the nearest place where he can get money for his produce. Whatever renders it difficult or disadvantageous for the zemindar to establish marts on his land, or to allow of the erection of better houses than the mud huts, or bamboo or thatch hovels, which now form the peasant's or ordinary dwelling, in the same degree keeps back not only the commercial development of the country, but also the material comfort of the peasant, and consequently also his striving after improvement. If the subject of letting land for purposes other than agricultural be not treated of in its proper place in this Bill, the Bill will be imperfect, and a most urgent and all-important feature in the question of the tenure of land will be left in a state of dangerous chaos.

61. *Section 88.*—I agree with Mr. Reynolds in considering it a mistake to call a ryot, who has no right of occupancy, an "ordinary" ryot. In the earlier part of this report I observed that we had not yet succeeded in defining a ryot at all; and when you cannot define the substantive, it seems strange to prefix to it the adjective "ordinary."

Section 89.—I also object to the terms of this section, leaving the "ordinary" ryots' rent to be fixed by contract between him and the landlord, subject only to a maximum, which it is truly observed will be evaded at every turn.

62. The privilege of the occupancy ryot is not necessarily, at least it ought not to be, a more favourable rate of rent than other classes, nor ought it to consist in greater protection at the hands of the law. It ought to consist merely in a tighter hold on his land in a right to hold his hand in spite of every one, so long as he pays his rent and uses the land for the purpose for which he got it.

63. The "ordinary ryot" ought to have all these privileges too, except fixity of tenure. He is a tenant-at-will, unless he likes to stick to his land long enough to give him occupancy rights; and this ought not to be difficult for him to do, now that every possible obstacle is placed in the way of zemindars stopping the accrual of such rights.

64. *Sections 91, 92, &c.*—The procedure for enhancement in these sections seems to me very faulty. There is here none of the careful weighing of considerations laid down for the occupancy ryot in chapter VI. The landlord may enhance, with or without reason, up to the limit of section 119, five annas in the rupee. Then he may serve a notice on the ryot, who must then either pay or go. In the suit for his ejection, to be instituted under section 93, the

court is not to enquire whether the enhancement is fair or not. The case is to be tried in the most summary manner, and unless the ryot agrees to pay the enhanced rent, the court must pass a decree ejecting him. I really do not see why such tender care should be bestowed upon one favoured class of ryots, while the other is left utterly unprotected. The protection granted to the occupancy ryot is so complete, and any attack on him is attended with so much risk and difficulty, that the zemindar will naturally turn his attacks against the "ordinary" ryot, whom the law does not deign to protect, and will effectually prevent him, at any rate, from acquiring occupancy rights by ruining him long before he has had time to do so.

65. *Section 93*, clause (*a*), will be inoperative. Every one knows that tenants-at-will do not make improvement. But I agree with Mr. Reynolds, and with the unanimous opinion of all whom I have consulted, that clause (*b*) is absurd. If you start by defining a man as one who has no right of occupancy, why should he be compensated for being turned out if he does not comply with the terms of the contract by virtue of which alone he holds. The law expressly says that the "ordinary" ryot has no rights in the land he tills, save such as he may acquire by virtue of some contract or agreement with landlord. It is of the very essence of his position that he can be turned out, and if so, what injury is done him when he is so turned out? It is very sad to see this, one of the most pestilent inventions of the *anti-landlord* party in England, of that noxious class who believe that *la propriete cest le vol* introduced into this country.

66. *Sections 97 to 99.*—Some objections have been raised against this Part B. I do not share them. I think it is very necessary that something should be done, not so much to fix the dates of ryots' kists, which are on the whole very fairly paid already, but to limit the number of kists. On more than one occasion recently I have met with cases in which a zemindar or putnidar had arbitrarily fixed 12 kists in the year; and, in order to harass his ryots, was in the habit of suing them in the moonsif's court separately for each kist, thus bringing twelve suits in one year against a single ryot. It should, however, be stated who is to move the Board to exercise its powers under Part B. If the Board waits for either zemindars or ryots to apply to it, I fear it will wait a long time. The initiative should rest with the Collector of the district, who should report through the Commissioner for the Board's orders.

67. *Section 100.*—I approve of this section entirely. I would, however, repeat the recommendation, which I made in reporting on the Bengal Bill of 1881, that the Board should have power to prescribe a form of receipt, as zemindars through ignorance or carelessness will be very apt not to include all the necessary particulars in the receipts which they may give.

68. *Section 101.*—I adhere to my former objection to this provision. It will be widely and generally, if not universally, evaded; such a statement is not, as a general rule, required by ryots. Those who desire to be on good terms with their landlords are careful to avoid asking for any information. If a ryot comes asking for information about the state of his account, it is generally assumed that he means litigation, and the zemindar prepares himself accordingly, and bad blood is caused. It would be far better to provide that zemindars shall *keep* a register containing all those particulars (many of them keep nothing of the kind); this would be a great step in advance, and that if a ryot at any time wanted a statement, which might happen once or twice in his lifetime, the zemindar should be bound to give it; and if he did not, the ryot could apply to the Collector or the civil court to compel the zemindar to give it. It would be useless practically to rule that such statement should be given free of cost, because whatever the law might say to the contrary, the zemindar's *amla*, if not the zemindar himself, would be sure to demand some fee or present, and the ryot would, on the whole, rather give it than not, in order to keep on good terms with his landlord and the *amla*, who have his fate in their hands.

69. *Sections 103 to 107.*—I object to the wording of clause (*a*). It would be very dangerous to allow any tenant who, without just cause, or for the deliberate purpose of making mischief, chooses to fancy that he "has reason to believe" that the zemindar will not receive his rent and grant a receipt to pay it into court. The present law (section 46 of Act VIII, B.C., of 1869) requires that the tenant shall first make a tender of the rent. I think this provision ought to be retained. I know it has been said that a ryot is often afraid to go to the zemindar's cutcherry with his money, lest it should be taken from him and no receipt granted, but such cases are in my experience more imaginary than real; and as between man and man, it is surely only fair that the recipient should have a chance of taking the money and giving a receipt before he is put to the trouble of going to a distant court to get it.

70. When a ryot is afraid of violence or unfair treatment at the zemindari cutcherry, he always takes the precaution of taking a number of other ryots with him, who can give evidence in case of his being ill-treated; and a zemindar, who is capable of such conduct, is always so unpopular with his ryots that any one of them can get plenty of others to stand by him in such a case. If we let any ryot, who thinks he "has reason to believe" that the moon is made of green cheese, or any other of the wonderful things which make up a ryot's belief, especially at times when he is at feud with his landlord or neighbour, deposit his money in court, much unnecessary business will be entailed on the courts, and much hardship on zemindars.

71. The wording of the remaining sections of Part D seems to be intended to authorize

Collectors to receive deposits; but if the suits lie in the Munsif's court, the deposits should be made there also to avoid delay and correspondence in ascertaining whether the money is really in deposit or not.

72. *Section 119.*—I have much doubt as to the propriety of fixing a definite proportion of the produce as the ryots' rent. I know that very much has been said in favour of such a measure, yet as it seems that this section is intended to have retrospective effect (though the wording is not very clear), such a provision would lead to a very general disturbance of existing engagements. Is it meant that if a ryot is at the present moment paying a rent which is in excess of five annas in the rupee on the value of the produce, he shall, as soon as this Act comes into force, be entitled to have his rent reduced to that proportion? If so, I am not prepared to say to what extent the rents of ryots all over Bengal will not require reduction. It is one thing to lay down a general principle and quite another to insist on its being immediately applied everywhere throughout a vast country. I think it is far better to leave such matters to be decided by mutual consent and local custom. The ryot is in many places far stronger than seems to be supposed, and with the liberal amount of protection now to be given him by the Bill, will be well able to hold his own against any excessive demand on the part of his zemindar. At any rate, if it be thought that the welfare of the ryot demands some such limit as this to his rent, the rule should not be made retrospective.

73. *Section 126.*—Instead of ruling, as is done at the close of clause (2), that no work shall be deemed to be an improvement which diminishes the value of any other part of the estate, it would be fairer, I think, to say that it shall not be deemed an improvement if it diminishes the value of any other part of the estate to a greater degree than it improves the part worked upon. The estate in this respect being regarded as an unit, an improvement on one part expressed by fifty, which diminished the value of another part to an extent expressed by twenty-five, would still be on the whole, as regards the estate at large, an improvement. I do not, however, attach importance to this chapter, as I fear, from what I see round me, we are yet some way off from the day when ryots of any kind will make improvements to any great extent at their own expense.

74. *Sections 133 to 138.*—These are mostly already in force. There seems to be some obscurity, however, about rent-free and revenue-free lands. In section 92 of the Statement of Objects and Reasons reference is made to a letter from the Government of Bengal, in which it is remarked that a landlord cannot measure "lakhiraj," though a lakhirajdar may be holding under cover of his grant more land than he is entitled to. The Government thought landlords should be entitled to measure such land, and there can be no doubt of the correctness of this view. To remedy the defect, however, section 133 of the Bill gives the landlord power to measure "rent-free" lands, but does not (if I understand the wording rightly) empower him to measure "revenue-free" lands. Both classes of land are commonly included under the expression lakhiraj, which, however, strictly only applies to the latter, and probably the Government of Bengal meant to include "revenue-free" lands. These lands very frequently are entirely surrounded by zemindari land, and "revenue-free" holder is quite as much given to encroaching as the humbler "rent-free" holder. The law should enable a zemindar to proceed against the former as much as against the latter, provided the lands were an *enclave* in that is, entirely surrounded by the zemindar's lands. Probably some alteration in the wording of this section would be advisable.

75. *In Section 138.*—I think the appeal from the Collector should be not to the District Judge, who, from his official position at least, has no means of judging what is the correct standard of measurement, but to the higher revenue authorities, who, as administrators of all matters relating to the revenue, and custodians of all the records pertaining to the subject, are the best persons to decide what is the proper standard in any part of the country.

76. As we are by way of providing Bengal with all sorts of records of matters which we have hitherto been brought up in the belief that we were not concerned with, it would, I think, be as well if, along with our records of rights and such like matters, we should make once for all an enquiry which would enable the Board authoritatively to declare what was the standard in each pergunnah or other area throughout the country.

77. *Section 141.*—Here I am in doubt whether the provisions of "merger" are not in opposition to those of section 56. If a landlord acquires an occupancy right in land by any process, would not the principle of merger cause the occupancy right to merge in that of the landlord, so that on re-letting the land the new ryot would not, as provided in section 56, acquire an occupancy right, that right having merged and so become extinguished. I am not sufficiently familiar with the meaning and working of this new principle of "merger" to answer this question. I think it ought to do so, as I have said in my remarks on section 56.

78. *Sections 142 to 148.*—It is only necessary to say that I fully approve of this Part E, and that it introduces a much needed and extremely valuable reform. There is, I think, one small omission, which might be supplied. It is of course understood that during the incumbency of a manager all power of interference shall be taken away from the co-owners, and that during that period it shall not be lawful for them to receive rent or grant leases, and that all receipts given and leases granted, save by the manager, shall be null and void, and that the manger, and he alone, shall exercise all the powers and functions conferred by the law on landlords. I have known cases in which co-owners have tried to collect rents and do other acts indicative of ownership behind the back of a manager appointed under Regulation V of 1812.

79. *Section 151.*—The procedure of chapter XI virtually amounts to making a regular settlement of part or the whole of a permanently-settled estate. It involves not merely the determination of the rents, but the preparation of a jummabundi; in fact all the proceedings of an ordinary settlement, excepting only the fixing of the revenue. And in some respects this procedure gives more power to revenue officers than do the existing settlement laws. This is stated to be intentional, and the procedure has been invented with a view to removing from the civil courts the power they now exercise of reversing the decision of the revenue officers on many points in a settlement, accordingly Bengal Act VIII of 1869 is repealed.

80. I personally, as a revenue officer, naturally approve of such a step. It may be foreseen that with such a powerful engine as this in their hands, the executive authorities will in future abandon the procedure of the settlement laws entirely in all cases of Government estates or wards' estates in favour of procedure under section 151, clause (*c*), and I fancy few revenue officers will avail themselves of the permission to refer to the civil court given by section 155. By section 227 (*a*) the Local Government may confer on revenue officer employed under chapter XI all the powers of a civil court in trying a suit; and as these powers include those of summoning and examining witnesses, compelling production of documents, and in fact do everything that is necessary to the full understanding of the matter at issue, I do not see why a revenue officer, say a Deputy Collector, should not be quite as competent to decide any matter that may arise as a munsif. The munsif can do no more than the Deputy Collector is empowered to do. He can only summon and examine the same witnesses, compel the production of the same documents, hear the same arguments from pleaders. His materials for forming a judgment will be precisely the same as those of the revenue officer, and consequently unless we admit that the munsif is *per se* a better man than the revenue officer, which is a hazardous assumption, there is not the slightest necessity for any reference to the civil court under section 156. The revenue officers will, therefore, henceforth pursue their course in settling an estate in peace without having the fear of interference by the civil court constantly before their eyes.

81. All this is very pleasant and gratifying for us, revenue officers. I do not, however, quite see how it is to be reconciled with the remarks in the preamble to Regulation II of 1793, which, after stating that "all questions between Government and the land-holders respecting the assessment and collection of the public revenues, &c., &c., have hitherto been cognizable in the courts of mal adalut or revenue courts," goes on to say that "the proprietors can never consider the privileges which have been conferred upon them as secure, whilst the revenue officers are vested with these judicial powers." This is not forgotten by the zemindars in the present day, and it is to be feared that the provisions of this chapter will excite great oppositions from them; indeed, this is already the case; and this chapter is by many zemindars looked on as an infringement of the principle laid down in the above regulation, which has for nearly a century been one of the fundamental principles of British rule.

82. It may be said that the powers conferred by this chapter can only be exercised at the request of the parties interested, or to preserve the public peace, or in estates where there is either permanently or temporarily no zemindar in existence.

83. As to the first of these cases, I would observe that the chapter can be brought into operation not only without the consent of the zemindar, but very much against his will. The vague expression "a large proportion of the tenants" may easily cover case of collusion among a certain portion of the tenantry got up by disaffected persons; and as the total number of the tenantry on an estate can, prior to proceedings under this chapter, be only vaguely guessed at, the Collector, with whom will rest the initial duty of representing the case to higher authority, may easily be misled into taking a comparatively small number of disaffected persons for a "large proportion of the tenants."

84. Then again, clause (*a*) of sub-section 2 of section 151 is defective in an important point. Surely it is not intended, as the words as they now stand imply, that any large body of tenants by merely making an application and depositing costs should cause an estate to be brought under settlement. They should certainly show cause for their application, and the landlord should have an opportunity of showing cause against the application, and the Collector's decision should be appealable, and no formal representation to the local Government should be made, except by the Board, and after all appeals have been decided.

85. It is no light thing to enter on to a permanently-settled estate and turn it upside down, with the result, perhaps, of crippling the landlord's resources for one lifetime or more. This clause must be very carefully fenced and hedged to prevent much injustice. It must be remembered that it is not always a case of the righteous arm of Government interfering to rescue a helpless flock of ryots from the fangs of a ravenous landlord. There are cases, and not so few as some would persuade us, in which a helpless landlord requires to be rescued from a combination of crafty and irreconcileable ryots. Eastern Bengal would furnish many such cases.

86. I would say that an application under clause (*a*) must be made by not less than two-thirds of the rent-paying tenants; that a local enquiry should be held to verify the signatures, and to count the tenants, so as to ascertain that the true proportion had signed, and had signed knowing what they were signing. If this was satisfactorily settled the Collector should then hold an enquiry as to whether there existed any valid reason for making a settlement, and at this enquiry both parties should be heard, the ryots and the landlord.

If the Collector found that there was cause, as well as if he found that there was not, he should report to the Commissioner, who should hear appeals against the report from either side, and should then report to the Board, who might again hear appeals, and either quash the whole proposal, in which case their decision should be final, or report to Government in its favour, in which case orders would issue under the section.

87. The same procedure should be followed in case where a landlord seeks to put in force this clause, though I presume such cases will be very few and far between. On this point, however, the Collector of Midnapore observes very justly that enhancement made under chapter XI "will have one great advantage over enhancement effected by a landlord dealing separately with individual ryots, in that it is more likely to be equitable." But as he also remarks, it is open to the serious objection that such a step will excite the hostility of the whole of the ryots, and lead them to band together in opposition; and this opposition will be the more serious, because it is principally in districts like Pubna and Furreedpore, where the ryots are particularly difficult to deal with, that applications will be made under this clause by zemindars.

88. It may be expected that during the progress of a settlement thus originated, the ryots will stand aloof and give as little assistance as possible. Recent events in Midnapore have shown us what is the result of these tactics. When the jummabundi is prepared and issued, it is suddenly discovered that it is full of errors, both as regards classification of soil, area, names of ryots holding specific plots, and the like. When this jummabundi, full of errors, is put into the zemindar's hand, he will find himself quite unable to collect according to it. He will then either make default in paying his revenue, and so get rid of an unprofitable estate by throwing it on the hands of Government, or he will have fair cause for asking Government to undertake the management for him: either of these courses would be very embarrassing.

89. These remarks are based on the supposition that any zemindar who applied under this clause would do so with the object of getting his rents raised. One cannot conceive that he should make the application with any other object. It is not for the interest either of Government or of the mass of the population that rents should be raised to any large extent, and Government would not be justified in interfering on the application of a zemindar for such a purpose. I therefore think that if a zemindar wants to raise his rents, the courts are open to him, and he should have recourse to them, instead of being able to proceed as provided in this section.

90. As to the second cause of interference—the preservation of the public peace—clause (*b*) appears to cover the same ground as the Agrarian Disputes Act V (B.C.) of 1876, which, as far as I am aware, has never been made use of anywhere since it was passed. There would therefore seem to be very little use in enacting clause (*b*). When a serious dispute arises, it is the duty of the Magistrate to preserve the peace, which he has generally no difficulty in doing, while the matters at issue are being decided by a competent court. Ryots are many, landlords few; a disturbance of any magnitude is necessarily got up by the ryots, who would thus have it in their power to force the landlord against his will into submitting to the procedure of this section. This ought not to be. I do not suppose it would occur often, seeing how entirely the Agrarian Disputes Act has remained a dead letter, but this clause goes further than the Act, and might be taken advantage of by designing persons.

91. The third cause provided for by class (*c*) is a valid one, and will be of much use.

92. *Section 164.*—If undertaken gradually and systematically by picked officers throughout the country, and confined simply to *recording* with no attempt at deciding disputed points, this record-of-rights would be extremely valuable. It will not, however, ordinarily be called for either under clause (*a*) or clause (*b*) of section 164 (2).

93. It should, I think, merely put on record such facts as are undisputed; indeed section 164 provides for no decision of disputed facts. If the class to which a tenant belong, or the amount of land held by him, or the rent payable be disputed, the recording officer should merely enter "disputed." Subsequently, if a court called for a copy of the record for reference in a case, and decided the disputed point, it should issue a precept to the recorder or the Collector, directing him to insert the facts affirmed by the decree in his record. The record would thus in course of time get complete.

94. There should be some provision in this chapter authorizing the Board or Government to confirm the record by notification, and to make rules for its form and for its safe custody, and for granting copies of extracts from it.

95. *Sections 166 to 187.*—I approve of the retention of the power of distraint under its present modified form. I think, however, that much, if not the whole, value of distraint depends upon the rapidity with which it is carried out, and having regard to the general slowness of procedure in civil courts, I would, in section 168, fix a period within which the court should be compelled to issue its order, say, 15 days from date of presentation of petition. If there is much delay, a ryot may get wind of the matter, and carry off his crop.

96. Distraint in itself does no harm to the ryot, and the courts should not allow themselves to be led into long and tedious proceeding before granting the distraint order. It would, I think, be sufficient if a mere application were taken from the landlord, with a copy of the accounts, both to be altered, with penalties attaching to false statements and damages as under section 110, if the rent were ultimately proved not to be due. These precautions would sufficiently protect the ryot.

CHAPTER XIV.

97. *Sections 188 to 207.*—The whole of this chapter seems well adapted to the conduct of suits. I do not think any greater simplification of procedure is called for. I have nothing particular to suggest.

CHAPTER XV.

98. *Section 215.*—In this section I would leave out the word "registered;" none of the Midnapore ryots' holdings referred to in paragraph 37 above are registered in the sense of section 208 (2), and it is not likely that they ever will be. If, therefore, this word stands, it will deprive large classes of the kind, which it is sought to benefit, of the protection designed for them by the section.

99. The question, what particular liens and rights shall be considered incumbrances, is a very difficult one, and one which, with the limited time at my disposal, I am unable fully to go into. As far as I have been able to study this chapter, however, I am disposed to agree with the views expressed, with Statement of Objects and Reasons.

100. I have not yet received any reports from any of the Collectors, except the Collector of Midnapore. In order not to delay the submission of this report, I propose to embody any suggestion that may be received from the Collectors in a supplementary report to be submitted hereafter.

No. 639, dated Hooghly, the 26th June 1883.

From—F. Wyer, Esq., Collector of Hooghly,

To—The Commissioner of the Burdwan Division.

With reference to your circular No. 38 of the 14th instant, calling on me for an immediate report on the Rent Bill, and Board's letter No. 351 A., dated the 29th March 1883, and forwarded with your letter No. 131 of the 16th instant, I have the honour to submit the following report. The shortness of the time allowed me for considering the Bill and ascertaining the views of the leading persons in my district is my excuse for its shortcomings.

2. I have received the opinions of Baboos Joy Kissen Mookerjee, Peary Mohun Mookerjee, Bijoy Kissen Mookerjee, Harihur and Monohur Mookerjee, Jogessar Shing, Chander Kant Mookerjee, Onooroop Mookerjee, Okhoy Chander Sarkar, and a note from Baboo Bimola Churn Bhattyacharjee, Deputy Collector.

CHAPTER II.

3. All the zemindars whose opinions I have received object to the Bill. In Baboo Joy Kissen's opinion the measures proposed will ultimately lead to no good results. He objects to the attempt to restrict for ever the area of *khamar* lands, and the presumption of section 6, on the grounds that the landlord's proprietary rights will be interfered with, and that the right of the landlord to let lands to the best advantage, which they are by the permanent settlement entitled to do, would be seriously restricted.

4. Baboo Onooroop Mookerjee thinks that it will be impossible to fix the area of khamar lands, for when a ryot gives up his ryoti lands, and no one comes forward to take them, then the land must become khamar. All khamar lands were once ryoti, and so no hard-and-fast line can be drawn between them. Baboos Bijoy Kissen, Harihur and Monohur Mookerjee think the proposed survey of khamar lands unnecessary, and will be the cause of litigation and expense, and the provisions of Chapter II will prevent the landlord from making improvements by digging tanks, planting groves, and so forth, and would expunge Chapter II entirely from the Bill. I think that there should certainly be an authentic register of khamar land in a village, but a zemindar should be allowed to add to his khamar or sir land. Thus, if he wishes to reclaim some of the culturable land in the estate, or to try agricultural experiments on a large scale, he should certainly be allowed to have the register prepared under section 9 corrected, as too in other cases, as where he exchange uncultivated land for holdings of a ryot with the ryot's consent.

CHAPTER III B.

5. I think it would be far better not to allow any enhancement of the rent of middlemen. If it be allowed on their own number, and that of enhancement suits to increase, their rents will be ever on the increase. If, however, enhancement of these tenures is allowed, I think there should be no maximum of enhancement fixed, for, if there is, in many cases such a rule would bear hardly on the landlord. For instance, the lands in Naihati now let, I believe, for 2 or 3 annas a bigha. When the railway bridge has been opened, the same lands will probably fetch Rs. 15 or Rs. 20 a bigha, and the increase in value will in no way be due to anything the tenure-holders have done.

6. Baboo Joy Kissen Mookerjee is of opinion that the limit put to enhancement is wholly unwarrantable, and that the effect of the rule will not only stop for ever all enhancement in districts like Hooghly, where the public assessment was so high as to be nearly 50 per cent. of the staple produce, but will gradually lessen the rates of rent to a material extent.

CHAPTER IV.

Putni tenures.

7. Baboo Bijoy Kissen Mookerjee and others are of opinion that the notice required to be published under section 8 of Regulation VIII of 1819 should be served through the Collector, and not by a single peon of the

zemindar. That rule has, they say, been all along the cause of great hardship to all parties, and the source of expensive litigation throughout the country. The notice should therefore be published by beat of drum by a collectorate peon. I think the proposed alteration should hardly be made, since the Collector would then be responsible for the due service of the notice, instead of the zemindar, and no sufficiently strong case has been made out against the present practice.

CHAPTER V.

8. This chapter is most strongly objected to by most of the zemindars. Baboo Joy Kissen Mookerjee, after quoting Sir Barnes Peacock's opinion, writes:—"The Bill proposes to extend the right of occupancy in a most objectionable manner, unless protected by a registered contract to the contrary. The right will accrue with respect to khamar lands of the landholder, and by a retrospective operation of the proposed law all ryots who held any quantity of land, even for a day, with other plots of land, however small, for 12 years in the same village or estate, will acquire the right for the whole quantity of land." Baboo Bijoy Kissen Mookerjee says that section 45 is a most obnoxious one. It deprives zemindars of their vested rights granted them by the permanent settlement: it may render inoperative kabuliyats executed years ago. The proprietary rights of zemindars are disregarded, and pass into the hands of ryots, who have only to enter upon the land under section 56 by force or fraud, and cultivate it for a few months. After the landlord has improved the land, the Legislature, without giving him any compensation, deprives him of it. Baboo Onooroop Chunder Mookerjee says that he would not grudge ryots acquiring this right, provided that they held and occupied the land themselves at a reasonable rent. But the Bill, by vesting the ryot with the privilege, and allowing him to sub-let the land while the sub-tenant can never acquire the right of occupancy, virtually throws on the actual cultivator all the risks and dangers which the Supreme Council seeks to remove. The Bill, if it becomes law, will make the zemindar share his rights with the occupancy ryots, and the zemindar is to be fettered in the numerous conditions in the process of enhancement, and a thorough re-distribution of landed property is contemplated, in spite of the permanent settlement, with the object of benefitting the ryot, but the practical result will be that the real tiller of the soil will be placed in the worst possible position. He will be left to the tender mercies of hungry middlemen, instead of to the better educated zemindar. He adds that the zemindars would scarcely exercise the right of pre-emption, and outsiders would step in. He asks whether anything could be more invidious than to allow a ryot who buys an occupancy holding to sub-let it to a cultivator who cannot acquire the right; but if a zemindar leases out any such holding, the cultivator at once acquires the right. He says further there is not much objection to the principle of the right of occupancy, but the zemindars protest to a man against the manner in which the proposed Bill deals with it. It seems to to me that the right of occupancy should be acquired only by the actual cultivator, and that it should not be transferable; otherwise the right will in all probability pass in a few years into the hands of the money-lenders, and the actual cultivator will in no way have been benefited, except so far as they have obtained funds by the transfer of the right. By section 47 of the Bill the ryot is not allowed to divest himself of the right as against the landlord, yet by section 50 of the Bill he may transfer it.

9. One gentleman, Baboo Okhoy Chunder Sarkar, while entirely approving of the distinctions between *khamar* and ryoti lands, and Khudkast and Paikast ryots, which, he says, are the key-stone to the entire superstructure of the land settlement in Bengal, and while he commends generally the provisions of the Bill which attempt to improve, define, and settle the rights and status of the ryots, and declares that they are no new rights, deprecates the forcing the ryot constantly into court in order that he may enforce the details of his rights. Thus by section 28 of the Bill the ryot may obtain registration of a transfer without first applying to the landlord under section 27. This, he says, is mistrusting the landlord unnecessarily. But passing this over from a ryot's point of view, the provisions for obtaining registration are very cumbrous and troublesome to the parties concerned. He then gives the steps which have to be gone through until at last the civil court's decree has been obtained. Here the Bill stops, but execution of decree must be taken out according to the Civil Procedure Code, and the zemindar may now contest the decree on the ground of notice being not served on him, and so on. Such provisions, he adds, are ruinous to the tenant, and a fruitful source of exasperation to the landlord; and to compel an ordinary Bengal ryot to go to two sets of courts for the mere luxury of having his name registered in his superior landlord's book shows a deplorable oversight of the position of the parties and the practice of the courts. The Government, by desiring to nullify certain voluntary contracts, proves clearly that it considers the zemindars powerful and the ryots weak, and yet it will set up class against class in such details of tenant's right as the registration of a transfer. This, the Baboo says, is not sound policy. The civil courts are already overworked, and people, besides having to pay the initial petition stamp duty of 8 annas, have to pay 8 annas for almost every prayer they make. Thus by compelling the ryot constantly to resort to the court against his landlord frustrates the first object of the Bill, which is to give reasonable security to the tenant in the occupation and enjoyment of his land. This is only one instance out of many in the Bill, and those provisions have been proposed only through completely ignoring the true position of the parties, and should be recast.

10. With regard to clause C, section 50, Baboo Bijoy Kissen Mookerjee says that this provision will entangle landlords and ryots in law suits of the most technical kind. What

should be considered improvement? The small *ails* which bound a ryot's fields? Is any ryot to be allowed to dig a tank and thus multiply a constant source of disease? He says that section 51 will result in converting money-lenders into occupancy ryots, and the ryots into their under-ryots, for no landlord, as a rule, would exercise the right of the pre-emption, since, as soon as ryots entered into the lands again, the right of occupancy would again spring up; and further, ryots would easily sell their rights without giving notice to their landlords. A full year should be allowed to the landlord within which he might take steps in cases of sale without notice. Baboo Joy Kissen Mookerjee objects strongly to the provisions for compensation for disturbances, as implying not only a title in them which the ryots never claimed or enjoyed, but as assuming a state of things which never existed. He adds that, with very few exceptions all improvements have been made by the landlords, and not even by tenants with fixity of tenure, and yet the Bill assumes that tenants-at-will have carried out these works. He objects to making the rights of occupancy saleable. The right of pre-emption will place the landlord in a worse position than any other purchaser, for he will be allowed to let it subject to the occupancy right and at the old rent even to a new-comer and stranger. He quotes the opinions of Sir Richard Garth and Mr. Elliot againt the proposal.

Tables of Rates 62 to 72.

11. It is the general opinion that tables of rates cannot be prepared, and in that opinion, as far as my experience goes, I agree, but special enquiries have been made by the Board of Revenue on this point, and the result of the enquiries will doubtless settle the question.

Enhancement 75, 76.

12. I think that the limit of enhancement should not be fixed. The only way to do so would be to define what proportion of the rent, as defined by Ricardo, should be left with the ryot, always bearing in mind that the rent so defined is rack-rent. With regard to the rules contained in sections 73, 74, and 75, Baboo Bijoy Kissen Mookerjee thinks that they cannot be carried out, so many restrictions have been placed in the way of the landlord in carrying them out. He says that it was expected that some improvements would result after so much writing and discussing, but the result has been no improvement on the present law. He also thinks that section 79 will always be worked against the landlord by the ryots when enhancement suits have been started, for the ryots will only have to combine, and by suing the landlord under this section force him to give up his enhancement proceedings.

13. *Sections 81, 82* are objected to by Baboo Bijoy Kissen Mookerjee on the grounds that in some cases, according to local custom, the landlord is entitled to recover more than half, and the matter had better be left to be settled by the parties. Baboo Bimola Churn Bhattyachargee thinks that in section 82 the words "notwithstanding any contract to the contrary" should be struck out; for in many parts of Behar, where roads are very bad, it is the grain which the zemindars keep up in stock during famines, that keeps the people from starving, and asks why Government should afford a means of abolishing a system which the experience of ages has proved beneficial to the country. This section was proposed to the Behar Commission by this officer, and his opinion to the effect that special contracts should not be done away with is entitled to great weight. I have had no experience in Behar, and so pass no opinion on the matter.

14. *Section 85.*—This section is objected to by Baboo Bijoy Kissen Mookerjee on the ground that proper prices will not be supplied, and it would be impossible to do so for every village. It will be quite sufficient, however, to obtain the prices at the principal market-places where the new crops come into the market.

15. *Sections 85, 86.*—Section 85 will bear hard on landlords, ryots being allowed to occupy his bastu land, though he does not use it as such. Baboo Bimola Churn Bhattyachargee informs me that in Behar no rent is paid for bastu land, and in that case he certainly should have to give it up when he is no more a ryot in the proper sense of the term. For this part of the country, where rent is paid for bastu land, non-payment of rent for one year should render the ryot liable to ejectment.

16. *Sections 93 and 94.*—Clauses *a* and *b*, sub-section 2, should, I think, be struck out. A landlord gets a decree for fair and equitable rent, if the ryot does not choose to pay, the zemindar has to suffer. He has to pay for "compensation for disturbance." Does he disturb the ryot when the ryot refuses to pay his just rent?

17. *Section 98.*—This section is objected to by the zemindars, but will be, I think, a most useful one.

18. *Section 119.*—By this section the practical difference between occupancy and ordinary ryots would be removed. Separate limits should be fixed for each class.

19. *Section 166.*—If the power of distraining crops for current arrears is continued, the procedure should be very much less complex than that proposed in the Bill. The costs would be very heavy, and ultimately fall on the ryot. It would be quite enough to allow the zemindar to distrain the crops himself, but in no case to sell them without the order of a competent court. As a rule the arrears would be paid on the mere attachment.

20. *Section 167, clause 2.*—The application should be allowed on plain paper.

21. *Sections 169 and 170.*—The zemindar should give the list of demand and account to the ryot previous to the application for sale. If after the distraint and delivery of the demand and account paper the ryot does not pay up, then the zemindar should apply to the court to sell the crops, and any objection the ryot might have would be heard.

22. I have given above the principal objections to the Bill. It excites great apprehensions in the minds of the zemindars, and will, I think, not effect any permanent settlement of the rent question. Mr. Ilbert says that it is "merely a Bill to amend and consolidate certain enactments relating to that subject" (the law of landlord and tenant), and it seems hardly worth while to pass a measure which excites so much opposition among the landlords merely for this object. I am inclined to think with Mr. C. B. Clarke that the real remedy will be a ryotwari settlement, for in that way only would the ryot get rid of the middlemen; and, as Odysseus says, "a multitude of masters is no good thing."

23. To show how strong the feelings of the zemindars are against the Bill I enclose copy of a note on it, sent to me by Baboo Peary Mohun Mookerjee.

I find that I was quite unable to let you have my report by Saturday last; I have therefore, to save time, sent a copy of it direct to the Board of Revenue.

No. 648, dated Hooghly, the 27th June, 1883.

Memo. by—The Collector of Hooghly.

Copy, with enclosure, forwarded to the Secretary to the Board of Revenue.

The Bengal Tenancy Bill.

I am of opinion that in so far as the Bengal Tenancy Bill proposes, (1) to limit the maximum area of khamar lands; (2) to extend the right of occupancy in the manner provided in section 47, and in a modified way to tenants-at-will; (3) to give the occupancy ryot a right to the accretion to his holding; (4) to make a right of occupancy transferable; (5) to limit the maximum increase of rent to one-fifth of the value of the staple produce; (6) to restrict the landholder's right of letting in any way he chooses lands which come to his khas possession; (7) to award compensation to ordinary ryots for disturbance; and (8) to virtually abolish the law of distraint; it is a direct breach of the compact known as the permanent settlement, and is a measure of spoliation of vested rights of property.

The other provisions of the Bill are not such as would alter for the better the existing law on the subject. The provision, for instance, as to instalments of rent, contained in section 97; the provisions for deposit of rent, contained in section 103; the provision for the appointment of managers of joint estates, contained in section 112; the provision for a record of rights, contained in section 164: the provision for the sale of tenures and under-tenures, with encumbrances, contained in section 211; and the limitation to the right of appeal in certain suits, contained in section 198, would aggravate the defects of the present law, and introduce complications and difficulties where none exist at present, would give rise to unnecessary and harassing litigation, and set class against class, and individuals against individuals, in matters in which legislation may well aim at the establishment of peace and harmony.

The Bill presupposes a power in the legislature to take away material rights from the landholder, and to give them to the ryot. The Hon'ble Mover of the Bill claims that power under section 8 by Regulation I of 1793. When, however, it is recollected that at the time of the Permanent Settlement landholders had the legal power of not only compelling the attendance of ryots, but also of inflicting corporal punishment, and confining them for non-payment of rent, of levying sayer duties on internal trade, of maintaining police establishment for the preservation of peace, and of appointing kazees and canoongoes for the administration of justice, civil and criminal, and that some of the subsequent Regulations were expressly passed to divest the landholders of almost all of these seignorial powers, it may be fairly contended that the reservation contained in that section could have reference only to the powers thus exercised by the State, and not to any interference with the proprietary rights of landholders, with regard to which they were assured that "they will enjoy exclusively the fruits of their own good management and industry," and that "no power will then exist in the country by which the rights vested in the landholders by the Regulations can be infringed, or the value of landed property affected."

It seems to me that the Indian Legislature, by giving to the reservation in section 8 an interpretation which is at least doubtful, and assuming powers which are denied by such eminent and responsible authorities as Sir Barnes Peacock and Sir Richard Garth, may give cause to parties interested to question the validity of its acts. The principle laid down by Sir Lawrence Peel in Wheel Tax Case (Taylor and Bell, 391), would, I think, give them a *locus standi* in such an attempt. "It is the province of courts of justice of the country to decide on the legality of *Acts of Legislature*, if a suit is instituted to decide whether the Legislature has or has not exceeded the limits within which it may legislate.

The matter presents yet another aspect. The present body of landholders have mostly come to the possession of their estates and talooks by purchases made for adequate considerations, and crores of rupees have been thus invested in land on the faith of the binding character of the Permanent Settlement; but if the Bill in question passes into law, the value of landed property will be materially reduced, and while those who will make purchases hereafter will pay only the reduced prices, and those who have gone before had a full return for their money, it is only the present body of landholders who will be the losers, in many cases to a ruinous extent. It is with reference to such a case as this that Sir J. S. Mill observes that it would "impose a penalty on people for having worked harder and saved more than their neighbours."

But the question is, where is the necessity for such a piece of revolutionary legislation? Not a single suggestion for a radical amendment of the Rent Law emanated before the publication of the Draft Bill of the Rent Commission from any of those responsible officers of Government who are charged with its administration. The Chief Justice of Bengal, on the contrary, held that the Bill "is calculated to deprive landlords, unjustly and unnecessarily, in my opinion, of rights which the courts of law have always considered to be their due." No part of these provinces is suffering from an agricultural depression. The condition of the ryots is unquestionably one of growing prosperity, and the fabulous wealth of the landholders which both Justice Cunningham and the Hon'ble Mover of the Bill deduce from the fact of the increase of the rent roll of these provinces from three and a half crores at the time of the Settlement to more than 13 crores at the present time, even if well founded, is no index either of a corresponding poverty of the ryots or of their rights having been usurped. So long ago as 1871 the Government bound itself by a promise to give the landholders greater facilities for the recovery of rent in return for the obligation laid upon them to collect the tenant's share of the road cess; but surely a plea of fulfilment of that pledge cannot justify a radical amendment of the Rent Law to the detriment of the most valued rights of landholders.

On the above grounds I think that a radical amendment of the Rent Law is wholly uncalled for, and that several of the provisions of the Bill involve assumptions of fact which are not merely not true, but the very reverse of the truth; interpretations of law which are opposed to judicial decisions; inroads into vested rights of property, which are as much objectionable as measures of direct confiscation; visions of peasant proprietorship, which leave out of sight important factors peculiar to the Indian social economy, and theories of legislation which would justify a universal distribution of all property.

OOTERPARA,
June 21st, 1883.

PEARY MOHUN MOOKERJI.

No. 1928-694L.-R., dated the 24th July, 1883

From—A. P. MACDONNELL, Esq., Officiating Secretary to Government, Bengal,
To—The Secretary to the Government of India, Legislative Department.

In continuation of my letter No. 1876-669 L.-R., dated the 18th July 1883, I am directed to submit, for the information of His Excellency the Governor General in Council, the accompanying copy of a report * on the provisions of the Bengal Tenancy Bill, 1883, submitted through the High Court by Mr. J. P. Grant, District Judge of Hooghly.

* No. 750, dated the 13th July 1883, enclosed with letter No. 2014, dated the 17th idem, from the Officiating Registrar of the High Court.

No. 2014, dated Calcutta, the 17th July 1883.

From—C. A. WILKINS, Esq., Officiating Registrar of the High Court of Judicature at Fort William in Bengal,
To—The Secretary to the Government of Bengal, Revenue Department.

In continuation of my letter No. 1835, dated the 27th ultimo, I am directed to forward, for the information of His Honour the Lieutenant-Governor, the accompanying report on the Bengal Tenancy Bill, which has just been received by the court from Mr. J. P. Grant, District Judge of Hooghly.

No. 750, dated Hooghly, the 13th July 1883.

From—J. P. GRANT, Esq., District Judge of Hooghly,
To—The Registrar of the High Court of Judicature at Fort William in Bengal, Calcutta.

I have the honour to submit a report as requested in your letter No. 1157, dated 23rd April 1883, on the Bengal Tenancy Bill, 1883. I am sorry that press of other business, which could not be neglected, has delayed my examination of the Bill, the subject of which, moreover, demands considerable thought and deliberation. I do not propose to enter into the general question of the necessity for legislation, which, I think, no one who has at all studied the subject denies, still less shall I discuss such matters as the alleged inviolability of the Permanent Settlement, &c. I shall content myself with criticising the provisions of the Bill *seriatim*, from the point of view of what I understand to be its two-fold object, *viz.*, (1) to give security to the tenant in the occupation and enjoyment of his land, and (2) to give facilities to the landlord for settlement and recovery of his rent.

CHAPTER I.

2. *Section 3, clause (5).*—The definitions of "tenure-holder" and "ryot" are not satisfactory. The latter especially is defined in negative terms only, and the definition, although apparently intended to connote something different from a ryot who is a tenure-holder under section 14 of the Bill, yet includes this class. If these definitions are maintained, the conven-

tional meaning of the word "ryot," the nearest English equivalent of which is 'yeoman,' will disappear, as indeed will the class itself, for the inevitable tendency of the proposed law is to make right-of-occupancy ryots, in fact as well as in name, middlemen. In this view, perhaps, the reserving of the term 'ryot,' for the class upon which the actual cultivation of the soil must ultimately fall, is far-sighted. I would, however, take occupancy ryots out of the category of tenure-holders. There is nothing, *pace* the author of the Objects and Reasons, in common between their position and the position of those who are really middlemen, such as patnidars and farmers. The law should recognise the existing two classes of ryots, *viz.*, those having, and those not having, rights of occupancy, and in defining them should employ the word 'ryot' for both. The definition of tenure-holder should be altered to signify exclusively a middleman between a proprietor and a ryot. This clause should also be amended so as to include in the definition of ryoti land tanks which are often let as ryoti holdings for fishing purposes.

CHAPTER II.

3. This chapter purports to limit for the future *khamar* land to what was such land at the passing of the Bill. I doubt both the policy which would enact this, and the possibility of enforcing it, if enacted, in face of the provisions of section 141 of the Bill as regards merger. I do not see why a proprietor should be restricted from converting to *khamar* lands from which the ryot has been lawfully evicted, or which he has vacated by surrender, or to which there is no heir. There is again nothing in the Bill to prevent a proprietor purchasing occupancy rights and then holding the land *khas*. It is, indeed, to be feared that this expedient will be largely resorted to as the only one by which occupancy rights can be extinguished, and thus, practically, *khamar* lands must largely increase in spite of the Bill. It must be remembered that, in some instances, a zemindar can find no one to take up lands from which the previous tenant has absconded or has been evicted, or which he has surrendered, or to which the last occupant has left no heir. In such a case the zemindar *must* hold the land khas, or in *bhag-jote*, or let it lie idle while he is paying revenue on it.

CHAPTER IIIA.

4. Sections 14 and 15 of this chapter convert the right of occupancy ryot into a tenure-holder. I have already pointed out the confusion of ideas here indicated, which is certain to breed confusion of practice. You cannot alter the conventional meaning of words by Act of Parliament. Section 16 converts the *bhag-jotedar* into a ryot who may possibly acquire a right of occupancy. This is totally opposed to all the existing notions of a *bhag-jotedar's status* and position. He is, in fact, only a labourer under another name. His share of the crop is the wages for which he has engaged to cultivate it. This is the only way in which many proprietors can use their *khas khamar* land. I do not know whether the definition of 'tenant' excludes the *bhag-jotedar* from the operation of this section; but if it is intended to do so, it might be more clearly so expressed by an illustration. Of that portion of this chapter regarding enhancement, I have not much to say, except that I approve of a limit being placed to enhancement, and that I do not think much occasion will arise for recourse to the civil courts under this part of the law. The cases in which the customary rate payable by holders of similar tenures in the vicinity cannot be easily ascertained must be rare. The provisions regarding registration are very necessary, but, as here drawn, are imperfect. It is quite proper that the proceedings to enforce this should be before the Collector in the first instance; but if they are to be of any effect, some penalty must be provided for the case of neglect or refusal on the part of the zemindar to register. It is vain to enact that he "shall" do this, and "is bound" to do that, unless some sanction be provided. The result of the law in its present state will be that zemindars will, as a rule, refuse to register in order to force the ryot into the civil court, where all the resources of chicanery will be resorted to call in question the title of the ryot or the nature of his tenure. There should be provision for the imposition of a fine upon the zemindar by the Collector on proof of his omitting or refusing to fulfil the requirements of the law; and if thereafter the zemindar is taken to the civil court, he should, whether the applicant succeeds or not, be liable for his costs.

CHAPTER IV.

5. I do not see why the patni Regulation should be incorporated with this Bill. The character of a complete code is repudiated for the Bill, and I see no more reason for incorporating this Regulation than for incorporating the Regulation creating the Permanent Settlement which is still left as a separate law, and is, in its nature, as much connected with the Bill as the Patni Regulation is. If this last is to be incorporated, the opportunity should be taken of amending it, of which there is, in some respects, great need. The difficulty of proof of private service of notice of sale especially is a standing complaint of zemindars and one which is only too well-founded. Service ought certainly to be through the Collector, whose certificate as to a good service ought to be conclusive proof of it. In many other respects, too, the Patni Law might well be amended; but I do not enlarge on this subject, as I cannot suppose that this Regulation will be degraded bodily into a schedule of the Rent Law.

CHAPTER V.

6. By this chapter the 12-year rule in regard to a prescriptive right of occupancy at fixed rates is maintained, and thus the zemindars are no worse off than they are under the existing

law, and have therefore, I think, much to congratulate themselves on. Considering that it is admitted on all sides that this rule of Act X of 1859 was a most mistaken one, operating to the prejudice of a large body of ryots who were right-of-occupancy ryots already on other conditions, I am rather surprised at the retention of the rule. I would have approved a much shorter term if the test is to be at all of one time. But taking the 12-year term, it is absolutely necessary to apply it to all alike, and thus I think it expedient that even where a contract to the contrary exists it should be set aside. On the same principle, taking the word 'estate' as defined in the Bill, I consider that it is an improvement on the former state of things to allow the *status* of a settled ryot to one who has held in the same estate, though not perhaps always in the same village. By the nature of the case the different villages of an estate must be contiguous to one another. The provisions of section 50, defining the incidents of an occupancy right, generally, have my entire approval. I have never yet known the place in which such tenures are not transferable by custom even now. The provision regarding improvements may at first create some litigation. Zemindars will still seek to prevent ryots digging tanks and cutting down trees; but this will soon right itself. The crux of the whole question is the determining, what is to be looked upon as constituting a holding, a permanent one at fixed rates, which is the estate which the Permanent Settlement purported to confer on all resident ryots; and I think this end has been achieved by the Bill with less injury to zemindars' present interests than they at all looked for, loudly as they may still exclaim against it. The provisions as to pre-emption are entirely in their favour. They will lose nothing even by the provision which accords the *status* of a right-of-occupancy ryot to one who takes such a holding after the zemindar has purchased it; for we may be sure that the zemindar will not let a ryot come in who has not paid, by way of *bonus*, at least as much as the zemindar gave for the out-going ryot's right of occupancy; who has not, in fact, purchased from the zemindar the right of occupancy inherent in the holding. The only part of this chapter that, I think, the zemindars may legitimately object to is section 49. "Holding *khamar* land as a ryot" is a contradiction in terms. Of course, if a zemindar regularly settles his *khamar* land with a ryot he converts it into *ryoti*; but *khamar* lands, as a rule, are cultivated on the *bhag-jote* system, which, as I have pointed out, is not really a system of land-tenure, involving payment of rent, whatever economists may say of the metayer system, as prevailing in Europe, but is simply a system of paying wages on the co-operative principle.

CHAPTER VI.

7. This deals with enhancement of the rents of occupancy ryots. It provides, as one means of adjudging enhancement, for the drawing up of a local table of rates of rent and produce. I believe that it will be practically impossible to draw up such tables: indeed, I understand that an attempt has been already made on a considerable scale and has signally failed. This was only to be expected. To begin with, much must depend in the enquiries incidental to such a matter upon the individual idiosyncracies of the particular officer making them; and again the whole idea pre-supposes a sort of natural unfluctuating dead-level in the outturn of land, and taking no account of improvement and industry.
It is impossible to expect any trustworthy result from such tables, which, moreover, to be of any real use, must be applicable, each of them, to comparatively small areas. I do not know where Government could obtain the machinery necessary for this work on any very considerable scale. Where such tables have been prepared, they are to furnish conclusive evidence; but where no such tables are prepared, the courts are to proceed in enhancement suits on certain prescribed principles stated in sections 74 and 75, which I cannot distinguish from those now law. The greater number of enhancement cases will be those to which clause (c) of section 75 applies, and we are thus sent back to Ishur Ghose's case. As to the one-fifth limit, I understand this, if calculated at harvest time, will be unduly favourable to the ryot; and that the more just proportion would be one-fourth. I do not know how the market rate at harevst time is to be authoritatively settled; but this is a much easier task than the preparing a table of rates. Further, the produce of the *staple* crop alone is to govern the calculation; but where this is rice, there is often a very valuable second crop, which should not, I think, be ignored.

CHAPTER VIII.

8. This deals with what are very mistakenly called "ordinary" ryots. The ordinary ryot of the country is the ryot having rights of occupancy; it is all *other* classes of ryots that are exceptional. I do not see why the every-day terms of "ryots having a right of occupancy" add "ryots not having a right of occupancy," should not be maintained. But the mistake goes deeper than the mere name. The only difference between the two classes of ryots is that one has fixity of tenure and the other has not. The provisions of this chapter would seem to imply that the former class possesses some privilege of setting at a lower rate of rent also; for the "ordinary" ryot may, by the Bill, be rack-rented up to a certain maximum, which, in practice, will certainly be evaded. All classes of ryots have now, and ought always to have, equal protection at the hands of the law in respect of the rate of rent payable by them; the only difference is that while one class hold from year to year, or for a term of years on lease, the other holds in perpetuity, if he only pays his fixed rent. For these reasons I do not agree with those who find fault with the provisions of section 93. Without this section, as soon as the Bill passes, there will be a flood of notices of enhancement upon tenants-at-will, which they would have no means of resisting. It is true that, under exist-

ing circumstances, a tenant-at-will has little or no inducement to make improvements, and therefore, as a rule, make none; but this is no reason, if the law is so altered, as it is here proposed to alter it, as to give him also a far better prospect than he has now—of remaining on the land as long as he pays a reasonable rent—why tenants-at-will in the future should be assumed to be incapable of making improvements. I therefore approve of the clause (*a*) of this section. The clause (*b*) is also necessary, much as it has been exclaimed against, in order to prevent arbitrary and unreasonable enhancements, the sole object of which is not to raise the rent but to eject. For this reason I think it is right that the landlord should know that he can only eject his ryot on paying him the amount that he would have received from the ryot in increment of rent for the term during which his rent, if enhanced, must be let alone. I think this provision has been most unreasonably criticized. Its opponents argue from the erroneous point of view that the Indian agricultural tenant-at-will is one who can be turned out, without rhyme or reason, at the mere will or even caprice of the landlord. I need not say that this is not so; that if a tenant holds over, after notice of enhancement or notice to quit, he cannot be proceeded against only for compensation at a reasonable rate for use and occupation, and if he pays cannot be turned out.

CHAPTER IX.

9. The provisions of section 98 are absolutely necessary, in order to abolish the practice which has, during the last few years, been adopted by zemindars, especially in this part of the country, of demanding rent in monthly instalments, and suing for each instalment if not paid This cruel procedure has been the ruin of thousands of ryots, as it was deliberately intended to be, and is one of those crying abuses that call for the interference of the legislature. Section 100 is also urgently called for on much the same grounds. At present ryots are entirely at the mercy of the zemindar, or rather of the gomashta, especially as to the appropriation of the amount paid as rent. But to make this section really effective, the forms of receipt in foil and counterfoil ought to be supplied by Government at cost price, or even given away to the landlord. At least no landlord should be allowed to use a form, a specimen of which has not been presented to the Collector and approved by him, such specimen being preserved for future reference. I am more doubtful as to section 105; but even this is only an amplification of the *akhiri* or *faikaludakhila* which all honest zemindars have been long in the habit of giving. The provisions as to depositing rent are also necessary, especially in the cases of clauses (*b*) and (*c*). As to (*a*) it has been the greatest boon that has been conferred on the ryot since the passing of Act X, and has been hitherto unnecessarily clogged with the condition of proof of tender, such condition being a mere premium on perjury. Section 119 is rather obscurely worded. It may be held to operate retrospectively, in which case there will be a perfect invasion of the courts by ryots with suits to have their rents re-adjusted. As regards occupancy ryots, the words "and not otherwise" of section 79 will stop them, but the position of other ryots is not clear.

CHAPTER XA.

10. I approve of the definition of improvements here given, but I see no reason whatever for making the case of the "ordinary" ryot different from, or rather the converse of, that of the occupancy ryot. As I have said before, the only difference between the classes is that the former has a firmer hold on the land, but that this does not mean that the latter has no hold on it. Once admitted, he cannot be turned out as long as he pays a fair rent. Why should he not be in the same position as the occupancy ryot as regards the making improvements? The Bill, indeed, is inconsistent with itself on this point. It puts all classes of ryots on the same footing as regards the improvement of house-building, as it certainly could not decently do otherwise. What is there in the nature of this species of improvement that makes it exceptional? The Bill is logically wrong here. Hitherto neither landlord or tenant has made "improvements;" the former because they do not rightly discern their own interests, the latter because they do. *They* have hitherto refrained from making improvements, not because they fail to see the ordinary advantages of making them, but because they know that their making them would only entail the result of the zemindar seizing upon the fact to raise their rent. The provisions of the Bill will relieve occupancy ryots of this fear; but they do not protect the ordinary ryot, or rather they absolutely discourage him. The very class who ought to have even exceptional facilities for making improvements, are denied the facilities that are given to more favoured classes, indeed are positively obstructed where the others are facilitated. I do not think this reasonable, to say nothing of justice. We may be sure that the zemindar class will not "improve;" any improvements that may come must come from the cultivator class, and all these should have equal rights in this respect.* (*B*) Rent-free lands, as well as revenue-free lands, should be included in section 133. I also doubt the policy of giving appeal to the civil court in the matter of the standard pole. These are matters which are better left to the revenue authorities. (*C*) Here, again, I think that the notice of surrender should be served through the Collector, not a civil court. (*D*) What is the effect of section 141 when read with section 56? If the interest on an occupancy tenant be "extinguished" by merger, can it be revived when the landlord, if he does so, re-lets the tenure? This should be made clearer, and one or other section should contain "notwithstanding anything contained in section." (*E*) The provisions of this part will obviate much inconvenience now felt. There ought, however, to be specific provision disabling all the co-parceners for doing any acts of management, and making such acts null and void. As things exist, a co-sharer has been known to go on collecting rents, notwithstanding the appointment of a general manager.

CHAPTER XI.

11. This chapter is a very important one, as re-introducing a state of things which the preamble of Regulation II of 1793 states was found then to be unsatisfactory. The principle therein enunciated is that disputes between landholders and tenants shall be adjudicated by the civil courts and not by the revenue authorities, who otherwise would in many cases be deciding upon their own acts. Under the present chapter, however, revenue officers will have it all their own way. It is true that section 155 allows of their referring a case to the civil court, but this provision will be a dead-letter, depending, as it does, on the option of the revenue officer alone. Moreover, it must be remembered that, under clause (*a*), section 227 of the Bill, Government may invest any revenue officer with the powers exercised by a civil court in the trial of suits. The chapter provides an alternative to the procedure under chapter VI, as regards enhancing or varying rents; this being done in the one case by the civil courts in separate and individual suits, while in the other case it is done by dealing with whole estates at one operation, and by the revenue authorities. I think that the distinction ought to be made complete, and reference to the civil court in the latter case abolished. The procedure of the revenue authorities might still be that of the civil courts. I believe that adjustments of rent will be more equitably made when on this large scale than is possible with a civil court dealing with isolated suits. Clause (*b*) of section 151 appears to re-enact Bengal Act V of 1876, which has hitherto been a dead-letter. In its present shape it promises to be of some practical effect; but I do not see the above Act among those repealed by schedule 1 of the Bill.

CHAPTER XIII.

12. The power of distraint being, I am sorry to see, maintained, the provisions here made are hedged round with such wholesome checks that it cannot be hereafter used as the engine of fraud and oppression that it has hitherto been. Instead, however, of the power by the Local Government to suspend its provisions in any local area, I would prefer to see it provided that the chapter should be inoperative, unless especially extended to a local area, which should not be smaller than a collectorate. I myself doubt very much the necessity of any law of distraint anywhere, not seeing the justice of giving a landlord-creditor priority or preference to all other creditors; and I think that, with the improved procedure here to be enacted as to the recovery of rent-at-law, it would be well to wait and see whether any law of distraint is really called for. This would best be done by leaving the chapter to be extended when and where experience might show it to be needed. If, however, distraint is allowed, all the proceedings regarding it should be as prompt as possible. The rules to be prescribed by the High Court under section 169 should require applications for distraint to be dealt with within a certain time, according as the court allows of additional evidence or not, that the applicant furnish a properly drawn-up form of notification (section 169), at least two forms of demand and account (section 170), one of proclamation of sale, and at least six forms of certificate, to be given to purchasers (section 178). Section 179 appears to require the immediate distribution of the sale proceeds on the spot by the distraining officer; whereas if the distraint is paid off by a deposit before sale into court or into the hands of the distraining officer, the amount must be held for one month before being paid out. I do not understand why there should be this distinction. I think that in all cases the money, whether realized by sale or by deposit, ought to be paid into court, held for one month, and then distributed. In any case, even if sale proceeds are not held for one month, they should, I think, be distributed at the court and not on the spot. The present class of pleaders are not to be trusted with this duty. As regards penalties, I would add to section 186 a provision, that a criminal prosecution is to be no bar to any civil remedy that may lie open to the injured party.

CHAPTER XIV.

13. I very much approve of the adoption of a procedure simplified from the existing code, instead of the odd and fanciful procedure recommended in the former Bills, founded on analogy to that on negotiable instruments, &c. I have carefully considered this part of the Bill, but have no suggestion to make, except that to section 195 should be added some such words as "granted by an order written and signed by the presiding Judge on a written application to that end." Unless this is done, cases will happen in which a fictitious written statement, purporting to be made by the ryot and containing damaging admissions against his interest—certified copies of which will be taken out by the plaintiff—will be found on records after disposal. I would also add to section 189 some words to the effect that, notwithstanding that suits are instituted by naibs and gomashtas under general powers, the personal responsibility of landlords under sections 209 and 210 of the Penal Code shall remain unaffected. It is notorious that a regular system of instituting false legal proceedings, either by suing deliberately twice for the same arrear, or by executing decrees twice, or by drawing out money paid into court before or during suit, and then executing the decree, is practised in many districts. When such is the case, it is by deliberate direction of the landlord. His agents have no incentive to sue on any but really existing cause of action.

CHAPTER XV.

14. This chapter will go a good way to prevent excessive sub-infeudation, and I can add nothing to the argument in favour of these provisions which are contained in the Statement of Objects and Reasons. The remaining chapters of the Act call for no remark.

No. 2179-787L.R., dated 13th August, 1883.

From—A. P. MACDONNELL, Esq., Officiating Secretary to the Government of Bengal,
To—The Secretary to the Government of India, Legislative Department.

1. "Notes on the Bengal Tenancy Bill" by the Committee of the Behar Landholders' Association, with appendix.
2. No. 484R., dated the 7th-13th July, 1883, from the Commissioner of Patna.
3. No. 188R L., dated the 2nd July, 1883, from the Commissioner of the Presidency Division
4. No. 246A.M., dated the 23rd June 1883, from the Officiating Commissioner of Dacca.
5. No. 335G.C., dated the 30th June, 1883, from the Commissioner of Chittagong.

In continuation of my letter No. $\frac{1928}{694}$ L. R., dated the 24th July, 1883, I am directed to submit, for the information of His Excellency the Governor General in Council, the accompanying copies of reports on the provisions of the Bengal Tenancy Bill, 1883, received from the Behar Landholders Association and the Commissioners of the Patna, Presidency, Dacca, and Chittagong divisions.

No. 484R., dated Bankipore, the $\frac{\text{7th}}{\text{13th}}$ July 1883.

From—F. M. HALLIDAY, Esq., Commissioner of the Patna Division,
To—The Secretary to the Board of Revenue, Lower Provinces.

With reference to your No. 351A., dated 29th March last, calling for a report on the Bengal Tenancy Bill, after holding a conference with the Collectors subordinate to me, I have the honour to say that the following Collectors attended the conference:—

Mr.	Norman,	Collector,	Mozufferpore.
„	Boxwell,	ditto,	Durbhunga.
„	Quinn,	ditto,	Sarun.
„	Nolan,	ditto,	Shahabad.
„	Grierson,	ditto,	Patna.
„	Henry,	ditto,	Chumparun.

Mr. Skrine, who had very recently joined as Officiating Collector of Gya, was unable to attend.

2. The Bill was discussed chapter by chapter.

Taking Chapter II, section 5, it appeared to some of us that this section did not provide for the case of dearah land which might come into existence subsequent to the passing of this Act, though, in the opinion of two of the Collectors, under the existing Bill such lands are provided for under section 6.

I myself considered that sections 5 and 6 might deal hardly in the case of small proprietors being allotted separate shares under the provisions of the law for partition of estates, after the Act came into force; but I admit that this would more probably fall under the subject of an amendment of the partition law, rather than of the rent law. It seems to me that a small proprietor, in a partition case, who may have his proportion of zeraat in the estate in his own holding, and who objects to the partition proceedings, though unsuccessfully, may find himself turned out of his zeraat by the process of partition. As an original proprietor of the parent estate, he was entitled to, and held, his proportion of the zeraat lands, and I think some provisions might be made in the present Bill by which such a proprietor on making the arrangement, which is usually made in Behar in these instances, should retain his original proportion of zeraat land in the new estate, and that this land may be registered by him as new zeraat. It almost always happens that ryots, who in the course of partition find themselves under a small proprietor in the allotment apportioned to him, relinquish their land voluntarily, and enter into new arrangements with the larger shareholders. These lands on being relinquished should be recognized as zeraat, after the commencement of the Act, if the proprietor should so wish. It was unanimously agreed at the conference that the point should be brought to notice.

CHAPTER IIIB.

Section 12 (3).—With the exception of Mr. Boxwell, who did not think it necessary to interfere, we came to the conclusion that the words "more than thirty per cent. or" should be omitted.

There appears to be no particular reason for having a minimum of enhancement. For instance, take the profits at Rs. 100 and rent Rs. 60. The tenure-holder's share Rs. 40. Under the Bill his share would be reduced to Rs. 30, which in many instances might be very unfair.

Section 22.—This section states that the rent of a tenureholder cannot be enhanced to more than double the rent previously payable. On the representation of Mr. Henry, we considered that this section requires re-consideration, for it ought to meet the case of those under-tenures which are created by zemindars in the names of their wives and families at quit-rents, and are held separately from the zemindari.

If such an estate were sold, the auction-purchaser could only get an enhanced rent of double the amount of the original quit-rent. This would seem to be a hardship. Under the Bill, the civil court would be bound to accept the Collector's table of rates, and to enforce it, unless the ryot could show that by contract or special consideration he was entitled to hold at lower rates.

Section 25.—In connection with this section, the Behar Landholders' Association have, in their remarks on the Bill (copy of which is appended), raised the contention that the landlord should be allowed the right of pre-emption in permanent tenures. The contention seems untenable. At present there is no right of pre-emption in the case of tenures (such as the guzashta rights in Shahabad), and no special reason appears for according it now.

CHAPTER V.

Sections 43, 45, and 47.—In connection with these we were unanimously and decidedly of opinion that the Bill gives two great advantages to a non-resident ryot, and that the extension of the right of occupancy to all lands held in the same village or estate should be conditional on residence; and I would submit that the distinction, which exists according to the custom of the country between a resident and non-resident ryot, and which has been continually affirmed and re-affirmed by subsequent Regulations and Acts, has been entirely lost sight of in the Bill. As a corollary, whatever qualification of occupancy be adopted, it seems most necessary that the definition of "estate" in section 3 should be adhered to, and hence section 43 (*b*) should be expunged. In Behar, the retention of this clause would certainly lead to endless confusion and complication.

Section 48.—This section has been already noticed by the Hon'ble Mr. Reynolds in his speech in Council, where he speaks of it as practically an admission of the vicious principle that the occupancy right may be made a matter of bargain or contract between landlord and tenant. The section appears altogether unnecessary. A proprietor before his estate was sold for arrears of revenue might go about granting occupancy rights all round, not a large sum of money, and thereby diminish the value of the estate; occupancy rights being not voidable under the sale law. As Mr. Reynolds has remarked, the occupancy right is not the landlord's to grant; it is essentially inherent in the status of the resident cultivator, we would therefore record our protest against this section.

Section 49 (1).—In view of the great extension of the right of occupancy given to ryots, I, in concurrence with Messrs. Grierson and Henry, would add after the words "fixed period" the words "or under an agreement to hold from year to year." It seems necessary to take into consideration on this point the case of small proprietors who let small plots of their zeraat lands from year to year to labourers on a verbal agreement, and to whom the formal execution of a lease, except at considerable expense, is almost an impossibility. It is altogether so very opposed to the whole custom of the country that occupancy rights should so accrue in *bonâ fide* zeraat lands, except with the consent of the landlord, that numbers of small proprietors would never dream of such privilege existing for the cultivator, and would fail to take the only precaution to retain their rights which the section, as it stands, gives.

Section 50.—"Incidents of occupancy right generally."

The general sense of the conference was to approve of the provisions. But it was considered advisable to draw attention to the remarks submitted by Messrs. Boxwell, Quinn, and others regarding sub-letting. I give the remarks as follows: Mr. Boxwell states:—"I myself think the subletting powers of the occupancy ryots the most doubtful and only dangerous part of the Bill. The great object is to secure the cultivator his occupancy at a fair rent, to be transmitted to his heirs as long as the family can last. I see no good in sub-letting."

The whole question seems to me to be, is more good or harm done by trying to stop it? A long string of rent-payers and receivers must be bad. "As far as an occupancy ryot is a rent receiver, he is one of the objectionable class of land-jobbers. His under-ryot is the important man. I would be greatly inclined to enact that there should be for each field or holding one rent at a time. If the occupancy ryot chooses for his own convenience to sublet it, he should not be permitted to make money on it. It is easy to say, we can't interfere with sub-letting; but our courts should not give an occupancy ryot more rent than he pays. It is as a cultivator we wish to protect him, not as land-jobber."

It is a pity the reasons and objects do not dwell more on the question of subletting. It would be impossible to prevent it, and therefore it is right formally to admit it. Mr. Boxwell considers these dangers arising from ryots not behaving as ryots do not seem to him to be very great or pressing, and perhaps it was enough to note that when occasion arose, the legislature could act; but he thinks that one simple and easy condition would make the danger idefinitely remote.

No ryot should recover for any piece of land a higher rent than he pays for it. This rule, he believes, would do no harm to the man we want to protect, and encourage the strong hereditary cultivator; while it would help to checkmate the land-jobber, who under the guise of a ryot makes his money by speculating in rents.

Mr. Quinn thinks that the balance of argument is entirely in favour of allowing the settled ryot to sell or sublet his holding. These provisions may no doubt tend to produce a class of middlemen, under whom the actual cultivator would have no occupancy rights, and this would be a most undesirable result; but in Behar at least they will not have this effect. As a fact, even in Sarun, ryots' holdings have been frequently sold both privately and in execution of decrees, and these evil consequences have not followed. As regards subletting, Mr. Quinn is of opinion that no legislation can prevent it, and in many cases it is a good thing that a ryot should have the right of subletting a portion of his holding. For instance, if indigo is to be grown on a proper system, it is certainly desirable that the planter should be

able to obtain a lease of the land which he requires from the ryot, and that the latter should get the full benefit of the transaction which he would not obtain if the landlord's consent were necessary. The provisions regarding the landholder's rights of pre-emption are, Mr. Quinn thinks, fair and reasonable, though it is believed advantage will seldom be taken of them.

Mr. Norman, on the other hand, has recorded that he cannot for a moment admit the necessity or advisability of framing the Bill in such a manner as to lead to consequences, such as clause 41 of the Statement of Objects and Reasons admits to be possible. It seems difficult to understand how such a result can be contemplated with equanimity, or how an intention can be deliberately expressed of encouraging the growth of another class of idle annuitants upon the land in addition to those which already cumber it. The Bill will undoubtedly enhance the value of occupancy rights which will command a good price in the market, and which will naturally be bought up right and left by the money-lending class. The net results of the Bill, Mr. Norman thinks, will therefore be the extinction of the present class of occupancy ryots and the transfer of the rights to the money-lenders.

Section 59.—The conference were of opinion that in case of a revenue officer refusing to register the contract, an appeal to the Commissioner and Board should be allowed. I do not myself see the necessity for the proposition. It is much more advisable that transactions of the kind provided for in these sections should be complete and final before the local officer making the investigation required under clause (2).

Section 62.—We were unanimous in thinking that the preparation of a table of rates was impracticable. As Mr. Norman has pointed out, these sections on the preparation of a table of rates and produce and of suits to enhance money rents where such a table is in force, contain a Procrustian scheme of enforcing uniformity in matters in which from the nature of things no uniformity exists. The rates in a village are about as numerous as the fields of the ryots, and cannot be classified without an arbitrary disregard of actual facts.

On the details of the procedure laid down in this and the following sections, Mr. Nolan has urged that the revenue officer is generally to fix rates for the different classes of land, leaving it to the civil courts to determine in what class each field is to be placed. This appears a cumbersome and inconvenient method of procedure. The object being to find what rent A, B, and C should pay, it would be best obtained by trusting the whole enquiry to one tribunal. Nothing is gained by compelling the parties to fight out before one court the question what rents are payable for lands of a specified class, and before another under what class the holdings should be entered. If the reveneue officer is to interfere at all, he had best proceed under Chapter XI, and fix the rents once for all. As a matter of fact, it was found in the experimental enquiries in this division, that to fix rates of rent, it was necessary first to classify each field. By bringing two distinct tribunals to bear on the one point, as proposed in the Bill there is danger of misapprehension.

Mr. Nolan does not think it would be impossible to fix rates in the abstract without first considering how much of the land will be subjected to each rate, but the adoption of such a course has never been heard of, and the practice would be slovenly and highly dangerous. The confusion would produce the worst results if we put the cart before the horse, and settle the rates in the abstract first, leaving the application to be made afterwards by a different and probably unsympathetic authority.

Section 64 (a).—We are unanimous in considering that "in vicinity" should be inserted after "occupancy ryots."

Section 66.—Under this section, the officer fixing rates is empowered to hear objections but parties concerned are at a disadvantage in framing objections, as the lands not having been classified, they will not know how the rates affect them. A ryot who considers his land of second quality may see no reason to question the rate fixed for land of the first quality and may let it pass unquestioned. When he finds that the moonsif is of a different opinion as to the classification of his holding, there will be no authority empowered to hear his objection to the rate.

Section 69.—Mr. Nolan points out with regard to the provision in this section for the publication of the rates in the Gazette, that they will be found rather to encumber that publication, as there are as many as 50 rates in one village.

Section 72.—It seems unfair to leave it open to make the ryots pay part of the cost of making table of rates, as such tables can only be used for their enquiry to enhance their rents, and are not admissible for the purpose of obtaining a reduction. With regard to the recovery of such expenses in the case of ryots, it would be advisable to recover arrears by the certificate procedure under the Public Demands Act.

Section 75(c).—Mr. Nolan brought to our notice, and it was thought advisible to note, that the rule as to dividing an increase on value of crop between zemindar and ryot in equal proportions can never possibly operate in any case, for if the old rent was less than half the value of the crop, then the landlord's share of the increase, under the rule of proprtion in the proviso would be less than a half, and if the old rent was more, then the landlord's share under clause (a) would be less than one-fifth. In connection with this section, we were also unanimously of opinion that temporary lessees should not be allowed to enhance.

Section 84 of Mr. Reynold's Bengal Rent Bill, which took away from thikadars the power of enhancing ryots' rents, has not been reproduced in this new Bill.

Mr. Henry rightly urged, that the section 84 was introduced on the earnest representation of the officials of Behar, and the arguments upon which their application was based

seemed so conclusive, that the local Government presumably was willing to incur the odium of initiating class legislation in view of the very grave interests at stake. The new Bill omits all reference to this proposal, though having regard to the circumstances of Behar it may be said that any law which does not modify the status of the thikadar or temporary lessee is defective. It is, as has been before represented by me, above all things necessary that the thikadar should be authoritatively relegated to his original position as a mere rent-collector on behalf of the zemindar, and not allowed to exercise any proprietary rights.

Section 79.—I am not altogether prepared to support the proposition made to us by Mr. Quinn in connection with this section, but I submit it for consideration. His suggestion was that an occupancy ryot should be entitled to claim abatement on the ground that his rent exceeds the limit prescribed by section 119. He states that the Legislature having admitted the right of an occupancy ryot to abatements is logically bound to reduce the rent when it exceeds the prescribed maximum rent allowed in cases of enhancement, but as the general principle is not to disturb existing rents, it may not be advisable to raise this point in favour of the ryots. An abatement, however, should, he thinks, be allowed where the rent exceeds the limit prescribed in sections 81 and 119.

Section 80(*b*).—We are unanimously of opinion that this section should be omitted. This sections assumes that the rent of pasture land may be raised on account of the increase in the value of the produce of neighbouring arable land, but not on account of a rise in the price of its own produce. This does not seem reasonable, nor is it clear why the rent of pasture land should be regulated otherwise than that of arable land, *viz.*, by the value of its outturn. For example, Mr. Nolan pointed out that the opening of the proposed railway from Dehri to Mogul Serai, if it raised the value of the grazing grounds on the Rhotas plateau by enabling the holders to send their produce more easily to Benares, would be a proper ground for enhancement. Under the bill, the grazing rents at Rhotas could not be raised on this account, but could be raised if the price of rice had risen, though they produce no rice.

Section 81 (*a*).—We are unanimous in the opinion that clause (*a*) should be modified in the following manner:—After the words "any contract" should be "and in the absence of any," the word "or" being expunged.

Sections 81 and 82 appear to be likely to bring about serious consequences to a large body of petty proprietors, more especially in the districts of Gya and Shahabad. The first section states that the maximum amount of rent in kind which can be claimed is limited to half the produce, and to this no exception can be taken. The result will be a general reduction of rents which are now and have been for years not objected to such as the $\frac{9}{16}$ ths of the landlord's share in kind all over Gya and in parts of Shahabad.

I observe that Mr. Reynolds in his speech in Council mentions with regard to this section that it is to be noticed that, though at present the landlord's share is in some cases $\frac{9}{16}$ths of the *grain*, the whole of the straw and chaff belong by custom to the tenant, and to give the landlord half the gross produce would therefore be giving him a larger share than he is entitled to. Most absurdly, if we interfere directly as proposed in this section, we shall bring about a total revolution in the nature of these tenures which will lead to much litigation between landlord and tenant. We are also unanimously of opinion that section 82 should be omitted, and that commutation should not be allowed except when agreed to by both parties, under a contract in writing approved of and registered by a revenue officer. The power which has been conferred upon the ryot by this Bill and denied to the zemindar of being able to get his rent in kind commuted to a money rent to be fixed at the discretion of the court will have the effect of reducing bhouli tenures at least 50 per cent—a reduction which in many cases may mean absolute ruin to the petty proprietors. With regard to Chumparun, Mr. Henry rightly, I think, observes, that having regard to the nature of these bhouli tenures, the circumstances under which they are as a rule created, and to the fact that this cultivation is taken up by the ryots as a speculation as something over and above the area of land upon which they depend for the food crops which are to keep them through the year, no sweeping provisions of this nature was required. In many places the petty proprietors are almost entirely dependent upon the proceeds of their bhouli rents, and the enforced commutation of these rents into a money payment, to be determined by the courts, will be felt by them as an intolerable hardship.

Section 87.—We are unanimous in thinking that this section should be omitted altogether as inapplicable to Behar.

Section 88, *chapter VIII*.—We disapprove of the term "ordinary" ryot, and we would prefer to call ryots treated of in this chapter simply as "ryots." This point has been taken up by Mr. Reynolds in his speech on the Bill.

Section 90.—I express the unanimous opinion of the conference, in saying that freedom of contract should not be withheld from a zemindar giving land to a new and possibly an unknown ryot, and we recommend therefore that in this section 90 the words "subject to" should be adopted instead of "notwithstanding."

It is of course understood that such contracts will not, under the provisions of the Bill, bar the accrual of a right of occupancy; also that on the understanding that freedom of contract is permitted, we have no objection to compensation for disturbance under Section 93 (*b*) which can now only take place in the absence of a contract to the contrary.

With regard to this section 93 (*b*) we are of opinion that in the absence of such a contract, compensation for disturbance should not be granted as a rule, but only left optional with the court up to a limited amount.

Section 100.—In connection with this section I have to submit a proposition made by Mr. Henry, which was approved of by us, *viz.*, that it was very necessary that the different classes of receipts should be on different coloured papers. In the majority of cases where the cultivators are illiterate, it is doubtful whether they will be able to ascertain for themselves whether the provisions of the law are being complied with. The proposal which would solve a practical difficulty in a practical way has however the disadvantage of being too obvious and rude and expedient to find a place in an elaborate Bill. But it seems desirable that it should be declared that receipts in full, which are known as "farkhatti," should be on paper of a particular colour, receipts in part being on paper of a different colour. The expedient would enable any man, however illiterate, to understand at once whether his receipt was in full or in part. It is an expedient that would remove a great deal of the friction which now exists, and would do much towards inducing the ryots to pay their rents. There are innumerable occasions when the ryots have been unwilling to pay their rents, because they had no confidence in the putwari, and dreaded that he would insert in the receipt an entry declaring that the payment received was partly due on account of arrears of previous years. If the ryot were in a position to say "give me a receipt on paper of a certain colour for a particular period, and I will pay you so much", the issue between the parties would be intelligible to both, and would form a basis upon which to effect a settlement. Under existing circumstances the receipt is to the ryot a scroll upon which are some mystic characters, which he has learnt by experience to know may very often be turned to his disadvantage in suits before a determining tribunal. To facilitate the use of such receipts, the forms might be sold at Government treasuries at cost price.

Section 101.—Sub-section (2).—We are unanimous in thinking that this sub-section should be omitted altogether, and as a necessary consequence, the words "or statement" in section 102 (3) should also be omitted. The necessity for a landlord retaining the counterpart of receipt in which under the Bill all details are to be recorded is obvious, but not so the requirement that a counterpart of the statement of account should be *retained* by the landlord under a penalty for failure. It should be optional with the landlord, for it can only be for the defence of his own interest on the contingency of a dispute that he would require to produce the counterpart of such a statement. It is to be noted also that there is no procedure given for adjudicating the fine, or stating what court is to do so.

Section 103 (*a*).—There was some discussion on the provisions of this section. The majority preferred to leave the section as it stands, but Mr. Henry and I concurring were of opinion that the section should be modified. We view with some apprehension the increased facilities which are afforded by the proposed Bill for the deposit of rents in public offices. Under the existing law a ryot can only deposit his rent under the sanction of a formal statement that he has tendered his rent to the landlord who refuses to accept it, but under the proposed law he can pay it into court practically whenever he feels disposed to do so, as receiving officer has no grounds upon which to test the correctness of the depositor's explanation.

It is possible to imagine the case of a large proprietor who happens to be on bad terms with his tenantry. Each tenant will, unless the expense of so doing is so large as to exercise a restraining effect, save himself the trouble of going to the zemindar's cutcherry, and at the same time gratify his own instincts of dislike of paying his rent into court. Under existing practice the withdrawal by zemindars of their rents is a tedious and expensive process, and one that throws great clerical labour on public officers. If these provisions are carried into law, special procedure rules should be passed simplifying the measures under which deposits can be withdrawn.

Imposition of any heavy stamp duty on applications for permission to deposit rents in court, would in practice nullify the provisions of the law, while at the same time if the process is made overcheap, ryots may resort to it in such numbers that the clerical work thrown on the public officers will be excessive. Under the best devised arrangements, this procedure must cause both trouble and expense to the smaller landlords who are not permanently represented at the public offices by muktears or agent.

Section 112.—We strongly approve of the provisions of this section.

Section 113.—Mr. Grierson pointed out that a difficulty would arise when there were a number of rival claimants to the title of either party, *e. g.*, when there was no doubt as to who was the ryot, but there were two rival claimants to the title of the landlord; or when the landlords consist of a number of shareholders disputing amongst themselves as to the amount of their shares. It was considered by us that the Collector might act also on the application of the Magistrate or the sub-divisional officer when a breach of the peace was apprehended. I would submit that a provision to this effect should be added.

Section 116.—In this section provision should be made for the use of the certificate procedure in the case of the ryot.

Section 117.—Messrs. Boxwell and Quinn approved of this section as it stands, and consider the provision essential to check existing abuses; but they would not object to the importation of a corresponding penalty on a ryot who removes a crop without giving the landlord the opportunity of having an appraisement or division made of it.

Messrs. Norman and Grierson consider that a remedy had already been given under section 112; at the same time they were not prepared to argue for the total omission of section 117. They would, however, be strongly against it unless the ryot was also punishable for cutting and carrying away the crop against the will, or without the knowledge, of the

landlord. They would either have both penal provisions, or neither. I am myself strongly opposed to the section as it stands, and consider that the present Bill affords the landlord no means of protecting his interest in bhaoli tenures in regard to the bhowli crop in the case of a dishonest tenant, and therefore the provisions of section 117 which make *any* interference on the landlord's part punishable as criminal trespass might, in many cases, prove to be very harsh.

In the present Bill a certain and speedy remedy is afforded to both parties in the case of any dispute arising in regard to the crop in these tenures, and I think that the landlord should have just as much opportunity afforded him of securing the safety of his interest in the crop without being liable to a criminal prosecution, as the ryot has in securing his. The very essence of the tenure is expressed in the vernacular word used for it "agawr bat'ai," or *watching* and *sharing*, meaning thereby, *each party keeping a watch over the fields that none of the crop be frudulently made away with.*

By this section the landlord will be precluded from the right even to *watch* the crop through his servants, and an immemorial custom will be needlessly interfered with. If both penal provisions be adopted, there will be a door opened for endless false charges and criminal prosecutions.

Section 118.—We are unanimous in thinking that the provisions of this section for the *danabundi* or appraisement papers to be deposited in the Collector's office, are not necessary and are objectionable. In the districts of Gya and Shahabad and in the greater part of Patna, the filing of these papers will involve the necessity for the entertainment of extra establishments in the offices of the Collectors, if not of additional building accommodation, and, when the papers have been lodged, will be as useless and cumbersome as the putwaris' papers, the filing of which in the same way had been ordered a few years ago, and which it has been since found necessary to countermand. In the provision in this section, there is no check on the filing of *false* danabundi papers, and there can be no check.

Section 119.—The limit prescribed by this section is not a fair and equitable limit on the case of special and valuable crops, such as indigo, tobacco, or sugarcane, which would not fall under the category of staple crops. Some of the Collectors do not think the section requires alteration. Mr. Quinn withdrew from the objection above-mentioned, in the case of settled ryots; but I am not prepared to go with him so far as this.

Section 138.—I object to their being any appeal in this matter, and certainly the appeal should not in an executive point of this kind be from the Collector to the Judge. In these days the Collector is likely to be an officer of greater experience than the Judge. The analogy of Magistrates and Judges does not hold, because Magistrates of districts do not usually try cases. The determination of the length of the standard used in a local measure is a question of simple local investigation, and the Collector's finding should be conclusive. It does not seem consistent that when the civil court makes a reference to the Collector for decision on a matter of this nature, the civil court should have the power to reverse the Collector's finding. It was suggested in the conference that the appeal should lie to the Commissioner, but I still adhere to my opinion that there should be no appeal. Such a procedure would only lengthen the proceedings uselessly, and prolong litigation upon a point which on the Collector's investigation should be clear and conclusive.

Section 139.—We consider that to prevent mistakes a special provision should be inserted that a ryot should not be allowed to surrender a portion only of his holding.

CHAPTER XI.

We would record our cordial approval of the provisions in this chapter, and also of those in Chapter XII.

CHAPTER XIII.

Section 167. Sub-section (2).—The charge here for an application for distraint, appears excessive. So heavy a court-fee being imposed, there will be the tendency on the part of zemindars to have recourse to illegal distraint as now. There should be an uniform fee of eight annas. This provision for distraint is the only summary procedure contained in the Bill which enables a landlord to recover his rents expeditiously.

CHAPTER XIV.

Section 188.—It has always been understood that opportunity would be taken of the revision of the tenancy law, to introduce a procedure which would enable suits between landlords and tenants rapidly disposed of. The Bengal Bill, sections 147, 148, &c., proposed to render the patni sale procedure applicable to certain occupancy holdings These holdings could then have been sold summarily without decree on the application of the landlord; notice of arrear being given to the Collector, the defaulter's village, and zemindar's office. The whole responsibility of setting this procedure in motion would have rested with the zemindar.

It would have conferred great relief on the zemindars, and would have enabled them to realize their rents quickly. But it has been lost sight of in the new Bill, which seems not to contain any provisions which will enable rent-suits to be rapidly disposed of. The existing procedure is no doubt abbreviated, the right of appeal curtailed, and to this extent the Bill is an improvement on the existing law; but it does not go far enough in the direction of giving relief to the zemindari class, who certainly may claim that some procedure should be introduced which will admit of their recovering their just rents without incurring delay or expense.

It is also very desirable that in a suit for arrears the landlord should be allowed to include in the same suit any number of ryots of the same class and occupying land in the same village.

Section 199.—We highly approve of the provisions in this section. None of the remaining sections of the Bill call for any remarks.

I must apologize for the delay in submitting this report, but the submission of it came when in this heavy division, I have had very much more than the usual demand on my time for the despatch of business, connected with the various annual reports due at this period of the year.

ENCLOSURE OF COMMISSIONER'S REPORT No. 484R, DATED 7TH JULY 1883.

Notes on the Bengal Tenancy Bill by the Committee of the Behar Landholder's Association.

PART I.

CHAPTER I.

Section 3 (5).—Why should not the words "he or his predecessors in interest came into possession of it for such purpose" be omitted altogether, and explanation modified thus:—"A holding through a bhagjote ryot will be a holding under this section,"—and, to this extent alone sub-letting allowed.

Should not payment of rent be also made an ingredient of the definition. As the definition stands at present, there is nothing to prevent a trespasser being included in it, if he holds the lands after the trespass for agricultural purposes. The definition should be: "A person shall not be deemed to be a ryot in respect of any land, or to hold that land as a ryot, unless he holds it for the purpose of agriculture, &c., and *pays rent for the same.*" The Rent Commission Bill defined "tenant" as a person liable to pay or deliver rent.

Section 3 (*6*).—"Under-ryot" means tenant holding land whether immediately or mediately below a ryot. Will not this definition bring in a large chain of under-ryots, and give some amount of legislative sanction to subletting by these people? The word "mediately" might better be omitted.

Section 3 (*9*).—Landlord means a person or a number of persons immediately under whom a tenant holds. A tenant, however, includes an under-ryot. Will not the occupancy ryot be thus a landlord with respect to his under-ryot?

Section 3, Clause (*14*).—Agricultural year, where the Fasli year prevails, commences, for purposes of agricultural settlements, &c., on the first day of Asardh. The Fasli year of course commences in Ashin.

CHAPTER II.

Section 5.—The principle on which this chapter seems to be based appears to be the assumption that there is a lasting distinction between the lands of a village, some being exclusively appropriated by the ryots and some by proprietors, under the name of *khamar* lands. It will be found that no such distinction exists under the present village custom.

All the waste lands belong to the malik, and he can at any time make them his *zeraat* lands, and the ryot can have nothing to say to this. Again, lands which have been abandoned by ryots, or have in any other way passed into the hands of the proprietors, can be converted into *zeraat.* There is no village custom forbidding this, and it would be an act of spoliation to deprive the proprietor of these rights. In this view a register once made cannot hold good for all time to come.

Section 5 (*1st and 2nd*).—After the word "proprietor" the words "his representative in interest" should be added.

Section 5 (*a*).—Assumes the existence of a village custom, which, it is feared, will be found to exist nowhere.

Section 5, 2nd (*a*) *and* (*b*).—The sentence "have been held as zeraat" is not clear. Will not holding through a ryot come within these words? Yet the provisions of section 49 would point the other way.

Sections 7-15—Provide for making a complete survey and record of existing *khamar* lands in order to preclude the possibility of future disputes. But where is the complaint on the part of ryots that they cannot obtain lands from the zemindars, the latter having absorbed the ryoti into *khamar* lands? One would have thought that the subject dealt with in this chapter was of sufficient importance to require that careful attention and elaboration which it has obtained, specially when the original idea, which would have necessitated such a classification, is not to be carried out. The fact is that, notwithstanding the provision for the non-accrual of the right of occupancy in *nij jote* land under section 6 of Act X of 1859, zemindars never think of shutting out their ryots from the right, on the ground that they farm their *nij jote* lands (witness the paucity of cases in which questions of this nature do arise). Even in Behar, in South Gangetic districts, dispute regarding *zeraats* is very rare. In North Gangetic districts, question of zeraat lands has doubtless some importance in estates held by indigo planters, or lands in the neighbourhood of estates held by them. To make a law which is specially intended to provide for a few cases may not be inexpedient; and if the operation of the law be confined to these few cases only, people may not have much to say; but it will be a serious matter indeed if, without regard to the importance of the subject in any given locality, the law is sought to be applied and register of *khamar* lands made. It would be, as it were, opening the eyes of people to a class of dispute with which they are not yet familiar,

and this enlightenment they can only gain at no small amount of expense and trouble to themselves. The survey, the letting in of a host of survey underlings, ameens, chainmen, *et hoc genus homines*, should not be lightly thought of, and thus driving people to appeals up to the Board of Revenue, and ultimately to Government, for evils which are more imaginary than real.

Perhaps it is not meant that all lands not in the occupation of ryots on the date when the survey party enters the village will be treated as *khamar* lands. The definition of *khamar* lands precludes such a supposition; yet the ryot will be a village Hampden indeed, fighting for the sake of principle, and spending money after such fight; who is expected to contest the landlord's demand of entry of such land in the *khamar* register. Even if such Hampdens there are, the legislature would do better than to invite them to fight. Litigation in this country means ruin; it entails much more than legitimate cost; and the legislature, whose only motive is the good of the people, should think twice before opening out a fresh flood-gate of litigation.

Then there is the question of cost. The executive machinery required by the law under this chapter will have to be paid by the zemindar and the ryots. The expenses in some cases of the survey, &c, will not be a trifle. On the score of expense alone, if not on any other ground, the enactment of this chapter appears inexpedient.

Do not the road cess returns now, to some extent, furnish the information required by this chapter?

Sections 10 and 11.—The period of one month provided for appeal to the Commissioner and the Board of Revenue under these sections, is rather short.

Section 12.—On what ground or grounds will the Local Government proceed under this section?

Section 13.—It is intended to give a stereotyped character to these registers, and this will trench against the zemindar's proprietary right and village custom, under which all the waste lands are his, lands abandoned by ryots are his, lands acquired by alluvion in many cases are his, and he is at liberty to make these lands his *zeraat* without any reference to the ryot or his right.

CHAPTER III.

The only class of tenure-holders who were allowed to hold at fixed rates were those istemrardars or mokararidars who had held their lands at a fixed rent for more than 12 years previous to the date of permanent settlement. Even they were not protected against a Government farmer. No other class of tenure-holders were entitled to hold at fixed rates. Act X of 1859 first made an innovation in this respect. Under that Act, the privilege of holding at fixed rate was given to tenure-holders who had held at a uniform rate from the date of the permanent settlement, and the presumption was to be made of uniform fixed rate if the tenure-holder could prove that he had paid at such fixed rate for 20 years before the commencement of the suit. Even now, when reference is made to the rights of parties as they existed at the date of the permanent settlement, and it is proposed to go beyond Act X of 1859, few zemindars would perhaps cry for the repeal of the privilege given under that Act to tenure-holders; but they have good reason to complain of the presumption which now, when strictness is observed in the matter of granting receipts, and greater strictness is to be provided for by the Bill, would place it in the power of every tenant to ask for such presumption in all cases, and thus to shift the onus of proof. Mr. Reynolds in his Bill proposed to carry back the ryot to proof of an uniform payment of rent to 20 years before 1859. The equitableness of this provision was undoubted.

The Bill now proposes to raise the presumption of proof of uniform payment of rent for *any* period of twenty years. A ryot is sued in 1883. He proves uniform payment of rent from 1840 to 1860, and does not go into proof of such uniform payment for the last 20 years before the commencement of the suit. The presumption as now proposed under the Bill will be against the ordinary rules of presumption in such a case.

Section 14.—Refers also to ryots with fixed rates of rent. Section 14 and section 18, and other sections in Chapter III, come together to apply to the same class or classes of persons. If section 18 applies to ryots, the grounds of enhancement in cases of a particular class of ryots holding from the time of the permanent settlement will be different from the grounds in cases of ryots described in Chapter V. This will be entirely new. In paragraph 13 of the Object and Reasons it is said that "the term tenure-holder, as used in the Bill, is defined in section 3 (3) and (4) to include what are commonly known as undertenure-holders—that is to say, darpatnidars, sepatnidars, darijaradars, and such like; and also tenants of the class hitherto known as ryots at fixed rates. The inclusion of tenants of this latter class in the definition is convenient from the draftsman's point of view, but is, it is believed, otherwise of little importance, inasmuch as the incidents which attached to their holdings place them to all practical interests and purposes on the same footing as tenure-holders." Again, in paragraph 20 the alterations which it is proposed to make in the existing law regarding tenures are not of great importance.

Section 14.—Converts the present ryots at fixed rates into tenure-holders, but as already explained, *supra* paragraph 13, the change is unimportant.

The change would be unimportant if section 18 would not apply. It may be said that as only ryots with fixed rates would be tenure-holders, ryots not with fixed rates would not be entitled to take advantage of the provisions of this chapter. The point, however, is not clear. It should be clearly stated that the provisions of section 18 will not apply to ryots.

The uncertainty noted above is to some extent attributable to the use of the term

'tenant,' 'tenure,' and 'tenure-holder.' Tenant is defined by a negative. It does not include any person who is not a tenure-holder, ryot, or under-ryot, or the tenant of a bastu land. It may include them, or some of them, and it may exclude some, as certainly section 14 does. The definition simply excludes people who are not of certain classes. The term 'tenure' includes an under-tenure, and the interest of every tenant of the class referred to in section 14; and tenure-holders mean a person or a number of persons owning a tenure.

Section 20.—The provisions of this section appear to be inconsistent with the declared policy of Government to better the condition of ryots. Why should not the benefit of section 14, and the presumption under section 15 be given to ryots in Government estates? Surely ryots in Government estates should not be placed at a disadvantage as compared with their neighbours living in zemindari estates.

Sections 22, 23, and 24.—Lands have been added to a tenure by alluvion. The alluviated lands will form a part of the original tenure, or will be a tenure by itself. Rent in such a case is nominal at first, but when the alluvial deposits are fully formed, and land acquires a greater degree of fertility, the rent payable and paid is fully equal to the degree of such fertility. The ryots, under the circumstances of the case, do not grudge to pay such full rates, notwithstanding it may be four or five times the nominal rent they had paid at first, and the increase is made all at once. The double limit, the gradual enhancement, and 10 years' rule will tell very hard in such cases, and this without there being any justifiable necessity for it.

These limits will also tell against the landlord's making any improvements in his estate. An estate yields only Rs. 500 at present; with improvements effected it can be made to yield Rs. 2,000. The improvements cost, we will suppose, Rs. 20,000 in five years. If the zemindar chooses to wait for the increase until the whole outlay has been made, he can get only Rs. 500; whereas interests at 5 per cent. on the rent of the outlay will be something like Rs. 1,000. If instead of waiting so long, he takes the increased rent from the first year, he debars himself from any future increase for 10 years.

Section 25.—Why should not a right of pre-emption be given to the proprietors in cases of sale of tenures?

Section 27.—Tenure does not include occupancy holdings. Evidently it is not intended that the transfer of an occupancy right should also require registration in the zemindar's sherista. Is there any reason why this should be so? These new rights proposed to be made transferable should not be placed on a better footing than tenures. If registration were to be made compulsory in this case also, the landlord might, on the application made for registry, either claim his right of pre-emption, or might choose to register on the receipt of the fee.

Section 28.—Appears unmeaning. It would be harassing to parties. Why should not the transferee of a tenure apply in the first instance to the landlord? The section should be omitted.

Section 34.—Or "*that of his agent*" should be added after the word 'his hand.'

Section 45.—As the intention appears to be to rehabilitate the *khudkast* ryots of old, residence should also be laid down as a condition for acquiring the status of a settled ryot. If this suggestion be adopted, perhaps it may be necessary to retain a section similar to Section 6 of the present Act, with respect to *piekast* ryots. Thus, while the resident settled ryots alone will have a right of occupancy in ryoti lands under Section 47, the same right will not accrue to *piekast* ryots, unless and until they have held such ryoti lands for 12 years.

"*Held land, as a ryot, ryoti lands.*"—Under Section 3, clause 5, "a person shall not be deemed to hold land as a ryot, unless he holds it for agriculture, horticulture, or pasture, or unless he or his predecessor in interest held it for such purpose."

A person shall be deemed to hold under this Section, though he may sublet it.

Why should not the words "he or his predecessors in interest came into possession of it for such purpose" be omitted, and the power of subletting restricted to such cases and to such places where it obtains now under custom, or where it is exercised only through a *bhag jote* system.

Either the power of subletting should be done away with, and the ryots confined to their legitimate occupation of agriculture, horticulture, &c., or the power to sublet being given, under-ryots should have all those advantages now proposed to be conferred on ryots. There is no reason why, by giving unlimited facility for the transfer of occupancy holdings and their accumulations in a few hands, the Legislature should create a class of petty zemindars who, in their relation to actual cultivators, can only prove worse than any greedy rack-renting zemindar that might have gone before them.

But it is more when Section 45 is taken in connection with Section 47, that we find greater need for the adoption of the suggestion noted above. A co-owner, an ijaradar of a part estate, can acquire a right of occupancy. These men, by the exercise of the influence of their position, may buy an occupancy right or otherwise acquire the status of a settled ryot; they will thereafter acquire right of occupancy in all ryoti lands of the village from the date of their holding. The European indigo-planter will acquire the status of a settled ryot after holding a bit of land in a village or estate for 12 years; and the dreaded ticadar is oftentimes even now a settled ryot of the village. These classes of people may buy or otherwise acquire a right of occupancy in the entire quantity of lands in a village, and then sublet these lands at pleasure. Yet it is not for the benefit of these classes of men that the changes are proposed. Again, any obnoxious ryot might be introduced in an estate against the zemindar's will under the power of subletting. The right of pre-emption will here be of no avail to the landlord, and subletting will be resorted to as a device to defeat pre-emption.

"*In any village or estate.*"—A large estate in a raj or big zemindari may comprise several hundreds of villages, and under the operation of the law, a ryot who has occupied a bit of land in any one of these villages for 12 years will acquire the status of a settled ryot in the estate, and come to have a right of occupancy with respect to the ryoti lands of all the villages comprised in such estate no sooner he will get into possession, of such ryoti lands.

"*Notwithstanding any contract to the contrary.*"—*Sections 45, 47, 49, 50.*—It is strange that when the ryot is considered *sui juris*, as respects his contracts and dealings with the world around, more than he ever was under the Indian laws, and this in his dealings with a part-owner of an estate, or an ijaradar of a share, he should be only considered in a state of pupilage in his dealings with the sole proprietor of an entire estate. There may be cases in which the ryots themselves may, for the sake of some advantage to themselves, choose to enter into a contract with their landlord against the provisions of the proposed Bill. The law will deprive them of the power of so doing. Why should not the words "*unless the contract be in writing registered*" be added after the words "notwithstanding any contract to the contrary" in these sections?

An ignorant ryot may be an object of protection of the Legislature, and it may be justified in denying him the power of contract; but is an ijaradar, an indigo-Planter, nay, a co-owner of an estate, the legitimate objects of such protection? Yet these classes of men can be settled ryots, come to have rights of occupancy with all its incidents, and the law will apply to them as to those who are now known as ryots.

Section 46.—Who will be responsible for the zemindar's rent during the period of vacant possession? During the year the zemindar will have no right to make a settlement with any other ryot, and thus the zemindar loses a year's rent. The fact that he comes by an occupancy holding does not signify much, for, on his settling the lands with a ryot, he can only do so on the fair rent fixed in accordance with the provisions of this Act, which, in Behar, means a reduction of at least half the previous rent paid.

Section 49.—Should be omitted altogether when it is intended to have a survey and register of *khamar* lands; or if it is retained, it should be modified as follows:—"Unless he has held it for any portion of that period under a lease for a term, or year by year."

Section 50(a).—The words are very vague, and will lead to litigation. The purposes of tenancy should be confined to agriculture, horticulture, and pasture, and should not be extended further.

(*c*) The question of fair and equitable rates have been discussed separately in so far as the present limitations affect the zemindar's right under the permanent settlement.

(*e*) Should be omitted altogether.

(*f*) The transfer at least should be restricted to *bonâ fide* cultivators, and this can only be done by preventing subletting. As regards the question of transferability, the Association, in addition to what they said in a separate note, beg simply to subjoin in this place what they stated in their note on the Bill of the Rent Commission:—

"In the vast mass of literature on rent law, collected together by the labour of the members of the Rent Commission, we do not find a single sentence authorizing the transfer of mere occupancy rights. On the contrary, the rulings under Act X of 1859 and Act VIII of 1869 (B.C.) are against it, and there is a significant passage in Harrington's Analysis, quoted at page 408 of the Rent Report, Vol. II, clearly shewing that the ryots had no such power of alienation even in good old days. The passage is to the following effect:—On the whole therefore *I do not think ryots can claim any right of alienating the lands rented by them by sale or other mode of transfer*, nor any right of holding them at a fixed rent except in the particular instances of *khudkast* ryots, who from *prescription* have a privilege of keeping possession as long as they pay the rent stipulated for by them." (Extract from Harrington's Analysis pages 269, 281, & 301.)

From the above passage we find that the ryots as a body, whether *khudkast* or *piekast* had not the right to alienate their holding by sale or other mode of transfer; that in the particular instance of *khudkast* ryots, who from *prescription* enjoyed certain rights, that right never extended beyond holding at pergunnah rates of rent, and their not being liable to be disturbed in their holding so long as they continued to pay such rent. It is said that the landholder can care for nothing so long as he gets his rents; it does not matter from whom. The very argument which Lord Cornwallis used against arbitrary eviction of ryots when rent was ordinarily rack-rent is now sought to be pressed in favour of purchasers of ryots' rights, under condition of things when rents happen to be no longer rack-rents. The present learned Chief Justice, in his valuable minute on the proposed new rent law, printed at page 380 of the Rent Report, Vol. II, thus disposes of this argument:—

"But assuming this to be the true view of the matter, what becomes of the justification for invading the landholder's rights, if the ryot is to be allowed, as soon as he has acquired his right of occupancy, to get rid of it altogether? If the equity to the landlord consisted in his being permanently secured a good tenant, what becomes of the equity if you allow the ryot to transfer his interest?

"It seems to me that this view of the zemindar's position is rather lost sight of in Mr. Field's note; and I think, moreover, that it is hardly fair to suggest that zemindars ought not to object to the transferability of ryot's tenures upon the ground that the measure would be merely unpleasant or injurious to themselves.

"It strikes me that this is just the ground upon which zemindars, or any other class of men, are perfectly justified in objecting to any public measure. And considering that in this instance the Legislature are dealing substantially with the two great branches of the agricultural interest—landlords on the one hand and tenants on the other—the former have at least a right

to insist that no measure ought to be passed which would be *unpleasant* or *injurious* to them, unless some solid advantage is to result from it to the general public."

It is positively injurious to the landlords, for, not to speak of the *unpleasantness* of having ryots installed against their will, they become losers to the extent by which the ryots gain; if instead of the ryot's selling his right of occupancy to a stranger, a zemindar could give the right to the same party with the ryot's *consent*, the zemindar would obtain a share of the money value of such right, the consent of both being necessary under the present law for a valid transfer.

Considering the question in a ryot's point of view, the learned Chief Justice says:—"I should have thought that the most effectual way of protecting such people and preventing them from wasting their substance would be to secure them a permanent interest in their property, by prohibiting the alienation of it in any shape or way." (Page 382, Vol. II, Rent Report.)

* * * * * * * *

It is now generally admitted that the poverty-stricken condition of the Deccan ryots, for whose special relief a law, which trenched against the rights of a class and which ignored all private contract, was enacted only last year, was owing, among other causes, to the transferable nature of their tenure. The following quotation is taken from a letter dated 29th February 1879, from the Secretary to the Government of India, to the Secretary, Government of Bombay, circulated along with other papers for opinion on the Deccan Ryot's Relief Bill:—

"(14) Satisfactory as this picture of progress is (and similar ones may be produced from all parts of India), there is undeniable evidence in the report before us that the very improvements introduced under our rules, such as fixity of tenure and lowering of the assessments, have been the principal causes of the great destitution which the Commissioners found to exist.

"(15) The saleable value of the land greatly increased the credit of the ryot, and encouraged beyond measure the national habit of borrowing, which I have before observed on. High prices led to extended cultivation, to more expensive modes of living, to larger outlay on the great stimulant to Hindu expenditure—marriage ceremonies. Recourse to the money-lender became the more frequent than before, and the class of money-lenders competing for custom increased in undue proportion."

It is said that the Bengal ryots are not to be judged by the standard of the ryots of Deccan or other parts of India, but whatever point of difference there may be between the ryots of Bengal Proper and the ryots elsewhere in India, and whatever advantage the former may have over the latter in their habit of prudence, the same can by no means be safely asserted with respect to the Beharis. With them, with landlords and tenants alike, there is unfortunately no lack of the great stimulant to Hindu expenditure—marriage ceremonies.

* * * * * * * *

If, again, Bengal ryots are not to be judged by the standard of ryots in other parts of India, they ought at least to be judged by the standard of those who are admittedly their betters. Not long ago, the following note by Mr. Hertslet, the Consul at Konigsberg, on the practical working of the German land system, went round the newspapers:—

"Landed estates can be sold, parcelled out into the smallest free-holds, and disposed of in any manner without any difficulty or expense beyond the contract stamp of 1 per cent. Renting of farms is almost unknown. Agriculturists buy the land, including barns and dwellings and dead inventories, at a price agreed on, pay usually a quarter or a third of the money down, and the rest is hypothecated on the estate, large or small: the hypothec banks generally advancing the money at 5 per cent., which cannot be demanded back, but may be gradually sunk or paid off by yearly instalments. But, notwithstanding the facility of buying or selling landed property, the agriculturists are always complaining, and it is understood that at least two-thirds of them are in money difficulties, and public sales by the courts of law are of constant occurrence. The most of the nominal proprietors have not sufficient capital to work or cultivate property, and most of them are in difficulties when the interest on the hypothecated debt is due. It is also remarkable that, with the exception of a very few estates which are entailed under the law of primogeniture by a small number of the higher nobility, hardly one estate has remained in the same hands or family for fifty consecutive years, and it appears to be hard on a proprietor to sink such capital in landed property which must in most cases be sold at his death."

Even Mr. Mill, who saw nothing but good in the system of peasant proprietorships, says: "Undue sub-division and excessive smallness of holdings are undoubtedly a prevalent evil in parts of Germany and Flanders." (Mill's Political Economy, Vol. I, p. 366).

But, however good the peasant proprietorships may be in countries where they are, so to say, indigenous to the soil, where the habit of the people favours such a system of land tenures, and where, as in Norway, Belgium, France, there are existing checks to an overgrowth of population imposed either by law or the salutary customs of the people, it does not follow that we could secure an equal amount of good by transplanting the same land system in Bengal and Behar, where over-population and sub-dividing are the prominent features in the economic condition of the peasantry.* Add to this the chronic indebtedness of our people, and the

* In the 24-Pergunnahs, which are now comprised in the district of Gya, the total number of estates in 1789 was 744, and the number of proprietors 1,160; in 1871 the number of estates was 4,411, and the number of registered proprietors 20,453. In 80 years, therefore, each estate has, on an average, been split up into six, and where there was formerly one proprietor, there are now 18. (Statistical Reporter, Vol. XII, p. 126.) In 1790 there were 1,232 separate estates on the rent-roll of the Patna district, as then constituted, held by 1,280 registered proprietors. Including a net total of 777 new estates obtained by transfer from the Gya district, the number of estates on the rent-roll of the district amounted in 1870-71 to 6,075. The number of registered proprietors had increased to 37,800. Allowing for the increase in the size of the district by the addition of the Behar sub division, the number of estates under the Patna collectorate had quadrupled since the original assessment in 1790; and where there was formerly one proprietor, there are now probably 20. (Statistical Reporter, Vol. XI, p. 187). In the district of Tirhoot, the figures are more marked. In 1790 there were 1,321 estates held by 1,989 registered proprietors. In 1871 the number of estates was 11,500, and the number of registered proprietors 73,416 (Statistical Reporter, Vol. XIII, p. 168.) So long ago as 1789, Mr. Shore remarked on the insignificant size of the Behar estates and the poverty of their owners. If sub-division has gone on thus rapidly with estates, it is hard to expect a different state of things in case of transferable occupancy holdings.

danger of the measure becomes at once manifest. While there is to be sub-division in one hand, there is every possibility of accumulation of these small holdings in the hands of capitalist mahajuns on the other, and side by side, with the present race of zemindars as annuitants on their land, there will spring up landed proprietorships of another kind with mahajuns as owners; thus the only good we derive from the measure is to sweep away the present race of our peasants.

It is noteworthy how, when the land question has been a burning one for centuries in Ireland, the introduction of the system of present proprietorships of Belgium and France into Ireland, has not been advocated by those who are best able to pass an opinion on the subject. Emile De Laveleye says:—

"In Flanders you do not find the land sub-divided in the way it is in Ireland, according to Lord Dufferin who has shewn the evils of the kind of sub division practised there. From his description, it appears that in Ireland, at the death of any holder, and often even during his lifetime, the children divided the lands among themselves, each of them building a cottage on it; or, if the tenant has no children, he sub-lets his lands to several small farmers, and allows them to settle on it, notwithstanding the stipulations of the lease. Such breaking up of the land must lead to the most wretched farming and to pauperism on the part of the tenants. As long as the Irish farmer has no better understanding than that of his own interest and of the requirements of a sound economical system, no agricultural policy, neither fixity of tenure, nor even ownership in fee-simple, could improve his condition. Although the population of Flanders is twice as dense as that of Ireland, a Flemish peasant would never think of dividing the farm he cultivates among his children; and the idea of allowing a stranger to settle and build house on it, and farm a portion of it, would appear altogether monstrous to him. On the contrary, he will submit to extraordinary sacrifices to give his farm the size and typical shape it should have.

"How is it that the Fleming and the Irishman hold such different points of view? I think it is partly due to the difference of race, and partly to circumstances. The Celt, being more sociable, thinks most of the requirements of the members of his family, whilst the Teuton thinks more of the requirements of the soil and of good cultivation.. ....But, supposing the Irishman to become the absolute owner of his farm, would he learn and comply with the requirements of the land. A Flemish farmer's son always wants to have a good farm of his own; he would not put up with a hovel improvised on a potato field. Could the Irishman but be brought to practise agriculture as an art, and not as a mere means of bringing a subsistence from the soil, he would soon abandon the miserable system of sub-division which he has adhered to so long. But how is this taste for agriculture as an art to be imparted to him? To extinguish the influence of instincts or tendencies, whether inherent in the race or the historical product of centuries, would it suffice to introduce an agrarian constitution in Ireland similar to that of Flanders, or, better still, Switzerland? These are questions which I confess myself not in a position to answer; but they are questions which those who have the Irish Land Question to solve ought to face when considering the land system of Flanders." (Cobden Club Essays.)

It is significant to observe that in enacting for the North-Western Provinces in 1873, the Supreme Council did not think it expedient to give a statutory right of transfer to 'right of occupancy'—the mere creation of Act X of 1859 in Bengal as well as in the North-West.

Section 9 of Act XVIII of 1873 (The North-Western Provinces Rent Act) runs as follows:—

"The rights of tenants at fixed rates shall be heritable and transferable.

"No other right of occupancy shall be transferable by grant, will, or otherwise, except as beween persons who have become by inheritance co-sharers in such right.

"When any person entitled to such last-mentioned right dies, the right shall devolve as if it were land, provided that no collateral relative of the deceased, who did not then share in the cultivation of his holding, shall be entitled to inherit under this section."

The tenants at fixed rates are thus defined in section 5:—

"All tenants in districts or portions of districts permanently settled, who hold lands at fixed rates of rent which have not been changed since the permanent settlement, shall have a right of occupancy at those rates, and shall be called 'tenants at fixed rates.'"

Thus occupancy right is not only not transferable, but not even heritable under the law as it prevails in the North-Western Provinces.

Is there any reason why incidents which are denied to occupancy holdings in the North-Western Provinces, either from a regard to expediency or from a regard to the existing rights in that province, shall be attached to occupancy rights in Bengal and Behar? If the ryots of the Lower Provinces are not to be judged by the standard of the ryots of the North-Western Provinces, it should also be borne in mind that the ryots of Behar are not to be judged by the standard of the ryots of the Lower Bengal, and that there would be fewer chances of mistakes if they were to be judged by the standard of the ryots of the North-West.

As regards Behar, the majority of the members of the Behar Rent Commission, who in one respect at least had the advantage over the members of the Rent Commission sitting in Calcutta, that they knew the people of this province better, were of opinion that it is not desirable to alter the existing law on the subject. On a further reference to the members by the President, after the sitting of the Commission was over, it appears that only 4 out of 15 members, being perhaps the original minority, were for unrestricted transfer. It is noteworthy to remark that two of these members are indigo-planters themselves, or persons interested in indigo-planting; the other two, Messrs. Worsley and Finucane, would not allow subletting if transferability of occupancy rights were to be recognized by law. Two other members would only allow transfer to *bonâ fide* cultivators; the other members, being the majority, remained opposed to such transferability.

Horticulture.—In Behar, fruit trees are planted by the ryots in lands for which they pay no rent. When the trees bear fruit, the produce (fruits) is divided under the *bhowli* system half and half. When the tree is sold, the zemindar takes half the price, and the ryot the other half; and the land being cleared, it again belongs to the zemindar, who has the option of settling it with whomsoever he likes, no right of occupancy accruing to the previous tenant in a case of this kind. Horticulture in the mode in which it is ordinarily carried on in this province does not require much labour or expense. Mango seeds are sown here and there, and in 10 years, during which the ryot pays no rents, we have a mango tope, and the ryot enjoys half the produce, *plus* as much more as he can keep away from the division. Sometimes, though of course his right to a share is undisputed, the zemindar does not care for a division; or even if a division be made, it is the village *amlahs* alone who enjoy the fruits, or they distribute them among the villagers, the zemindar living at considerable distance. A sale of fruits in a zemindari is a practice which has not yet generally recommended itself to the patriarchal instincts of the landlords of Behar. In the rearing of the mango tope, besides the initial labour of sowing the seed, the only other trouble to the ryot is to protect it from cattle; and no great amount of trouble is even entailed in this matter, for the seeds are abundant, and one seedling wasted, ten can take its place. This is the way, too, in which, besides large mango topes, other kind of fruit trees are reared and held. The tal (palm) is always the zemindar's own under-village custom. Annual settlements are made with pashis at the rate of 1 rupee or 8 annas per tree, and the tree, when cut, belongs exclusively to the zemindar. To allow right of occupancy in all such cases with respect to the trees, or the land on which they grow, would be at once depriving the zemindar of a very valuable property. To allow transferability in such cases, without any regard to the zemindar's right, would be quite contrary to custom. The point should be enquired into and provided for.

Section 51.—The word '*landlord*' is defined to mean a person or a number of persons immediately under whom a tenant holds Now the right of pre-emption under Section 51 is given to a landlord as defined above. Will the recorded proprietor of an estate be entitled to exercise this right when he has given his estate in ijara or tica? and yet this is the time when undoubtedly the exercise of the right will be of the greatest importance. The definition, however, would seem to preclude the proprietor's right in such a case.

Will one of several co-sharers of an estate be entitled to exercise this right? Will he be entitled to exercise this right against the wishes of his co-sharers? These points should be made clear.

Why should not a similar right of pre-emption be given to the resident ryots of the estate, exercisable only in case the landlord refuses to exercise his right.

Instead of the words 'landlord,' &c., "any person interested in the land of the estate may claim to purchase, &c., provided that the claim of the recorded proprietor shall be preferential to all other claims, and next to his, the claim of the person immediately under whom the ryot holds" would do much better. After all, the right of pre-emption given to the landlords will not serve the purpose of checking objectionable transfers. We have seen how, under the colour of subletting, transfers might be effected, and thus a claim of pre-emption defeated. Again, a neighbouring rich and powerful zemindar would find no difficulty whatever to collude with the tenants of a weak neighbour, and instigate them to sell their tenures simultaneously and *en masse*. Not having sufficient money at his command, he will have to allow the lands thus to pass to his hostile neighbour, who gains his ends in effecting the ruin of a weak neighbour by stopping payment of rent.

Sections 51, 53, and 54.—The word 'served' should be substituted for the word 'filed' as used in these sections, for the obvious reason that, though notices may be filed, they may be served too late. And yet the time within which the landlord is to seek for his right of pre-emption is one month from the date of filing of the notice.

Section 56.—The provisions of this section would render the right of pre-emption of no advantage to the zemindar. In cases of successive transfers by the ryots with whom the lands may be settled by the landlords, the zemindar, if he would choose to exercise his right of pre-emption, will simply have to pay very heavy fines for coming between the ryots and their transferrees each time such a transfer is made.

If the landlord be a part-owner only, and has the status of a settled ryot of the estate, the provision will not perhaps apply, nor will it perhaps apply in a case where the landlord has filed a declaration under Section 141. When the provision is thus of a very limited application only, why should it not be omitted altogether. If it stands as it is, it will simply lead to litigation, and prevent landlords from exercising a right which it may be necessary for them to exercise at times, to ward off the evil of having an obnoxious ryot (possibly an enemy) inducted in their estate against their will as a settled ryot.

"*If immediately before the acquisition of the right by the landlord, the rent of the land was a money rent, the ryot shall be entitled to hold at a money rent fixed in accordance with the provisions of this Act.*"

It will be found on enquiry, that in Behar in most cases the existing money rent bears a higher proportion to the annual value of the gross produce than one-fifth, as proposed by the Bill. In these cases, when in the exercise of his right of pre-emption, the proprietor has bought a right of occupancy, and settles it with a ryot, the new ryot thus installed will not only have right of occupancy, but will be entitled to hold at a money rent which must not

exceed, under the provisions of the law, one-fifth of the annual value of the estimated gross produce of the land. Thus, with every transfer of the occupancy rights, the existing rates in Behar will be reduced and brought to the level of the lower statutory rates proposed by the Bill. After the passing of the Bill, the ryots may successfully combine amongst themselves to bring down existing rates, and resort to fictitious sales. Not only will the interest of the zemindars suffer by this provision, but, it is seriously apprehended, the interest of the Government revenue as well. It is a fact which will be fully borne out on enquiry that the Government revenue, in cases of many estates recently settled, represents more than a fifth of the annual value of the produce. In the confiscated estates of Gavind Dehri, pergunnah Peru, zillah Shahabad, an area of 398 bigahs of land under cultivation, the whole amount of rental on which the assessment was determined was Rs. 800. The Government revenue, after the usual deductions for *gilandazi* and collections, has been fixed at Rs. 612, and the estate put up to auction. The auction-purchaser, to whom the estate was knocked down, paid Rs. 7,200 for the purchase. Besides the Government revenue, the purchaser will have also to pay the road cess, the dâk bheri, and public works cess. At the time of the settlement a great part of the land of the estate was held in *bhowli*, so that the rental of Rs. 800 represents half the annual value of the produce, and the Government revenue, including the cesses, more than 6 annas; and yet the Bill fixes the maximum rate at a fifth. Is it again just to the present body of ryots to fix a lower statutory rate than the rates prevalent? Not to speak of other and serious consequences, will it not at once diminish the value of their holdings? Why should a new class of ryots be favoured at the expense of the old? If the existing ryots were wise, they would be the first to protest against a measure thus seriously calculated to diminish the value of their holdings.

Section 56.—"Any person thereafter holding the land as a ryot." Is it intended to include cases other than that of letting the lands by the landlord?

Section 57.—The proviso to this section appears inconsistent with the provision of Section 47. Once the status of a settled ryot is acquired, the person having such status will acquire a right of occupancy in all ryoti lands held by him. And though he will come to have right of occupancy in all subsequently acquired ryoti lands, the proviso will bar such right in ryoti lands which have been longer in his possession.

CHAPTER VI.

Section 59.—Is it at all necessary or desirable that there should be so much restriction on the freedom of contract? If any contract is likely to prove prejudicial to the interest of the ryot, it may be fairly presumed that he will be the last person to enter into it. He is the best judge of his own interests, and if he is not, no amount of legislation can keep him out of danger. As to the limitation, the tabular statement appended will shew how, in many cases, the revenue payable to Government represents full six-sixteenths of the annual value of gross produce. And the zemindar has to pay the cesses in addition. An uniform maximum for Bengal and Behar, and even for the districts of the same province can only prove mischievous.

Is not the revenue officer an already hard-working official that he should have imposed on him this and other works in addition? The determination of the question as to whether the rate is fair and equitable requires some amount of judicial enquiry and some data to go by. Without any disparagement to the ability of our revenue officers, it may be urged that both these will be wanting in their case. Contracts will be registered or rejected according to the individual fancies of these officers.

No procedure is laid down for the registration under this section. But if the procedure be the same as that provided by the registration law, ryots will have to be moved *en masse* to the court of the revenue officer, possibly at some considerable distance from their residence, and they will have to dance attendance in the courts for a number of days, as in all matters the case is at present, before the registration of the contract can be taken up in hand by the revenue officer. The trouble and the cost of the proceeding should not be lost sight of.

The proposal for the compulsory registration of pottahs and kabuliats did not find much favour with the Behar Rent Commission, for the reasons stated above.

If the provisions for compulsory registration by a revenue officer are to be retained, the Legislature would do well to see whether the attendance of ryots *en masse* at the time of registration cannot be dispensed with; and if so, under what conditions.

Section 62.—Most of the objections noted under Section 59 as to the registration of contracts by the revenue officer will apply also to the preparation of table of rates. There are such a diversity of rates prevailing in any local area that the preparation of a table of rates will be found to be simply impracticable, and it will be found, after a great deal of unnecessary expense incurred, that it is unworkable. There will be a whole flood-gate of dispute opened regarding the classification of lands and the rates. If the truth were to be ascertained, it will be found that nothing impoverishes our people so much as these litigations to which they are driven by new laws like the one proposed.

Section 76.—Exception should be made in case of dearah lands. In these cases the amount of rent depends on the alluvial deposits, and if a trifling and nominal amount of rent is charged, so long as these alluvial deposits have not been formed, an amount of rent proportionate to the degree of fertility acquired is at once charged and readily paid no sooner the alluvial deposits have been fully formed. This amount is often more than double the old nominal amount charged. The same objection would apply to the provisions of Sections 77 and 78.

Section 78.—The period of 10 years during which no fresh enhancement is to be made after the rent has been once enhanced, appears rather long and unsuited to a variety of circumstances. Prices may enormously rise, the productive powers may increase without any expense or trouble on the part of ryots, and lands may acquire an additional degree of fertility, as in the case of dearah lands. The period should be shortened to five years.

Section 79.—A ryot who pays as rent half the annual value of the gross estimated average produce of land in staple crops, as all the *bhowli* tenants under the rate of commutation under Section 82 will do, and almost all the Behar ryots, who, under the existing rate of rent, certainly pay more than one-fifth of the annual value of gross produce as rent, will be, as regards the produce of these lands, readily undersold by ryots who under the provisions of the Act, will have their rents determined at not more than one-fifth of the annual value of the gross produce. The ryots who will be inducted in an estate after the passing of the Act, will all thus have an advantage over the old ryots whose existing rates are not to be touched at present. In so far as the amount of rent is an ingredient in determining prices, prices are calculated to fall with low rents, though it is possible that the counteracting effect of greater *demand* in years to come may not absolutely bring it down. If such a counteracting force of *greater demand* does not immediately come into operation, as under the existing condition of things it is not likely that it will for years to come, the effect will be the fall of prices, and the persons who will benefit will be the *consumers*. These consumers will, however, benefit at the expense of the landlords, the receivers of rent. For one effect of the falling of prices under these circumstances will be the reduction of existing rents of occupany ryots under clause (*b*), section 79; and thus, though the existing money rates may not be changed now, they will, under the operation of this clause and the economic condition of things, be changed hereafter and equalized with low rents around (*viz.*), to a rate not exceeding one-fifth of the annual value of the estimated average gross produce fixed under the present Act. Any maximum fixed, without reference to the existing rate of rent in a given locality, is thus calculated to bring down these existing rates to its own standard (*i.e.*), to an equality with itself.

The section also interferes with freedom of contracts. Unlike the provisions in enhancement cases, there will be no limitation to reduction of rent, either as to time or to the amount.

Section 80.—Pasture lands are either the uncultivated lands of an estate, on which grass only grows, or lands in the occupation of ryot, on which other crops not growing in a year, fodder for cattle is grown. In the fiast case, the lands belong to the proprietor of the estate. The ryots are allowed to graze their cattle on it by sufferance; no rents are charged, and the proprietor can at any time bring these lands under cultivation. There is nothing like commons in the estates of Behar. If such commons had existed at one time, when the village community flourished in all its pristine vigour, traces of these are now lost. At the settlement all the lands of an estate were included in the malguzary lands, and the zemindar had vested in him the fullest domain in these lands, where they were not in the actual occupation of ryots. The old settlement khusrah papers make no mention of grazing commons. In the second case, when the pasture lands are in the occupation of ryot, on which other crops not growing in a year, fodder is grown for cattle, the pasture lands are not separate from the other portion of the ryot's holding, but forms part and parcel of the same.

In most of the years, no portion of the holding is used as pasture lands, and it will lead to much complication if any attempt be made to separate them. The provisions of section 80 would be perfectly unnecessary, if the intention is to provide for these classes of lands. There is scarcely any land in Behar which the ryot holds separately as pasture lands. Greatest hardship to landlords would be the consequence, if any right of occupancy was to be given to ryots with respect to such uncultivated lands, on which the ryot has been hitherto allowed to graze his cattle on sufferance. There is also another class of land on which the ryot grazes his cattle, and these are the dearah lands, wherever they exist on their first formation. In this case, grass or other fodder which has grown, or has been allowed to grow, belongs exclusively to landlords. Ryots are allowed either to graze their cattle, or cut and take them home for purposes of fodder at so much per bigah. The rate in these cases is always settled under contract, and in fact the grass or fodder is bought and sold just like other marketable commodities The provisions of section 80 ought surely not to apply to such cases as these. The provision of this section will only be unnecessary and vexatious.

Section 81.—The limitation of landlord's claim to not more than half the gross produce or its value, in cases where an occupancy ryot pays in kind, or pays as rent, the value of a certain share of the actual gross produce, will touch the existing rates of rent in *bhowli* tenures in Behar. In most cases the landlord's share is now 9 annas out of 16 annas of the produce There are many estates in the districts of Gya and Patna in which all the lands are held in *bhowli* tenures, and, as far as the settlement papers show, were so held at the date of the permanent settlement. The assessment of revenue in fact was made on the amount of gross rental estimated at this rate. The effect of the limitation proposed by section 81 would be to reduce the income of the zemindars in these cases by a full sixteenth. Where recent investment has been made on the basis of this share in the purchase of zemindaris, and more than the fullest value paid, greatest hardships will be the inevitable consequence.

Section 82.—With reference to this section, the Committee of the Behar Landholders' Association in their note on the report on the Behar Rent Commission said:—

The provisions for the commutation of *bhowli* into *nukdi* rental in cases of occupancy

holders at the option of either the zemindar or the ryot will be a death-blow to the *bhowli* tenure. In some year, it will be the interest of the zemindar to seek for such commutation; in other years, it will serve the ryot's interest better; but it is to be feared that the interest of both will suffer in the long run by such commutation. Payment of rent in kind may not chime in with civilized notions of things; but, nevertheless, a custom which has survived change of ages, and has been handed down from generation to generation, being acquiesced in both by landlords and tenants, must undoubtedly have its uses.*

Year before last was a year of prosperity for Behar and Bengal, but a bumper crop had brought on low prices, and the effect of this was that the ryots paying money rent were unable in many cases to meet the landlord's demand of rent, and the landlords had to borrow on account of the ryots' default to pay the Government dues. Not being able to pay their *nukdi* rents, the ryots of whole villages sought and obtained from considerate landlords the conversion of *nukdi* into *bhowli*. There were many estates in which this happened, and it was this conversion alone which in several instances saved the ryots. Yet the cry is against the *bhowli* system of Behar.

With reference to the *bhowli* tenures, the Committee in their last year's note said:—

The system of ryoti tenures in Behar is very simple and well suited to the peculiar circumstance of this province, where a large portion of the land is entirely dependent on rain for its fertility. In good seasons it yields heavy crops, in bad ones next to nothing; and bad and indifferent seasons are more common than good ones. The ryots having no capital, and being an improvident race, would be ruined by one or two bad seasons, if they had to pay fixed money rents. There is again the method of storing rain-water and its economical use by means of *ahars* (reservoirs), *alangs* (embankments), *pynes* (water channels), and *bunds*, which are peculiar to Behar. Some crops are raised entirely by means of artificial irrigation. It is essential therefore that the landlord who alone has the means and power to keep a proper supply of water for the village cultivation, should have a joint interest with the ryot in the improvement of the soil. The ryoti tenures, which are peculiar to this province, seem to have originated in this circumstance. It may be that the nature of these tenures makes the ryot a little too dependent on the good-will of the landlord, but the landlord also is dependent in a great measure on the honest exertion of the ryot for the security of his rents. The interest of both are bound up together by the circumstances of the case and the nature of the tenures, and there does not appear to be anything intrinsically wrong in the system. The peculiar advantages which recommend it to the people of this province have to be only set off against any fancied evils, and it will be readily seen that customs which have originated in the necessities of the people, and which have prevailed from generation to generation, should not be hastily condemned or done away with 'by a stroke of the pen.'

The Commissioner of Patna, writing to the Secretary to the Board of Revenue on the 21st August 1858, said:—

"It may very probably be thought by those who have had no experience in this part of the country that payment in kind or the mixed payments which form the peculiarity of the *bhowli* tenures should be discouraged as much as possible, and should not be sanctioned by the legislature; but this would be a very great error. A large portion of the land of this province is entirely dependent on rain for its fertility. In good seasons it yields heavy crops, in bad ones next to nothing; and bad and indifferent seasons are more common than good ones. The ryots having no capital, and being an improvident race, would be ruined by one or two bad seasons, if they had to pay fixed money rents. Under a *bhowli* or *batai* system on the contrary, where the rent is proportioned to the produce, they can always rub on, and if they have not much opportunity of making money, they are tolerably secure from ruin. These tenures are therefore very popular, and when the landlord is a just man, are perfectly satisfactory to all parties. Any attempt to abolish them would create great discontent."

CHAPTER VII.

Sections 83—86.—Chapter VII is doubtless an improvement on the corresponding chapter of the Rent Commission Bill. Yet its provisions are objectionable on the ground that they disregard the existing customs in Behar. The habitable portion of a Behar agricultural village consists of the houses of cultivating ryots and the houses of one or two artizans or shop-keepers. The village site forms no portion of the ryots' holdings, and the cultivating ryots pay no rent for their homestead lands. Their houses in many cases are the property of the landlords, by whom they have been built, though they are repaired at the ryots' expense and labour during the period of their occupation. Neither agriculturists who pay no ground rent,

* One argument against a Metayer tenancy, is that in this case the Metayer's interest for 'improvement' is only half as much as that of a peasant proprietor; but if the interest of the *bhowli* tenant could be thus measured, there is that of the *bhowli* landlord which should also be taken into account; and in the interest of cultivation of Behar, it is a serious matter for consideration whether the landlord's interest should or should not be diminished. Mr. Mill thus replies to the arguments for commutation:—"If this transformation were effected, and no other change made in the Metayer's condition—if preserving all the other rights which usage ensures to him, he merely got rid of the landlord's claim to half the produce paying in lieu of it a moderate fixed rent,—he would be so far in a better position than at present, as the whole instead of only half the fruits of any improvement he made would now belong to himself; but even so, the benefit would not be without alloy; for a Metayer, though not himself a capitalist, has a capitalist for his partner, and has the use, in Italy at least, of a considerable capital, as is proved by the excellence of the farm buildings; and it is not probable that the land-owners would any longer consent to peril their movable property on the hazards of agricultural enterprise, when assured of a fixed money income without it." The remark would apply *verbatim*, if we were to substitute Behar for Italy and the *excellence of the gilandazi system* for the excellence of *farm buildings*.

nor the non-agriculturists who pay only a nominal rent, are ejected out of their homesteads which they occupy from generation to generation. This is the custom in Behar—a custom which doubtless originated at a time when the present body of ryots were hired labourers working for the proprietory body. By changed circumstances of the times the hired labourers of the village have now acquired the status of ryots, and occupy a site in the village for a home by sufferance, but are never ejected out of the same. It would indeed be pretty hard to give them a transferable right in lands which they only hold through *sufferance.* The section also interferes with the right of contract.

CHAPTER VIII.

Sections 88—95.—The Committee have already shown that the effect of the provisions of this chapter will be to vest the right of occupancy in all the ryoti lands of a village in any person who may choose to hold it for agriculture or horticulture. A ryot once installed will be a ryot for all time to come. Holding ryoti land as a ryot has been defined. That definition does exclude a forcible inception of a tenancy against the landlord's will. Will a squatter, if he afterwards signifies his willingness to attorn to the landlord for rent, be a ryot under this chapter?

Section 89.—The limitation of five-sixteenths as the maximum of rent for the ordinary ryot as proposed by section 19 has been shown elsewhere to trench against the rights vested in the zemindar under permanent settlement. In Behar as well as in Bengal, as will be found on enquiry, the existing money rent in cases of long-standing tenancy is in many places more than a third. Now, when on the passing of the Bill, an ordinary ryot will be entitled to hold at this privileged rate of five-sixteenths, it may not be absurd to suppose that the old tenants will prefer relinquishing their holdings on the passing of the Bill, and taking as an ordinary ryot. A great disturbance of the economic condition of the village will thus be the consequence.

Section 91.—Why should the service of the notice be made at least six months before the expiry of the year? In lands producing only rubbi and bhadoi crops, the notice in this case, if the agricultural Fasli year be held to commence in Ashin, will have to be served before the agricultural prospects of the year are known. In Bengal, the year commencing in Bysakh, this would have to be done before either the khariff or rubbi has been reaped. Will not a notice of three months before the expiry of the year be sufficient? How is the service of notice to be made in this and other cases? Section 194 refers to summons in suits, and does not refer to notice.

Section 93.—" If in any suit instituted under Section 92, the defendant appears and agrees to pay the enhanced *rent demanded, his agreement shall be recorded, &c.,* and he shall be liable to pay from the commencement of the agricultural year next following the *date of the agreement.*" In this case the ryot who does not appear till after a suit has been instituted against him, will have the advantage over one who comes forward and agrees to an enhancement without suit under Section 92; for if the court cannot take up the case instituted only 10 weeks before the expiry of the year, or the summons cannot be served, and the agreement cannot thus be recorded before the end of the year, the ryot will have to pay the enhanced rent from the year next following the date of the agreement, whereas in the other case, the ryot will have to pay such enhanced rent a year earlier.

Section 93 (2) (a) and (b).—It should be taken into consideration that ten times the yearly increase of rent demanded *plus* such sum (if any) as may be declared by the decree to be payable to the ryot as compensation for improvement which is of no value to the landlord, and which in 99 cases out of 100 will not make any perceptible difference in the letting value of the land, will be more than the capitalized value of such increase.

Sections 93, 94, and 95.—The provisions of these sections will have the effect of vesting a right of occupancy in ordinary ryots in all ryoti lands in their holding. Perhaps it will be replied that these provisions are intended to have that effect.

Chapter IX, Section 96.—A ryot holding at fixed rate is a tenure-holder under clause (4), Section 3. Why should a deduction of thirty per cent. be made in his case. The deduction allowed under Section 21 in cases of enhancement of rent of tenure-holders is a profit not more than 30 per centum or less than 10 per centum of the balance which remains after deducting from the gross rents payable to him the expenses of collecting their rents. Why should an absolute deduction of 30 per centum be allowed in cases of alluvion. The principle on which the deduction is made in both the cases is the same, and the rule should be the same also.

Section 100.—When a separate statement of account shall have to be given to the ryots at the end of the year under Section 101, it is not very necessary that the receipt given with every item of payment of rent should contain all the particulars mentioned in Section 100. With a stupid village patwari, who can scarcely be induced to move out of his traditionary groove, and whom, under law, the landlord is unable to remove, the introduction of such details for every item of receipt will simply hamper collections, while it will make the landlord liable to heavy fines and penalties for the omission of his village servants.

Section 100 (4) and Section 102 (2).—Why should there be a double penalty for one and the same offence.

Section 103 (c).—This sub-section is substantially the same as it was originally drafted by the Rent Commission. In their Note on the Bill of the Rent Commission the Committee of the Behar Landholders' Association said :—" The Bill provides that a tenant who entertains a *boná fide* doubt as to who is entitled to the rent payable by him may deposit such rent in the collectorate. The provision appears at first sight to be equitable, but it will ultimately lead to

endless complications. It makes the ryots the arbiters of all disputes regarding proprietary possession. One of the members of the Behar Rent Commission justly observes: "It would be practically placing the landlords at the mercy of their ryots. Some party, whether rightly or wrongly, must always be in possession, and the ryots are bound to pay him rent. By such payment they are also exonerated for all time to come, and the rightful claimants can only recover mesne profits from the person in possession to whom the ryots have paid. A dispute as regards the zemindari title is thus never prejudicial to the ryots' interest; it is sometimes advantageous to them. Greater indulgence is not required to be shown to them by the necessities of the case. It is positively mischievous with respect to the zemindars, for under this proposal, even in case of secure possession, the ryots, specially those inimically inclined or gained over by the zemindars' enemies, may trump out a dispute and cease to pay rent under the protection of law, thus possibly bringing on a sale of the zemindar's property, and his ultimate ruin." The Committee see no reason to change their opinion on the point.

Section 117.—Under custom, the landlord appoints *agoras* (watchmen) in *agarbattia* tenures (which literally means *watch* and *divide*) to watch the crops and his own interest in his share of the crops. One part of the *agora's* duty is to see that the ryots do not clandestinely take away the crops or any portion thereof to their own house without dividing it with the landlord. Will the appointment of the *agora* be an interference under this section? In *agarbattia* tenure no appraisement is made; but the landlord receives his share by actual division after the crop is harvested and reaped. If the ryot removes the crops, or a portion thereof, to his own house without paying the landlord's share, the landlord loses, and unless it is intended that in all cases of *agarbattia*, the landlord is to seek the assistance of the Collector under Section 112, even though the ryot might not have shown any disinclination to divide before the actual harvesting and reaping, surely some power ought to be left in him to watch his own interests. and he ought to be allowed to do this without making himself liable, on the complaint of the ryot, to the offence of criminal trespass. The property in the *battia* crops is under present custom as much in the zemindars as in ryots, though of course, under the definition of rent as given in the Bill, the landlord's share of the *battia* crops will be rent payable in kind by the tenant.

The present custom is that the ryot reaps and gathers the produce in the *khalihan* (threshing floor) where the division is made. Up to this point the *agoras* watch the landlord's interest, and the ryot cannot take the crops to his home or anywhere else, excepting to this *khalihan* (threshing floor). The complaint of so-called abuse of the power of distraint in Behar will be found in the main founded on a misconception of this custom—a custom which allows the landlord the exercise of certain right in defence of what he, under custom and may be under a rough notion of things, knows to be his property. If the concensus of opinion of the ryots could be taken, it would be found that of the two *danabundi* and *agarbatti*, the ryot likes the *agarbatti* best; and if Section 117 be allowed to stand as it is without some provision allowing the landlord to watch his own interests, the *agarbatti* will soon be a thing of the past.

It should at least be provided that this section will not apply to the landlords watching his interests through the *agora* (watch), and that the harvesting refers to the gathering of the crops in the *khalihan*.

Section 118.—Who is to be responsible for the safe custody of these *danabundi* papers? It has to be noted that some years ago, *jummabundis* used to be periodically lodged in the Collector's office in the Behar district These were big bundles of papers, ordinarily kept in the custody of some petty collectorate clerk (mohurir). Some cases of tampering came to light, and the whole of the papers were very properly burnt.

The provision would doubtless be unobjectionable if, at the same time with its enactment, some administrative reforms be introduced in the Collector's office giving protection to the zemindars against the systematic annoyances to which they and their people are subjected by the official underlings, when they have anything to do with them.

Section 119.—This section has been already commented on along with Section 89. In many cases, just as in the case of the confiscated estates of Shahabad sold in 1862-63, after a reassessment and at full price, Government revenue alone represents something like six-sixteenths of the actual produce. The zemindar has over and above this to pay cesses, collection charges, and *gilandazi* expenses. Where is all this to come from?

Section 121.—The same remark applies as to Section 20. The Collector here will override private contracts, not as in the other sections, for the protection of an ignorant ryot, but for the protection of the Government revenue as affected by a contract which is undoubtedly advantageous to the ryot.

CHAPTER X.

At present, agricultural improvements in a village are all effected by the proprietor. He pays for the *gilandazi* (earthworks) of a village, he constructs *bunds*, excavates *pynes*, makes arrangements for the storage of water in *ahars* (reservoirs), buys water for the rice crop where it is necessary to do so, digs tanks and wells, and keeps the old ones in repair, pays for the construction and periodical repair of the field and village channels, and also for all arrangements for the proper drainage of the land. He has frequent dispute with the neighbouring proprietors with respect to some one or other of these matters, and the cost of the litigation is entirely his. The annual expenditure on these heads is not inconsiderable. The sections of this chapter do not take all these existing facts into consideration, and appear to be intended to provide for circumstances which have not yet arisen. Cursory enquiry will satisfy that the improvements noted above, which are of the highest importance to the agricultural prosperity

of a Behar village, are not and cannot be effected by ryots. In the first place, they have not the means wherewith to carry on these improvements; in the second place, they are more or less of a *general* nature, affecting the agricultural prospects of a whole village; and the execution of works of this kind cannot be entrusted to individual interest of ryots. In thus providing for agricultural improvements by ryots in future, the Legislature forgets that it will materially discourage works of improvement on the part of landlords who alone have hitherto carried them on, and who alone have the ability and the means to carry them on.

With reference to the corresponding section, being Section 29 of the Rent Commission Bill, the Committee noted "Section 29, not being exhaustive, leaves to the option of every munsiff to say, what is improvement in each individual case. The determination of what is improvement in each individual case, and the amount of compensation to be awarded, will lead to bitter and harassing litigations." The same remark applies in all its force to the provisions of this section.

Section 126 (2).—In what portion of a holding will the dwelling-house and out-offices be erected? If a ryot choose to think that the whole of his holding should be converted to that purpose, will not the provision, as it stands at present, justify him in dong so? How can the erection of a dwelling-house be said to be an agricultural improvement?

Section 126 (3).—We will suppose that, contrary to their present method of proceeding, the ryots of a village combine and make a water excavation, called a *pyne*, at a cost of 500 rupees. The expenses when distributed among 50 of them will be 10 rupees a head, yet the benefit reaped with respect to each holding is to the extent of the full outlay of rupees 500: the work shall be, with respect to each of them under this sub-section, an improvement; but it is an improvement which, while if it were carried out for the individual holding, would cost 500 rupees, but when carried out for the benefit of a number of holdings costs each rupees 10. Rupees 10 ought therefore to be the measure of such improvement, yet if the sub-section stands as it is, the measure of improvement would be 500 rupees.

Section 127 (1) (2).—Nothing could be more mischievous than to make the landlords dependent on the good-will of the ryots in the matter of improvement of their village. The lands of a whole village can be converted by the judicious construction of *gilandazi* (earthworks) from *rabijar* (*rabbi* producing lands) into *salijar* (paddy-producing lands). A village can be saved from the effect of periodical droughts by the opening of a water channel (pyne). These are works of general utility to the agricultural population of the whole village, and while ultimately relating to, and benefiting individual holdings benefit the whole village. At present the landlords carry on these works at their own expense in lands for which they get no rents, and which do not form a part of ryot's holding. The proposed law will make the permission of the ryot necessary for the landlord executing works of this kind, and the reason of the rule as stated elsewhere is that the ryot having a greater interest in the improvement of the land should have a preferential right to make such improvements. Undoubtedly the proposed Bill, when passed into law, will make the ryot's interests in his individual holding greater; but after all it will be nothing as compared with the interest of the landlord as the rent receiver of the entire village; yet even in respect of improvement, the interest of the rent receiver of an entire estate, possibly comprising a number of villages, is sought to be subordinated to the interest of an occupancy ryot, the holder, say, of a few bigahs of lands. Provisions of this kind will doubtless tend to diminish the prestige of the zemindars in the eyes of the people; but effects of that kind may not be desirable on the score of other interests than that of the zemindar alone.

Section 128.—Is there any reason to allow an ordinary ryot, possibly a mere squatter, to build a house on a part of his holding, nay in the whole, without the landlord's permission except it be to give him a hold on the lands which he had come to cultivate for a year or so? The provisions of this section, and generally of the other sections of this chapter will simply serve to irritate the feelings of the landlords without conferring any corresponding benefit on the ryot or anybody. In the case referred to in this section, it will generally happen that the holding will be situate in a part of the village where it is not possible to erect a dwelling-house. In Behar, the only habitable part of a village, as has been noted before, is the village Dhi which does not form a part of the holding of any ryot.

Section 129 (4).—Cases of improvements of this nature will be scarcely found; yet the Act will have an objectionally retrospective effect. But though improvements by ryots have been, as a matter of fact, *nil*, false claims for compensations will, we may rest assured, be not few.

Section 133.—In a country where even between two neighbouring zemindaries the boundary mark is a mere ridge of earth, and when the field demarcations are periodically destroyed after each flood, the limit of 10 years before a fresh measurement of the lands of an estate can be made, appears to be unnecessarily long.

Encroachments are brought to light by measurements of this kind, and after a lapse of years a good claim is barred as against a trespasser.

It is necessary again to measure, almost annually, the alluvial accretions to an estate, if there be any, and to determine in what quantity of the accreted lands alluvial deposits have been formed. If 10 years' limit of enhancement is not to be made applicable to cases of this nature, it will be necessary also to give a right of measurement to landlords in such cases oftener than once in every 10 years. The circumstances of the case would clearly demand this.

Section 141.—Is not this section inconsistent with the provisions of Section 56? Under this section if a landlord buys an occupancy holding, the occupancy holding shall be presumed to be merged in the interest of the landlord and extinguished during the period of 3 months

mentioned in sub-section (2) unless the landlord proves that he has not intended it to be merged, and after the expiration of that period, be deemed to be so merged and extinguished, unless within that period the person executes an instrument declaring his intention that a merger shall not take place, &c. Now, if nothing of the kind be done, the interest of the tenant shall be effectually merged and extinguished in that of the landlord, to wit, in the case supposed, the occupancy right shall cease to exist; yet Section 56 provides that any person thereafter, *i.e.* (after the merger and extinguishment have once effectually taken place), holding the land as a ryot shall have a right of occupancy in respect of it.

Section 142.—With reference to the similar provision of the Bill of the Rent Commission, Babu Peary Mohan Mukerjee, one of the Commissioners, wrote as follows:—

"The necessity for investing the district courts with the power of appointing a manager for the management of an estate or tenure held by two or more co-parceners, when even a single ryot, or the owner of an infinitesimal share, chooses to apply for such an appointment, has not been made out. The decision recently passed by a full bench of the High Court, recognizing the power of every co-parcener to have his share of the rent apportioned by a suit in court, will remove all sources of annoyances to the ryots of joint estates and tenures, and of disputes among the co-parceners themselves. The proposal for appointment of managers by court is therefore uncalled for. A similar proposition started at the time of Sir George Campbell was looked upon with disfavour by the executive and judicial officers who were consulted about it, and it was abandoned after a thorough discussion of its merits and demerits. It is certainly not desirable that the mediæval passion for superseding the independent conduct of every man's affair by officious legislation in matters relating to land should be revived."

The Committee of the Behar Landholders' Association in their note said:—

"It is to be feared that in districts where the Judges may like to exercise a little patronage by appointing managers, the management of estates will in most cases in such districts pass out of the hands of their lawful owners."

Sections 65, 66, and 67.—The effect of these provisions will be to reduce the real owners to the position of mere annuitants upon their estates. The managers cannot have that interest in the management and improvement of the estates which those personally interested can have; and as it is very essential to the agricultural prospects of this province, specially in estates where *bhowli* tenure abounds, and where it is necessary at seasons for landlords to advance money out of their pockets to the ryots for the successful prosecution of agricultural industry, that such personal interest should be taken, it is to be feared that agriculture would suffer. Nor is it very likely that the managers appointed by the district courts will prove better men than the zemindari village amlahs; the salary which could be given is not likely to tempt a first class set of men, and the men that would ordinarily be appointed as managers carrying with them the authority of the district courts, will, when venal, be not satisfied with the paltry douceurs now received by the patwaris from the ryots There will again be no check to their corruption and rapacity on the spot, as they will be placed above the control of the landlords, and will be only removeable by the orders of the district courts.

Are not the words (*a*) "inconvenience to the public," or (*b*) "injury to private right" very vague? If the section is to be retained at all, some attempt ought to be made to specify the circumstances which would come under these general and vague expressions.

CHAPTER XI.

There is no reference to existing rates of rent—not a single section in the chapter under which the revenue officer is enjoined to determine the rates paid, and to make this the basis of his settlement. There will be nothing to prevent revenue officers in exercise of the extraordinary powers given to them under this chapter, to reduce existing rates, and thus the rent-roll of a whole village. As such the provisions of this chapter are very dangerous to the interest of the zemindars. If the chapter is to be retained at all, it should be distinctly laid down that the Collector should in no case reduce the existing jummabandi of a village.

CHAPTER XII.

Perhaps the objections noted to the preceding chapter will apply in a greater degree to the provisions of Chapter XII. Whole estates will be in a ferment of litigation after one of these proceedings, and the result will be the impoverishment and possibly the utter ruin o both landlords and tenants.

CHAPTER XIII.

Section 166.—It is sought to make distraint somewhat of the nature of attachment before judgment, and as such the power of distraint will lose all its value. The power has been exercised by the zemindars from time immemorial. It is not, as some suppose, an offshoot of the English law, but rather an offshoot of the power which under the Hindu law, creditors exercised to compel their debtors to make payment of their dues. Even now, the power prevails in the native State of Nepal, thus clearly indicating that it is not one of foreign, but of native origin. The earlier regulations recognized this power, and it is the only one yet remaining in the hands of zemindars to compel payment of rent. The limiting it in the way proposed appears to the Committee to be open to the following objections:—

1st.—The power of distraint is only valuable because its action is prompt and swift, Recourse to a distant court for taking the initiative in distraint cases reduces the power to *nil.*

2nd.—Distraint thus becomes mere attachment before judgment, leaving to the ryot the power of taking away all his crops before the distraint order reaches the village.

3rd.—As a matter of fact, the power is very seldom exercised; but its existence in the present form serves as an incentive to the ryots to make payments of rents with due promptness.

Section 167 (2).—The procedure under Section 168 is a very short one; and why should applications for distraint in ordinary cases require the court-fee payable in a suit instituted for the recovery of the arrear therein claimed? The proceeding will assume the form of a regular suit only in cases of contest, and a court-fee may be required with some show of reason in a distraint proceeding when the case has assumed that complexion. It is respectfully submitted here in connection with this matter, that the incidence of equality is not a prominent feature of the court-fee law. The proprietor has to pay an *ad valorem* fee of 7½ per cent. on the valuation of an estate at ten times the Government revenue when he has to sue for possession. The tenure-holder or the occupancy tenant will have to pay this *ad valorem* fee on a year's rent when he brings a suit against the landlord for possession of his holding, and the landlord has to pay the same *ad valorem* fee when he sues for a year's rent.

Section 166 (1).—Will a petition under Section 166 be allowed by a part-owner of an estate, the extent of whose interest in respect of which the arrear is due has been registered under the provision of the Bengal Land Registration Act, 1876? If so, provision ought to be made for the protection of the interest of the other proprietors.

Section 186.—If the section be allowed to stand as it is, it will make the life of a zemindar one of constant peril. When the offence is one of simple omission or of passive acquiescence in certain proceedings of another, the imposition of a fine alone ought to be held sufficient. In the cognate case under Section 155 of the Indian Penal Code, fine is the only punishment provided.

Section 187.—The circumstances under which the local Government would be empowered to suspend the provisions of Sections 166 to 184 in any local area should be clearly laid down by the Legislature.

Section 191.—Sections 121 to 127 (both inclusive), 191 to 194 (both inclusive), of the Civil Procedure Code shorten procedure, and there is no reason why they shall not apply in rent suits, specially in suits to recover possession of the land either by the landlords or the tenant.

Section 198 (*b*).—As finality is to be given to decrees and orders (which doubtless will include decrees and orders in appeal) of Judges and Subordinate Judges as in suits in which the amount does not exceed Rs. 100, it is not very necessary or desirable that finality should also be given to the decrees or orders of Munsiffs in suits in which the amount claimed does not exceed Rs. 50.

Section 199.—It will be indeed very hard if, having instituted a suit for his rent, the landlord is driven to another suit by the nature of the ryot's defence. Yet Section 169, clause (3), read together with the provisions of Section 166, would point to this. In place of clause (3) the provisions should be as follows:—"When a deposit has been made under clause (2), a summons shall be served on the person who, the ryot alleges, is entitled to the rent, and if he appears and contests plaintiff's right to the receipt of the rent, the court shall proceed to try the suit as one between him and the plaintiff, and if he does not appear when summoned, the amount of deposit shall be made over to the plaintiff.

There shall be a further decree for costs as against the defendant."

Section 201.—"The agricultural year next following" and "agricultural year next but one following" are perhaps intended to mean "agricultural year" following the date of the institution of the suit, and not the agricultural year following the date of the decree. Under the old law notice of a month or so before the end of the agricultural year was sufficient to entitle the plaintiff to enhanced rent from the beginning of the year, if he instituted his suit for enhanced rent within four months from the commencement of the year. There is no reason why the rule should be otherwise now.

Section 201 (*clause 2*).—Why should discretion be again left to the court to fix the date from which any such decree shall take effect. Is not the time fixed by clause 1 long enough during which the landlord will be deprived of his just dues? It would to some extent be better if clause 1 was omitted, and the matter left entirely to the discretion of the court; but when such discretion is thus meant to be fettered and restricted on behalf of the ryot, its exercise should not be allowed to the prejudice of the landlord.

Section 202.—Is entirely new. What will be 'the reasonable time' under this section? When it is proposed to vest in courts the power of not allowing a forfeiture, but to decree compensation in lieu, why should a request within a reasonable time to the ryot, on the part of the landlord, to remedy the wrong, be again made a condition precedent to the entertainment of the suit. Our courts were apt to be technical in the matter of the notice in enhancement suits, and it is seriously to be apprehended that they would be very technical in the matter of 'request' and 'reasonable time' also. It is at best a matter to be looked into in awarding costs of the suit.

Section 202 (*3*).—It is proposed to vest, by this clause, in the court executing the decree the power to change the nature of the decree. When will the decree become final?

Sections 203 & 204.—Is there any reason, why, when the landlord has made out a proper case for ejectment, the tenant should be treated better than a trespasser or a wrong-doer? The wrong-doer is not entitled to take away the growing crops, but is liable to make good to the party entitled to possession for all mesne profits of the period during which he has kept the rightful owner out of possession.

CHAPTER XV

Does not seem to provide for a case, when the decree for rent has been obtained by a part-owner of an estate, collecting the rent separately for his share with the ryot's consent. There

is no provision in the Bill forbidding a suit of the kind, or a decree being obtained under it. In execution of a decree of this kind, will the part-proprietor be entitled to put up to sale the whole tenure, or holding, and, if so, what steps will be taken to protect the interest of the other co-sharers? Section 216 should provide for a case of the kind, and the sale proceeds should not be allowed to pass out of the hands of the court until the other co-sharers receive notice, and they have been paid out all their dues.

PART II.

(1) In this part of the note the Committee proposes to examine the changes made by the Bill with respect to the three main questions of fixity of tenure, fair rent, and freedom of sale, showing by the way how they are inconsistent with the rights of zemindars, as guaranteed to them by the permanent settlement.

(2) To begin with the question of fair rent. It is proposed to limit the enhancement of money rent to one-fifth of the estimated annual value of the produce of land in staple crops in cases of occupancy holdings; to five-sixteenths of such value in cases of ordinary ryot, *i.e.*, ryots not having rights of occupancy; and to one-half the produce in cases of *bhowli* tenures. Viewed in the interests of the ryots, these changes are calculated to do them good; but the objections against these limitations are, that they are so much taken away from the sum of zemindari rights to be given away to ryots.

(3) If one was to examine the point in the light of the earlier regulations, he would find that the zemindars are at least entitled to receive their rents on the pergunnah rates, and this pergunnah rate, if it had been settled from time to time on the principle on which alone the pergunnah rates were determined at the date of the permanent settlement, instead of being, as some suppose, lower than the rates prevalen now, would have been considerably higher.

(4) It is admitted on all hands that, previous to the permanent settlement, the produce of every bigah of land used to be divided in certain shares between the State, the zemindar, and the actual cultivator. The State and the zemindar were entitled to their share no sooner a bigah of land came under cultivation.

(5) One effect of the permanent settlement was to transfer absolutely and for ever, in consideration of a fixed money rent or revenue, the State share of the produce to the zemindars who from that time became entitled to the State share *plus* his own share of the produce of every bigah of land.

(6) The pergunnah rate referred to in the regulations cannot therefore be less than a rate that would adequately represent the State share of the produce, *plus* the zemindar's own before the date of the permanent settlement.

(7) It will be found from the 5th Report, page 16, that this State share of the produce at or about the date of the permanent settlement was three-fifths, the ryot getting only two-fifths.

There are other authorities to show that the State share alone was never, for some centuries preceding the permanent settlement, less than half. The authorities are given below for easy reference—

"In the extensive plains of India, a large proportion, estimated, in the Company's provinces, at one-third by Lord Cornwallis at one-half by others, and by some at two-thirds, of lands capable of cultivation lies waste, and probably was never otherwise. It became, therefore, of importance to native Governments, whose principal financial resource was the land revenue, to provide that, as the population and cultivation should increase, the State might derive its proportion of advantages resulting from this progressive augmentation. * * * This rule is traceable as a general principle through every part of the empire which has yet come under the British dominion, and undoubtedly had its origin in times anterior to the entry of the Mahomedans in India. By this rule the produce of the land, whether taken in kind or estimated in money, was understood to be shared in distinct proportions between the cultivators and Government. The shares varied when the land was recently cleared, and required extraordinary labour; but when it was fully settled and productive, the cultivator had about two-fifths and Government the remainder." (5th Report, page 16.)

"The assessment of Akbar is estimated by Abul Fazal at one-third, and by other authorities at one-fourth of the gross produce; but it was undoubtedly higher than either of these rates, for, had it not been so, enough would have remained to the ryot after defraying all expenses to render the land private property; and as this did not take place, we may be certain that the nominal one-third or one-fourth was nearly one-half. This seems to have been the opinion of Aurungzebe, for he directs that no more than one-half of the crop shall be taken from the ryot; when the crop has suffered injury, such remission shall be made as may have been one-half of what the crop might have been: and that when one ryot dies, and another occupies his land, the rent should be reduced, if more than one-half of the produce, and raised, if less than a third. It is evident, therefore, that Aurungzebe thought that one-half was in general enough for the ryot, and that he ought in no case to have two-thirds." (Minute of Sir Thomas Munro, dated 15th August 1807, quoted in the Zemindari Settlement, Vol. I, page 99.)

"Sir George Campbell says the State, before British rule, took from one-fourth to one-half of the gross produce—one-third and one-fifth being the most common proportions. The 5th Report puts the State proportion at three-fifths in fully settled land, leaving the cultivator two-fifths. * * * Mr. Shore gives two different opinions. His earlier opinion is that Government took one-third; but his later opinion puts the Government share at from one-half to three-fifths. Mr. Elphinstone says that one-third is a moderate assessment, and that the full share is one-half." (Tagore Law Lectures for 1874-75, pages 185-86). Sir Thomas Munro, in the minute quoted above, speaking of ceded districts and of the Deccan, says:— "The mode of assessment in the ceded districts and in the Deccan still limits the share of the ryots to those proportions (two-thirds), but makes it commonly much nearer to one-half than

(8) In *bhowli* tenure, the rate even at the present day is never less than half, but it sometimes is 9 annas out of 16 annas of the produce. At the time of the permanent settlement, it appears that, in the district of Sarun at least, the share was 1 maund 22½ seers out of an estimated produce of two maunds (*vide* Statistical Reporter, vol. XI, page 301.)

(9) To limit the zemindar's rent to anything less than the State share of the produce, *plus* the share which the zemindar claimed as his own before the permanent settlement, whether these shares be three-fifths or any other proportion of the produce, would be not only arbitrary but unjust, and, it is respectfully submitted, an infringement of the permanent settlement.

(10) It will be perhaps said that these limitations proposed do not touch existing rates, and leave the zemindars in the enjoyment of his present profits. It is clear, however, that the existing rates are not respected in all cases. When the maximum of rent paid in kind is fixed at one-half (*vide* Section 81), it proposes to reduce the zemindar's existing rate in *bhowli* tenures from nine-sixteenths to one-half. Nine annas out of 16 annas in both *danabundi* and *agarbattia* tenures is a very common rate in the districts of Behar, and the proposed law, by reducing such rates, will at once bring down the amount of zemindari profit in such cases. There are vast estates, both in the districts of Gya and Patna, where these kinds of tenures prevail, and the enforcement of the law will at once bring down the profits by a full sixteenth.

(11) Nor is it sufficient to say that these limitations do not touch existing rates, or bring down existing profits, but that they will only apply in future to cases when the rates are exorbitantly high. It is clear from what has been submitted before that no rates can be legally said to be exorbitant, so long as it is lower than the State share of the produce, *plus* the zemindar's share. The rights guaranteed to the zemindars by the permanent settlement were not to last for a century, but for all time to come, and it is a clear interference with such rights to limit them to their present income for all time to come, when, if the limits were not thus imposed, they would be entitled to more.

(12) The reservation of power to enact laws for the protection and welfare of ryots cannot, it is respectfully submitted, cover a case where the object is to curtail a part of the zemindars' rights to be given away to ryots. If a measure like this is required for the welfare of the ryots, it should not be carried out at the expense of the zemindars alone. They should at least get proper compensation for what is thus taken away from them. The selling value of zemindari lands, in Behar, is 25 to 33 years' purchase, *i.e.*, investment in lands is dearer than in Government securities. Such investments are then only made in hopes of prospective increase. It need not be said that the limits proposed will be at once ruinous to the individuals who have thus invested; and their number cannot be small.

(13) It will again be perhaps urged that, though theoretically the zemindars were entitled to the State share, *plus* their own share, the total which could not be less than *three-fifths* of the produce of every bigah of land, they have always practically contented themselves with a smaller share. This, which in the face of a growing demand for land, should be taken as an indication of the good-will of the zemindars to their ryots, ought not surely to be pressed as an argument against them. The fact shows further that it were better to leave things to themselves than to try to regulate them by law.

(14) One other objection will perhaps be raised. It will be said that at the date of the permanent settlement, the State share had been commuted to money. But the question is—how was this commutation made? Was it not on a consideration of the actual produce of the land? and is it not a fact that in several Behar zemindaris, at the date of the permanent settlement, rent used to be collected in kind? and it was with reference to the gross produce thus collected that the assessment was made.

(15) Next as to the question of fixity of tenure. Lands are classed under the Bill as ryoti and *khamar*, and occupancy rights are proposed to be given to all settled ryots with respect to all ryoti lands under their cultivation. A settled ryot is defined to be a ryot who has held ryoti lands in a village or estate for 12 years. The ryot will get occupancy rights with respect to khamar lands also, if he holds them for 12 years. (*Vide* Sections 45, 17, and 49 of the Bengal Tenancy Bill.) The ryot will not contract himself out of occupancy rights, nor will any such contract be binding.

These sections will doubtless benefit ryots, as it would doubtless benefit them if the Government were to pay them 500 rupees a-piece out of the Government treasury. As between the zemindar and the ryots, the law is entirely one-sided and in favour of the ryots.

(16) It is needless to recapitulate the arguments showing how this trenches upon the rights of zemindars as guaranteed to them by the permanent settlement. It confers occupancy rights upon all the existing ryots—*piekast* and *khodkast* alike. Whereas the restrictions, *as regards ryots*, with respect to the landlord's power of letting out lands to whomsoever he pleased, as vested in him by Section 52 of Regulation VIII of 1793, referred only to *khodkast* ryots (Section 60), and to certain existing leases, till the expiry of the term of these leases.

(17) It is plain, however, from the express wording of Section 60, which protects the right of *khodkast* ryot, that its provisions were not made applicable to Behar.

(18) The proposed Bill, however, following the precedent set before by Act X of 1859, does not observe any such distinction between *khodkast* and *piekast* (Dains and Pahis of Behar), though of course the enactment of Act X of 1859 has been found fault with on the ground that it did a great wrong to the general body of *khodkast* ryots.

(19) The introduction in an extensive scale of a great body of *piekast* ryots, who will naturally be under the influence of men in whose estates they live, and these men, sometimes the landlord's enemies, will be a source of immense deal of trouble to the landlord in whose estates these *piekast* ryots will come to have a transferable right of occupancy by the operation of the law.

(20) The landlord has nothing to gain by ejecting a good ryot, from whom he punctually gets his rents, yet he can for good reasons complain of an unwarrantable extension of occupancy rights, as it proposed to be done by the Bill.

(21) It is thought that occupancy rights, even as they were under Act X of 1859, were valuable properties, and any law which would at once vest in the mass of ryots the occupancy right proposed to be made much more valuable under the Bill, will be depriving the landlords of the letting value of such occupancy rights.

(22) No statistics are available to show to what extent occupancy rights have accrued to ryots; reliance was made in the course of debate on some guesses. Bnt whatever may be the probative force of such guesses, it cannot be denied that a great body of ryots, from whatever circumstances this may be owing, are yet tenants-at-will, while others are so, if not with respect to all, but a part of their present holdings; and the effect of the change will be to vest at once to these ryots a right of occupancy.

(23) Some vague and indefinite customs are referred to in justification of this extension of occupancy rights, but what this custom is, nobody has yet cared to define, and if it points to anything, it points to residence in a village, to membership in a village community, as conditions for the acquisition of certain privileges.

(24) Both these points are lost sight of in the present attempt to extend occupancy rights, and it may be doubted whether in this unwarrantable extension of occupancy rights, the Legislature in 1883 is not perpetrating in a stronger degree the injustice and wrong alleged to have been done to the *khodkast* ryots in 1859.

(25) It is not true that the extension of the right of occupancy deprives the landlord merely of his power of eviction, but, as we have seen, deprives him of the letting value of such occupancy rights. Even a power of eviction, though not of much use in itself, has a value in another way. Acting as a *terrorem*, it induces the most unpunctual of ryots to make punctual payments of their rents.

(26) If fixity of tenure, as proposed by the Bill, is calculated to tell against the interest of the zemindars, it is this fixity of tenure, coupled with its incidence of freedom of sale, that it is to be feared, will tell strongly against the interest of the landlords and tenants alike, more specially of the unthrifty tenants of Behar.

(27) It is the fashion to ridicule prophecies of this kind. The unthriftiness of some classes of Behar ryots is, however, a fact; the extravagant scale of their marriage expenses is also a fact; and with a valuable right in their right of occupancy, mahajuns will be found in their neighbourhood too ready to supply them the money wherewith to make an extra show. It is easy to divine that the ryots sold out of their holdings and homes will be the result of the care now bestowed on them.

(28) Under the Bill, the zemindars, with regard to new tenancies, will only be a threeanna proprietor of the land, the ryots thirteen-anna proprietor of the same, and with an ignorant class of men, to whom knowledge of laws and benefits conferred on them by these laws permeate only, if it permeates at all, years after the laws have been in force, speculators will not be wanting who will think it a nice investment to go about villages to induce them to sell their rights, and thus instal themselves in a thirteen-anna pucka zemindari, the creation of the law of 1883 as distinct from the zemindaris of 1793.

(29) In these newly-created zemindaries, for the present at least, all sorts of protection will be denied to under-ryots; no rights of occupancy will accrue to them, the veritable cultivators, and no restrictions will be imposed on the freedom of contract of those who will be their landlords.

(30) If thicadari system is an evil in Behar, this occupancy right ryot zemindari system will be worse.

(31) It will be perhaps replied that if it comes to this pass, the Legislature will again interfere to prevent the growth of the evil. This is true, but does it behove an enlightened and well-meaning Legislature to take all this risk for some possible good to the ryots? An experiment at least might very well be tried, and fixity of tenure coupled with freedom of sale granted to ryots of khas mehal estates, and the working watched for a few years before it is thought expedient to extend such rights *en masse* to the present body of Bengal ryots.

(32) Perhaps it will be said that transferability of occupancy rights is growing day by day more general. The statistics are not available to the public. Such of them as were published in the Rent Commission report do not all appear to relate to occupancy rights, and stray cases here and there do not prove or establish a general custom. If such a custom has grown up, we may rest assured that it will take care of itself; the Indians are very tenacious of their customs.

(33) As to the right of pre-emption given to the zemindars, it is to be observed that they will have to pay for the fancy of choosing their ryots. Sometimes this choosing is of absolute necessity to ward off an evil, but it will be an evil to which the zemindars will be made subject under the Bill proposed, and it is somewhat in the nature of a double injury to bring on him an evil, and then to tell him to ward it off by paying for the purchase of a right which is of no possible advantage to himself, excepting it be that, contrary to their present habit and mode of management, the zemindars in time to come think of introducing the English system of farming in such bought-up occupancy rights of ryots which comes to him under the pre-emption clauses. Whether this again will be for the good of ryots is a point that has yet to be seen.

As the Bill stands at present, no sooner after his purchase, the zemindar inducts a ryot in such bought-up tenure, such ryot will have a right of occupancy accruing to him in the land.

Statement of the confiscated estates of late Koer Singh in Zillah Shahabad.

APPENDIX.

Proceedings of an extraordinary meeting of the Behar Landholders' Association to consider the Bengal Tenancy Bill.

An influential meeting of the landholders of Behar was held at the Sujjubaug House of His Highness the Maharajah of Durbhangah at 6 P. M. on the 28th May 1882. There were present :—H. H. the Maharajah of Durbhangah, H. H. the Maharajah of Doomraon, H. H. the Maharajah of Hutwa, Syed Lutf Ali Khan, C. I. E., the Agent of Her Highness the Maharani of Tikari, the agent of Babu Run Bahadur Sinha of Tikari, Syed Fuzlul Rahaman, Kazi Reza Hossein, Syed Fuzul Imam, Rai Jai Prokash Lal Bahadur, the Hon'ble Hurbanas Sahai, the agent of Rai Mahabir Prashad of Dildargunge, Chupra, the agent of Babu Deo Kumar Sinha, the Dewan of Surajpura Wahid Ali Khan of Durbhangah, Syed Bahadur Ali Khan, Barh, Babu Saligram Sinha, Shahabad, Moulvi Mahomed Hossein, Patna, Shah Mehdi Hossein, Barh, Babus Harpat Narain, Patna, Jagdev Sinha, Patna, Sunow Lal, Patna, Syed Willayet Hossein *alias* Medhi Newab, Babu Bhuboneshwar Dutta, Maharaj Kuor Narendra Protap Sahi of Hutwa, Babu Sheo Protap Narain Lal, Chupra, Usuf Hossein Khan, Patna, Moulvi Mahomed Ishak, Durbhangah, Babu Govind Narain, Bhagulpore, Moulvi Mazhar Imam, Gya, Munshi Janki Sahai, Patna, Babus Mohesh Narain, Bhagulpore, Badri Narain, Bhagulpore, Hardayal Sinha, Buxar Sub-Division, Babu Ram Sarun Sinha, Patna, Shaikh Rasol Ullah, Mooktear, Zillah Sarun, Babus Deo Kumar Sinha, Sarun, Bishun Sinha, Shahabad, Shaikh Jean (for himself) and for Wali-ul Hossein, Patna and Gya, Moulvi Amir Haidar, Patna, Babus Sooraz Koomar, Patna, Kali Charan Sinha, Patna, Gajadhar Pershad, Patna, Moulvi Athar Hossein, Patna and Gya, Moulvi Zeauldin, Patna and Monghyr, Shaikh, Alahi Baksh, Patna and Gya, Moulvi Hamid Ashref, Patna, Gya and Shahabad, Moulvi Mahomed Taki Khan, Patna, Monghyr, Mozufferpore, and Bhagulpore, Babus Kuldip Shahai, Patna, Sree Kishen Lal, Patna, Nawab Sarfray Hossein, Patna, Peari Saheb, Patna, Hakim Mahomed Amir, Patna, Moulvi Abdul Kadir, Patna, Shaik Faridnddin Ahmed, Patna, Har Shankar Lal, Patna, Syed Geas Uddin Ahmed, Patna and Gya, Moulvi Ahson Saheb, Patna, Giridhar Chaubai, Patna, Rai Iswari Persad, Patna, Babus Jai Narain Bajpai, Patna, Narain Pershad, Patna, Makundi Lal, Patna, Sheve Narain, Patna, Shah Ahmed Nazir, Patna, Shaik Fazal Hossein, Patna, Babus Gouri Shankar, Sarun, Jengal Pershad, Sarun, Shaikh Mazhar Hossein, Patna, Shaikh Hameed, Patna ; Syed Zahoor Hossein, Patna, Gya and Tirhut, Syed Badrul Hassan, Patna, Syed Zafar Imam, Patna, Babus Darshun Sinha, Patna and Monghyr, Inderdew Narain, Patna and Monghyr, Babus Gopal Sinha, Patna, Bhawani Persad, Patna, Mahomed Ismael, Patna, Shaikh Turab Ali, Patna, Shaik Ameer Ali, Patna, Shaikh Janat Hossein, Patna, Shaikh Wahidulhak, Patna, Rai Doorga Pershad, Gya and Monghyr (for Rai Sultan Bahadur), Syed Abdul Hossein, Sarun, Syed Nehad Hossein, Patna, Syed Saif Uddin, Patna, Moulvi Abdul Guni, Patna, Shaikh Mahomed Rahim, Patna, Babus Jevan Chundra Mookerji, Poorno Chunder, Pleader, Patna, Moulvi Sham Shul Hoda of Patna, Badsha Nawab, Patna, &c., &c., &c.

His Highness the Maharajah of Durbhangah, in opening the proceedings, said :—

Maharajahs and Gentlemen,—You have been called here to-day for, as you all know, the purpose of considering the Bengal Tenancy Bill, and of expressing the views you hold on its provisions. In opening the proceedings to-day, I do not propose to make a speech, but to hear your views on the subject—views which I shall deem it my pleasing duty to convey to His Excellency the Viceroy in Council. You may rest assured that if you can shew that any provisions of the Bill trenches against the rights guaranteed to you by the permanent settlement, those rights will not be taken away from you. What these rights are it is not for me to say. The question has been dealt with by far abler men than myself, by, in short, the highest legal functionaries in the country—amongst them his Lordship the Chief Justice and the learned Advocate-General. You are probably aware what the views of the Chief Justice are. He thinks that if the Tenancy Bill passes into law, it will, without doubt, trench on our rights; and the learned Advocate-General, who has not published his opinion, holds, as I learnt from a conversation I had with him, as also from other sources, precisely the same views. These, gentlemen, are the independent views of the two highest legal functionaries of the country. Of course, there are people who try to make out that the provisions of the Tenancy Bill do not trench on the vested rights of zemindars; but, after reading and hearing the views of the gentlemen I have named, I must confess that I believe that the provisions of the Bill *do trench* on our vested rights. I will admit that on such an intricate subject as this, I am not competent to pass a judgment as I am not a lawyer myself, but the Government have the views of two of their very highest legal officers on the subject, and I think every one will admit that they, at least, are competent to pass an opinion. I may state that on this subject Lord Cornwallis held that the property in this soil was vested in the zemindars who were entitled to enjoy the fruits of their own management: and again it was stated in the Regulations of 1793 that the Government revenue being fixed, the zemindar was to enjoy for ever the difference between the value of the State share of the produce of every bigah of land now in cultivation or hereafter to come into cultivation, and this fixed money revenue. Furthermore, it was laid down that the zemindar was to let out the land of his estate with certain restrictions to whomever he pleased and in whatever manner he pleased. These, then, were, and are, your rights; and it is for you to say whether or not the value of your property will be deteriorated by the passing of the new Act. Older men than myself, with far greater experience than any to which I can lay claim, will be

able to give a weightier expression of opinion on the subject than I can. I can only say that if freedom of contract is done away with, the value of landed property must decline. You know that a special section of the proposed Bill debars the ryot from contracting against his rights of occupancy. Such contracts as you know are seldom made. But there are occasions when it is necessary that such contracts should be made. A piece of land may be situate at or about the dwelling-house of a zemindar, and though he may not have occasion for its immediate use, he may require it hereafter. He lets it out—but lets it out on condition that no right of occupancy shall accrue therein. It is chiefly in such cases where contracts are made, and is the zemindar to be prevented for ever from using his land? Then the ryot may wish to enter into a special contract, and is he not to be in a position to do so? What I mean to say is, that a ryot understands his own interests a great deal better than anybody else, and it is useless for the legislature to think that it can protect his interests better than the ryot can himself. My own opinion is that the Government, in proposing to legislate after this fashion, seems to think that the ryot is a child, and the zemindar a monster. Then again, the primary object with which a change in the law of landlord and tenant was contemplated was to give to the zemindars further facilities for the collection and enhancement of rents: in fact Sir Richard Temple first drafted a Bill on these lines; and if such a Bill had been passed it would have been much better indeed, though I may state that we, Beharis, never asked for such a Bill. The provisions of the present Bill, however, seem rather to go to the other way. The most speedy and best way of realising rent is in the power of distraint, and this power is now to be taken away from us. Some authorities contend that the power of distraint is an off-shoot of the English law, and it should therefore be abolished. Well, I admit that the members of the Rent Commission have given more time to this subject than any of us have; but there is one little fact which they have not explained, and which completely upsets their theory. You are probably well aware that some of the southern districts of Nepal are adjacent to the districts of Northern Behar; and if any one really wishes to find out what was the custom of the country previous to the Permanent Settlement he ought to go to Nepal, where he would discover a system of distraint which has been in force for hundreds of years—in fact from time immemorial. This little fact clearly proves to my mind that the theory of the Rent Commission—that the power of distraint is an off-shoot of the English law—is not the true theory. But they also seem to think that the power of distraint has only been introduced since the time of the permanent settlement, and therefore that there are sufficient grounds for abolishing it. In fact they proposed to abolish it altogether, and in this view the Government have effected a compromise, but I am confident that the proposed mode of distraint which is now only had recourse to as a speedy mode of realising rent, by making an initiative proceeding in a distant court necessary, will only frustrate the object in view. Then, again, the Commission and the Government are very desirous to put down oppression which, they say, is practised by the zemindars, and to restore the old custom of the country. But one of the greatest oppressions committed—and this, mind you, is a legal oppression—is the heavy taxes which we have to pay for justice. They have proposed to do away with the power of distraint and to appoint managers in ijmali estates, but no provisions have, I see, been made to do away with court-fee stamps, or to reduce their value (hear, hear and cheers). When they desire to do away with distraint they speak of the old customs of the country, but they are silent as to the customs of the country on the subject of court-fee stamps. As far as Oriental natives are concerned, the imposition of a tax on justice is viewed with feelings of repugnance, for they think that it is the duty of the Government to mete out justice. But as people get civilised their ideas change, and it may therefore be that there is not such a repugnance to a tax on justice among a more educated community. However, the fact remains that the tax on justice is a heavy one, and if that, at least, was done away with or reduced, the Government might be credited with the intention of giving us some cheap mode of realising our dues, and at the same time, reverting to our ancient Hindoo mode of doing the duty of a king As it stands, however, while the process for realisation of rent has been lengthened, nothing whatever has been done towards lessening the expenses. It is therefore that I say that the Government has in this matter of the rent law gone decidedly against the intention of Sir Richard Temple, whose object was to give facilities for the collection of rent. While, therefore, the power of distraint has been removed, nothing has been done to diminish the costs. As far as the enhancement of rent is concerned, I think the provisions of the Tenancy Bill are most monstrous. The Bill proposes fixing a table of rates for each pergunnah. Pergunnah rates, as you know, vary in each village. I have known many pergunnahs where the rates are Rs. 5 per bigha in one village; while the rates for similar lands in another village are only eight annas per bigha. Therefore I think that instead of fixing a table of rates for each pergunnah, the Bill ought to fix a certain proportion of the gross produce as the zemindar's rent. But the Government proposes to fix the maximum at one-fifth of the gross produce; whereas, as a matter of fact, in some parts of the country the prevalent customary share of the zemindar in *bhaoli* tenure is not less than half at the present date, and the State share of the produce, which was transferred to the zemindars in 1793, was never less than half. It is in fact proposed to introduce land courts similar to Irish land courts only in a different name. These are the only two points, gentlemen, on which I intend to say anything just now. I would like to have spoken more, but then I alone would be monopolising all your time and attention. The primary object, you will please to remember, was to give to the zemindars further facilities for the

realisation and enhancement of rent, and I hope I have shown to you, to the best of my abilities, that the proposed Bill will actually give us no such facilities; but, on the contrary, if it unhappily passes into law, it will have the effect of narrowing our powers to a great extent in securing even our undisputed dues. The other sections of the Bill refer to tenants in particular. I would like to have discussed the subject more fully, but as I am confident that it will be treated by other members who are older than myself and who possess a great deal more experience than myself in by far an abler manner, I shall not trouble you any longer with what I have to say. (Loud cheers.)

In moving the first resolution His Highness the Maharajah of Hutwa said :—" Gentlemen, you have been called here to-day to consider the Bengal Tenancy Bill. As you are aware, under that title a Bill to consolidate and amend the present law of landlord and tenant was presented to the Council of the Government of India by the Law Member on the 5th March, and, discussion having taken place on it on a subsequent sitting of the Council, the Bill has been referred to a Select Committee, which will meet after the Council meets again in Calcutta in November next. In the meantime the public have been invited to place before Government an expression of their opinion on the Bill, and the Bengal Government circular asks us to give our opinion by the 15th June at the latest. The Government translation of the Bill is only just out, but the Behar Landholders' Association have thought it their duty under the circumstances to publish ere long a vernacular synopsis embodying the most important changes proposed to be made by the Bill. That synopsis is now in your hands. You will be able to judge therefrom what momentous changes are going to be effected in your right by the proposed Bill. Gentlemen, it is said that all these changes are absolutely necessary, because here in Behar we are rack-renters and oppressors of our ryots. Now that is a charge which you have to answer. The charge implies one of these three things: *1st*, that the law does not afford sufficient protection to the ryots; *2nd*, that the administrative machinery is weak and powerless to enforce the laws; *3rd*, that the people, the subject of oppression, are ignorant of their rights or powerless to assert them. Now the first two of these suppositions cannot be correct, because the same law which admittedly makes the ryots of Bengal the masters of their landlords, prevails in this province, and the administrative machinery which affords them protection and redress against wrongs in Bengal is ready to afford them protection and redress in Behar as well. There remains the last of these suppositions, and the question is whether it is a fact that our ryots are ignorant of their rights and powerless to assert them. Now, gentlemen, agriculture in this province is not, as you are aware, confined, as in Bengal, amongst the lower orders of Mahomedans and Hindoos. We have here amongst our ryots the veritable cultivators of the soil, Brahmins, Rajputs, Babhons, Kyasts, Coiris, Kurmis, Gowalas, in fact all castes of Hindoos represented; and we have also a class of Mahomedan ryots, not so low and despised as the Mussalman ryots of Bengal. Now, are these people ignorant and powerless to defend themselves? They are certainly not more ignorant than the landlords to whom they pay rent. Gentlemen, we have heard ever and anon stories of the depressed condition of the Behar peasantry. There is no question that sometimes the pressure of population, the excessive sub-division of lands, proprietory and ryoti, which is the consequence of our law of inheritance—nay their extravagance in foolish displays on occasions of marriages and so forth, the luxury of litigation which they have come to indulge in with all the administrative conveniences at their very door, are telling hardly against our people in general; but I doubt whether it is a fact that our agricultural people are worse off than the same class of people in lower Bengal. Whether money rent is higher or lower here than in Bengal is a question to which I do not enter at present, but granting that the money rent is higher, is it not a fact that while our peasants here make two and sometimes three harvests out of their holdings, in Bengal they get only one? Have we not in our midst numerous instances in which from the position of a mere cultivator, our Koiris, our Kurmis, our Gowalas have risen to be thikadars and ultimately the zemindars of their mouzahs? How many instances of this kind can Bengal show? Before they vilify us, let our vilifiers at least make enquiries into these points. Let them satisfy also us to whether it was not a fact that here in Behar, at the date of the permanent settlement, the rate at which assessment was made was or was not something like three-fourths of the produce in kind of every bigha of land, and whether these rates have not been reduced by the zemindars themselves in the interest of their ryots. Let them satisfy also whether it is or it is not a fact that the rate which the zemindars now receive from the ryots is much lower than the rate which they are entitled to demand as the pergunnah rate. Now if other facts were wanting, would not these facts at once show that the Behar zemindars are not the tyrants, the harpies, and the rack-renters they are represented to be? Does this not show that in the face of a growing population and an increasing demand for land, the Behar zemindars have not been wanting in their good will towards the ryots? Gentlemen, it was only year before last that Sir Ashley Eden, in replying to a deputation of the Behar Landholders' Association, said: " I can assure you that nothing has given me greater pleasure than to notice, as I have had ample opportunities of doing, the extraordinary improvement in the condition of the people. It is made manifest in a hundred ways daily, even to the most casual observer. I hear the same story from all classes, official and non-official, and it is a matter for general congratulation.

" This improvement is due to various causes—first and foremost, to several succeeding harvests, plentiful almost beyond the recollection of the present generation, and these full harvests followed years of trial and famine. Next there has been, with growing prosperity,

and an increase in the value of land, a *general awaking* of the cultivating classes, and an improved knowledge of their legal rights and privileges, and this has, I hope, been accompanied by a stricter administration of the law. Then there has been a greater readiness on the part of landlords to recognize and affirm the rights of cultivators, and I hope that this may to some extent be due to the influence of your association." Does this testimony, coming from such a high quarter, show that our ryots are yet ignorant, and that our zemindars are unwilling to recognize their rights? If this is not so, and even if this were so, where would be the justification of the violent changes about to be introduced—changes which would sweep away half our rights! Gentlemen, you have heard of the fable of Jupiter and the little frogs. The little frogs expressed themselves dissatisfied with their king-log, and asked Jupiter to send them one better, and Jupiter sent them the king-stork. Our fate is much the same. If not we, our brethren of Bengal, complained that Act of 1859 did not afford them sufficient facilities for realizing their rents, and they have gone on complaining till we and they have been all alarmed by the Bengal Tenancy Bill. The development of the Bill in its present form illustrates the fable in a very marked manner. The Behar Rent Commission assembled at Sonepore in 1879, but before they could submit their report, a short Bill was introduced in the Bengal Council by Mr. Mackenzie. This dwarf Bill had only two objects: to make occupancy rights transferable, and to make a short procedure for the realization of rents. It also, by the way, defined occupancy rights so as to make it to some extent more restricted than it was under Act X of 1859. This was was thought a sufficient *penacea* for the ryots' bills. Well, we protested, as we thought it our duty to protest, both in the interest of the landholders and tenants. The Bill was referred to a Select Committee, and on the recommendation of this Select Committee, instead of taking up the rent law piecemeal, it was resolved to face the whole question once for all. This was the origin of the Rent Commission. In the meantime, the recommendations of the Behar Rent Commission were submitted to Government, and the Rent Commission having been appointed, the whole question of rent law together with the recommendations of the Behar Rent Commission, was referred to that body. The Rent Commission drafted a Bill, the provisions again trenched on our rights, and it trenched against some of the rights of the ryots also, the Rent Commission, according to their report, having offered them by way of compensation to the zemindars. Now we memorialized again against these provisions. Without adopting the Bill of the Rent Commission in its entirety, the Bengal Government commissioned Mr. Reynolds to draft a Bill, and ultimately it sent up a Bill of its own to Government of India, and this Bill, notwithstanding a pledge given by the Government of Bengal in a letter to the British Indian Association that it was to be published for the information of those *interested*, was never published. The Government of India, having consulted Her Majesty's Government, have determined on the main features and general principles of the Bill, and the result is the Tenancy Bill before you. Now, gentlemen, if you would simply compare the provisions of these various Bills, as regards the three main questions of fair rent, fixity of tenure, and freedom of sale, you will find a perfect illustration of the fable I have quoted above; you will find how the dwarf has developed itself into the monster which threatens your existence. Mr. Mackenzie's first Bill did not tough on the question of fair rent at all, nor was it alleged at the time that in the interests of the ryots that question was at all necessary to be touched; it did certainly restrict occupancy rights to a greater extent than before, and it prescribed a summary procedure for realization of rent which, if not exactly summary, would have compensated the unscrupulous amongst the zemindars for many a loss of his rights. In return it granted a free transferability to occupancy rights. This was its salient point. The Behar Rent Commission report, which had been put forward as an excuse for some of these violent changes, did not recommend any change at all with respect to the three main questions alluded to above. The Rent Commission certainly recommended many changes, but as regards occupancy rights, the Bill left the law as it is; only its numerous explanations and illustrations would have made the right more difficult of acquisition. It restricted ryoti rights to actual cultivation. It fettered transferability by providing against mortgages, and it limited fair rent to a fourth of the estimated average annual produce of land in staple-crops. Only it attempted to create a new class of ryots with three years' occupancy to whom it gave certain rights. Now the Tenancy Bill deals with these questions in a more summary way. It gives occupancy rights to all *settled* ryots, with respect to all ryoti lands they may come in possession of irrespective of the time of occupation; it makes transferability unrestricted, except that it gives the landlord a right of pre-emption—a right which he would never choose to exercise if he were wise, and it limits fair rent to a fifth of the estimated average annual produce of land in staple-crops in cases of occupancy rights; while as regards ordinary ryots, the tendency of the provision will be to give occupancy rights to a ryot no sooner he will get into possession of a piece of land. The doctrine "once a tenant always a tenant" will have meaning of its own under the Bengal Tenancy Bill.

Now, gentlemen, instead of troubling you with the details of all the changes made under the Bill, I will confine myself to the most important ones I have indicated above. I will show you how all these changes tell against the rights vested in us by the permanent settlement. Take for instance the question of fair rent and its limitation to a maximum of a fifth of the estimated annual produce of land in staple crops as regards occupancy ryots, to five-sixteenths in cases of ordinary ryots, and to half in cases of *bhaoli* tenures.

These limitations touch the very principle on which the permanent settlement is based. That settlement as you all know, though dictated by the kindliest of policy towards a subject

race, was in the nature of a contract, under which Government, for the consideration of a fixed money rent or revenue, parted with its rights with respect to a share of the produce to every bigah of land in favour of the zemindars. It was something like a perpetual lease under which the Government for all times to come leased out its share of the produce of land to zemindars for a permanent rent or revenue, which the latter agreed to discharge for all time to come without making any application or claim for remission on ground of drought, inundation or famines. Now, gentlemen, in India the produce of the land had been at all times divided between the State, the zemindar, and the actual cultivator. The zemindar under the permanent settlement is now entitled to the first two shares, and any limitation which would be determined without due regard or enquiry as to what was this share or shares would go certainly against the principles of the permanent settlement. The zemindar does not certainly like to touch the share of the ryots. The rights of ryots could not be and were not indeed touched by the permanent settlement, because they were no parties to that settlement; but the zemindars are certainly entitled to ask to be protected in their rights (*i.e.*) to their own share of the produce and the State share which was transferred to them in 1793. What was then the State share of the produce at or about 1793, is the question. It is a question which, notwithstanding its importance, has been left undetermined during the present discussions. But, as it appears to me, it has been fully determined ere long. In 1812, a parliamentary committee sat on the affairs of India, and in one of their reports called the fifth report they make the following statement :—

"In the extensive plains of India a large proportion, estimated in the Company's provinces, at one-third by Lord Cornwallis, at one-half by others, and by some at two-thirds, of lands capable of cultivation lies waste and probably was never otherwise. It became, therefore, of importance to Native Governments, whose principal financial resource was the land revenue, to provide that as the population and cultivation should increase, the State might derive its proportion of advantages resulting from their progressive augmentation. * * * This rule is traceable as a general principle through every part of the empire which has yet come under the British dominion, and undoubtedly had its origin in times anterior to the entry of the Mahomedans in India. By this rule, the produce of the land, whether taken in kind or estimated in money, was understood to be shared in distinct proportions between the cultivators and Government. This share varied when the land was recently cleared and required extraordinary labour; but when it was fully settled and productive, the cultivator had about two-fifths, and Government the remainder." During the early days of the Hindoos, the State share was certainly smaller. We find from Manu that the King's share was from one-twelfth to one-sixth. But even, during the last days of the Hindoos, the share had come up to a fourth. Akbar fixed it at a third, but there is evidence to show that even during his reign, the share actually taken was half. It had certainly come up to a higher proportion during the days of Aurangzebe and the last days of the Mahomedans, and when the British Government obtained the Dewany, and on the date of the permanent settlement, this share, on which the public assessments were made, had not been certainly reduced.

Now this was the share on which the permanent settlement was based. The share was not only due with respect to lands actually in cultivation, but became due, as we find from the quotation given above, no sooner a bigah of land came into cultivation. Three questions will perhaps be asked. *1st*, it will be said that though theoretically the State share was three-fifths, the money assessment was lower. True it is that Akbar commuted his one-third into a money rubbeh; but many abwabs had been added up to his rubbeh and at the date of the permanent settlement, there is good evidence to shew that money assessment wherever, as in Behar, not actually based on an actual proportion of the produce, was based on a money rent that bore a higher proportion to the gross produce than the rubbeh of Akbar; *secondly*, it will be said that though the zemindars were actually entitled to the State share of the produce *plus* their own share, that is to pergunnah rate of rent, in practice they never keep up to this high figure in the pergunnah. There can be no question that the so-called pergunnah rate, at which the assessment was fixed, pressed very heavily on the ryots then, and the only way the zemindars could relieve them of this high pressure, and at the same time keep their estates from sale, notwithstanding the high amount of revenue which they had to pay, was by doing their best to develope the resources of their estate (*i.e.*) by actually bringing waste lands into cultivation. Many could not do this, and their estates were brought to sale. Well, gentlemen, the permanent settlement was not an immediate boon to the zemindars with whom the settlement was made. Many of these could not discharge the high amount of revenue which had been assessed on their estates, and as a great historian of India says—"The selling of the zemindaris immediately began and proceeded with a rapid pace. In the year 1796, the land advertized for sale comprehended a rent roll of 287,000 sicca rupees, which, according to the total assessment, was nearly one-tenth of the whole of Bengal, Behar and Orissa in a single year. By the progress of this operation the whole class of the ancient zemindaris, instead of being erected into an aristocracy, was speedily destroyed;" *thirdly*, it will be said that this limitation does not touch existing rates, that the zemindars will not be disturbed in the enjoyment of his present rent, and that it only stops enhancement where the rates are already exorbitantly high. Well, gentlemen, it is not absolutely true that the limitation will not touch existing rates.

In *bhaoli*, a rate of 9 annas share of the produce out of the 16 annas is not uncommon now in Behar. In this case, immediately on the passing of the Act, the rate will be

reduced to 8 annas, and a zemindari, the present income of which is Rs. 9,000 under *bhoali* tenures, will not have its income reduced to Rs. 8,000. Then again, as I have already told you, the limitation touches the very principle on which the permanent settlement was founded. That settlement was not made for a day or for one hundred years. It would be as much an infringement of that settlement contract if the zemindars or their successors are hereafter to be debarred from the rights which were given to them in 1793.

Take then the question of fixity of tenure and freedom of sale. At the date of the permanent settlement, lands were under the occupation of the zemindars as his *nij jote*, in the occupation of middlemen, or in those of actual cultivators, khudkast and others. A great part of the land was, however, waste. *Nij jote* lands, here in Behar malikana lands, which the zemindars had previously held whether they entered into settlement or not, were amalgamated with the malguzari lands under the permanent settlement. There cannot be any question that at least with respect to these lands the zemindars had full proprietory right, and could do with it just as they pleased; historically it can be proved that this bit of land descended to a *Gram Adhikari* (zemindar) from the time of Manu. It is now proposed to fetter the zemindar's power with respect to this class of land also. They will be only nominally his, if he had been imprudent enough to settle it with a ryot, and the ryot had been in possession for 12 years. The next class of lands, those in the occupation of middlemen, does not much concern us here, as sub-infeudation in the province has been till now very rare.

As to the lands in the occupation of ryots, *khudkast*, or otherwise, the limitations fixed were that the pattahs of *khudkast* ryots were not to be cancelled, unless they paid less than the pergunnah rates, and for some reason or other which does not concern our present purpose, this provision was not made applicable to Behar. It was also stipulated that the existing lease of other ryots were not cancelled during the term for which such pattahs had been granted. With these reservations the zemindar was given the full power of letting out the lands to whomsoever he pleased and in whatever manner he pleased. This was in 1793. We are told now in 1883 that we must not do whatever we pleased with the lands which we have brought into cultivation at a very heavy expense to ourselves. Then that not only every squatter is to get occupancy rights with respect to these lands at a rent nor exceeding a fifth of the estimated annual value of the produce, but that he will have a transferable right too. Now, gentlemen, whatever might have been the rights of the *khudkast* ryots of old, a class of ryots entirely forgotten by the provisions of the Bill, no one pretends to say that they had a saleable right at the date of the permanent settlement. I leave others to tell you how these provisions of fixity of tenure and freedom of sale are calculated to disturb the existing rural and agricultural system in these provinces; how if these provisions were to stand just as they are in the Bill without any let or hinderance to the power of subletting of occupancy ryots, while you, gentlemen, all will be reduced to a three-anna zemindar, a new kind of 13-anna zemindari will spring up, the creation of the Tenancy Act, with men as proprietors who will be nominally known as ryots.

Gentlemen, I have been so long in shewing you how the provisions are calculated to trench on our rights as vested in us by the permanent settlement. The reservations of power in the hands of Government to enact laws for the protection and welfare of ryots do not mean that vested rights should be taken away to be given to others. Gentlemen, the permanent settlement is the "Magna Charta" of our rights as also of the rights of our ryots; far be it from our thought to usurp the rights of our ryots, far be it from our thought to raise obstacles in the way of Government enacting law for their protection and welfare, far be it from our thought to object to the benevolent intention of Government to ameliorate their condition. I am sure you will all co-operate in a body to improve the condition of your countrymen. The charge of apathy, of want of public spirit, can be fortunately no longer brought home to your doors; but I am sure, as you will do justice, you will expect justice to be done to you in return. No gentlemen, I am sure, under Her Majesty's benign Government, which is established on the solid rock of justice, in which the rights of even the meanest are protected, your rights will not be taken away if you will only loyally, firmly and constitutionally represent your case to Her Majesty's noble representative in India. The Government of our Excellent Viceroy Lord Ripon, which has already done so much for our people, cannot do a conscious injustice to that important class to which you belong, and if you can only show that the changes contemplated by the proposed Tenancy Bill trench against our rights as guaranteed to us by the permanent settlement, you can rest assured that you will get full justice done to these rights.

His Highness the Maharaja of Doomraon seconded the motion. He said that he agreed with all that has just fallen from His Highness the Maharajah of Hutwa, that he has said in full what he had to say on this question, at the meeting of the zemindars at Shahabad, and he does not like to detain you with another speech here.

The Hon'ble Hurbans Sahai, in supporting the Resolution, said that the substance of the Resolution was that certain rights had been guaranteed to the zemindars by the permanent settlement, which rights, it was understood, could not be taken away. The reservation of power for protection and welfare of the ryots did not mean that the rights of the zemindars should be taken away to be given to the ryots. It was asserted that the zemindars were in the habit of rack-renting and oppressing the ryots. If the meeting bore with him, he would show them how the Government protected its ryots. He held in his hands authenticated copies of certain pottahs given to ryots in khas mehals, and he would read to them some of the

conditions of those pottas.—"Whereas in accordance with the order dated 29th July 1879, 25 bighas of land numbered below, situate in mehal Diora Khowaspur, pergunnah Arrah, property of the Government, were let out with us at the rate of Rs. 6 per bigha, the annual jumma of which being Rs. 150 exclusive of cesses for one year. Therefore we write the kabuliut that we may cultivate the land and appropriate its produce, that we may pay the rent of the land to the Government *kist* by *kist* and year by year, that in case of default and if we do not deposit the Government rent in the treasury within the time allowed, and if any part of the rent is not paid by us, the Government servants have power to eject us from the land without having any assistance of the civil courts, and will not wait for completion and expiration of the year; and they have also power to realize the rents with interest thereon at the rate of 12 annas per cent. calculated from the date when it became due by sale of our moveable and immoveable property whatever could be found without procuring any assistance of the civil courts, and we ourselves, our heirs and representatives cannot have any objection to those proceedings; and if they have any, that will be disallowed and rejected. If any damage is done to the land by our fault we will be held responsible for it and we will, without any objection of dryness of season, or the produce of land being watered and washed away or any unexpected damage to the crops, pay the rent assessed; and if we put forward such objection that will be rejected, and that if we die within the time of settlement mentioned in this kabuliut, the Government servants are at liberty to settle this land with any other they like, or they may settle it with our heirs till the period of settlement expires. If any order of the Collector be passed, we will not anyhow disobey the order, or if we do so by negligence or idleness on our part, we shall be liable to any penalty and punishment given under the provisions of the law in force. If after the term of settlement expires, the Government has power to allow the present settlement to remain, or to annul this settlement and let out the land with any other person whom they may think fit; and in this new settlement neither we nor our heirs have or will have any objection; and if they have any, it is not allowable. And we are not anyhow authorised under the terms of this kabuliut to transfer the interest in land without the permission of the Government servant or give any pottah (lease) to any other person, or make any other person partner; and if we do anything inconsistent with the terms mentioned in the kabuliut, the servants of the Government are at liberty to make the kabuliut void without any assistance of the court. And if the Government has any necessity of taking the land, we will without any objection relinquish it. And be it known we will never acquire our gezushta right in this land; and without any order we will not plant any trees or bamboos in the land, and therefore we have written this kabuliut that it may work at any time of necessity."

The Hon'ble gentleman then commented on the provisions of the Bill, section by section, as follows:—The condition of the Government khas mehal ryot is worse than that of his brother in a private zemindary. The Bill, in the first instance, should have been applicable in his case, as the rate of rent in khas mehals is fixed according to the whims and fancies of the settlement officers, and sanctioned by the higher revenue authorities. The tenant incurs the expense of coming into court as plaintiff against the Government; while the Government enjoys the privilege of recovering rents summarily. Is not the position of the most oppressed ryots of a private landlord enviable in comparison with that of the most happy of the khas mehals? Those who know to what an alarming extent enhancement of rent has taken place in khas mehals, and to what dreadful oppressions and hardships the ryots there are subject, will not hesitate to answer in the affirmative. Should it not, therefore, be made in keeping with the generous and liberal profession of the Government to give as much protection to the ryots of its own estates as to those of private zemindaries? Indeed, the anxious solicitude for the welfare of the dumb and oppressed millions comes with a very bad grace from the Government, when it does not hesitate to treat our own ryots so ungenerously and illiberally as is generally done in khas mehals.

The ryots, partly on the false belief that there is no remedy against the officers of the Government, simply submit to their lot without the least murmur of complaint. Let the Government, therefore, if it really wishes to improve the condition and status of the ryots, extend the boon to its own tenants. Let it itself set a noble and pious example to the oppressive zemindars that they may be ashamed of their inhuman and unpatriotic conduct, and may follow after the footsteps of the Government. The Government as a zemindar has been so long setting a bad example to other landlords, that it is high time that it should now find its own mistake and correct accordingly. The provision of the Bill does not affect the powers of the settlement officers, the reason being that it will not interfere with their powers of fixing the rates at the time of settlement in temporarily settled estates. Do not the ryots of such estates deserve as much protection as the ryots of the permanently settled estates? The zemindar is a much-abused creature; vials of wrath have been poured upon his head. Much has been said about his oppression, greediness, and unmitigated selfishness. In short, he has been represented as a vulture intent only on falling upon his prey, the ryot, and the Government has offered itself as his protector. But such conduct on its own part does not seem to be in keeping with its own profession. The second chapter of the Bill deals with the khamar and ryoti lands. It provides that the existing stock of khamar lands cannot be hereafter increased, and further that all land shall be deemed as ryoti land. Why should such a presumption be made in favour of the land being ryoti? Hitherto the practice of the court and the custom of the country has been just the reverse. If a ryot claim against the zemindar or a landlord as a ryoti, the onus of proof lies upon him. It may be that in a village there has been no custom established before the commencement of the Act with regard to the recognition of zerait land. Why should not a zemindar treat such land as zerait?

Section 6.—Now in some villages there are waste lands and land unreclaimed and lands under water. These lands ought to be comprised within khamar lands: lands from which no rents have been realised cannot be called ryoti lands. It has not been correctly represented that the zemindars of Behar always make persistent efforts to increase the extent of khamar or, as it is termed, their zerait land, whereas it is true only in the cases of their lessees or some small landowners.

Section 9.—What is the Collector to do in a village where there is no custom established before the commencement of this Act for recognition as zerait, where the Collector finds that some lands have been newly purchased by the zemindars, or some lands have been relinquished by the ryot, and is in the possession of the zemindar? This section makes it a matter of necessity to amend the definition of *khamar* land.

Section 10.—One month's time of appeal will not be sufficient for big zemindars.

Section 13.—Why should not a zemindar be allowed to acquire ryoti land after the approval of a register of *khamar* land by the local Government? For instance the register has been approved of by the Government in the month of May 1883, and a ryot holding a certain jote relinquishes his jote, or a zemindar reclaims certain waste land in the month of June following. Why should not lands of this description be recognized as *khamar*? Thus it will be necessary for the Government to revise the register annually.

CHAPTER III.

Section 15.—The presumption that the land, the rent of which has not been changed for 20 years, will be considered that it has been held at that rent from the time of the permanent settlement, is very objectionable.

It may be modified, and at least "twenty years from the time of Act VIII of 1869" should be substituted for it, otherwise it will prove very hard to the zemindars.

Section 20.—The ryots of the estate not permanently settled deserve as much protection as those of the permanently settled estates. The Government has saved to the settlement officer a right to raise the rent, simply because it will affect its own revenue.

Section 22.—The provision that the rent of the tenure-holder cannot be enhanced under Section 21 to more than double the rent previously payable is objectionable, for the fair and equitable rent may in some cases be more than double the amount previously payable.

Section 23—The restrictions as to the progressive enhancement to rent is altogether unnecessary. If the enhancement be considered just and equitable, why should it not be introduced at once?

Section 47.—The principle of section 47 cannot be defended. According to the present law, a ryot who has cultivated different lands in a village has no right of occupancy in the land so held by him. The zemindars consider that they can oust him at any time; but should it be declared that his ryot has right of occupancy in all the lands held by him on the second March 1883, they will be taken by surprise.

Section 49.—The section should be modified as follows: "unless he has held on lease for a term, or year by year."

Sections 50-56.—The Bill does not at all benefit the actual cultivators of the soil. The middle class cultivators who will be profited by it, are not after all the actual cultivators of the soil. The provision of giving the right of sub-letting the land will not at all do any good to the actual cultivator, who under its provision will not be allowed the rights of occupancy. This is certainly anomalous and its inevitable effect will be to put the actual cultivators at the mercy of grasping middle-class tenure-holders. The actual cultivators will not feel any permanent interest in the land, and they are therefore not likely to increase the value thereof. It will unnecessarily multiply subordinate tenures which will prove prejudicial to the interest of agriculture. The Bill interferes with the freedom of contract. It provides very unjustly for a right of occupancy against any contract to the contrary. It will defeat the very object of the Bill—the interest of the ryot The ryot may of his own accord give up his legal right in order to secure some personal benefit, but in case the provisions of the Bill are carried out, no chance of benefiting himself will be left to him. It will also be remembered that the ryots have now-a-days to deal with large landowners who are more lenient than the class of middle-class tenants, who are now going to be created by the provisions of the Bill.

Section 51.—As regards the right of pre-emption, though it is true that the zemindars have been allowed this privilege, still they are not allowed to buy on the same conditions as the ryots. The ryot does not lose his right of occupancy by leasing it to any other person, if he does not wish to cultivate himself, but no such provision has been made in the case of the zemindar. He has not been allowed even the right of an ordinary purchaser; all this injustice is going to be done to him simply because he has the misfortune of being the owner of the land. What can be a better proof of the one-sided character of the Bill than this? The tenants will be raised, to all intents and purposes, to the commanding position of proprietor, while the real proprietor will be reduced to an accountant.

The right of pre-emption will not serve the purpose of checking objectionable transfers. A neighbouring rich and powerful zemindar would find no difficulty whatever to collude with the tenants of another weak neighbour, and to instigate them to sell their tenures simultaneously and *en masse.* Having not sufficient money at his command, his land would pass into the hands of the unfriendly zamindar, who would harass his weak neighbour by stopping payment. It is clear that by the powers of transferring and subletting which the Bill recognizes, the great bulk of the actual cultivators would not be occupancy

tenants. The law does not afford any protection whatever to them; so from a ryot and zemindar's view both the provisions are very objectionable. It does not benefit the ryots and at the same time does not guard against objectionable transfers. The zamindar will find it difficult to cultivate the land himself, and thus will be obliged to lease the land, and will gain no advantage. The moment a zamindar who purchases an occupancy right in his own land lets that land to another ryot, he loses his occupancy right. Can there be anything more unjust than this? He will have to pay a large sum of purchase-money, but he will not be allowed to enjoy the benefit thereof. Nothing can be more objectionable than such arbitrary legislation. As regards the ryots' powers of transferring and subletting, the Government proposes to make in future provision for complications that may arise thereof; but it is better not to create complications than first to create and correct them afterwards.

CHAPTER VI.

Deals with the subject of rents payable by occupancy ryots. Under the provisions of this chapter, the ryot has not been allowed to act as a free agent. It will interfere obnoxiously with the freedom of the parties, and it will prove much prejudicial to the interests of the ryot himself.

Section 59.—The ryot himself is the best judge of his own interests. The approval of any written contract by the revenue officer is wholly unnecessary.

Section 61.—Moreover, the revenue officer has been virtually debarred from registering any contract by which a ryot engages to pay a rent more than one-fifth of the estimated annual value of the gross produce of the land. Even from a ryot's point of view it is very objectionable, as it will inflict much hardship in many cases, inasmuch as the ryot will not be able to gain any personal advantage by giving up his legal right. So it will be seen that liabilities of the zemindars nearly amount to seven-sixteenths, but he will get only one-fifth. So he will be a loser by seventeen-eighteenths of the gross produce of the land. The sections for enhancement cannot be worked properly, and they will become dead-letters, and it will become worse than the present provision for enhancement of rent. The only result will be that the zamindars and the ryots will have to pay from their own pocket the necessary expenses for investigation, &c., and there will be frequent disputes about the correctness of the classification of lands, which will be a fruitful source of endless and ruinous litigation.

Sections 76 to 79.—The provisions as to enhancement not beyond double rent previously payable, as to powers to order progressive enhancement are very objectionable, as already noticed. The Bill lays down a uniform proportion with respect to the rates of rent in all the districts, but it ought to be remembered that the facilities for cultivation, the capital and labour employed, are not the same with respect to all lands in all districts.

[*The remarks relating to sections 81 to 118 will be found on pages 177 to 180 of the appendix.*]

It has to be noted that some years will be some fifty years hence; they will require all that help which the State can give them if they by that time do not learn how to help themselves. Are they rack-renting and are the ryots rack-rented? The Beharees are indeed poor, but I deny that the system of tenure which prevails in the province, the sort of relation which subsists between the zamindars and the tenants in this province, make them poor. The great populousness of the Behar districts and the consequent low rate of wages serve to make the great landless classes poor. To these causes you have to add their want of thrifty habits; but are the agricultural classes poorer than the corresponding class even in Lower Bengal? This is to be seriously apprehended that a great national calamity will ensue, if agriculture continue to be our only national pursuit. Already there is a great sub-division of lands among the proprietory body, and the transfers of ryoti rights and their heritable nature will make agricultural holdings smaller and smaller year by year. Government should therefore, when it would further the interests of the poor, instead of proceeding on a false assumption that the zamindari system is the cause of the poverty of our ryot, try to find out the real cause, and apply the true remedy. The population of neither Behar nor Bengal will prosper by demolishing the zamindars, but drawing the attention of the people to other than agricultural pursuits, setting up industries, and industrial schools will go a great way in that direction.

Gentlemen, when Act X of 1859 was enacted, it was thought that the Government had sufficiently redeemed its pledge of affording protection to the ryots. Sir Frederick Halliday said:—" A heavy obligation towards the raiyat long unfulfilled by our legislature has now been fulfilled by enacting Act X of 1859. Two successive Chief Justices of the High Court of Judicature of this country condemned the new right of occupancy given under that law to ryots as an invasion of the zamindars' rights and as inconsistent with such rights; but Act X was passed, and the zamindars and ryots had been content to abide by its provisions for the last 25 years. Gentlemen, it is now thought that Act X of 1859 had not done enough, and the legislature now thinks of going beyond what had ever been thought of by the most radical members of the Government when enacting Act X of 1859. If the provisions of the proposed Bill are allowed to pass, the permanent settlement under which you hold will be a mere dead-letter; you will be, as the Maharaja of Hutwa has very well expressed it, a 3-anna proprietor in your zamindari, while the 13-anna rental proprietor will be an occupancy-right ryot, mind, not the ryot of the present day, the actual cultivator, whom the Government thinks it its bounden duty to support, but some designing speculator who will come in his place.

Gentlemen, I am not much accustomed to public speaking, but it is a time when all should speak. None of you, I am sure, deny to your ryot rights which properly belong to him. Though you are stigmatised in the highest places, one and all, as rack-renters and

oppressors of your ryots, I am sure you all are fully alive to your duty to ryots. But while you will do justice to others you will doubtless expect to have justice done to you. You will certainly claim the right of being protected in those rights which have been guaranteed to you under the permanent settlement.

Seconded by Rai Joi Prukash Lal Bahadur.

3rd Resolution.

That the provisions regarding the survey and register of khamar lands, those relating to improvements and record of rights, will lead to unnecessary and costly litigation, the effect of which will be the impoverishment and, nay, sometimes the utter ruin of both the landlords and tenants.

Moved by Maharaj Kumar Narendra Narain Pratab Sahai Bahadur of Hutwa.

Seconded by Babu Saligram Sinha of Mednipur, Shahabad.

Supported by the Agent of the Maharani of Tikari and Babu Gajudhur Pershad.

4th Resolution.

That it is unwise to unsettle customary laws and tenures which have been prevalent from time immemorial, and the Behar zemindars look with serious apprehension to the special provisions for the commutation of bhaoli tenures into nakdi, as calculated to affect seriously the interest of agriculture in this province.

Moved by Syed Usuf Hossein Khan.

Seconded by Syed Willayet Hossein *alias* Mehdi Nawab.

5th Resolution.

That the advantages offered by the Bill to the tenants are substantial and new, while those offered to the zamindars are *nil*; that the Bill in fact proposes re-distribution of property between landholders and tenants for what is taken away from some of his rights, and the provisions of the Bill do not fall within the power reserved to the Governor-General at the time of the permanent settlement, to enact laws for the protection and welfare of dependent taluqdars and ryots.

Moved by Moulvi Fazlul Rahman.

Seconded by Kazi Reza Ausein.

6th Resolution.

That a sub-committee of the following gentlemen, with power to add to their number, be formed to draw up a memorial stating all the objections to the provisions of the Tenancy Bill, and it be submitted to Government through Behar Landholders' Association.

Moved by Munshi Bahadur Ali Khan.

Seconded by Agent of Tikari.

Supported by Mahomed Ali Khan of Durbhangah.

After a vote of thanks to the chair, proposed by Mir Shamshul Hoda and carried by acclamation, the meeting dispersed.

No. 188 R.L., dated Calcutta, the 2nd July 1883.

From—J. Monro, Esq., Commissioner of the Presidency Division,

To—The Secretary to the Board of Revenue, Lower Provinces.

With reference to your letter No. 351A, dated the 29th March 1883, I have the honour to submit the report on the Bengal Tenancy Bill, therein called for.

2. I have found it impossible to hold a conference with district officers, as the adoption of such a course would have involved their absence from their districts for several days, at a specially busy season of the year. The reports which I have received I forward herewith.

3. I have had many conversations on the subject with officials, zemindars, and others, and have omitted no opportunity of ascertaining the feeling of the people generally in connection with this important measure.

4. As was to be expected, the landholding class is most strenuously opposed to the Bill, and there is no doubt that a most uncompromising resistance to its provisions will be manifested. There is a general feeling amongst members of the landholding class that zemindars will practically be effaced and reduced to the position of annuitants or partners with their ryots in the profits of land, and that the Bill, with its manifold provisions in favour of the ryots, constitutes a distinct infringement of the rights which they conceive were guaranteed under the terms of the permanent settlement, and which they have certainly exercised without dispute for nearly a century.

5. It is rather curious to notice the different views of the effect of the Bill as taken by the planters of Lower Bengal and of Behar. The majority of indigo planters in Lower Bengal, who are often landholders themselves, are opposed to the Bill, although some of them do not think that much harm will be done, specially with reference to the enhancement clauses. In Behar, again, I have noticed a decided feeling arising that the interests of the planters, hitherto identified with those of the landlords in consequence of the tikadari system, will now be found to be on the side of the ryots.

6. The ryots themselves are as usual ignorantly apathetic on the subject. They have heard some rumours of impending changes, and, in some instances, agitators have made them believe that the millennium of the ryots is at hand, when they will pay only nominal rents for, and reap all profits from, their land, but as a rule they have no intelligent idea on the subject, and it is difficult to define any feeling which they may have on the matter. Had the seasons of late years been unfavourable, no doubt we should have found them in a more complaining mood, but with good harvests they are not disposed to repine, and only wish for

scarcity to show itself in some district other than their own, that they may reap the benefit of increased prices of their crops. Under any circumstances it would be very difficult to convey to the mind of any ryot an accurate impression, or to create in it any definite idea, of the meaning of the proposed alterations in the law, with reference to compensation for improvements, compensation for disturbance or the doctrine of Merger.

7. I have to apologize for the hurried style in which my notes upon the Bill have been made. At this time of year when officers are overwhelmed with annual reports of all kinds, it is simply impossible for any one to find time for a leisurely discussion of such an important subject as a complete change in the relations between landlord and tenant. I have therefore been compelled to make notes on the Bill as I could find time amid the pressure of exceptionally heavy current work. It is not open to me now to discuss the principle of the Bill. Upon that question, as connected with the rights of the zemindars under the permanent settlement, I have already expressed an opinion, and, after the authoritative declaration of the Government of India of their views upon that point, it is not for me to re-open the discussion. There is, however, one point on which I venture to think I may still be permitted to make a remark. The Bill is framed for the purpose of carrying out a pledge given by the Government with regard to the rights of ryots, at the time of the permanent settlement. And in pursuance of the effort to fulfil this pledge it is now proposed to give the ryots fixity of tenure, fair rent, and freedom of sale of their holdings.

8. How far these privileges or rights were guaranteed under the terms of the settlement has been disputed; how far the ryot requires fixity of tenure which he has, in Lower Bengal, practically got, is also a question upon which there have been differences of opinion: whether freedom of sale will in reality confer on the ryots the boon which it is intended to give them, is also an open question; but there is and can be no difference of opinion as to the ryot being required to pay a fair rent for any holding which he possesses.

9. Many provisions have been laid down for the purpose of ensuring to the ryot exemption from demands of unfair rent, and the pledge given at the time of the settlement has been frequently referred to as the justification for the enactment of such provisions. Whether the terms of the pledge then given justify the provisions of the law which it is proposed to introduce, has been, and will be, hotly contested by the zemindars. But there is one portion of the pledge given by the framers of the settlement, as to the interpretation of the terms to which there is no uncertainty, and yet I find no proposal made as to any intention being entertained of effectively fulfilling our promises—I mean the pledge as to the absolute abolition of illegal cesses.

10. It seems to me that this question is of the most vital importance in considering the point of fairness of rent, and it appears almost a mockery to devise a multitude of provisions for regulating the exact amount of money to be paid by the ryot under the name of rent, while we leave unlimited and unchecked (for the declaration in sections 123 and 124 practically impose no greater check than exists now) the demand on the part of rent receivers of every degree, with reference to illegal cesses. How can we with propriety call any rent *fair*, which is to be supplemented by practically unlimited illegal demands of cesses, which, although abolished by law, the representative of the zemindar in council describes as the "moral adjustment of enhanced rent."

11. There can be no doubt as to the meaning of our ancient pledges in this respect, there can be no doubt as to the absolute non-existence of any right on the part of zemindars to realize such cesses, and there can be no doubt as to one having for nearly a century permitted the ryots to be unwarrantly oppressed, without giving them any substantial relief against the illegal and extortionate demands made upon them by zemindars and other rent receivers.

12. It seems to me that it is our bounden duty, when talking of the force of pledges given nearly a century ago, to put an effectual stop to illegal oppression before regulating legal demands. Especially do I think so, when I believe, as I do, that the summary and stern repression of such illegal oppression by zemindars, will do more to ensure to the ryot the payment of a fair rent than many elaborate restrictions and provisions, such as are contained in the present Bill.

13. It is notorious that such illegal cesses are levied in almost every zemindari in the country, although all such irregular demands have been by law abolished. It is equally notorious that such demands are paid by tenants, although they press very heavily on the ryots, and raise their contributions to their zemindars far beyond the standard of moderate enhancement. It must be also clear why such irregular payments are paid by ryots, who are not ordinarily liberal in the discharge of their duties to the landlord. The reason simply is, that the ryot submits to these exactions rather than have his rent enhanced by order of Court, because he has no security that, after such legal enhancement, the demand for illegal cesses will in any way be relaxed or diminished, and because he has no practical protection under the law against the illegal exactions of his zemindar with regard to such cesses.

14. It seems to me a disgrace to our administration that we should admit our incapacity to deal with such universal and flagrant breaches of the law, and the ryots, it appears to me, can hardly be expected to attach much value to our professions of legislative interest in their welfare, when we fail to devise effectual means to protect them against demands of their zemindars, which are admittedly illegal, which are undoubtedly oppressive, and which will continue to render any rent unfair, although its fairness may be secured by many provisions in a Tenancy Bill.

15. If the ryot were first of all secured against, what I would term an immoral "adjustment of enhanced rent," in the shape of illegal cesses, and if the zemindars were rigorously

punished for such undoubted infractions of the laws of the land, we should then have made the first step to secure fairness of rent, and should have removed the chief objection of the ryot to legitimate enhancement of his dues to his landlord. Till that is done, (and if there is any meaning in promises, we are pledged to do it), I cannot believe that any real progress will have been made in rendering payment of rents by ryots *fair*.

16. I come now to consider the details of the Bill, and here I find myself in a peculiar position. Holding the views which I have previously and on another occasion expressed, I cannot consider many of the provisions of the Bill as fair to the zemindar, with reference to the rights, which they have enjoyed for a century, and yet I am precluded from calling in question the principle upon which the Bill is founded. My remarks must therefore be more general than if I were supporter of the Bill suggesting modifications in details based upon a principle which I thoroughly endorsed.

17. Before going on to consider the more important provisions of the Bill generally, I have a few remarks to make regarding khamar land as dealt with in Chapter II. So far as regards Lower Bengal, there is no such extensive recognition of the difference between *khamar* and *ryoti* land, as exists in Behar with reference to *zerat*. I question very much whether many zemindars in Lower Bengal could tell accurately how much khamar and how much ryoti land is included in their jummabundis, when they possess such documents, and still fewer landlords would be able to file any documentary evidence as to lands having been held as khamar. For example, all *utbundi* lands are considered to be khas lands, but yet I never heard of zemindars calling them khamar. Similarly, all *nakshan* holdings revert to the possession of the zemindar, and lands in churs and alluvial formations are undoubtedly in his exclusive possession.

18. If the definition given in section 5 of khamar land is not extended, so as to cover *utbundi* and *nakshan* lands, the inclusion of such lands under *ryoti* will be most unjust to the zemindar.

19. Further, if the register which is now to be prepared is never to be amended, how will chur lands coming subsequently into the possession of a zemindar be shown?

20. I am bound to say that I have not seen in Lower Bengal any manifestation of any tendency on the part of zemindars to bring ryoti into the category of khamar lands. This tendency undoubtedly exists in Behar, and for Behar this chapter is chiefly framed. I have, however, seen indications of a tendency on the part of ryots to filch khamar land when they got a chance, and call it ryoti.

21. It seems to me that acting upon the presumption that all land is ryoti, until the contrary is shown, the zemindars will have, under the circumstances of Lower Bengal, great difficulty in establishing their rights to what really is khamar. When the time comes for a field survey of the province (and until this is done we shall never have any really satisfactory determination of the questions at issue between landlords and tenants), it would be fair to mark off as ryoti the amount of land held by each ryot as ryoti according to jummabundi, leaving the surplus to be adjudicated either as khamar or ryoti according to proof adduced. In many cases, I have no doubt that such surplus would represent much khamar land that had originally been filched from the zemindar, owing, I admit, to his own laches by the ryots.

22. With reference to the provisions of section III, there is not much to be said. I am bound to say that the extension in section 15 of the presumption from twenty years holding at unchanged rent, is in my opinion going too far. I much prefer the previous proposal of limiting the proof required to 20 years' unchanged rent before 1859.

23. Is the provision in section 20 to have retrospective effect with reference to the thousands of temporarily settled estates in Bengal?

24. I have no special objection to the provisions for enhancement of rent of tenures.

25. Why should not the right of pre-emption be given to the landlord in the case of transfer of tenures? It is of quite as much importance to him to keep out an objectionable transferee of a tenure as of an occupancy holding.

26. With reference to registration of tenures, I see no reason for the provisions of section 28. It is advisable to restrict such transactions to the parties themselves, and not to bring in the aid of the courts or revenue officers on every occasion. The landlord can always be brought to account for refusal to register as provided in section 32.

27. With reference to occupancy ryots, and the provisions of the Bill regarding them, I object to the extension of the provisions of Act X of 1859, specially with reference to the definition of a settled ryot in section 45.

2nd.—With reference to what seems to me the unjust provisions of section 47.

3rd.—With reference to transferability of the tenure.

4th.—With reference to sub-letting.

5th.—With reference to the abolition of freedom of contract.

6th.—With reference to the provisions of sections 59 and 61 of Chapter VI. With reference to enhancement of rents by contract, other limit of money rent payable by a settled ryot taking a new holding.

28. I have nothing new to add to the arguments of those who object to the extension of occupancy rights proposed by the Bill. It seems to me as to them unjust that the element of *residence* should not be an essential feature of the status of a settled ryot. I see no reason why a settled ryot having a right of occupancy in certain lands should, as a matter of right, have the same status in lands, which may be miles away from his village, although within the same estate, and the accrual of a right of occupancy to a settled ryot, in any lands subsequently acquired by virtue of his tenancy of lands at the time of his becoming a settled ryot, seems to

me an unjust extension of occupancy right. I do not object to the tenures of occupancy ryots being made transferable subject to the consent of the landlord, or even without such consent because as a matter of fact such transfers of tenures have become a matter of custom (although it may be remarked in passing that the customary exercise of rights *by zemindars* for a century is not admitted by the framers of the Bill, as a valid argument for arrogating such rights), but I question very much whether this power of transfer will be such a boon as is represented to the ryot. It will undoubtedly enable him to raise money for the purpose of spending it, but that it will, with his improvident habits, convert him into a thrifty peasant, I have very grave doubts.

29. There is no doubt that this unfettered power of transfer will encourage the disputes and faction quarrels which have always been a prominent feature in native families, and if in addition to this power of transfer is given the privilege of sub-letting, without consent of the landlord, the latter will very soon find his estate full of occupancy ryots or their dependents in the shape of his bitterest enemies.

30. The right of pre-emption on the part of the landlord is good so far as it goes, but the condition of being obliged to let the land as an occupancy holding does away with much of the protection which the right of pre-emption affords.

31. If the tenure is allowed to be transferable, I would, on no account, permit sub-letting, which will simply encourage ryots to let out their tenures, and prey upon the sub-tenants. Such a system will in the end lead to sub-tenants or ordinary ryots under occupancy holders being much more rack-rented than they are now.

32. As to the abolition of freedom of contract, I altogether fail to see the justice of the provision. I do not find anything of the kind in any of the settlement regulations, and I fail to see how the ryot is ever to learn how to stand alone, if he is to be rigidly protected against himself. The ryot is to be allowed freedom in every respect, except when he enters into an agreement with his landlord. If this is not setting class against class, and teaching the ryot to look upon the landlord as his natural enemy, words have no meaning. I would certainly leave the parties to contract as they please, and the courts should not, in my opinion, refuse to recognize such contracts. Denial of the right of contract has a distinct tendency to make the landlord resort to illegal cesses, and the ryot acquiesce in such improper exactions. For, if the tenant is in need or wishes in any way to propitiate his landlord, he will agree to pay a *mangan* without much hesitation, seeing that the right to make a legitimate agreement with his zemindar is denied to him. I must confess that, according to my experience, the ryot of Lower Bengal is not such a down-trodden or helpless creature, with reference to his own interests, as he is represented to be. I notice that the case of Backergunge is cited as an instance of exceptional prosperity amongst ryots, brought about apparently by the existence of a large number of peasant-proprietors in that district. I am not prepared to attribute the prosperity of Backergunge to this cause, but if peaseant-proprietorship in that district has caused prosperity, it is undeniable that such a system of land tenure has also brought with it a development of turbulence unknown in any other district. But leaving Backergunge out of the question, I can point to the majority of ryots having occupancy rights in Dacca, Tipperah, Chittagong, Jessore, Noakhally, and other districts, as being men who are eminently calculated to look after their own interests. It seems to me hardly consistent to inculcate upon the people by one enactment their fitness to govern themselves, and in another to provide them with a means of protection against their own acts. To give them power to vote with reference to matters about which they express little concern, and to deny them a right to contract with regard to their rent, about which they are supremely interested.

33. With reference to the provisions for enhancement, it seems to me that, considering the difficulties of the subject, the proposals embodied in the Bill are on the whole fair. It might be simpler to eliminate the standard as regards rate of one-fifth of the average annual value of the gross produce of the land, and lay down the principle that the enhanced rent should not exceed so many annas in the rupee of rent, but I am not prepared to suggest any better provisions than those laid down. The general provisions as to the enhanced rent not being more than double the previous rent paid, that it may be ordered to take effect gradually, and that no re-enhancement shall take place for ten years, are in my opinion salutary. I do not see that zemindars have any reason to complain of these provisions, and I quite admit the necessity for giving the ryot protection against the ever recurring threats of enhancement which have embittered the relations between landlords and tenants.

34. I am not of opinion that it will be practicable to frame tables of rates such as are proposed, without an amount of harassment and expense to both landlords and tenants, which would be ruinous to them, and, even when prepared, I question very much whether it would be fair to either party to keep them in force for even ten years. Whether, when we have a field survey, it may be possible to frame such tables of rates with less expense, is another question.

35. With reference to the provisions regarding bhaoli rents, I must admit that my service having been almost entirely in Lower Bengal, where this system is not so prevalent as in Behar, I am not in a position to give any opinion derived from practical experience.

36. With regard to ordinary ryots, the provisions of the Bill militate against all previous practice under which a tenant-at-will was allowed to hold land in accordance with agreement entered into between him and his landlord. I think it unwise that such a practice should be disturbed, and am not prepared to support those provisions which fix a maximum of rent to

be demanded, and which introduce the entirely new system of compensation, for the disturbance of tenancy of a man who has no right to such tenancy except under agreement with his landlord.

37. Throughout Lower Bengal there is no necessity for recognizing any other principle than that of mutual interest between landlords and tenants, in determining the relations which should exist on the part of landholders to tenants-at-will. No landholder in his senses will now aim at extravagant enhancements, for such a policy will very soon relieve him of his ryots. Most landlords are now anxious to get ryots to settle, and eviction, even of tenants-at-will, is a procedure which is, I imagine, more sparingly resorted to in Lower Bengal than in any country that I know of. The relations, therefore, between landlords and tenants-at-will may safely be left to determine themselves according to the economic laws of supply and demand.

38. Instalments of rent should, in my opinion, be payable according either to custom or contract. Interference, such as is contemplated in section 98, is not desired by either ryots or zemindars, and does not appear to me to be desirable.

39. It is very proper that receipts should be given as laid down in section 100, and I have no doubt that these provisions will do much to stop the forgery, which prevails to such a lamentable extent in connection with rent receipts. I do not, however, see that the ryot should be entitled to have such a statement of account as is specified in section 101, without paying a fee for the same. Such a statement is entirely unusual, and in a large zemindari will involve considerable expense on the landlord, in the way of keeping up clerical establishments. The rent receipt is sufficient protection to the ryot, and if he wishes to have a further safe guard, he should, in my opinion, pay for it.

40. The provision as regards deposit of rent are unobjectionable, except that in 103 (a). The ryot should not be allowed to deposit simply *when he has reason to believe* that rent will not be received or a receipt given. He should first make the tender as at present, and, after refusal made, should be at liberty to deposit.

41. The chapter upon compensation for improvements seems to me to be based upon an entirely mistaken theory as to the wishes and acts of Bengal ryots with regard to improvements. It seems to be assumed that every ryot who has a holding is wishful to improve it, and that he only requires fixity of tenure to invest capital in developing the latent resources of his land. Hitherto he has been afraid to invest money owing to the uncertainty of his tenure and the oppressions of his landlord. Once fix the former and restrain the latter, and it is assumed that the ryot will have courage to improve his land, which has hitherto remained less productive than it should have been.

42. Now there have been for centuries, and are now, millions of ryots who have had fixity of tenure, and to whom the provisions of the Bill on the subject of the existence of tenant right are no novelty. Have these ryots shown any inclination to invest capital in improving their land; have they evinced any desire to increase the productive powers of the land, even by the elementary process of manuring it; have they done anything under the influence of fixity of tenure in the way of constructing for the benefit of their lands any of the numerous works specified in section 26 as agricultural improvements?

43. I do not know what may be the condition of affairs in this respect in other parts of the province, but in Lower Bengal the ryots with rights of occupancy or fixity of tenure have done nothing to improve their lands, and although, if, as is proposed, an opportunity of demanding compensation for improvements is given them, they will be only too ready to advance false claims for mythical expenditure in this respect, I say, without hesitation, that ryots with fixity of tenure have evinced no desire to benefit their land or expend any portion of their supposed savings in developing its resources. Any such improvements as have been made have, so far as my experience goes, been carried out by landlords, and not by ryots, and I see no reason to believe that the ryots, when they have more capital, will change their nature or their habits as regards expenditure, which they think ought to be incurred by their zemindar.

44. If by fixity of tenure the ryot manages to save, he certainly does not spend his profits on his land. He may add to his house, which hardly can be called an agricultural improvement, buy cattle, increase his wife's stock of ornaments, spend somewhat more at marriages and village festivals, but it will not occur to him to improve the land, which, in his opinion, ought to improve itself, which has for ages yielded crops without expenditure on his part on agricultural improvements and which ought to continue so to do.

45. The ryot, so far as my experience goes, does not want to improve his land or be improved himself, he wants to be let alone, and this chapter on agricultural improvements introduces a system which is perfectly new in the bucolic history of Bengal, which is certainly not needed with reference to the acts or wants of ryots at present, and which will infallibly lead to litigation and false claims of every description, such a system will also most certainly lead to landlords declining to undertake or give any assistance to villagers in undertaking village improvements, and when villagers with, as is the case in most instances, opposing interests are left to themselves to carry out so called improvements, the result may be easily imagined.

46. I would not object to seeing the whole chapter excised from the Bill, but if it is to be retained, I am not in favour of giving even the occupancy ryot any right to make improvements for which at some time the landlord may be called upon to pay compensation, unless such improvements have been sanctioned by the landlord. It might be left open to the tenant to compel such consent, if, after application made, the landlord refused to allow any reasonable improvement to be carried out.

47. With reference to tenants-at-will, I would allow no improvements to be made by them without the landlord's consent.

48. The doctrine of merger contained in paragraph 141, is, so far as I am aware, unknown to Indian law, and I find nothing in the papers connected with the Bill which shows me that the application of such a principle is in any way required either by ryots or landlords.

49. The appointment of a common manager in the case of zemindars who are quarrelling is a provision which is very necessary in the interests both of the public peace and private rights. I do not see anything objectionable in the provisions of the Bill on this point. It has been objected that, under the provisions of section 142, any discontented ryot may cause his zemindars much trouble. I do not, however, take this to be the meaning of the words "any one interested in the estate or tenure" in section? If by these words is included *any ryots*, then I think that it should not be within the power of one tenant to set the law in motion. I would not say that the majority of tenants only should have such power, but would leave indefinite the number of ryots having interest in the estate, upon whose application the civil court should take action, unless, "a large proportion (*vide* section 164*a*) of tenants applied," I do not think the civil courts should act.

50. I am quite prepared to admit that, if the provisions of sections XI and XII can be successfully carried out, and, if we can have a record-of-rights made, and rents ascertained, great progress will have been made in reaching a solution of many of the vexed questions at issue between landlords and tenants. The expense of such proceedings as are contemplated under these two chapters will be enormous, and I suspect ruinous to both parties. Before making these provisions of universal application under the order of Government in the cases specified in section 151, Government should, in my opinion, try the experiment thoroughly in Crown Estates. We have not yet, in the similar operations which have been carried on in settlements, sufficient data to work upon, and I much fear that the amount of litigation which would be at once excited by the application of these provisions generally, would be very injurious to both ryots and landlords, who might wish to make use of them. At the same time, I believe, that, if the system can be carried out without involving too much outlay, the principle of ascertaining and recording rights and rents paid (I am not quite prepared to go the length of *fixing* rents as proposed) will go a great way towards settling disputes, and facilitate the realization of rents.

51. As to the provisions for recovery of rent which was the beginning of the legislation which has found its outcome in the present Bill, I am afraid that landlords will hardly feel satisfied as to the relief which has been given them. Distraint has been practically abolished, for very few landlords will avail themselves of the provisions of the Bill, which enable them to apply to a Court for permission to distrain as laid down in the Bill. If a landlord has first to pay fees as for a suit, file an elaborate application duly verified and supported by documentary evidence and then finds that when he comes to execute his process, that pending operations at court, the crop sought to be distrained has been removed, as it almost certainly will be, such landlord will not be much encouraged to repeat the experiment in many instances.

52. So far as Lower Bengal is concerned, the existing provisions of the law as regards distraint may be safely maintained. I have no objections to illegal distraint being sternly put down, and I would visit abetment of such offences even with the punishment provided in *section* 186. Such a punishment, however, as I have already pointed out, is much more severe than that provided by the code for practical abetment or connivance at a riot involving perhaps loss of life on the part of a zemindar. If the lighter punishment for such abetment of a serious offence is to be maintained, it seems all arc at one that connivance at an act of illegal distraint should be considered of so aggravated a nature as to demand such severe repression.

53. The further provisions for the speedy realization of rent go some way towards simplifying present procedure for recovery of rent, and, so far as they go, must be accepted by the zemindars as provisions in their favour. I am bound to say that *on the principles on which the Bill is drawn*, the zemindars could not expect further relief. I suspect, however, that they expected, and I am not prepared to say that they had not a good right to expect very much more substantial relief as the outcome of their applications for a summary method of realizing rents preferred during the last 12 years.

54. Generally, while I am prepared to accept the provisions of the Bill with reference to enhancement, as on the whole such as landlords under present circumstances cannot complain of, I am bound to say that I consider the provisions of the Bill in most respects unfair to zemindars, and one-sided in favour of ryots. This I hold to be the case with reference to (*a*) the immense extension of the rights of occupancy; (*b*) the bestowal of large rights on tenants-at-will; (*c*) the withdrawal of freedom of contract; (*d*) the provisions with reference to improvements; (*e*) the introduction of the system of compensation for disturbance; (*f*) the practical abolition of distraint, while insufficient relief is given in the way of a summary procedure for realization of rents.

55. Under such circumstances, I cannot convince myself that the Bill, if passed into law, will render practicable a satisfactory solution of the difficulties attending the disposal of the questions at issue; on the contrary, I feel constrained to believe that the application of the various provisions of the Bill must result in endless litigation, active hostility between landlords and tenants, and injury to the property of both.

No. 349G, dated Jessore, the 31st May, 1883.

From—E. J. Barton, Esq., Collector of Jessore,
To—The Commissioner of the Presidency Division.

I have the honour to reply to your circular No. 3RL of 9th April, 1883, requiring my opinion on the Bengal Tenancy Bill.

2. I beg to premise that my remarks are limited to the applicability of the Bill to Lower Bengal, more especially to my own district of Jessore, and that I do not think I am required to refer to the provisions which relate to Behar.

3. I have to inform you that I have doubts if it would be expedient to pass the Bill in its present shape. *I think that a more speedy and a cheaper means of realizing rent is desirable, and that a Bill which secures this would do all that is really necessary.* So far as the Bill endeavours to secure a speedier and cheaper recovery of rents, I am in favour of it.

4. The parts of the Bill which, I think, are open to objection, and which still require mature consideration and modification are those which introduce changes into the respective rights of landlord and tenant, and raise the tenant into the position of a co-partner at the expense of the landlord, without giving the latter any compensation for the property of which he is deprived.

5. I doubt if it is expedient to introduce the drastic and serious changes which the Bill proposes in the substantive law, which at present regulates the respective rights of landlord and tenant. Constant changes in legislation are greatly to be deprecated in this country, and should only be made when a clear and undoubted necessity arises. In the present case, I do not think that any such necessity has arisen. Of course I here speak of Lower Bengal, and of the district of Jessore more particularly. The Bill gives to all ordinary ryots facilities for acquiring the status of settled ryots *against the will of the landlord*, and gives occupancy rights to settled ryots in respect to all ryoti land, *see* sections 88 to 90. It makes occupancy rights transferable, *see* section 50, and limits the maximum of the zemindar's claim to one-fifth gross annual produce in all occupancy tenancies, *see* section 61. The Bill, in important matters, deprives a landlord of liberty of contract with his ryots. I consider that the whole of the above provisions require careful reconsideration and modification, and that some of them, instead of conferring a benefit upon cultivating ryots as they are intended to do, will injure them. I consider that the Legislature should interfere with liberty of contract only in cases of the most pressing necessity, and that no case of this kind has been established so far as the landlords and tenants of Lower Bengal are concerned. I am far from maintaining that the condition of the ryots in Lower Bengal is what it should be, or that their landlords' treatment of them had been such as the Government had a right to expect in accordance with the terms of the permanent settlement. I merely express an opinion that this Bill will not improve matters in either respect, and there is grave reason to fear that it will aggravate the evils which it professes to remedy.

6. With regard to the question how far it is expedient to allow contracts providing against the acquisition of the right of occupancy, I think it is perhaps better to leave the parties to contract for themselves. The in-coming tenant might, in the generality of cases, be prevailed upon to accept the terms offered to him by his landlord, but it is neither fair nor sound upon judicial principles to place a restriction on the freedom of parties to contract as they will. The argument which may be raised in favour of restricting the right of landlords to choose their own terms in letting out their lands to tenants may, with equal force, be applied to all kinds of contracts, and I do not see why landlords should be deprived of their right in a particular class of contracts only.

7. The Bill, in many important particulars, reduces the zemindars to the position of annuitants, deprives them of incentives to improve their estate and the condition of their ryots, and vests important rights over their property in the ryot's rights, which the zemindars have enjoyed for many years, and of which, in my opinion, the present state of the country does not justify the forfeiture without compensation.

8. The opinions of the gentlemen named below are herewith enclosed, in original, for your information :—

Names.	Profession.	Opinion whether for or against the Bill.
Mr. W. G. Deare	Sub-Divisional Officer, Jhenida	For the Bill.
" Tweedie	Indigo-planter and zemindar	Against.
" Oatts	Ditto ditto	Ditto.
" Shirreff	Ditto ditto	Ditto.
Moulvie Moazzim Hossein	Small Cause Court Judge and zemindar	Ditto.
Pramatha Bhusana Deva Raya, Raja of Naldanga.	Zemindar	Ditto.
Babu Shyamadhaba Roy	Deputy Collector	For the Bill.

Memo. No. 40, dated Jhenidah, the 1st May, 1883.

From—W. G. DRAKE, Esq., Deputy Collector,
To—The Collector of Jessore.

Refers to the Collector's No. 78G., dated the 14th April, 1883.

As far as my individual opinion is concerned, it seems to me the Government, in the exercise of an inherent right, have, with much care, labour and research, drafted a Bill which, if it becomes law, will very largely improve the condition of the ryots and subordinate landlords. It will raise the inferior occupants of the soil from the position of serfs, and give them a real interest in their holdings, for they will learn that, so long as they act legally, they will be in a position to assert and maintain certain rights, and be no longer at the mercy and caprice of a landlord. In my opinion the Government are acting justly and in the interests of humanity in legislating for the benefit of a people very largely agricultural. Of course, certain provisions of the Bill are very distasteful to the zemindars, but the Government are considering and dealing with the interests of those who, from their situation, are dependant and helpless and at the mercy of the landlords, whose one aim is gain at the expense of tenants. The Government are not exceeding their authority in limiting the privileges of a rich and powerful, but small, class of landed proprietors, whose interests are also very fairly protected by the Bill.

One landlord's opinion respecting the Bill is, that it is one-sided and calculated to increase difficulties between landlords and their tenants. It is arbitrary and unjust, and the frequency of the expression "notwithstanding any contract to the contrary" shows a total disregard for engagements legally entered into and duly registered, the cancelling of which cannot fail to be disastrous in its effects upon zemindars. But I fear enquiry may disclose that the landlord, taking advantage of his power and influence and of the ignorance and helplessness of the ryot, has bound them under engagements largely beneficial to himself and probably injurious to the ryots. They are bound hand and foot by engagements unprofitable to themselves, and cannot cast off the yoke and improve their circumstances. The Government have a right to step in, and declare that such one-sided engagements shall no longer be recognized, but that the ryot shall have a fair field for his industry.

Such is my opinion. There is great need for legislation, if the ryot is to be emancipated from serfdom and to be allowed to take up a position as a free man, able to turn his industry to the best advantage to himself, to improve his holding, and secure a safe and permanent dwelling, without, in the first place, having to purchase the landlord's permission at a runious cost, so long as he acts legally and pays a fair rent. The Bill in its present form will, it seems to me, meet every requirement.

I append a report drafted by the Sub-Deputy Collector, showing the opinion of local Native landholders regarding certain portions of the Bill.

Draft Report by BABU NOGENDRA LAL MITTRA, *Sub-Deputy Collector.*

A public meeting was convened, and the opinion of the respectable inhabitants and pleaders of the sub-division was consulted, and they one and all consider that a slight modification in the Bill would be well for the interest of landlord and tenant, both classes alike.

It seems to me the points of the Bill which require particular consideration are the following:—

(1) Occupancy-ryot.

(2) Proposal for taking away from the hands of the landlord right to give consent to build, excavate tanks, fell trees upon his land, and while the landlord is thus deprived of his right, the tenant has been vested with the right to claim compensation for any improvement in case he be disturbed in his possession even for non-payment of rent.

(3) Proposal to give power to the occupancy-ryot to sell or sublet his right to anybody, without the consent of the landlord.

(4) Direct interference with private contract.

CHAPTER V.

Describes at length how occupancy right is acquired and what right an occupancy ryot can exercise under this Bill. The definition of an occupancy ryot is a broad one, so much so that an occupancy ryot can be classed with that of second grade landlord. This ryot under the Bill can build, excavate tanks, cut trees on his holding, and can sell, sublet, transfer, or mortgage his right without the consent of his landlord. Before anything is said on this class of ryot, I would moot the question who is an occupancy ryot. This class of ryot is not the actual cultivator of the soil, and the expenses and risk of cultivation are not his, but he would enjoy the privileges though. A sub-tenant faces all their risk and pays expenses of cultivation, borrowing money at a high rate of interest from his mohajany. As soon as the harvest season is over, these matans, landlords, and above all, or occupancy ryot, come in for their respective profits. Can a cultivator lay by anything after satisfying these three classes of payees. The Commissioners recognise occupancy ryots who are virtually no better than middlemen. The condition of the peasantry of Bengal has not been bettered, and unless these squatters or middlemen are removed, there is no chance of its getting bettered in future. Again, an occupancy ryot can sublet his holding. I consider a ryot ceases to be a ryot when he sublets his holding. These middlemen do not cultivate land or go to any risk whatever, but they acquire occupancy right by the mere fiat of the law. If the sub-letting be

recognized, the class of middlemen will increase, the condition of the actual cultivator of the soil remaining the same.

CHAPTER X.

Ryot from the time of the decennial settlement has been acting under the old usage of the country, *viz.*, building and excavating tank upon his holding with the permission of his landlord. The landlord in giving permission to the cultivable or arable land, thus converting into a homestead or bastoo one, does not lose. By the introduction of the change surely landlord will be a loser, and more so when he is to deal with a refractory ryot. By the provision of this chapter a proprietor suffers doubly,—1*stly*, being deprived of the right to give permission to the ryot for excavating tank, &c.; 2*ndly*, by being compelled to compensate a refractory ryot for the losses he may sustain by his own refractoriness.

CHAPTER V.

It has been already pointed out that, if the sub-letting system be allowed to go on, then the present occupancy ryot would be converted into middlemen ere long, and middlemen as a class are not actual cultivators of the soil. Now the tendency of the Bill is to give privileges to occupancy ryots, and probably Legislature has in view the bettering of the condition of the actual cultivator of the soil. But if the occupancy ryots convert themselves into middlemen, and the practical effect of the Bill be to better the condition of the middlemen only, then I beg to submit the object of the Bill will be sadly frustrated.

The right of transfer of occupancy right, if given unconditionally to the ryot, would probably move the same effect.

CHAPTER VI.

The next subject which requires notice is the proposal of vesting the revenue officers with the power of interfering with the private contracts between the landlords and tenants. I should think that the contemplated interference cannot have a beneficial effect. Private contracts have always been held sacred by law except in peculiar circumstances. A long-standing quarrel between a landlord and ryot may be put an end to by a private arrangement. And if the parties to a contract consider it beneficial to their actual interest, I think it is not necessary for Government to interfere and unsettle a thing settled by the parties themselves, who, I believe, would understand their interest better than any officer of Government.

Dated Porehattie, the 28th April 1883.

From—C. TWEEDIE, Esq.,

To—The Collector of Jessore.

Having been asked to give my opinion on the proposed Bengal Tenancy Bill, I have read it over carefully, and am struck with dismay at its contents: a more unjust and arbitrary Bill, and one calculated to widen the breach between landlords and their tenants, and gradually stamp out the former, could not well be drawn.

The injustice of the expression which runs throughout the Bill, "notwithstanding any contract to the contrary," is so great, that I cannot believe it will ever be sanctioned by any law-maker who gravely considers the matter—to do away with contracts (terms of tenure), and they are many, which have been legally made and duly registered, and which have greatly tended to calm down the differences which arose by the passing of Act X of 1859; will upset all that has been done during 24 years by those landlords who have given attention to the management of their estates, and will also so unsettle the minds of the tenants that the consequences are likely to be very disastrous.

If existing contracts are not upheld, it will tell particularly hard on European tenure-holders who have paid much attention to settling their estates, and I presume they are not included in the description given by the Government of India in paragraph 85 of their letter No. 6 of 21st March 1882. If they are included, I would recommend the Government to adopt the more open and fair policy of offering to give them compensation to quit the mofussil, making over their properties and factories to the Government, an experiment which could be easily carried out in the Presidency circle, where but few of the indigo-planter landholders remain, rather than gradually but surely stamp them out by the introduction of such a Bill as the Bengal Tenancy Bill with its arbitrary and retrospective clauses.

The framers of the Bill have evidently no knowledge of the people and requirements of the country; they have but one fixed object in view, the annihilation of the landlords.

There is nothing in the Bill which will facilitate the collection of rents, and very little that will really benefit the tenant class.

I annex some remarks upon the sections of the Bill, to which I beg to draw your attention.

Sections 5 and 7 to 13.—In this district there was a quantity of khamar land in every village, a deal of which has been absorbed or taken possession of by ryots, thereby making a ryot's holding larger than it was at the time of settlement when he was supposed to hold one bigah of matan land for Rs. 1-5-3. Would it not be better to define the ryots' holdings, charging them at the very old established rate of the pergunnah for each bigah they claim as belonging to their tenures, and the balance be considered khamar, or in other words, it is now impossible to define khamar without defining the ryots' tenures at the same time. I do not suppose that many landlords mind whether lands are khamar or ryoti, so long as they get

a fair rent for each bigah of land; but there is no doubt that all that a ryot was originally entitled to was one bigah for Rs. 1-5-3—anything he may hold which reduces his nirrick has been got by absorbing the landlord's khamar, except in cases of special pattah.

Sections 14 to 18.—Except under special pattah given by the landlords, no ryots had any right to hold at a cheaper rate than the pergunnah rate, and every ryot should be assessed at that rate who claims to hold at an unchanged rate from the permanent settlement, as such lands as he holds in excess have been absorbed from the landlord's khamar. The above is according to the special custom of the district, and would be understood by both landlords and ryots.

Section 22.—If a ryot was entitled to 5 bigahs at Rs. 1-5-3=Rs. 6-10-3, and has absorbed 10 bigahs of the landlord's khamar, total 15 bigahs, there seems to be no reason why his rent should not be brought up to Rs. 19-14-9 instead of double as proposed, viz., Rs. 13-4-6, which is in accordance with custom.

Section 24.—In a country where it is so difficult to ascertain the exact quantity of land held by a ryot, there seems to be no reason why enhancement should not take place as often as lands can be shewn to be held in excess of what was supposed.

Sections 38 to 42.—There seems to be little use in demanding security from the purchaser of a putni holding, as a ready remedy can be found to recover the rent due by an astum sale: and considering that a bonus of three to four years rental is usually paid for a putni, the security of the holding seems ample to meet the needs of the zemindars.

Section 45.—It seems to be unjust to give a man a right of permanent occupancy who has contracted with his landlord that he shall not acquire such a right; what would landlords and tenants in Scotland say to such a proposal where leases are usually of 19 years? Unjust.

Section 46.—If a ryot does not lose his status title a year after he has absconded, who is to pay the rent of the holding for that year?

Section 47.—This is a section rather unintelligible, especially the proviso; but it is evident that special contract is to be null and void.

Section 48.—This seems to be a useless section, as according to previous sections, a ryot is to acquire an occupancy right without its being granted to him.

Section 49.—This is what has taken place: the ryot has absorbed khamar land into his holding, but it was never supposed that he has acquired a right of occupancy in the excess lands, and he is generally too glad to pay for the excess lands at the pergunnah rate, and have them joined on to his holding when he is farmed out.

Section 50.—This section, to override contract, is unjust and quite contrary to custom. I held a house and land in England, and I was bound by my lease not to sublet, cut trees, nor break up pasture. Had I infringed any of the conditions of my lease, I presume an injunction would have been taken out to prevent me, and justly too.

Sections 51 to 57.—When a ryot has hitherto had no transferable right in his land except that given to him by an arbitrary law, which proposes to override all written contracts and old established customs, it is not likely that a landlord would care to avail himself of the right of pre-emption, and to find himself in the position described in section 56, by which he would have spent his money, and be in the same position as he was before.

Section 59.—It is unjust that a revenue or registering officer should interfere between two parties contracting, or arbitrate as to what should be, unasked. It is surely sufficient that the parties contracting are satisfied, and that the registering officer is satisfied as to the identity of the executant, and that he knows the terms of his contract.

Section 61.—This is decidedly unjust. It would be better to say that ryots are not competent to contract, and that no contracts would be binding unless made by a Government officer as the guardian of the ryot.

Section 72.—When Government officers, with an expensive staff, undertake to draw out tables, unpetitioned for, it seems hard that the occupancy ryots and the landlord should be called on to pay their salaries.

Section 74 (2).—It seems difficult to understand why a contract should be binding on a landlord and not on a tenant.

Section 76.—Double or any other proportion seems to be arbitrary. It would surely be more equitable that rent should be paid at a fair rate for each bigah acknowledged to be held, whether it should be an increase of quarter, double, or treble.

Section 78.—It is surely fair that a fresh suit for enhancement should lie whenever just cause arises, such as its being ascertained that more land is held by the ryot than what he is paying for, and which by collusion or mistake was wrongly measured; or, where four bigahs were reported to the landlord as within the ryot's holding, when there were actually six bigahs. In a country where corruption is so rife, ten years is a long time to wait to have an error rectified.

Section 79.—When a ryot is allowed to sow what crops he likes without consideration as to their being exhaustive or not, and uses no manure to replenish the land, and has bound himself by contract not to ask for a reduction, it is unjust that he should be able to go into court and claim a reduction when the land has become exhausted by his bad farming, and the landlord has been prevented by law from having any say as to the rotation of crops. Rotation of crops so as not to impoverish the soil, also a clause about manuring, are strictly looked to in all English leases.

Section 86.—This section is surely not in accordance with English law.

Section 98.—This section would come very hard on tenure-holders, many of whom are bound by contract to pay to their superiors by monthly instalments. Where is the money to

come from if not from the tenants from whom it has always been customary to collect by monthly, and many of whom are bound by special agreement to pay in such kists.

Section 125.—In this case it would be necessary for the court to serve a notice upon the landlord, intimating that a sale for a money decree had taken place to enable the landlord to make his claim for such arrear of rent as might be due to him.

Section 126.—Ryots are not in the habit of making improvements in this district. If one ryot wished to do so, he could not on account of his lands being mixed up with the lands of other ryots.

Section 140.—According to this section, the holding must be fallow for one year, and the rent lost.

Section 166.—Distraining produce of the holding through the medium of the court would be useless as regards facilitating the collection of arrears, and would only result in the crop being wasted. What is wanted is a summary procedure by which a decree may be obtained, and either the moveable or immoveable property of the defaulter sold without delay.

Section 193.—A short limit should be given as to the time within which the suit must be heard and finally disposed of.

Section 194.—The post office would need to increase its delivery establishment.

Section 198(b).—There being no appeal, is a bad principle. An appeal has a great effect in keeping an officer from taking an one-sided view, or being arbitrary in his judgments.

Sections 211 and 212.—A sale, subject to encumbrances, will never answer, and it will only cause the unnecessary delay of the time allowed for postponement.

Section 217 (3).—No suit should be entertained to set aside a sale, unless the arrear for which the sale took place with costs is first deposited in court.

Dated Hazrapore, the 10th May, 1883.

From—J. HARRY OATTS, Esq.,

To—The Collector of Jessore.

With reference to your memorandum of 14th ultimo, I have the honour of submitting my views on the Bengal Tenancy Bill.

I consider the Bill to be a most arbitrary, partial and unjust measure. It will sever all friendly ties between landlords and tenants, and lead to a state of things that must have disastrous results. There is nothing in it that will facilitate the collection of rents, and very little that will do any real good to the ryot. In fact, the Bill seems to have only one object, and that is, to stamp out landlords.

Sections 5 to 13, which relate to khamar and ryoti land, could not be applied to this district without great injustice to the landlords. If the Behar landlords make "persistent efforts" to increase the khamar (paragraph 19 of Statement of Objects and Reasons of the Bill), it is the Eastern Bengal ryot who makes persistent efforts to increase the ryoti by absorbing the khamar. Most of the tenures that are held at cheap rates have been formed in this way. Hence, it would be impossible to define the landlord's khamar without first defining the ryot's land.

Sections 14 to 18.—Because a ryot can shew that he has held his jumma at an unchanged rent for 20 years, or since the permanent settlement, it ought not to be presumed that the quantity of land has remained the same during these periods, unless he holds a pattah from the landlord. The fact is that, although he may have paid the same rent, he has considerably increased the quantity of land by absorption from the khamar. It would greatly benefit the mass of the ryots if permanent ryoti tenures were done away with altogether, and the rents payable by a village more uniformly distributed according to the quantity and quality of land held by each ryot.

Sections 45, 47, 50.—Concerning right of occupancy, contain a most unjust clause,—"notwithstanding any contract to the contrary." The remarks of the Government of India in paragraph 85 of their letter No. 6 of the 21st March 1882, certainly do not apply to this part of the country where the ryot is quite able to look after himself, and make his own terms with his landlord; and it is most unjust to do away with contracts that have been legally made. (The power of the tenants of Eastern Bengal over their landlords, I see, is acknowledged in paragraph 4 of the Statement of Objects and Reasons of the Bill.) Section 50 confers such wholesale rights and privileges on the ryot, that it is a mockery to make use of the expression "landlord;" "rent-collector" would be much more correct.

Sections 59 and 61.—It is decidedly unjust to allow a revenue officer to interfere between a landlord and his tenant, especially when both parties are satisfied.

Section 72.—It is also very unfair, in section 72, to charge either the landlord or the ryot with the cost of preparing tables of rates when such tables are unasked for.

Section 14(2).—It seems very unfair that contracts should be binding on a landlord and not on a ryot.

Section 79.—If a ryot can do what he likes, and exhausts the soil by always sowing the same crops on it, and does nothing to improve it, it is very hard that the ryot should have the power to apply for a reduction of rent "notwithstanding any contract to the contrary."

Section 98.—If rents are collectable from ryots "*not more*" than four times in the year, and may be not so often, how are tenure-holders to pay rents to their superiors to whom they are bound by contract to pay more frequently; in many cases once a month?

Section 140—Seems to provide that a ryot's holding must lie fallow for one year, and the rent lost before the landlord can do anything. This seems difficult to understand.

Section 198.—Appeals ought not to be abolished. They prevent officers from being one-sided and arbitrary in their decisions.

Dated Sindooree, the 10th May, 1883.

From—W. Shirreff, Esq.,

To—The Collector of Jessore.

I have the honor to acknowledge receipt of your communication No. 78 of the 14th ultimo, requesting me to give you my opinion on the proposed Bengal Tenancy Bill. I have gone over the proposed Bill as published in the *Calcutta Gazette* of the 7th March last, and I must say that a more one-sided measure I never saw.

The one great grievance that the landlords had to complain of was the delay and difficulty there is in realizing rents through the courts when such a course has to be adopted; but I do not see that the new Bill gives any particular facilities in that way, and leaves the landlords just as badly off as they were before in that respect. It takes away to a very great extent the rights and privileges of the landlords as hitherto possessed by them, and leaves them mere rent-collectors for the Government, while their responsibility for paying up the Government revenue remains as heretofore.

It seems to me to be a most complicated Act, and that there will be considerable difficulty in working it. I believe it will unsettle the minds of the agrarian population of Bengal, and lead to an immense amount of fresh litigation; and though it seeks to benefit the ryots at the expense of the landlords, yet the real people it will benefit will be the vakeels, mooktears, and hangers-on about the Moonsiff's courts, while the ryots will impoverish themselves by litigation, and a bad feeling will be established between them and their landlords, which will go far to nullify any advantages which it is sought to give them by this new measure.

I have to apologize for not having replied to your communication sooner, but press of business at this the sowing time has prevented me doing so sooner.

Dated Narail, the 12th May, 1883

From—Moulvie Syed Moazzim Hossain, Khan Bahadur, Judge of the Court of Small Causes, at Narail,

To—The Collector of Jessore.

In acknowledging with thanks your kind letter of the 14th ultimo, I have the honor to state that I had not the remotest idea that I should ever be called upon to give my humble opinion on so important a law regulating the relations between the proprietors of land, subordinate holders of land, and the vast mass of the peasantry, and in which the best talents of the land and the ablest officers of the Government, who have given the subect their most devoted attention, have been engaged in elaborating and introducing the Bill under consideration.

The shortness of the time allowed for the submission of the report precludes the possibility of being able to deal with so vast and important a subject with any appreciable approach to completeness. I shall, however, try to the best of my humble abilities to notice some of the most important points on the subject. At the outset, I must say that, having due regard to all the surrounding circumstances, I fail to see at the present time any urgent necessity for recasting the whole Rent Law which is working so well, instead of only making some amendments useful to both landlords and tenants. The introduction of the present Bill, purporting to make so many novel and radical alterations in the existing law between landlord and tenant, affecting a population of over sixty millions, would be, on one hand, a direct invasion of the rights of the zemindars, and on the other, seriously detrimental to the true interests of the actual cultivators. It is an admitted fact that nothing is more injurious to a person than to go to litigation, which is often ruinous to both parties. The proposed law has so many outlets to litigation, that every ryot will be under the necessity of having recourse to law suits, and observe so many technical formalities for the maintenance and transfer of his rights. He will have to dance attendance before several officers besides the Civil Court, and thereby waste his precious time and hard-earned money which he could have more advantageously employed in the cultivation and improvement of his land which would not only be profitable to himself, but also beneficial to others.

In my humble opinion, the ryots have not yet attained such a stage of advancement as would enable them to reap the benefits and advantages which the framers of the Bill have in view for them. With a hazy and undefined exaggeration of their rights and privileges they would rush into law courts, and get involved in endless litigation to their own ruin and to that of their landlords, but much to the benefit and satisfaction of petty-fogging touters and unscrupulous money-lenders, who at first tempt and draw them into the intricacies of law, and not leave them till they have wheedled them out of their last pie.

I beg to observe that there are many provisions in the Bill which I fully approve, while there are others, which, I am sorry to say, are not only uncalled for, but positively injurious to the interest of all classes.

The Bengal zemindars asked for a simpler procedure for the realization and enhancement of rent. But the present Bill does not give them greater facilities for the purpose than what

they already possess. They do not want more than the share of produce which in 1793 the Government assigned to them. Such cumbrous and expensive mode of enhancement and settlement of rate of rent, value of produce, and restriction of money rent to one-fifth of the produce, are quite uncalled for, and will ultimately prove injurious to both the landholders and tenants.

It will appear from a reference to old records that, formerly there were neither too many evictions nor enhancements. It is the law which opens the door to litigation for both tenants and landlords, and teaches them to try a variety of means to gain their selfish ends. It must be borne in mind that, as a rule, landowners generally are attached to their tenants, and try to secure their goodwill, and live on friendly terms with them. Naturally, they do not, and cannot, like to turn them out of their holdings, for it is an old proverbial saying of the great poet Sadi which may be rendered into—"The tenant is the root of the tree, and the landlord the trunk." If they ever disagree, it is owing to the conduct of objectionable ryots. It appears that the under-mentioned number of evictions and enhancements took place under the orders of a Moonsiff's court, having jurisdiction over an area with a population of 328,231; average enhancement=14, and evictions=6; total 20—a very small number for so large a population.

Having regard to this circumstance, I do not think it desirable for the Government to enact a law, the inevitable effect of which would be to upset the old-established relations between landlords and tenants, respected by the usages and customs of the country and courts of law, and thereby shake the confidence of the people in the acts of the Government, and put the entire population of the country in arms against one another. They are now passing their days happily in peace and quiet, but the effect of the contemplated legislation would be to involve them in chronic and ruinous litigation.

It is, no doubt, the duty of Government to extend beniguant protection to all classes of its subjects, but the giving of a right of occupancy to a ryot who never had it before would, instead of improving his condition, rather make it worse by tempting him to run recklessly into debts by mortgaging his occupancy rights. It can easily be proved from enquiries that, of the several classes of ryots, those who cultivate the land appertaining to the village in which they may have resided from a long time, or from generations to generations, naturally have an attachment to such land, and feel anxious for its improvement and prosperity; on the other hand, the case is quite different with ryots who come merely to cultivate the lands, but reside in another village. They are nothing more or less than mere speculators, and, as such, they do not feel that interest in, and that attachment to, the land as are felt by the ryots of the former class.

If the right of occupancy be conferred on the latter class or non-resident ryots, the result would be that, without any hesitation, they would mortgage or transfer absolutely their rights and interests to any one, or make *benami* transactions, and thereby prove a source of great trouble and annoyance not only to the zemindar, but also to old resident ryots. I regret to find that the Bill encroaches on the freedom of contract, completion, and established usages which have been respected by all classes in all countries and in all ages.

The right of pre-emption may be considered by some as a compensation for the creation of transferability of occupancy rights, and as a guard against the introduction of objectionable tenants; but as a matter of fact, this right of pre-emption will practically be of little use, considering the large outlay which the landowner will have to make in the shape of purchase-money, &c., without any hope of an adequate return.

Most landowners in these days can hardly realize even as much as is necessary for payment of Government revenue and cesses; so they have no means to make purchases of interests of occupancy ryots; consequently, the introduction of objectionable ryots and interference of rival landowners and speculators, to the great annoyance of both the zemindars and the settled ryots of the village, are inevitable.

As regards the ryot himself, the formalities of law he shall have to go through to effect a transfer of a small holding in time of urgent need will put him to so much botheration, that his very object in making the transfer will be frustrated, and he will be obliged to incur unnecessary expenses, and suffer a great deal of trouble in the bargain.

It appears to me very hard that in cases of enhancement of rent, although the landlord may conform to all the rules prescribed by the proposed law, yet he must suffer, but for no fault of his own. Even if the grounds of enhancement of rent be fair and reasonable, but the ryot does not agree to pay the enhanced rent, and the landlord has to sue for ejectment, and gets a decree for it, yet he will have to pay compensation for improvement and a further compensation for disturbance before he can actually eject the tenant, or in other words, the landlord will not be able to gain the benefits of the decree until he deposits in court such sum as compensation for improvements and a further sum as compensation for disturbance equal to ten times the yearly increase of rent, which is indeed excessive and unjust. Here it is the tenant, who fails to comply with the provisions of the law, becomes the gainer; while the landlord is the loser. The landlord has to pay as compensation an amount to the outgoing tenant which he can seldom expect to realize from the new tenant. Suppose the old ryot agreed to pay the enhanced rent demanded, and was allowed to retain his holding, even in that case the landlord could not be sure of realizing from him by way of rent as much as he has to pay as compensation.

CHAPTER II.

Section 6.—The provisions of this section appear to be unreasonable and unjust. Every zemindar should be looked upon as proprietor of his lands, and as such he should be allow-

ed to keep as much lands for his own private use as he requires; but the provisions of this section divest him of that power, and confer on the ryot a title which he never possessed nor demanded. Evidently this section means to convert a ryot into a proprietor.

CHAPTER IV.

Section 41.—An appeal ought to lie from an order under this section.

I should think a provision ought to be made for relinquishment of putni tenures; cases may arise in which the patnidar may not be able to realize even as much rent as he has to pay to the zemindar who may not choose to bring the putni tenure to sale, but insist on attachment and sale of his moveable and other immoveable property, and even apply for arrest of his person.

CHAPTER V.

Sections 45 and 47.—The provisions of these sections are exceedingly objectionable, because a ryot may hold one bigah of land in a village or estate for 11 years, and take 99 more in the twelfth year, and yet he will, at the end of the twelfth year, acquire a right of occupancy in all the 100 bigahs.

Section 49.—This section also is very objectionable. Under section 13, Chapter II, no khamar lands in a certain local area other than that for which a register has been prepared shall become khamar lands, while this section provides accrual of right of occupancy in khamar lands. So the zemindar will suffer double loss: on one hand he is deprived of the right of retaining as much land as he requires for his own use, and on the other, the land which will be recorded as his khamar land will go to the ryot's hands for ever, so that, if a zemindar requires to extend his family residence, make a garden or a new house, he will be at the mercy of his own tenant.

Section 51.—The time of one month given by this section ought to run from the date of service of notice and not from that of filing the same.

Section 56.—The acquisition of right of occupancy by a tenant immediately on his taking from the landlord a jote wherein the former tenant had a right of occupancy is indeed very objectionable. This section does away with the general period of 12 years required for the acquisition of occupancy right.

CHAPTER VI.

Section 59—This section limits the enhancement to a six annas per rupe, or one-fifth of the estimated average annual value of the gross produce.

No restraint should be put on the freedom of contracts. When contracts entered into by people in other matters are respected by courts of law and sanctioned by the established usages of the country, there is no reason whatever why contracts between proprietors of lands and tenants should be respected only when it binds the zemindar (Section 74 sub-section 2).

Section 62.—Settlements of rate of rents, produce, or value might well be left for determination by Civil Courts.

The procedure as to settlement of rate of rent, &c., is indeed a very cumbrous one, and will cost trouble and expense to both landlords and tenants which the Legislature wants to avoid.

Section 73.—No provision is made if the change in, or in regard to, the land is effected solely by the agency or at the expense of the landlord or his predecessor in interest.

Section 74.—It is strange that the landlord should be bound by his contract not to enhance the rent of a tenant, while the ryot is either not bound by his contract, or bound partially only.

Section 82.—The provisions of this section are hard upon landlord who let the land originally on the understanding that he would always get a certain share of the actual gross produce, instead of which, if the money rent contemplated by this section be less than the value of his (landlord's) share of the produce, he becomes a loser for nothing; in fact by commutation of rent in kind into money rent the ryot has to untertake no further risk of cultivation; hence, in fixing money rent, no deduction should be made by the court from the average value of the landlord's share of gross produce, in consideration of the risk of cultivation being taken by the ryot, for the entire risk of cultivation already lies on him under the customary rules of payment in kind, except in rare cases of contract in which the ryot undertakes to meet the landlord's demand, notwithstanding his failure to raise or gather crop on account of drought or inundation, &c.

CHAPTER VII.

The provision of a settled ryot acquiring permanent right in bastu land not included in an occupancy holding, and not losing that right, notwithstanding that he has ceased to be a settled ryot of a particular village or estate to which the bastu land appertains, is extremely hard upon the landlord, and the provision regarding compensation to be awarded to the tenant in cases of ejectment for wilful breach of conditions of written contract is more so. No provision is made as to how long the zemindar is to wait before he can make arrangements about the land left by the absconding ryot.

CHAPTER VIII.

The grounds on which an ordinary ryot may be ejected are so stringent that no landlord can expect to eject a tenant at all; he would never like to pay any compensation for improvements, and a further compensation for disturbance as provided by Section 93.

CHAPTER IX.

The provisions as to fixing instalments in which money rent is payable, and the rules as to receipts and accounts to be given to tenants, and keeping counterparts, &c., are very wholesome improvements upon the old law. I should think a certain fee should be paid to the landlord for the statement of account to be given to the tenant as provided by Section 101, as every landlord having a large property shall have to increase his working staff to meet the ryots' demand under that section, particularly when under clause 2 of Section 102 the landlord shall have to pay penalty for neglect of, and non-compliance with, the provisions of Section 101.

Section 103.—I should think the old rule of tender to the landlord should be retained. The phrase "has reason to believe" is too wide, and every ryot will at random, and at the instigation of suit-mongers and pettyfoggers, take advantage of this section, and never go to his landlord for payment of rent. Section 110 remedies the evil apprehended in clause *a*, Section 103. The zemindar will, as a rule, have to wait for deposits to be made, and in some cases for years together pending the decision of Civil Courts under Section 106, before he can realize even as much as is payable by him as Government revenue; and the result will be that he will be improverished, and his zemindaris will ere long be put up to sale for arrears of Government revenue. I should add that the officers receiving deposits should, in case of deposits made under clauses *b* and *c* of section 103, cause a notice of the receipt of the deposits to be affixed on the tehsil kutchery or where rent is usually paid, and on a conspicuous place in the property; for otherwise it will not be possible for any small shareholder and petty landlord, whose circumstances may not allow them to engage a mooktear solely for the purpose of attending the office of the officers receiving deposits of rents, to get information if deposits have been made, or until the expiration of several months after deposit.

The provisions of appointment of commission for dividing and estimating crops may be made solely applicable to Behar cases. Cases of rent paid by division of the produce are rare in Lower Bengal, and are known as the burga bhag system. In Lower Bengal, the standing rules for suing out the landlord's share as now ought to be left as they are, as the introduction of the rules of division of produce by commission is a mere addition to a lawsuit.

CHAPTER X.

Would work well with certain amendments as suggested below.

The provision to award compensation to ryots for improvements made for their own benefit, and without the landlord's permission, is objectionable. If after certain improvements made by a ryot he is evicted from his holding for his own laches, or relinquishes it of his own accord, or absconds, the tenure is let to another. It may be that the new tenant may find that the improvements by digging a tank or sinking a well, &c., in agricultural land made by former tenant are rather detrimental to his interest, so this new tenant may demand reduction of rents on that ground. As such I should think that no ryot should be allowed any compensation for any improvement made without the landowner's permission.

Section 132.—Should be altogether omitted; people should be left free to enter into any sort of contract they like.

The provisions regarding common management of land are an improvement upon the old law. These provisions will greatly tend to preserve public peace which is often broken by riots, &c., among co-owners, and help the weaker shareholders who are often thrown into a disadvantageous position as regards collection of rents, &c., because of obstructions put in their way by powerful shareholders who often instigate the ryots to withhold payments of rents to the weaker shareholders.

CHAPTERS XI, XII, XIII, AND XIV

would again give rise to unnecessary litigation. The points mentioned in those chapters may be heard and determined in other suits allowed by law, if raised by any party.

CHAPTER XI.

Section 51 (3).—A notice should also be published by beat of drum, and affixed on a conspicuous spot in the property, and another on the tahsil kutchery or where rent is usually paid; for generally the ryots and even the landlords do not get, or have the opportunity to read, the official Gazette.

Section 157.—The time for filing objection should be limited to one month from the date of publication of the jummabundi on the spot, and not from that of its publication in the Gazette.

CHAPTER XIII.

The provisions as to distraint no way facilitate collection of rent, and are not an improvement upon the existing law for realizing rent by a law-suit. The procedure enjoined as to distraint is very cumbrous and expensive to both the tenants and the landowners. In cases of small arrears realizations will scarcely cover the costs, and the result will be that while the tenant will suffer, the landowner will fail to recover the arrears. The distraining officer should, under the rules, be above the rank of a peon.

CHAPTER XIV.

Section 199 (1).—The provisions of this section are an improvement on the old law.

Section 214, clause 3.—The notice should be served by the court of a Moonsiff having jurisdiction in respect of the lands to which the encumbrance relates, as the Moonsiff's court is

always nearer than the Collector's office. It is not clear whether the party affected by the service of notice under clause 3 of the section should have a further remedy in the civil court.

In conclusion, I beg to reiterate with regret that I have not been able to discuss this important subject as fully as it deserves, on account of want of leisure from heavy office work, and to avoid delay in the submission of my report. I have therefore touched briefly upon only a few important and salient points of the Bill.

No. 360, dated Naldanga Rajbati, the 12th May 1883.

From—BABU PRAMATHA BHUSANA DEVA RAYA,

To—The Collector of Jessore.

With reference to your memorandum No. 78G., dated 14th April, I have the honour to submit herewith my opinion on the Bengal Tenancy Bill in the form of a note. I have tried to discuss the variout important issues raised therein in a fair and impartial manner.

Note on the Bengal Tenancy Bill of 1883.

CHAPTER I.

1. *Section 3 (3) (4) (5).*—In classifying tenants, an important section of the community has been left out of consideration, and their existence virtually ignored. All over Bengal, there are jotedars (sometimes called gantidars) who are neither ryots, as defined in section 3 (5), nor tenure-holders as defined in section 14. Legislation in matters like this should, in my humble opinion, be constructive and preservative, recognizing the existing elements of the social economy, devising means for their development and prosperity, and eliminating whatever there may be to retard their harmony and growth. But the destructive tendency of legislation in ignoring the existence of tenure-holders generally since 1859 has revolutionized the Bengal society by bringing ruin and poverty upon a very important class of the community, the jotedars.

2. The Rent Law Commission perceived the anomaly of Act X of 1859 in this respect (*vide* their report, paragraphs 13—22), and the pernicious effect it has produced upon the social economy of Bengal is too well known to everyone who has the faintest knowledge of rural Bengal.

3. The present Bill has recognized tenants holding at fixed rents from the time of the permanent settlement; but besides these mokurrardars there is a class of tenure-holders (whose number far outweighs the number of mokurrardars in a given district), who are not ryots within the definition of section 3 (5) of the Bill; neither do they hold land for the purposes of agriculture, horticulture, or pasture, nor did they or their predecessors in interest come into possession of it for such purposes. Whatever their origin, it is pretty well certain that an overwhelming majority of tenure-holders is of this category, and that they constitute an important section of the true aristocracy of this country. To level them down to the status of ryots, and thereby subject them to the payment of enhanced rent at the same rate as provided for ryots, is to sweep them clean from the rural economy of the land. One of the pernicious effects of Act X of 1859 was the ruin of many a family holding tenures of this description. But future legislation, being cognizant of the fact, should carefully guard against committing the same error over again; for the non-recognition of such an important section of the community is neither conducive to the ultimate welfare of the zemindar, nor expedient upon political considerations.

4. This class of jotedars, as it at prerent exists, consists—

(*a*) Of families of the higher strata of society, owning holdings of various dimensions of, say, from 50 bighas to 5,000 bighas, but not at fixed rents, with under-ryots on the holdings previous to their creation.

(*b*) Of families of the lower strata of society, who, for service rendered, or consideration paid, received grants from the zemindar of considerable tracts of land with under-ryots on the holdings previous to their creation. These have advanced a few steps above their original social position.

(*c*) Of families of actual cultivators of land, who, by subletting, have gradually evolved themselves into the status of middlemen. Their social position is yet uncertain, but in the process of social evolution they will in time rise higher up.

5. Now, the difficulty of discovering "any principle of distinction between ryots and tenure-holders, or undertenure-holders, which will hold good universally," should not be the reason why their existence should be ignored in the statute book of the country. Some arbitrary rule should be adopted, and the class of tenants of this description differentiated from the class defined in the Bill as "ryot." To this end the following suggestions are most humbly made:—

Section 3 (3).—For "tenure" write "tenure of the first degree," and provide to the following effect:—

"Tenure of the second decree means a tenure of more than 50 bighas of land not held at fixed rent from the time of the permanent settlement, the holder of which does not derive his profit from the produce of the soil, but from undertenants paying him rent in money, or

the commencement of this Act, has continuously held as a ryot, ryoti land situate in that village shall, notwithstanding the land so held by him at different times during that period may have been different, be deemed to have become, on the expiration of that period, a settled ryot of that village ; or (2) in the case of a non-resident ryot, every such ryot who shall have held land in a village in which he is not permanently domiciled for a period of 12 years shall have a right of occupancy in the land so held by him. This, I humbly believe, would reconcile matters by reconciling traditional custom of the country with the dictum of the law of 1859, which for a quarter of century has been the custom in vogue.

15. *Section 47.*—Should be amended according to the above suggestions.

***Section 50 (e).*—The following amendment is suggested with reference to paragraph 4 of this note : " He may sublet not more than a fourth part of his holding."**

16. *Section* 59.—I seriously protest against any interference with free and voluntary dealing. Land, like everything else, has a market value, depending upon demand and necessity, and it is feared that the Government, in its paternal solicitude for the welfare of the ryots, may unnecessarily impose a hardship upon the zemindar who is the most loyal and devoted vassal of her Imperial majesty. The registering officer is only concerned to see whether the ryot is entering into the contract as a free agent ; and if he is satisfied that it is so, he should not have the power to inquire into the matters stated in sub-section 2. What objection can there be to the ryot's voluntary agreement to pay to his landlord what he thinks he can bear to part with? The same issue is joined to Section 61 (2).

17. *Sections 59 (2), 61 (2), 64, 75 (d).*—And other sections fixing the limit of money rent payable by settled ryot. This appears to be an infringement of the principle upon which the permanent settlement was made with the zemindar, and its consequence would be ruinous to him. By the permanent settlement, the Government's share of the gross produce was made over to the zeminder (*vide* preamble of Regulation XIX of 1793, and Justice Campbell's remarks in the Great Rent Case, B. L. R. Suppl., vol. 251). Both under the Hindu and the Mahomedan Governments, the cultivator's share of the produce was one-half of the gross produce. When latterly the Mahomedan Government preferred taking one-fourth, it was simply because the State wanted to save itself from the trouble and inconvenience of taking rent in kind. Now, the Government having transferred to the zemindar the right to a certain proportion of the produce of every bigah held by the ryot, and that proportion being half, both under the Hindu and the Mahomedan rule, it is inexplicable how the State can now depart from this principle, established by custom during centuries and ages?

18. By the permanent settlement, the zemindars were rack-rented. "We have seen," says Mr. Westland in his report on the district of Jessore, page 98, " one of the great zemindar families of the district lose all their estates, one after another, through no fault of their own, but from causes *directly referable to the action of Government!* Firstly, the assessment fixed at the permanent settlement was too high, &c." Again : " when the British came, they began by increasing the revenue by the 1772 assessment, and while they made the zemindar more than ever dependent for his revenue upon the excessive exercise of his power, they set it before them as one of the objects of their administration to limit and control that very exercise of power on which the zemindar had to depend" (page 84). The consolidation of cesses; police, chowkidari, poolbundi, and similar other expenses; canoongoes' allowances, zemindari pension, &c., &c., with the revenue brought the revenue practically to more than half the value of the gross produce which the State was entitled to receive. Hence all the old zemindars, notably the ancient house I have the honour to represent, were impoverished and ruined. If this was the condition which the zemindars had been reduced to in 1793 from causes "directly referable to the Government," the effect of fixing the limit of money rent by one-fifth of the estimated average annual value of the gross produce of the land would be equally, if not more, disastrous. I therefore propose that instead of one-fifth, three-eighth of estimated average annual value of the gross produce should be the zemindar's share in money rent.

19. With reference to enhancement of rent of tenures of the second degree proposed in paragraph 5 of this note, I beg to suggest that the rent of such tenures should be liable to be enhanced upon the same grounds and under the same procedure as the rent of occupancy holdings, with this exception, that a tenure-holder of this class shall be entitled to a profit not more than 15 per cent. and not less than 5 per cent. of the balance which remains after deducting from the gross rents payable to him the expense of collecting those rents, and where he has any portion of his holding in his own cultivation, the rent of such lands should be calculated for the purpose of assessment with reference to the table of rates then prevailing.

20. *Section 76.*—Such a circumscription does not seem to be at all necessary in the face of definite rules whereby the zemindar would not be allowed to get more than a fixed proportion of the gross produce in kind or money. On the other hand, it would be an injustice done to the zemindar in cases in which occupancy ryots pay him a nominal rent.

CHAPTER VIII.

21. With regard to the settlement of rent between the ordinary ryot and his landlord, Legislature should leave them quite unhampered by any rule or law. Restrictions such as are proposed in Section 119, specially with reference to the rent of this class of ryots, are, in my humble opinion, productive of infinite mischief, both to the landlord and to the tenant, for the benefit of which latter class the Government are so very solicitous. The zemindar to whom,

by the permanent settlement, the Government surrendered, among other things, "the right to profit by future increase of cultivation, and the cultivation of more valuable articles of produce," should not now be bound hand and foot to exercise that right in a way prejudicial to his interest. Further injustice seems to have been done to the landlord by providing in section 93 (2) (7) that the landlord shall be bound to pay to the ryot whom he wishes to eject a compensation for disturbance equal to ten times the yearly increase demanded. This, in other words, implies that the landlord will have to purchase *by full consideration* the benefit which he has the right to get. It is not clear why an *unsettled* ryot should get so large a compensation for disturbance which affects him very little. If he loses a holding here by refusing to pay what his landlord demands, he has a sure chance of getting a holding there. If the ryot is entitled to any compensation for being compelled to surrender against his will, the landlord must also be entitled to similar compensation when the ryot relinquishes his holding without the landlord's consent. But Sections 139 and 140 give no such benefit to the landlord. If the ryot suffers in the one case, the zemindar, too, suffers in the other; for, in a majority of cases, it does no frequently happen that the vacancy made by a ryot is filled up at once.

22. *Sections 97—99.*—"Much of the harassment, to which the ryots are subjected, is said to arise from the number of instalments in which the rents are payable, and to remedy this, the Board is empowered *** to fix the instalments ****." But in point of fact the number of instalments prevalent in each pergunnah from time immemorial has direct reference to the reaping times in the year, as will appear from the following table taken from Mr. J. Westland's report on the district of Jessore, Appendix B (agricultural statistics):—

	Rice crop			Date sugar.	Cocoanut.	Arecanut.	Mustard.	Musuri.	Kalai.	Barley.	Til.	Red pepper.	Fruit trees	Indigo.	Sugarcane.	Turmeric.	Jute.
	Aman.	Aus.	Boro														
Reaping time.	November, December, January.	August, September.	March, April	November to February.	Rainy season.	.....	February, March.	February, March.	February, March.	February, March.	November, July.	November, December.	.....	June to August.	December.	February.	August.

23. During ten months of the year, the ryot reaps his harvest in the field. There are some parts of the district, no doubt, where the winter crop is scantily grown, but then they have varieties of rice crop to do with for at least seven months of the year. Instalments have accordingly been fixed by tacit mutual agreement from time out of memory. Far from being a source of harassment to the ryot, it is a source of great relief to him, inasmuch as under the customary system of instalments he has to pay a certain portion of his yearly rent whenever he gets some produce. Had not this been the case, the ryot ignorant, improvident, and careless, would squander away his money, and when a heavy *kist* would come in, would hardly be able to meet it from his present savings. Instead of being salutary to the ryot, the proposed adridgement of all existing *kists* into four would, it is apprehended, be a fruitful source of his ruin. On the other hand, the zemindar's ruin would be inevitable. Bound by an inexorable law to pay the Government due punctually in four *kists*; having the arduous duty to collect his rent, rupee by rupee, from individual ryots; having no power to compel the ryot to pay; obliged to pay a heavy stamp duty for seeking relief in the civil courts, whose dilatoriness is proverbial, the zemindar's position is really very precarious. If in the face of all these difficulties, an insuperable obstacle (such as has been proposed in these sections) is thrown in the way of his realizing rent at harvest times, the fate of the zemindar would be sealed for ever. Let the Government give him the same facility to recover rent from his tenants as they (the Government) have in recovering their revenue from the zemindar, and the zemindar would not raise his voice against the proposal. Why throw everything *topsy turvy*; why subvert customs sanctified by time and agreed to by the ryot? It would be pernicious both to the ryot and the zemindar if Legislature interfered with custom and contracts not repugnant to custom in the matter of instalments of rent, and other matter as well.

24. *Section 102.*—The forms of receipt and statement of account provided in Sections 100 and 101 being very elaborate, it will be necessary for the zemindar to maintain extra establishment for keeping them. And as these are intended solely for the benefit of the tenant, it is but reasonable that he should pay some fees, if not for the receipt, at any rate for the statement of account which the zemindar is not bound in equity to deliver *gratis*.

25. In conclusion, I beg to suggest, that the provisions of Chapter III—D (of the registration of transfers, &c., be made applicable to occupancy holdings and tenures of the second decree. The Legislature fears that it would be a matter of great difficulty to bring

home to persons of the ryot class the details of "such a system." But I beg most humbly to point out that the system is not at all new, and that the ryots are used to it in this country from time immemorial. The prevalent custom is that a transfer of a tenure or holding of whatever class (save non-transferable holdings) pays a certain fee to the landlord, whereupon the landlord registers his name. This being the long established custom, the Legislature should not, I humbly submit, put a stop to it upon technical or sentimental grounds. The landlord must always know who is the person from whom he is to receive rent; otherwise his collections would come to a dead-lock. In this view I am supported by the Rent Commission (*vide* paragraphs 116 to 121 of their report).

Dated the 28th May 1883.

From—BABU SHYAMADHABA ROY, Deputy Collector,

To—The Collector of Jessore.

I have the honour to submit the following report on the *Bengal Tenancy Bill.*

1. In discussing the provisions of this Bill, there are, in my opinion, three things to be taken into consideration:—

(a) Whether there is any necessity of changing the existing Rent Law (Act X of 1859).

(b) Whether the provisions of the new Bill in any way infringe the Regulation of 1793.

(c) Whether the present Bill is based on equitable principles both as regards the ryot and the zemindar.

2. I do not think there can be any doubt that Act X of 1859, as a whole, has failed to give satisfaction either to the zemindar or to the ryot, and this dissatisfaction was felt at an early period. I find that within three or four years of the passing of the Rent Law, Sir Barnes Peacock suggested its amendment. In later years also, successive Lieutenant-Governors, as well as the Rent Commission, advocated a change in the law. Even the zemindars' champion, Babu Kristo Dass Pal, C.S.I. (Hon'ble), on the occasion of the agrarian disturbances at Pubna in 1876 (?), complained of the indefiniteness of the principles of the Rent Law, and in the course of the debate on the Bill at the last session of the Legislative Council, he did not deny that some fresh legislation on the subject was necessary. Without enlarging any further on this subject, it may be summed up that the cry for a change in the law came from two quarters. The zemindars wanted to have greater facilities for the enhancement and recovery of rent, and the ryots desired to attain "the three Fs," to quote Major Baring, *viz.*, fixity of tenure, fair rent, and free sale. In order to redress these grievances as far as possible that the present Bill is framed.

3. As regards the second point, I am humbly of opinion that the Bill is in no way an infraction of the vested rights of the zemindars, and does not involve a breach of the contract made in 1793 between Lord Cornwallis and the zemindars. I have not been able to read all the literature on this subject, but I think a reference to the Regulation of 1793 itself will be quite enough to show most conclusively, even to the most superficial reader, that the imputation of breach of faith is utterly groundless. The text of Regulation I of 1793 (clause 1, Section 8) reserves to Government full powers to interfere "for the protection and welfare of the dependent talookdars, ryots, and other cultivators of the soil." This is also fully supported by other contemporaneous official literature on the subject. The Court of Directors, writing to Lord Cornwallis in 1792, mentions, amongst other things, that "we wish to have it distinctly understood that while we confirm to the landholders the possession of the districts which they now hold and subject only to the revenue now settled, and while we disclaim any interference with respect to the situation of the ryots or the sums paid by them, with any view of an addition of revenue to ourselves, we expressly reserve the right which belongs to us as sovereigns of *interposing our authority in making from time to time all such regulations as may be necessary to prevent the ryots from being improperly disturbed in their possession or loaded with unwarrantable exactions.*" Then, again, later on, the Court of Directors expressed themselves as follows on the subject:—"In order to leave no room for our intentions being at any time misunderstood, we direct you to be accurate in the terms in which our determination is announced * * * You will in a particular manner be cautious so to express yourselves as to leave no ambiguity, as to our right to interfere from time to time, as it may be necessary, for the protection of the ryots and subordinate landholders, it being our intention, in the whole of this measure, effectually to limit our own demands, but not to depart from our inherent right as sovereigns of being the guardians and protectors of every class of persons living under our Government." On the face of these emphatic declarations, it is absurd to deny that power to legislate, whenever it was necessary to define the relations between the zemindars and the ryots was expressly reserved at the time the permanent settlement was made.

4. I now come to the third and the last point. It is necessary to refer all the sections of the new Bill, as most of them are the same as those in Act X of 1859. I shall therefore confine myself to the salient points regarding some of the sections which have been newly introduced into the present Rent Bill. Most of them are very important, and deserve the most serious consideration at the hands of those who are interested in the welfare of the ryots. I shall commence with Chapter II of the Bill, as Chapter I merely contains preliminary matters. In Chapter II, as far as I can see, the only section which is important is Section 6. The object of this section is to prevent zemindars from "getting

into their own hands as large an amount of ryoti land as possible and convert it into khamar land." To meet the exceptional case of Behar, where there is an unusually large quantity of *khamar* or *zeraat* land, provisions have been made in the Bill (Sections 7 to 13) for making a complete survey and record of the existing khamar land. This will remove the possibility of all future disputes regarding the matter.

5. The next chapter (Chapter III) deals with tenure-holders generally, and the changes introduced do not seem to be important. Chapter IV refers to putni tenure. The law regarding these tenures has been left substantially unchanged. I therefore at once pass over to Chapter V. This is a very important chapter, as it deals with the question of the acquisition of the occupancy right and of the general incidents of that right. The zemindars and their friends have protested most vehemently against the sections in this chapter. Without going into the more complicated portion of the question regarding *right of occupancy*, it is sufficient for our present purposes to say that Act X of 1859 has failed to define the conditions requisite to constitute a *right of occupancy*. It will be further seen that Act X of 1859 did not make any provision by which new comers might acquire rights of occupancy. This is a matter which is absolutely necessary for the prosperity of the agricultural classes in this country. It will be seen that under the present law it is almost impossible for a new ryot to obtain the right of occupancy, as the zemindar can easily prevent it by the "simple device of shifting the tenant from one holding to another before the period of 12 years has run out." To remedy this, it has been provided in Section 45 that the acquisition of the status of the "settled ryot" will depend not on the holding of the one and the same plot of land for 12 years, but on the holding of any ryoti land (whether the same or not) in the same village or estate whether before or after the passing of the Act. The Section 47 is equally important. It will be seen by a reference to these sections that a right of occupancy is acquired by a ryot holding ryoti land "notwithstanding any contract to the contrary." I have quoted the sections* of this chapter in the margin, where old contracts are not upheld according to your orders. It is these sections chiefly at which Mr. Tweedie, Manager, Porahattie concern, seems to be very much alarmed. I am sorry I cannot agree with him at all in this matter. If it be the intention of the Government to see that their humane object in framing this law is not frustrated by any contract by which the ryot is run out of his status, the binding power of these illegal contracts should be dispensed with. I need hardly say it is out of the question that the Government can prevent a ryot making what contract he likes, but all what the Government say is, that in certain cases the courts will not give effect to such contracts. I think this is perfectly fair. If Mr. Tweedie will refer to Sir S. Bayley's speech in the Council, he will find that one of the causes of the Pubna riot was, to quote Sir Steuart's words, "the endeavour on the part of the landlords to force from the ryots *kabuliats* which, besides incorporating illegal abwabs in the rents provided for the landlord changing arbitrarily the legal standard of measurement, and for his ejecting the ryot in case of the latter having the misfortune to quarrel with him." I could multiply instances if I chose. But I am sure everyone taking a dispassionate view of the matter will agree with me in thinking that Government should not allow their courts "to treat such documents made in direct contravention of the law as contracts made in equal terms between the parties." In leaving this question I can do no better than quote the language of the Government of India in one of their letters on the subject. They observed that "such is the power of the zemindars, so numerous and effective are the means possessed by them for inducing the ryots to accept agreements which, if history, custom, and expediency be regarded, are wrongful and contrary to good policy, that to uphold contracts in contravention of the main purposes of the Bill would be in our belief to condemn it to defeat and failure. It is absolutely necessary that such contracts should be disallowed, and in this conclusion we have the support not only of the Bengal Government, but also of the almost unanimous opinions of Bengal officers."

* Chapter V, Sections 45, 47 and 50.

6. In my opinion the sections about the occupancy ryots are very wholesome. It will be seen that mere squatters and nomads are effectually excluded from the acquisition of this great and important privilege.

7. The Bill then goes on to provide for the "transferability of the ryoti tenures," and for "the limitations to enhancement." As I am hard pressed for time—the report being due to-day—I regret I cannot make my observations at length on these points. I shall remain satisfied by merely saying that in dealing with these two important questions the Government has tried its best to look to the interest of the landlord as well as that of the ryot

8 As regards the facilities which the present Bill offers to the landlord for the recovery of rents and for their enhancement, I beg to observe that owing to the inherent difficulties of the subject, an entirely satisfactory solution of the problem has not been arrived at. From the debates at the Council, it appears that the matter will receive further consideration at the hands of the members of the select committee.

9. The preparation of a table of rates is another interesting and novel feature of this Bill. To me it seems to be a gigantic work and hardly feasible; nor can I understand how such a table can be accurate in a country where the quality of land changes so much. However, as this is a tentative measure, the procedure will be improved as it is worked.

10. In conclusion, I beg to say that my sympathies are entirely with the ryots, and I have therefore hailed this measure with great delight. What Bengal wants, in the language of Sir A. Eden, is a substantial peasantry, free from debt and able to bear the stress of hard times. The agricultural community in this country forms the backbone of the vast and

multitudinous population of Bengal. Never was a truer sentiment uttered when one of England's greatest living orators said that the "nation dwells in the cottage."

11. The above, I am fully aware, is hardly worth the name of a report, considering the importance of the subject it treats. My knowledge of land tenures of this country is very limited, and I have therefore utterly failed to do justice to this subject.

No. 651G, dated Krishnaghur, the 7th June 1883.

From—W. V. G. Tayler, Esq., Collector of Nuddea,

To—The Commissioner, Presidency Division.
